## 3.3 Spending

Table 3 and 4 summarize the total spending by initiative that Hydro Ottawa has incurred in 2013 and cumulatively since 2011. It is detailed by the Program Administration Budget (PAB), Participant Based Funding (PBF), Participant Incentives (PI) and Capability Building Funding (CBF).

**Table 3: 2013 Spending**

| Initiative | PAB | PBF | PI | CBF | TOTAL |
|---|---|---|---|---|---|
| Consumer Program | | | | | |
| Appliance Retirement | 46,122.79 | | | | 46,122.79 |

## 3.4 Additional Comments

The design of OPA Province–Wide CDM Initiatives is not customer friendly and this has had an impact on Hydro Ottawa's CDM program results. However, many of these design flaws have been identified and are being corrected.

**Consumer Programs**

1. **Home Energy Audit Tool, Midstream Pool Equipment, Midstream Electronics Initiatives** were never launched and subsequently withdrawn with no new additions.

2. Due to the maturity of the **Appliance Retirement Initiative**, and the revised eligibility requirements to appliances at least 20 years old, this Initiative appears to have reached market saturation. It is currently under consideration for removal from the portfolio.

3. The **Appliance Exchange Initiative** is at the discretion of Participating Retailers. Only one retailer hosted a spring event in 2012. There was no fall event. The elimination of one event restricted participation and reduced results.

4. The **Instant Coupon Initiative** was ineffective for most of 2012 as the annual Instant coupons were not available to consumers until September 2012 and once they were offered, they were only available on line. For illustration purposes, Hydro Ottawa customers used 30,000 printed coupons in 2011 and only 1,700 online coupons in 2012.

5. The **Bi-Annual Retailer Event Initiative** is a contracted arrangement between the participating retailer and the OPA. LDCs have prescribed engagement opportunities with the participating retailers. The reporting of coupon redemption results is not timely due to the contracted reporting timelines.

6. The **New Construction Program** was burdened with a cumbersome administrative process that vastly outweighed the benefit to builders. Hydro Ottawa took on the administrative burden for the program on behalf of the local builders and has experienced some success with this program. We do not feel that this approach is sustainable and that there needs to be a streamlined process that builders will embrace.

7. Implementation of the **Residential Demand Response Program** was delayed until 2012 as changes to the provincial technical specifications were required to facilitate procurement. This program contributes heavily towards the Consumer Program overall results but constraints imposed by the program funding caps, technical specifications and real time data requirements should be reviewed to encourage a broader range of equipment, services and offerings for LDCs to maintain a relevant offer as this market evolves.

8. **In Home Displays (IHDs)** formed an important part of the residential offering for many customers. IHDs engage customers, which leads to a greater understanding of how and when electricity is being used in their homes. The OPA, for a second year in a row, has been unable to determine the savings value of IHDs through their EM&V process. The methodology for the

EM&V was conducted the GTA which restricted the findings. It is felt that the restrictive nature of the EM&V paints all LDCs with the same brush when many LDCs used completely different approaches to deploying IHDs. Some LDCs focused heavily on proper installation and customer education and others deployed a more generic approach. As a result, Hydro Ottawa has no savings to report for our efforts. This has a significant negative impact on our results based on the original business case for IHDs. Because there are no results to date and no certainty around future results, Hydro Ottawa is unsure if it should continue to pursue this program.

**Business Program**

The Business Program has been hampered by inconsistent interpretation of program rules and eligibility, limited effectiveness of provincial marketing efforts, dated technologies and measures, cumbersome online administration systems and time consuming change management processes.

1. In the case of the **Efficiency: Equipment Replacement Incentive (ERII)** the OPA centralized application system (CRM) requires significant back office LDC processing to help participants navigate the application process. Eligible measures need to be updated and expanded in both technology and incentive amounts to address changing product costs and technology evolution.

2. The **Direct Install Initiative (DIL) has been in market since 2009.** The early success of the program was encouraging; however the program has not remained up to date with market needs and conditions. The product list for the program must be updated with current technologies and should be monitored and adjusted regularly. Product costs have also increased over time, eroding the contractor profit margins. This has led to a severe reduction in their participation.

3. **Existing Building Commissioning Incentive Initiative** has had minimal participation as it mostly limited to space cooling

4. There is typically a long sales cycle (3-5 years) associated with any **New Construction and Major Renovation Initiative (HPNC).** These projects with their long project development cycle are impacted by the program end date and heavily discounted EMV results.

5. The **Direct Service Space Cooling Initiative** was never launched.

**Industrial Program**

The Industrial initiatives have not generated significant savings in the Ottawa market because the region has a very light industrial base. However, Hydro Ottawa has rolled out these initiatives where possible.

1. The **Monitoring & Targeting Initiative** is targeted at larger customers with the capacity to analyze and respond to the M&T data. This requires the customer facility to employ an Energy Manager, or a person with equivalent qualifications, which has been a barrier for some customers. As such, a limited number of applications have been received to date. This combined with the savings target required has limited the initiative uptake for smaller customers.

2. One of the most successful elements of the Industrial program has been the capability building enabled by the **Embedded Energy Manager (EEM), Roving Energy Manager (REM) and Key Account Manager (KAM Initiatives.** These resources are difficult to find and require time to establish

themselves but once in place, they have been very successful at identifying and delivering energy efficiency opportunities. To date, Hydro Ottawa has placed six EEMs, 1 REM and 1 KAM in specific key accounts.

3. The **Demand Response 1 Initiative ("DR1")** has had no customer uptake and was removed from the Schedule in Q4, 2012.

**Home Assistance Program**

The **Home Assistance Program** is only marginally cost effective and delivers exceedingly low results per participant. This ineffective program is not attractive to Social Housing providers as they perceive it to be time consuming and burdened with paperwork for minimal value.

**LRAM**

Hydro Ottawa is concerned that the issues that have been identified above, namely programs that have not materialized, were delayed or for which the results are still under review (for example TOU pricing and Residential IHD), can adversely affect an LDC's ability to be held whole in terms of lost revenue due to CDM. For those LDCs that claim a LRAM ex post, if the results are not available or are subsequently changed, then there is a disconnect between the lost revenue applied for and that actually lost and if there is a true up it would be done years after the lost revenue occurred.

For those utilities recovering the lost revenue through an ex ante adjustment to their load forecast, that adjustment normally reflects the anticipated CDM results based on expected programs and current EM&V methodologies. When program results do not match those anticipated then the utility is required to record the shortfall in the Lost Revenue Adjustment Mechanism Variance Account (LRAMVA) and may never be able to properly recover the appropriate lost revenue.

Hydro Ottawa's results for 2012 were limited as a result of the above-mentioned shortcomings of OPA Province–Wide CDM Initiatives. The lack of success through OPA Province–Wide CDM Initiatives is further diminished by the difficult processes and negative experience with Board Approved CDM programs by those LDCs making application.

These limitations are easily addressed with a change to the CDM funding and regulatory structure that aligns LDC accountability with the requisite control over program design and delivery. OPA may continue to contribute in an ongoing and valuable role as a service provider to the LDCs providing centralized services for analytics, research and evaluation, but, they must not be in command and control of LDC success. To be successful, LDCs must be given greater control over this important condition of their distribution licence.

# 4 Combined CDM Reporting Elements

## 4.1 Progress Towards CDM Targets

**Table 5: Net Peak Demand Savings at the End User Level (MW)**

| Implementation Period | Annual (MW) | | | |
|---|---|---|---|---|
| | 2011 | 2012 | 2013 | 2014 |
| 2011 – Verified by OPA | 12.7 | 8.9 | 8.9 | 8.3 |
| 2012 – Verified by OPA | -0.2 | 16.6 | 8.5 | 8.4 |
| 2013 – Verified by OPA | | 0.5 | 22.5 | 8.8 |
| 2014 | | | | |

| **HYDRO OTTAWA 2014 Annual CDM Capacity Target:** | | | | 85.3 |
| **Verified Portion of Peak Demand Savings Target Achieved (%):** | | | | **29.8%** |

**Table 6: Net Energy Savings at the End-User Level (GWh)**

| Implementation Period | Annual (GWh) | | | | Cumulative (GWh) |
|---|---|---|---|---|---|
| | 2011 | 2012 | 2013 | 2014 | 2011-2014 |
| 2011 – Verified by OPA | 35.8 | 35.8 | 35.7 | 34.0 | 141.4 |
| 2012 – Verified by OPA | 0.2 | 35.1 | 34.9 | 34.4 | 104.6 |
| 2013 – Verified by OPA | | 2.4 | 42.6 | 41.4 | 86.4 |
| 2014 | | | | | |
| **Verified Net Cumulative Energy Savings 2011-2014:** | | | | | **332.4** |
| **HYDRO OTTAWA 2011-2014 Cumulative CDM Energy Target:** | | | | | **374.7** |
| **Verified Portion of Cumulative Energy Target Achieved (%):** | | | | | **88.7%** |

## 4.1 Variance from Strategy

There is no variance from our current strategy.

## 4.2 Outlook to 2014 and Strategy Modifications

There is no variance from our current strategy and we do not anticipate any modification to our strategy.

On March 31st, 2014 the Minister of Energy issued a directive entitled "Continuance of the OPA's Demand Response Program under IESO management" which effectively halts new customer enrollments in the DR3 program until the IESO has a program in market. This is estimated to be some time in 2015.

The DR3 Initiative is a significant contributor to helping LDCs achieve their demands savings target. The program has taken some time to get traction and LDCs have been diligently working with their customers to encourage participation in the DR3 program. LDC customers are now in a position where many of them have contracted with an Aggregator but will be unable to participate due to the inability of the Aggregator to receive new contract schedules resulting in the current "pipeline" of potential DR contributors being stranded.

The results reported for 2013 are lower than originally expected due to a number of factors. Major impacts include:

- no TOU results available and an expectation that any forthcoming results will be significantly lower than originally forecast.
- no results for IHDs
- removal of DR
- retrospective EM&V coming 1.5 years after the fact does not allow time to make adjustment

Our channels remain strong and engaged. We have made good inroads with some larger customers like the federal government. We continue to focus on moving conservation forward with our customers.

# 5 Conclusion

Over the course of 2013, Hydro Ottawa achieved 42.6 GWh in energy savings which represents 88.7% of the 2014 target. The Hydro Ottawa is reported to have saved 22.5 MW in peak demand savings which represents 29.8% of the 2014 target. Hydro Ottawa does not feel that this accurately represents our efforts as the peaksaver PLUS installs and the DR3 results from 2011 and 2012 are not included in this number.

These results are representative of a considerable effort expended by Hydro Ottawa, in cooperation with other LDCs, customers, channel partners and stakeholders to overcome many operational and structural issues that limited program effectiveness across all market sectors. This achievement is a success and the relationships built within the 2011-2014 CDM program term will aid results in a subsequent CDM term.

However, despite continuing improvements to existing programs Hydro Ottawa faces challenges in the remaining years of the current CDM framework. With the current slate of available OPA Programs, and the current forecast of implementation and projected savings, Hydro Ottawa expects to meet its 374.73 GWh consumption savings target but will be very challenged to meet its 85.26 MW demand savings target.

Looking ahead there is very limited time to make impactful changes to the current program portfolios and have these changes reflected in LDC 2014 results. However, LDCs and the OPA can build on the strengths and key successes of the 2011-2014 programs to launch new programs which will meet the needs of the industry and consumers.

# **Appendix A:** Initiative Descriptions

## Residential Program

### APPLIANCE RETIREMENT INITIATIVE (Exhibit D)

**Target Customer Type(s):** Residential Customers

**Initiative Frequency:** Year round

**Objectives:** Achieve energy and demand savings by permanently decommissioning certain older, inefficient refrigeration appliances.

**Description:** This is an energy efficiency Initiative that offers individuals and businesses free pick-up and decommissioning of old large refrigerators and freezers. Window air conditioners and portable dehumidifiers will also be picked up if a refrigerator or a freezer is being collected.

**Targeted End Uses:** Large refrigerators, large freezers, window air conditioners and portable dehumidifiers.

**Delivery**: OPA centrally contracts for the province-wide marketing, call centre, appliance pick-up and decommissioning process. LDC's provides local marketing and coordination with municipal pick-up where available.

**Additional Detail:** Schedule B-1, Exhibit D on the OPA extranet and saveONenergy website

**In Market Date:** February 2011

### APPLIANCE EXCHANGE INITIATIVE (Exhibit E)

**Target Customer Type(s):** Residential Customers

**Initiative Frequency:** Spring and Fall

**Objective:** The objective of this Initiative is to remove and permanently decommission older, inefficient window air conditioners and portable dehumidifiers that are in Ontario.

**Description:** This Initiative involves appliance exchange events. Exchange events are held at local retail locations and customers are encouraged to bring in their old room air conditioners (AC) and dehumidifiers in exchange for coupons/discounts towards the purchase of new energy efficient equipment. Window ACs were discontinued from the program in 2013.

**Targeted End Uses**: Window air conditioners and portable dehumidifiers

**Delivery**: OPA contracts with participating retailers for collection of eligible units. LDCs provide local marketing.

**Additional Detail:** Schedule B-1, Exhibit C on the OPA extranet and saveONenergy website

**In Market Date:** May 2011

### HVAC INCENTIVES INITIATIVE (Exhibit B)

**Target Customer Type(s):** Residential Customers

**Initiative Frequency:** Year round

**Objective:** The objective of this Initiative is to encourage the replacement of existing heating systems with high efficiency furnaces equipped with Electronically Commutated Motors (ECM), and to replace existing central air conditioners with ENERGY STAR qualified systems and products**.**

**Description:** This is an energy efficiency Initiative that provides rebates for the replacement of old heating or cooling systems with high efficiency furnaces (equipped with ECM) and ENERGY STAR® qualified central air conditioners by approved Heating, Refrigeration, and Air Conditioning Institute (HRAI) qualified contractors.

**Targeted End Uses:** Central air conditioners and furnaces

**Delivery:** OPA contracts centrally for delivery of the program. LDCs provide local marketing and encourage local contractors to participate in the Initiative.

**Additional Detail:** Schedule B-1, Exhibit B on the OPA extranet and SaveONenergy website

**In Market Date:** February 2011

### CONSERVATION INSTANT COUPON INITIATIVE (Exhibit A)

**Target Customer Type(s):** Residential Customers

**Initiative Frequency:** Year round

**Objective:** The objective of this Initiative is to encourage households to purchase energy efficient products by offering discounts.

**Description:** This Initiative provides customers with year round coupons. The coupons offer instant rebates towards the purchase of a variety of low cost, easy to install energy efficient measures and can be redeemed at participating retailers. Booklets were directly mailed to customers and were also available at point-of-purchase. Downloadable coupons were also available at www.saveoneenergy.ca.

**Targeted End Uses:** ENERGY STAR® qualified Standard Compact Fluorescent Lights ("CFLs"),ENERGY STAR® qualified Light Fixtures lighting control products, weather-stripping, hot water pipe wrap, electric water heater blanket, heavy duty plug-in Timers, Advanced power bars, clothesline, baseboard programmable thermostats.

**Delivery**: The OPA develops the electronic version of the coupons and posts them online for download. Three LDC specific coupons were made available for local marketing and utilization by LDCs. The OPA enters into agreements with retailers to honor the coupons.

**Additional Detail:** Schedule B-1, Exhibit A on the OPA extranet and saveONenergy website

**In Market Date:** March 2011

### BI-ANNUAL RETAILER EVENT INITIATIVE (Exhibit C)

**Target Customer Type(s):** Residential Customers

**Initiative Frequency:** Bi-annual events

**Objective:** The objective of this Initiative is to provide instant point of purchase discounts to individuals at participating retailers for a variety of energy efficient products.

**Description:** Twice a year (Spring and Fall), participating retailers host month-long rebate events. During the months of April and October, customers are encouraged to visit participating retailers where they can find coupons redeemable for instant rebates towards a variety of low cost, easy to install energy efficient measures.

**Targeted End Uses**: As per the Conservation Instant Coupon Initiative

**Delivery:** The OPA enters into arrangements with participating retailers to promote the discounted products, and to post and honor related coupons. LDCs also refer retailers to the OPA and market this initiative locally.

**Additional Detail:** Schedule B-1, Exhibit C on the OPA extranet and saveONenergy website

**In Market Date:** April 2011

### ~~RETAILER CO-OP~~

**Target Customer Type(s):** Residential Customers

**Initiative Frequency:** Year Round

**Objective:** Hold promotional events to encourage customers to purchase energy efficiency measures (and go above-and-beyond the traditional Bi-Annual Coupon Events).

**Description:** The Retailer Co-op Initiative provides LDCs with the opportunity to work with retailers in their service area by holding special events at retail locations. These events are typically special promotions that encourage customers to purchase energy efficiency measures (and go above-and-beyond the traditional Bi-Annual Coupon Events).

**Targeted End Uses:** As per the Conservation Instant Coupon Initiative

**Delivery:** Retailers apply to the OPA for co-op funding to run special promotions that promote energy efficiency to customers in their stores. LDCs can refer retailers to the OPA. The OPA provides each LDC with a list of retailers who have qualified for Co-Op Funding as well as details of the proposed special events.

**In Market Date:** N/A

### NEW CONSTRUCTION PROGRAM (Schedule B-2)

**Target Customer Type(s):** Residential Customers

**Initiative Frequency:** Year round

**Objective:** The objective of this Initiative is to provide incentives to participants for the purpose of promoting the construction of energy efficient residential homes in the Province of Ontario.

**Description:** This is an energy efficiency Initiative that provides incentives to homebuilders for constructing new homes that are efficient, smart, and integrated (applicable to new single family dwellings). Incentives are provided in two key categories as follows:

- Incentives for homebuilders who install electricity efficiency measures as determined by a prescriptive list or via a custom option.
- Incentives for homebuilders who meet or exceed aggressive efficiency standards using the EnerGuide performance rating system.

**Targeted End Uses:** All off switch, ECM motors, ENERGY STAR® qualified central a/c, lighting control products, lighting fixtures, EnerGuide 83 whole home, EnerGuide 85 whole homes

**Delivery:** Local engagement of builders will be the responsibility of the LDC and will be supported by OPA air coverage driving builders to their LDC for additional information.

**Additional Detail:** Schedule B-1, Exhibit C on the OPA extranet and saveONenergy website

**In Market Date:** Fall 2011

### RESIDENTIAL DEMAND RESPONSE PROGRAM (Schedule B-3)

**Target Customer Type(s):** Residential and Small Commercial Customers

**Initiative Frequency:** Year round

**Objective:** The objectives of this Initiative are to enhance the reliability of the IESO-controlled grid by accessing and aggregating specified residential and small commercial end uses for the purpose of load reduction, increasing consumer awareness of the importance of reducing summer demand and providing consumers their current electricity consumption and associated costs.

**Description:** In ***peaksaver***PLUS ™ participants are eligible to receive a free programmable thermostat or switch, including installation. Participants also receive access to price and real-time consumption information on an In Home Display (IHD).

**Targeted End Uses**: central air conditioning, electric hot water heaters and pool pumps

**Delivery**: LDC's recruit customers and procure technology

**Additional Detail:** Schedule B-1, Exhibit C on the OPA extranet and saveONenergy website

**In Market Date:** May 2012

## C&I Program

### EFFICIENCY: EQUIPMENT REPLACEMENT INCENTIVE (ERII) (Schedule C-2)

**Target Customer Type(s):** Commercial, Institutional, Agricultural and Industrial Customers

**Initiative Frequency:** Year round

**Objective**: The objective of this Initiative is to offer incentives to non-residential distribution customers to achieve reductions in electricity demand and consumption by upgrading to more energy efficient equipment for lighting, space cooling, ventilation and other measures.

**Description:** The Equipment Replacement Incentive Initiative (ERII) offers financial incentives to customers for the upgrade of existing equipment to energy efficient equipment. Upgrade projects can be classified into either: 1) prescriptive projects where prescribed measures replace associated required base case equipment; 2) engineered projects where energy and demand savings and incentives are calculated for associated measures; or 3) custom projects for other energy efficiency upgrades.

**Targeted End Uses:** lighting, space cooling, ventilation and other measures

**Delivery**: LDC delivered.

**Additional Detail:** Schedule C-2 on the OPA extranet and saveONenergy website

**In Market Date:** February 2011

## DIRECT INSTALL INITIATIVE (DIL) (Schedule C-3)

**Target Customer Type(s):** Small Commercial, Institutional, Agricultural facilities and multi-family buildings

**Initiative Frequency:** Year round

**Objective**: The objective of this Initiative is to offer a free installation of eligible lighting and water heating measures of up to $1,000 to eligible owners and tenants of small commercial, institutional and agricultural facilities and multi-family buildings, for the purpose of achieving electricity and peak demand savings.

**Description:** The Direct Installed Lighting Initiative targets customers in the General Service <50kW account category. This Initiative offers turnkey lighting and electric hot water heater measures with a value up to $1,000 at no cost to qualifying small businesses. In addition, standard prescriptive incentives are available for eligible equipment beyond the initial $1,000 limit.

**Target End Uses:** Lighting and electric water heating measures

**Delivery**: Participants can enroll directly with the LDC, or would be contacted by the LDC/LDC-designated representative.

**Additional Detail:** Schedule C-3 on the OPA extranet and saveONenergy website

**Initiative Activities/Progress:**

**In Market Date:** March 2011

## EXISTING BUILDING COMMISSIONING INCENTIVE INITIATIVE (Schedule C-6)

**Target Customer Type(s):** Commercial, Institutional, and Agricultural Customers

**Initiative Frequency:** Year round

**Objective:** The objective of this Initiative is to offer incentives for optimizing (but not replacing) existing chilled water systems for space cooling in non-residential facilities for the purpose of achieving implementation phase energy savings, implementation phase demand savings, or both.

**Description:** This Initiative offers Participants incentives for the following:

- scoping study phase
- investigation phase
- implementation phase
- hand off/completion phase

**Targeted End Uses:** Chilled water systems for space cooling

**Delivery:** LDC delivered.

**Additional Detail:** Schedule C-6 on the OPA extranet and saveONenergy website Additional detail is available:

**Initiative Activities/Progress:**

**In Market Date:** March 2011

### NEW CONSTRUCTION AND MAJOR RENOVATION INITIATIVE (HPNC) (Schedule C-4)

**Target Customer Type(s):** Commercial, Institutional, Agricultural and Industrial Customers

**Initiative Frequency:** Year round

**Objective:** The objective of this Initiative is to encourage builders/major renovators of commercial, institutional, and industrial buildings (including multi-family buildings and agricultural facilities) to reduce electricity demand and/or consumption by designing and building new buildings with more energy-efficient equipment and systems for lighting, space cooling, ventilation and other Measures.

**Description**: The New Construction initiative provides incentives for new buildings to exceed existing codes and standards for energy efficiency. The initiative uses both a prescriptive and custom approach.

**Targeted End Uses**: New building construction, building modeling, lighting, space cooling, ventilation and other Measures

**Delivery**: LDC delivers to customers and design decision makers.

**Additional Detail:** Schedule C-4 on the OPA extranet and saveONenergy website

**Initiative Activities/Progress**:

**In Market Date:** July 2011

### ENERGY AUDIT INITIATIVE (Schedule C-1)

**Target Customer Type(s):** Commercial, Institutional, Agricultural and Industrial Customers

**Initiative Frequency:** Year round

**Objective:** The objective of this Initiative is to offer incentives to owners and lessees of commercial, institutional, multi-family buildings and agricultural facilities for the purpose of undertaking assessments to identify all possible opportunities to reduce electricity demand and consumption within their buildings or premises.

**Description:** This Initiative provides participants incentives for the completion of energy audits of electricity consuming equipment located in the facility. Energy audits include development of energy baselines, use assessments and performance monitoring and reporting.

**Targeted End Uses:** Various

**Delivery:** LDC delivered.

**Additional Detail:** Schedule C-1 on the OPA extranet Schedule C-1 and saveONenergy website

**In Market Date:** March 2011

## Industrial Program

### PROCESS & SYSTEMS UPGRADES INITIATIVE (PSUI) (Schedule D-1)

**Target Customer Type(s):** Industrial, Commercial, Institutional and Agricultural Customers

**Initiative Frequency:** Year round

**Objectives:** The objectives of this Initiative are to:

- Offer distribution customers capital incentives and enabling initiatives to assist with the implementation of large projects and project portfolios;
- Implement system optimization project in systems which are intrinsically complex and capital intensive; and
- Increase the capability of distribution customers to implement energy management and system optimization projects.

**Description:** PSUI is an energy management Initiative that includes three Initiatives: (preliminary engineering study, detailed engineering study, and project incentive Initiative). The incentives are available to large distribution connected customers with projects or portfolio projects that are expected to generate at least 350 MWh of annualized electricity savings or, in the case of Micro-Projects, 100 MWh of annualized electricity savings. The capital incentive for this Initiative is the lowest of:

a) $200/MWh of annualized electricity savings

b) 70% of projects costs

c) A one year pay back

**Targeted End Uses:** Process and systems

**Delivery:** LDC delivered with Key Account Management support, in some cases.

**Additional Detail:** Schedule D-1 on the OPA extranet and saveONenergy website

**In Market Date:** February 2011

### MONITORING & TARGETING INITIATIVE (Schedule D-2)

**Target Customer Type(s):** Industrial, Commercial, Institutional and Agricultural Customers

**Initiative Frequency:** Year round

**Objective:** This Initiative offers access to funding for the installation of Monitoring and Targeting systems in order to deliver a minimum savings target at the end of 24 months and sustained for the term of the M&T Agreement.

**Description:** This Initiative offers customers funding for the installation of a Monitoring and Targeting system to help them understand how their energy consumption might be reduced. A facility energy manager, who regularly oversees energy usage, will now be able to use historical energy consumption performance to analyze and set targets.

**Targeted End Uses:** Process and systems

**Delivery:** LDC delivered with Key Account Management support, in some cases.

**Additional Detail:** Schedule D-2 on the OPA extranet and saveONenergy website

**In Market Date:** February 2011

### ENERGY MANAGER INITIATIVE (Schedule D-3)

**Target Customer Type(s):** Industrial, Commercial, Institutional and Agricultural Customers

**Initiative Frequency:** Year round

**Objective:** The objective of this initiative is to provide customers and LDCs the opportunity to access funding for the engagement of energy managers in order to deliver a minimum annual savings target.

**Description:** This Initiative provides customers the opportunity to access funding to engage an on-site, full time embedded energy manager, or an off-site roving energy manager who is engaged by the LDC. The role of the energy manager is to take control of the facility's energy use by monitoring performance, leading awareness programs, and identifying opportunities for energy consumption improvement, and spearheading projects. Participants are funded 80% of the embedded energy manager's salary up to $100,000 plus 80% of the energy manager's actual reasonable expenses incurred up to $8,000 per year. Each embedded energy manager has a target of 300 kW/year of energy savings from one or more facilities. LDCs receive funding of up to $120,000 for a Roving Energy Manager plus $8,000 for expenses.

**Targeted End Uses:** Process and systems

**Delivery:** LDC delivered with Key Account Management support, in some cases.

**Additional Detail**: Schedule D-3 on the OPA extranet and saveONenergy website

**In Market Date:** August 2012

### KEY ACCOUNT MANAGER (KAM) (Schedule D-4)

**Target Customer Type(s):** Industrial, Commercial, Institutional and Agricultural Customers

**Initiative Frequency:** Year round

**Objective**: This initiative offers LDCs the opportunity to access funding for the employment of a KAM in order to support them in fulfilling their obligations related to the PSUI.

**Description:** This Initiative provides LDCs the opportunity to utilize a KAM to assist their customers. The KAM is considered to be a key element in assisting the consumer in overcoming traditional barriers related to energy management and help them achieve savings since the KAM can build relationships and become a significant resource of knowledge to the customer.

**Targeted End Uses:** Process and systems

**Delivery:** LDC delivered

**Additional Detail:** ScheduleD-4 on the OPA extranet.

**In Market Date:** August 2012

### DEMAND RESPONSE 3 (Schedule D-6)

**Target Customer Type(s):** Industrial, Commercial, Institutional and Agricultural Customers

**Initiative Frequency:** Year round

**Objective:** This Initiative provides for Demand Response ("DR") payments to contracted participants to compensate them for reducing their electricity consumption by a pre-defined amount during a DR event.

**Description:** Demand Response 3 ("DR3") is a demand response Initiative for commercial and industrial customers, of 50 kW or greater to reduce the amount of power being used during certain periods of the year. The DR3 Initiative is a contractual resource that is an economic alternative to procurement of new generation capacity. DR3 comes with specific contractual obligations requiring participants to reduce their use of electricity relative to a baseline when called upon. This Initiative makes payments for participants to be on standby and payments for the actual electricity reduction provided during a demand response event. Participants are scheduled to be on standby approximately 1,600 hours per calendar year for possible dispatch of up to 100 hours or 200 hours within that year depending on the contract.

**Targeted End Uses:** Commercial and Industrial Operations

**Delivery:** DR3 is delivered by Demand Response Providers ("DRPs"), under contract to the OPA. The OPA administers contracts with all DRPs and Direct Participants (who provide in excess of 5 MW of demand response capacity). OPA provides administration including settlement, measurement and verification, and dispatch. LDCs are responsible for local customer outreach and marketing efforts.

**Additional Detail:** Schedule D-6 available on the OPA and saveONenergy website

**In Market Date:** October 2011

It is noted that while the Schedule for this Initiative was not posted until May 2011, the Aggregators reported that they were able to enroll customers as of January 2011.

### LOW INCOME INITIATIVE (HOME ASSISTANCE PROGRAM) (Schedule E-1)

**Target Customer Type(s):** Income Qualified Residential Customers

**Initiative Frequency:** Year Round

**Objective**: The objective of this Initiative is to offer free installation of energy efficiency measures to income qualified households for the purpose of achieving electricity and peak demand savings.

**Description:** This is a turnkey Initiative for income qualified customers. It offers residents the opportunity to take advantage of free installation of energy efficient measures that improve the comfort of their home, increase efficiency, and help them save money. All eligible customers receive a Basic and Extended Measures Audit, while customers with electric heat also receive a Weatherization Audit. The Initiative is designed to coordinate efforts with gas utilities.

**Targeted End Uses**: End use measures based on results of audit (i.e. compact fluorescent light bulbs)

**Delivery:** LDC delivered.

**Additional Detail**: Schedule E available on the OPA extranet.

**In Market Date:** January 2012

# **Appendix B:** Pre-2011 Programs

## ELECTRICITY RETROFIT INCENTIVE PROGRAM

**Target Customer Type(s):** Commercial, Institutional, and Agricultural Customers

**Initiative Frequency:** Year Round

**Objective:** The objective of this Initiative is to offer incentives to non-residential distribution customers to achieve reductions in electricity demand and consumption by upgrading to more energy efficient equipment for lighting, space cooling, ventilation and other measures.

**Description:** The Equipment Replacement Incentive Program (ERIP) offered financial incentives to customers for the upgrade of existing equipment to energy efficient equipment. This program was available in 2010 and allowed customers up to 11 months following Pre-Approval to complete their projects. As a result, a number of projects Pre-Approved in 2010 were not completed and in-service until 2011. The electricity savings associated with these projects are attributed to 2011.

**Targeted End Uses**: Electricity savings measures

**Delivery**: LDC Delivered

## HIGH PERFORMANCE NEW CONSTRUCTION

**Target Customer Type(s):** Commercial, Institutional, and Agricultural Customers

**Initiative Frequency:** Year round

**Objective:** The High Performance New Construction Initiative provided incentives for new buildings to exceed existing codes and standards for energy efficiency. The Initiative uses both a prescriptive and custom approach and was delivered by Enbridge Gas under contract with the OPA (and subcontracted to Union Gas), which ran until December 2010.

**Description:** The objective of this Initiative is to encourage builders of commercial, institutional, and industrial buildings (including multi-family buildings and agricultural facilities) to reduce electricity demand and/or consumption by designing and building new buildings with more energy-efficient equipment and systems for lighting, space cooling, ventilation and other Measures.

**Targeted End Uses**: New Building construction, building modeling, lighting, space cooling, ventilation and other measures

**Delivery**: Through Enbridge Gas (and subcontracted to Union Gas)

## ~~TORONTO COMPREHENSIVE INITIATIVE~~

**Target Customer Type(s):** Commercial and Institutional Customers

**Initiative Frequency:** Year round

**Objective:**

**Description:** This Initiative is specific to Toronto Hydro's Service Area.

**Targeted End Uses**:

**Delivery**:

## MULTIFAMILY ENERGY EFFICIENCY REBATES

**Target Customer Type(s):** Residential Multi-unit buildings

**Initiative Frequency:** Year round

**Objective:** Improve energy efficiency of Multi-unit building

**Description:** OPA's Multifamily Energy Efficiency Rebates (MEER) Initiative applies to multifamily buildings of six units or more, including rental buildings, condominiums, and assisted social housing. The OPA contracted with GreenSaver to deliver the MEER Initiative outside of the Toronto Hydro service territory. Activities delivered in Toronto were contracted with the City.

Similar to ERII and ERIP, MEER provides financial incentives for prescriptive and custom measures, but also funds resident education. Unlike ERII, where incentives are paid by the LDC, all incentives through MEER are paid through the contracted partner (i.e. GreenSaver).

**Targeted End Uses**: Electricity saving measures

**Delivery**: OPA contracted with GreenSaver

## ~~DATA CENTRE INCENTIVE PROGRAM~~

**Target Customer Type(s):**

**Initiative Frequency:** Year round

**Objective:**

**Description:** This Initiative is specific to PowerStream's Service Area.

**Targeted End Uses**:

**Delivery**:

## ~~ENWIN GREEN SUITES~~

**Target Customer Type(s):**

**Initiative Frequency:** Year round

**Objective:**

**Description:** This Initiative is specific to EnWin's Service Area.

**Targeted End Uses**:

**Delivery**:

# LRAM VARIANCE ACCOUNT

## 1.0 INTRODUCTION

Hydro Ottawa Limited is seeking the recovery of the Lost Revenue Adjustment Mechanism ("LRAM") in the amount of ($679,243), including principle of ($678,660) and carrying charges of ($583). This includes the 2011, 2012 and 2013 Ontario Power Authority ("OPA") Conservation and Demand Management ("CDM") programs, cumulative to the year ending December 31, 2013; please see Attachment I-8(A) for further details.

## 2.0 Input Assumptions

Hydro Ottawa confirms it is using the most recent input assumptions available for calculating lost revenue at the time of filing this rate application. This includes the final 2013 verified results report from the OPA and Hydro Ottawa's Conservation and Demand Management 2013 Annual Report as Submitted to the OEB on September 30, 2014. Please refer to attachments D–5(A) and D–5(B) respectively.

## 3.0 CDM Evaluation report from the OPA

Hydro Ottawa confirms it has relied upon the most recent final CDM evaluation, the 2013 verified results report from the OPA to support the lost revenue calculations. Please refer to Attachment D-5(A) for a copy of this OPA report.

## 4.0 CDM Programs and initiatives by rate class

Table 1 below shows the Lost Revenue from 2011 to 2013 by rate class, the total lost revenue from 2011 to 2013 is $678,660.

**Table 1 – Lost Revenue by Year by Rate Class**

| | 2011 | 2012 | 2013 | Total |
|---|---|---|---|---|
| Residential | $(187,041) | $ 170,928 | $ 61,248 | $ 45,135 |
| GS< 50 kW | (72,564) | (8,436) | (83,055) | (164,055) |
| Commercial | (172,163) | 606,207 | 327,092 | 761,136 |
| Unmetered | | 3,583 | 3,617 | 7,200 |
| Streetlighting | | 14,611 | 14,633 | 29,244 |
| **TOTAL** | **$(431,768)** | **$ 786,894** | **$ 323,534** | **$ 678,660** |

A list of all the CDM programs/initiatives by rate class indicating the energy savings (kWh) and peak demand (kW) savings assigned to the programs/initiatives, is available in Table 2. For descriptions on these initiatives, please see the OPA report in Attachment D–5(A).

## Table 2 – CDM Programs/Initiatives by Class by kWh/kW[1]

| Customer Class - Program / Initiative | Net Incremental Peak Demand Savings (kW) - 2011 | Net Incremental Peak Demand Savings (kW) - 2012 | Net Incremental Peak Demand Savings (kW) - 2013 | Net Incremental Energy Savings (kWh) - 2011 | Net Incremental Energy Savings (kWh) - 2012 | Net Incremental Energy Savings (kWh) - 2013 |
|---|---|---|---|---|---|---|
| **Residential** | | | | | | |
| Appliance Retirement | | | | 1,754,416 | 1,040,845 | 681,703 |
| Appliance Exchange | | | | 22,795 | 43,987 | 70,563 |
| HVAC Incentives | | | | 4,496,665 | 2,946,491 | 2,563,561 |
| Conservation Instant Coupon Booklet | | | | 1,120,034 | 78,235 | 431,268 |
| Bi-Annual Retailer Event | | | | 1,766,511 | 1,498,537 | 961,278 |
| Residential Demand Response | | | | 8,266 | 55,891 | 48,406 |
| Residential New Construction | | | | 0 | 0 | 16,548 |
| **Residential Program Total** | - | - | - | 9,168,688 | 5,663,987 | 4,773,328 |
| **GS< 50 kW** | | | | | | |
| Direct Install Lighting | | | | 0 | 0 | 0 |
| Small Commercial Demand Response | | | | 0 | 0 | 0 |
| **GS< 50 kW Total** | - | - | - | - | - | - |
| **Commercial** | | | | | | |
| Retrofit - Business | 35,933 | 66,187 | 58,770 | | | |
| New Construction | 0 | 163 | 1,500 | | | |
| Energy Audit | 311 | 1,553 | 5,076 | | | |
| Demand Response 3 - Business | 7,163 | 7,723 | 18,245 | | | |
| Energy Manager | 0 | 0 | 1,303 | | | |
| Retrofit - Industrial | 973 | | | | | |
| Demand Response 3 - Industrial | 0 | 503 | 2,266 | | | |
| Home Assistance Program | 0 | 316 | 380 | | | |
| Electricity Retrofit Incentive Program | 11,530 | 0 | 0 | | | |
| High Performance New Construction | 4,378 | 9,686 | 3,432 | | | |
| **Commercial Total** | 60,288 | 86,131 | 90,971 | - | - | - |
| **GRAND TOTAL** | **60,288** | **86,131** | **90,971** | **9,168,688** | **5,663,987** | **4,773,328** |

[1] Demand Response Activities due not Persist, therefore figures in Table 2 are not equal to cumulative totals in Table 3

## 5.0 Lost Revenue Calculations by Rate Class

Below in Table 3 is Hydro Ottawa's Lost Revenue by Class, broken down by demand (kW) and energy (kWh) for the years 2011 to 2013, the lost revenue totals shown include persistence. Hydro Ottawa used it's respective Board approved variable distribution charges in calculating the lost revenue.

**Table 3 – Lost Revenue by Class (2011 to 2013)**

| | | 2011 | | | 2012 | | | 2013 | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Customer Class | Demand (kW) or Energy (kWh) | Units of Demand or Energy | Variable Rate | Lost Revenue | Units of Demand or Energy | Variable Rate | Lost Revenue | Units of Demand or Energy | Variable Rate | Lost Revenue |
| Residential | kWh | 9,168,688 | $0.0204 | $(187,041) | 14,824,409 | $0.0231 | $170,928 | 19,541,846 | $0.0228 | $61,248 |
| GS< 50 kW | kWh | 3,979,746 | $0.0182 | (72,564) | 7,408,550 | $0.0203 | (8,436) | 11,064,344 | $0.0204 | (83,055) |
| Commercial | kW | 60,288 | $2.8557 | (172,163) | 139,255 | $3.3690 | $606,207 | 222,001 | $3.3654 | $327,092 |
| Unmetered | kWh | | | | 0 | $0.0211 | $3,583 | 0 | $0.0213 | $3,617 |
| Streetlighting | kW | | | | 0 | $3.8880 | $14,611 | 0 | $3.8939 | $14,633 |
| TOTAL | | | | $(431,768) | | | $786,894 | | | $323,534 |

## 6.0 Carrying Charges on Lost Revenue

Hydro Ottawa confirms carrying charges are being requested on the Lost Revenue Adjustment Mechanism Variance Account ("LRAMVA"). The interest rate used for the calculation of all carrying charges were as prescribed by the Board and published quarterly on its website, please refer to Exhibit I-1-1 for further details on the carrying charges.

## 7.0 Board Approved Programs

Hydro Ottawa did not undertake any Board-Approved CDM Programs from 2012 – 2014. All the CDM programs activities are OPA funded, thus as per section 6.1.1 of the Conservation and Demand Management Code, no separate third-party independent verification is required.

# COST OF CAPITAL AND CAPITAL STRUCTURE

Hydro Ottawa Limited (Hydro Ottawa) has prepared this document to provide an overview of its capital structure, financing approach, costs associated with short term and long term debt, and calculation of return on equity as required under section 2.8 of *Ontario Energy Board (OEB) Filing Requirements for Electricity Distribution Rate Applications (July 18, 2014).*

## 1.0 CAPITAL STRUCTURE

Hydro Ottawa's capital structure is set in accordance with the OEB guidelines provided in the *Report of the Board on Cost of Capital for Ontario's Regulated Utilities issued on December 11, 2009 (the "2009 Report)*. Hydro Ottawa targets a 60:40 debt to equity range as evidenced by Hydro Ottawa's past and current practices. The 60% debt component is made up of 56% long-term debt and 4% short term debt.

Appendix 2-OA "Capital Structure" outlines Hydro Ottawa's capital structure for the last Board approved year 2012 and the Test Years 2016 to 2020.

## 2.0 FINANCING APPROACH

Financing for Hydro Ottawa is received through its parent company, Hydro Ottawa Holding Inc. (Holding Company). All external debt is managed by the Holding Company as it maintains a strong investment grade credit rating at the parent company level for financing purposes. These credit ratings are required for the Holding Company to issue private debt issuances into the Canadian debt market to support its subsidiaries/affiliates financing requirements. Hydro Ottawa receives all of its financing from the Holding Company via intercompany loans on a "pass through" basis for the rates, terms, and conditions that the Holding Company receives from the external markets.

### 2.1 Credit Rating

The current credit ratings for the Holding Company by Standard and Poor's and Dominion Bond Rating Service are as follows:

| Rating Agency | Credit Rating |
|---|---|
| Dominion Bond Rating Service (DBRS) | A Stable |
| Standard and Poor's (S&P) | A Stable |

The most recent credit rating reports issued by DBRS and S&P are provided in Attachments A-4(D) and A-4(E) respectively.

### 2.2 Short Term Debt

The Holding Company maintains short term credit facilities to support the liquidity needs of Hydro Ottawa. These facilities are used to cover periodic working capital deficiencies, bridge financing requirements until long term debt is warranted, and to post required prudentials with the Independent Electricity System Operator.

The cost of short term financing is passed onto Hydro Ottawa on the same terms and conditions that the Holding Company receives from external markets through its credit facilities. Terms and conditions of short term borrowings are governed by the "Credit Agreement" dated January 1, 2009 which is filed in Attachment E-1(A).

For the purpose of the rate application, Hydro Ottawa has utilized the short term debt rate of 2.16% for the years 2016 through 2020, as provided in the letter dated November 20, 2014 outlining the Cost of Capital Parameter Updates for 2015 Applications. It is recognized that this rate will be updated at the time of the rate decision to reflect the deemed short term debt rate for 2016 rate applications to be published in November 2015. As described in the Executive Summary, it is Hydro Ottawa's intention to provide regulatory efficiency and rate stability by leaving this rate in effect until December 31, 2018, a 3-year period. In 2018, the short term rate would be reviewed and updated for the Cost of Capital Parameter Updates for 2019. This update would then remain in effect for the 2019 and 2020 rate years.

### 2.3 Long Term Debt

The Holding Company issues long term debt to support the financing requirements of Hydro Ottawa. Similar to short term financing, the costs associated with long term financing are also passed on to Hydro Ottawa on the same terms and conditions as the Holding Company receives from the external markets.

In the absence of associated external financing at the Holding Company level, long term debt is charged to Hydro Ottawa at the deemed cost of debt effective at the time of the fund transfer, as calculated per the 2009 Report. All debt using a deemed rate accumulates until the next external long term financing is conducted by the Holding Company, at which time the deemed rates are converted into the new rate, terms, and conditions as per the external bond issuance, which includes the actual cost of debt plus any incurred issuance costs. The issuance costs are amortized over a five year period which is consistent with the write-off for tax purposes.

By using this approach, Hydro Ottawa primarily relies on the embedded or actual cost of long term debt and only uses the deemed long term debt rate as a proxy to bridge the period between external financings.

The markets are not receptive to long term debt issuances under $100 million due to liquidity and listing requirements, and therefore smaller issuances, if attainable, would dictate premium pricing. As well, smaller and more frequent issuances will incur more costs than larger, less frequent issuances due to the fixed nature of most of the required issuance costs. The financing arrangement between Hydro Ottawa and the Holding Company is beneficial to both Hydro Ottawa and its ratepayers, as it allows Hydro Ottawa to follow the deemed capital structure and borrow in smaller tranches (without paying premiums) than it could otherwise be able to borrow in the financial markets.

The financial strength of the Holding Company and this type of financing arrangement optimizes Hydro Ottawa's borrowing requirements on both short term and long term financing. It provides financing to Hydro Ottawa in tranches that meets its capital structure requirements using both actual and deemed rates in an objective and transparent manner which minimizes borrowing costs for Hydro Ottawa and its ratepayers.

The current long term debt notes issued by Hydro Ottawa are included as Attachments E-1(B), (C), (D), (E), and (F).

### 2.4 Forecast Long Term Debt

Hydro Ottawa plans to issue further long term debt to support its on-going capital expenditure requirements. The forecasted additional borrowing requirement for Hydro Ottawa from 2015 to 2020 is as follows:

**Table 1 - Forecast Borrowing Requirements**

| Year | Amount |
|---|---|
| 2015 | $55 million |
| 2016 | $65 million |
| 2017 | $60 million |
| 2018 | $30 million |
| 2019 | $30 million |
| 2020 | $30 million |

### 2.5 Cost of Long Term Debt

The long term debt rate is calculated as the weighted average rate of existing debt and forecast debt planned to be issued from 2015 – 2020. The calculation to determine the forecast long term debt rate is comprised of 3 components:

1) The forecast Government of Canada 10-year bond yield;

2) The 30-year to 10-year Government of Canada bond yield spread, and
3) The Hydro Ottawa credit risk spread.

This emulates the calculation of the 2009 Report. Table 2 below summarizes the forecast Hydro Ottawa long term debt rate from 2016 to 2020.

The underlying forecast for the 10-year rate is as per the October 2014 Consensus Long Term Forecast (which is issued twice a year in October and April).

The 30-year Government of Canada bond yield is then calculated using the forecast 10-year bond yield plus 55bps, which is the 5-year historical average spread of the 30-year over 10-year Government of Canada bond yield as calculated per the 2009 Report.

The Hydro Ottawa historical credit spread is based on BMO Capital markets indicative spreads over the past 2.5-years for the Holding Company.

**Table 2 - Forecast Yield for 2015 to 2020 Long Term Debt Issuances**

| Year | Govt. of Canada 10-year Yield (based on October 2014 Consensus Forecast) | Historical Spread (30-year Govt. Yield over 10-year Govt. Yield) | Govt. of Canada 30-year Yield | Hydro Ottawa Historical Spread | Forecast Hydro Ottawa Yield |
|---|---|---|---|---|---|
| **2016** | 3.30%[1] | 55 bps | 3.85% | 152 bps | **5.37%** |
| **2017** | 3.90%[1] | 55 bps | 4.45% | 152 bps | **5.97%** |
| **2018** | 4.20%[1] | 55 bps | 4.75% | 152 bps | **6.27%** |
| **2019** | 4.40%[1] | 55 bps | 4.95% | 152 bps | **6.47%** |
| **2020** | 4.40%[1] | 55 bps | 4.95% | 152 bps | **6.47%** |

[1]Average for the year

As shown in Appendix 2-OB, the weighted cost of existing long term debt as of December 31, 2014 is 4.78%.

In February, 2015 the Holding Company issued two new tranches of debt comprised of tenures of 10 and 30 years. With this issuance, the Holding Company secured the lowest 10 and 30 year fixed coupons on record in the Canadian Corporate credit market. Hydro Ottawa has used these same rates for its financing requirements for 2015 and has reflected it in the weighted long term debt rates for 2015 to 2020.

For the purpose of the rate application, Hydro Ottawa has used the forecast weighted long term debt rate of 3.72% for 2016, 3.94% for 2017, 4.08% for 2018, 4.17% for 2019 and 4.23% for 2020. It is recognized that these rates will be updated at the time of the rate decision to reflect the then current weighted long term rate using the same foregoing approach and calculation.

As described in the Executive Summary, it is Hydro Ottawa's intention to provide regulatory efficiency by then leaving these rates in effect until December 31, 2018, a 3-year period. In 2018, the long term rate would be reviewed and updated following this same approach and to reflect any potential changes to the 2009 Report. This update would then remain in effect for the 2019 and 2020 rate years.

Appendix 2-OB "Debt Instruments" outlines the amounts and associated interest rates for all its long term debt instruments as well as the weighted long term debt rate for the historical, bridge and test years.

## 3.0 RETURN ON EQUITY

Hydro Ottawa has used the deemed ROE for 2015 cost of service applications of 9.30% as communicated through the November 20, 2014 Cost of Capital Parameters letter from the Board. It is recognized that this rate will be updated at the time of the rate decision to reflect the current rate in effect as per the calculations and terms outlined in the December 11, 2009 "Report of the Board on the Cost of Capital for Ontario's Regulated Utilities".

As described in the Executive Summary, it is Hydro Ottawa's intention to provide regulatory efficiency by leaving this rate in effect until the end of 2018, a 3 year period. In 2018, the rate would be reviewed and updated for the Cost of Capital Parameters Updates for 2019. This update would remain in effect for the 2019 and 2020 rate years.

## 4.0 PREFERRED SHARES

Hydro Ottawa does not currently have any preferred shares issued nor has it forecasted for any issuance of preferred shares for the test years.

# AMENDMENT TO CREDIT AGREEMENT

**The Credit Agreement between Hydro Ottawa Holding Inc. and Hydro Ottawa Limited, dated January 1, 2009, is amended as follows:**

**3. <u>Administrative Fee</u>**

An administrative charge will be added to the rate of interest charged on Prime Rate Advances and Fixed Term Loans, payable to the Lender at the rate of 0.10% per annum.

**This clause is removed in its entirety.**

**All other sections of the Credit Agreement, including any subsequent amendments remain the same.**

**IN WITNESS WHEREOF the parties have executed this amendment January 31, 2014:**

**HYDRO OTTAWA HOLDING INC. / SOCIÉTÉDE PORTEFEUILLE D'HYDRO OTTAWA INC.**

# CREDIT AGREEMENT

THIS AGREEMENT is made as of the 1st day of January 2009.

BETWEEN:

**HYDRO OTTAWA HOLDING INC./SOCIÉTÉ DE PORTEFEUILLE D'HYDRO OTTAWA INC.**

(hereinafter also referred to as the "Lender")

- and –

**HYDRO OTTAWA LIMITED**

(hereinafter also referred to as the "Borrower")

WHEREAS, the Lender has agreed to make available to the Borrower certain credits on the terms and conditions set out in this agreement.

NOW THEREFORE, in consideration of the covenants and agreements herein contained, the Parties agree as follows

1. **Definition**

Whenever used in this Agreement, unless there is something inconsistent in the subject matter or context, the following words and terms shall have the meaning as set out below:

(a) "Agreement" means this agreement, including any schedules and all instruments supplementing or amending or confirming this agreement;
(b) "Bank of Nova Scotia Credit Agreement" means an agreement between The Bank of Nova Scotia and Hydro Ottawa Holding Inc. evidenced by the most recent Commitment Letter;
(c) "Drawdown" means a borrowing of funds under the facility, a conversion or a rollover, as the context requires;
(d) "Event of Default" means any of the events described in section 7;
(e) "Fixed Term Loan" means an interest-bearing loan having a term of not less than 7 days and not more than 180 days having a rate of interest determined on the bases set out in this Agreement;
(f) "Permitted Encumbrance" means any of the following:

(i) purchase money security interests, capital leases and other encumbrances not exceeding in an aggregate amount of $5,000,000;

(ii) liens for taxes, payments in lieu of taxes, assessments, government charges or claims not yet due or for which instalments have been paid based on reasonable estimates pending final assessments, or if due, the validity of which is being contested in good faith, on in respect of which appropriate provision is made in consolidated financial statements of the Borrower;

(iii) a lien or deposit under workers' compensation, social security or similar legislation or deposits to secure public or statutory obligations;

(iv) a lien or deposit of cash or securities in connection with contracts, bids, tenders, leases or expropriation proceedings or to secure surety and appeal bonds not exceeding an aggregate amount of $1,000,000 at any time;

(v) a lien or privilege imposed by law, such as a builder's, carrier's, warehousemen's, landlord's mechanic's, supplier's or other similar liens and public, statutory and other like obligations incurred in the ordinary course of business;

(vi) a lien or right of distress reserved in or exercisable under any lease, for rent or for compliance with the terms of the lease;

(vii) undetermined or inchoate liens, rights of distress, privileges and charges incidental to current operations which have not at such time been filed or exercised or which relate to obligations not due or payable, or if due, the validity of which is being contested diligently and in good faith by appropriate proceedings;

(viii) reservations, limitations, provisos and conditions expressed in any original grants from the Crown or other grants of real or immovable property, or interests therein, which do not materially affect the use of the affected land for the purpose for which it is being used;

(ix) title defects, encroachments or irregularities or other matters relating to title which in the aggregate do not materially impair the use of the affected property for the purpose for which it is used;

(x) zoning, land use and building restrictions, by-laws, regulations and ordinances of federal, provincial, state, municipal and other governmental authorities, licences, easements, rights-of-way, rights in the nature of easements (including, without limiting the generality of the foregoing, licences, easements, rights-of-way and rights in the nature of easements for railways, sidewalks, public ways, sewers, drains, gas, steam and water mains or electric light and power, or telephone and telegraph conduits, poles, wires and cables) which do not materially impair the use of the affected land for the purpose for which it is being used;

(xi) any right reserved to or vested in any municipality or governmental or other public authority by the terms of any lease, licence, franchise, grant or permit acquired by that person or by any statutory provision to terminate any lease, licence, franchise, grant or permit, or to require annual or other payments as a condition for the continuance thereof;

(xii) security given to a public utility or any municipality or governmental authority when required by such utility or authority in connection with the operations of that person in the ordinary course of business;
(xiii) security for costs of litigation where required by law; and
(xiv) attachments, judgements and other similar encumbrances arising in connection with court proceedings; provided that the encumbrances are in existence for less than 30 days after their creation or the execution or other enforcement of the encumbrances is effectively stayed or the claims so secured are being actively contested in good faith and by proper legal proceedings;

(g) "Prime Rate" means, at any time, the rate of interest expressed as an annual rate, established by The Bank of Nova Scotia Agreement from time to time as its reference "interest rate / fee" to determine the interest rates it will charge for loans in Canadian dollars; and

(h) "Prime Rate Advance" means an interest-bearing loan having a term not more than 180 days, for which the principal may be drawndown and upon which interest is calculated daily at the Prime Rate and repayable determined on the bases set out in this Agreement;

2. **<u>The Credit Facilities</u>**

(1) Upon the terms and subject to the conditions herein set forth, the Lender establishes in favour of the Borrower the following credit facility to be available to the Borrower in accordance with the provisions of this Agreement. The facility shall consist of a revolving demand facility of up to a maximum principal amount available within the Bank of Nova Scotia Credit Agreement.

(2) The total amount authorized for this credit facility is $90,000,000.00 CDN.

(3) The Borrower may avail the credit facility by way of direct advances through Prime Rate Advances. Changes in the Prime Rate shall cause an immediate adjustment to the interest rate applicable to an advance without the necessity of notice to the Borrower. The principal amounts of any Prime Rate Advances shall be repayable at any time on demand of the Lender and may be repaid by the Borrower at any time prior to such demand.

(4) The Borrower may avail the credit facility by way of Fixed Term Loans.

(5) The rate of interest on Fixed Term Loans shall be the Banker's Acceptance Fee charged pursuant to The Bank of Nova Scotia Credit Agreement, plus the Bankers Acceptance rate applicable to the date of the Drawdown as evidenced by a Bankers

Acceptance drawn by Hydro Ottawa Holding Inc. on that date, otherwise The Bank of Canada "Bankers Acceptances – 1 Month" rate will be used as posted on that date.

(6) Interest on loans and advances will be calculated on a daily basis and payable in arrears on a mutually agreed date.

(7) The Borrower may increase or decrease advances made by Prime Rate Advances or by Fixed Term Loan by making drawdowns, repayments or further drawdowns of the amount of advances that have been repaid. The Borrower may also convert a Prime Rate Advance to a Fixed Term Loan by notice to the Lender.

(8) On the date of maturity, the Borrower shall repay to the Lender the principal amount of Prime Rate Advances and Fixed Term Loans. The Borrower may request from the Lender and the Lender, in its sole discretion, may grant an extension of the maturity date of any Primary Rate Advances or Fixed Term Loans for a further period not to exceed 180 days.

(9) The Borrower may avail the credit facility by way of Standby Letters of Credit / Letters of Guarantee. The charge will be made pursuant to the Bank of Nova Scotia Credit Agreement "Commission" fee and will be payable upon issuance.

3. **<u>Administrative Fee</u>**

An administrative charge will be added to the rate of interest charged on Prime Rate Advances and Fixed Term Loans, payable to the Lender at the rate of 0.10% per annum.

4. **<u>Commitment Fee and Standby Fees</u>**

The Borrower shall pay a proportionate share of the commitment fee and standby fees payable per the terms of the Bank of Nova Scotia Credit Agreement.

5. **<u>Evidence of Indebtedness</u>**

The Lender shall open and maintain books of account evidencing all advances and all other amounts owing by the Borrower to the Lender hereunder. The information entered in the foregoing accounts shall constitute *prima facie* evidence of the obligations of the Borrower to the Lender and, in the absence of manifest error, are conclusive evidence of the advances made, repayments on account thereof and the indebtedness of the Borrower to the Lender. Upon request of the Borrower, the Lender shall advise the Borrower of entries made on the books of account.

6. **General Conditions**

The following conditions will apply until all debts and liabilities of the Borrower availed under the Credit Facilities have been discharged in full:

(a) The Borrower shall not encumber its assets in any manner other than by Permitted Encumbrances;

(b) The Borrower may not incur, assume or permit any debt to remain outstanding other than debt under this Agreement, other than:

(i) debt incurred from the Lender;

(ii) debt incurred in respect of purchase money security interests;

(iii) capital leases; and

(iv) other debt permitted by the Lender.

(c) The business activities of the Borrower shall be restricted to those permitted pursuant to section 73 of the *Ontario Energy Board Act, 1998*, so long as those restrictions on business activities continue to apply to the Borrower;

(d) The Borrower shall make due and timely payment of the obligations required to be paid by it hereunder;

(e) The Borrower shall provide notice to the Lender of any Event of Default;

(f) The Lender shall be under no obligation to provide a Prime Rate Advance, a Fixed Term Loan, or a Standby Letter of Credit / Letters of Guarantee following an Event of Default.

7. **Events of Default**

(1) The following shall constitute Events of Default for the purposes of this Agreement:

(a) The Borrower encumbering assets other than by Permitted Encumbrances;

(b) The Borrower fails to pay interest, principal or other amounts owing pursuant to this Agreement

(c) The Borrower is in breach of any conditions of this Agreement;

(d) Any actions by the Borrower which cause the Lender to be in default of its obligations under the Bank of Nova Scotia Credit Agreement;

(e) The Borrower is bankrupt, insolvent or liquidation proceedings or any other proceedings for the relief of creditors are instituted by or against the Borrower and are not dismissed within 60 days of such institution.

(2) Upon the occurrence of an Event of Default, at the option of the Lender, all amounts of Principal and Interest shall become immediately due and payable. The occurrence of an Event of Default shall relieve the Lender of all obligations to provide any further advances or loans to the Borrower.

8. **Indemnification**

The Borrower shall indemnify the Lender from any loss or expense incurred by the Lender as a result of any failure by the Borrower to fulfill its obligations under this Agreement, expense any loss or expense arising from the negligence or wilful misconduct of the Lender.

9. **Early Termination**

In the event of any change in control of the Borrower, the Lender may require that the Borrower pay the Principal and Interest payable within 30 days following a change of control of the Borrower. For the purpose of this sub-section control means with respect to the Borrower at any time (i) holding, as owner or other beneficiary – other than solely as beneficiary of an unrealized security interest – directly or indirectly, securities or ownership interests of the Borrower carrying votes or ownership interests sufficient to elect or appoint the majority of individuals who are responsible for the supervision or management of the Borrower, or (ii) the exercise of de facto control of the Borrower, whether direct or indirect and whether through the ownership of securities or ownership interests, by contract, trust or otherwise.

10. **Termination**

Unless otherwise extended by agreement of the parties, this facility shall terminate the date the Bank of Nova Scotia Credit Agreement is no longer in force. Prior to the termination of the facility, the Borrower shall pay to the Lender the Principal outstanding and any Interest payable.

11. **Notice**

Any demand, notice or communication to be made or given pursuant to this Agreement shall be in writing and may be made or given by personal delivery, by mail, by electronic mail addressed to the respective parties as follows:

To the Borrower:
Hydro Ottawa Limited
3025 Albion Road North
Ottawa, Ontario
K1G 3S4
Attention: Treasurer
Telephone: 613-738-5499 ext. 319
Electronic Mail: mikegrue@hydroottawa.com

To the Lender:
Hydro Ottawa Holding Inc.
3025 Albion Road North
Ottawa, Ontario
K1G 3S4
Attention: Treasurer
Telephone: 613-738-5499 ext. 319
Electronic mail: mikegrue@hydroottawa.com

Either party may from time to time notify the other party of any change to its address, telephone number or electronic mail contact.

12. **Successors and Assigns**

This Agreement shall be binding upon and enure to the benefit of the Lender, the Borrower and their successors and assigns, except that the Borrower shall not assign any rights or obligations with respect to this Agreement without the prior written consent of the Lender, which consent may be withheld or refused for any reason. The Lender may assign its rights and obligations with respect to this Agreement upon notice to the Borrower.

13. **Governing Law**

This Agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein.

14. **Severability**

Any provision of this Agreement which is prohibited or unenforceable in any jurisdiction shall not invalidate the remaining provisions hereof and any such prohibition or unenforceability in any jurisdiction shall not invalidate or render unenforceable such provision in any other jurisdiction.

**IN WITNESS WHEREOF** the parties hereto have executed this Agreement.

# GRID PROMISSORY NOTE

Effective the 14th day of May 2013.

As consideration for the funds received, **Hydro Ottawa Limited** (the "Borrower") unconditionally promises to pay to, or the order of, **Hydro Ottawa Holding Inc.** ("the "Lender"), in lawful money of Canada, the principal amount (the "Principal") advanced under this grid promissory note (the "Note) and interest ("Interest") thereon at a rate specified below upon the terms and subject to the conditions set forth below.

This Note is a negotiable instrument.

The following are the terms and conditions of the Note:

## 1. PRINCIPAL

(1) Advances of Principal may be made in tranches to meet **Hydro Ottawa Limited's** long term business requirements.

(2) The liability of the Borrower and of any guarantor of the Borrower ("Guarantor") or endorser in respect of Principal shall not exceed the outstanding amount of Principal.

(3) Advances shall be deemed conclusively to have been made to and for the benefit of the Borrower when,

(a) deposited or credited to the account of the Borrower by the Lender; or

(b) made in accordance with the instructions of the Borrower.

(4) All advances of Principal under this Note shall be evidenced by endorsement upon the grid attached to this Note as Schedule A (the "Grid").

(5) The Lender's Chief Financial Officer, President and Chief Executive Officer and Treasurer are authorized to endorse the Grid, including any continuation Grid that may be attached to this Note, the date and amount of each advance and together with the unpaid balance of the Principal and each endorsement shall be prima facie evidence of the amounts so advanced and the balance of principal outstanding under this Note.

## 2. INTEREST RATE

(1) Interest shall be payable upon the amounts advanced under this Note at a fixed rate of Interest payable monthly in arrears on a mutually agreed date. The rate established for long term debt will be:

a. a "deemed interest rate" which will be based on the underlying methodology outlined in the Ontario Energy Board's "Report of the Board" on the Cost of Capital for Ontario's Regulated Utilities EB-2009-0084 dated December 11, 2009. The rate will be determined from information available at the end of the month preceding the date of the advancement. The rate that is in effect when the advance was made will be used for the duration of the advance as per the Term and Repayment section.

3. **TERMS OF PAYMENT**

The Interest payable hereunder shall be calculated and payable monthly in arrears on the first day of each month, both before and after demand, default and judgment. **Hydro Ottawa Limited** shall pay to **Hydro Ottawa Holding Inc.**, on demand, Interest on overdue Interest at the rate described in section 2 hereof compounded on each date for the payment of Interest on this Note before and after judgment.

4. **REPAYMENT**

(1) **Hydro Ottawa Limited** may, at any time, repay in whole or in part the Principal and Interest outstanding under this Note.

(2) **Hydro Ottawa Holding Inc.** may, at any time, require that **Hydro Ottawa Limited** repay in whole or in part the Principal and Interest outstanding under this Note.

5. **SUBORDINATION**

The obligation of **Hydro Ottawa Limited** to pay the Principal amount or the amount remaining unpaid from time to time on this Note, together with Interest thereon in accordance with and pursuant to this Note is subordinated and postponed to the obligations of **Hydro Ottawa Limited** to a third party for the payment in full of any secured indebtedness and all security interests granted to secure such obligations of **Hydro Ottawa Limited.**

6. **WAIVER OF NOTICE IN EVENT OF DEFAULT**

**Hydro Ottawa Limited** hereby waives presentment, protest and notice of any kind in the enforcement of this Note. **Hydro Ottawa Limited** further agrees to pay all costs of collection, including legal fees on a solicitor and client basis, in case the Principal amount on the amount remaining unpaid from time to time on this Note, or any payment of Interest thereon, is not made when due.

7. **RIGHTS AND REMEDIES IN EVENT OF DEFAULT**

The rights and remedies of **Hydro Ottawa Holding Inc.** under this Note which it may have at law or in equity against **Hydro Ottawa Limited** shall be distinct, separate and cumulative, and shall not be deemed inconsistent with one another, and none of the said rights, whether or not exercised by **Hydro Ottawa Holding Inc.**, shall be deemed to be to the exclusion of any other, and any one or more of said rights and remedies may be exercised at the same time. The obligations of **Hydro Ottawa Limited** under this Note shall continue until the entire debt evidenced hereby is paid, notwithstanding any court action or actions taken by **Hydro Ottawa Holding Inc.** which may be brought to recover any amounts due and payable under this Note. No delay or failure by **Hydro Ottawa Holding Inc.** in the enforcement of any covenant, promise or agreement of **Hydro**

**Ottawa Limited** hereunder shall constitute or be deemed to constitute a waiver of such right. Any waivers of **Hydro Ottawa Holding Inc.** shall only occur and be valid when set forth in writing by **Hydro Ottawa Holding Inc.** No waiver of any event of default shall discharge or release any person at any time liable for the payment of this Note from such liability. No single or partial exercise of any of **Hydro Ottawa Holding Inc.**'s powers hereunder shall preclude other and further exercise thereof or the exercise of any other power.

8. **ASSIGNMENT**

This Note may not be assigned **by Hydro Ottawa Limited** without the written consent of **Hydro Ottawa Holding Inc.**

9. **GOVERNING LAW**

This Note shall be governed by the laws of the Province of Ontario and the laws of Canada applicable therein.

10. **CANCELLATION OF PREVIOUS NOTE**

This Note replaces the Note dated January 1, 2009 made between **Hydro Ottawa Limited** and **Hydro Ottawa Holding Inc.**

**IN WITNESS WHEREOF Hydro Ottawa Limited** has duly executed this Grid Promissory Note.

# PROMISSORY NOTE

| Principal: $50,000,000<br>lawful money of Canada | Effective May 14th, 2013 |
| --- | --- |

For value received, **Hydro Ottawa Limited**, hereby unconditionally promises to pay to the order of **Hydro Ottawa Holding Inc.** at Ottawa, Canada on December 19, 2036 (the "Due Date") the principal amount of fifty million dollars ($50,000,000) (the "Principal Amount") in lawful money of Canada and interest thereon upon the terms and subject to the conditions set forth below.

## 1. INTEREST RATE

The rate of interest payable on the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note shall be 4.968% per annum.

## 2. TERMS OF PAYMENT

The interest payable hereunder shall be calculated and payable monthly in arrears on the first day of each month, both before and after demand, default and judgment. **Hydro Ottawa Limited** shall pay to **Hydro Ottawa Holding Inc.**, on demand, interest on overdue interest at the rate described in section 1 hereof compounded on each date for the payment of interest on this Promissory Note before and after judgment.

## 3. REPAYMENT

(1) Subject to the terms and conditions set out in sub-section 3 (4) herein, **Hydro Ottawa Limited** may, at any time, repay in whole or in part the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note and interest owing under this Promissory Note.

(2) **Hydro Ottawa Holding Inc.** may require that **Hydro Ottawa Limited** repay the Principal Amount and interest payable within 30 days following a change of control of **Hydro Ottawa Limited**. For the purpose of this sub-section control means with respect to **Hydro Ottawa Limited** at any time:

a. holding, as owner or other beneficiary, other than solely as beneficiary of an unrealized security interest, directly or indirectly, securities or ownership interests of **Hydro Ottawa Limited** carrying votes or ownership interests sufficient to elect or appoint the majority of individuals who are responsible for the supervision or management of **Hydro Ottawa Limited**, or

b. the exercise of de facto control of **Hydro Ottawa Limited**, whether direct or indirect and whether through the ownership of securities or ownership interests, by contract, trust or otherwise.

**Hydro Ottawa Holding Inc.** shall provide **Hydro Ottawa Limited** with no less than twenty (20) days' prior notice of the requirement to repay Principal and interest.

The amount to be repaid in respect of the Principal Amount and accrued and unpaid interest shall be determined in accordance with sub-section 3 (4) herein.

(3) **Hydro Ottawa Holding Inc.** may require that **Hydro Ottawa Limited** repay the Principal Amount and interest payable in the event that **Hydro Ottawa Limited:**

a. disposes of substantially all of its property or assets;

b. fails to pay any principal, premium or interest on an indebtedness however incurred beyond any period of grace applicable to such indebtedness, where the amount of the indebtedness is $25 million or greater;

c. fails to perform or observe an agreement, term or condition contained in any agreement under which an indebtedness in the amount of $25 million or greater becomes due and payable; or

d. for any other reason causes the whole or any part of the Principal Amount to be repayable to **Hydro Ottawa Holding Inc.** in advance of the Due Date;

The amount to be repaid in respect of the Principal Amount and accrued and unpaid interest shall be determined in accordance with sub-section 3 (4) herein.

(4) In the event that **Hydro Ottawa Limited** chooses to repay or is required to repay in whole or in part the Principal Amount remaining unpaid and accrued and unpaid interest in accordance with sub-sections 3 (1), (2) or (3) herein, **Hydro Ottawa Limited** shall:

a. Provide, where such repayment is initiated at the request of **Hydro Ottawa Limited,** at least fifty (50) days' prior notice in writing to **Hydro Ottawa Holding Inc.** setting out the proposed amount of the Principal Amount and accrued and unpaid interest that it proposes to pay and the date of such payment;

b. Pay to **Hydro Ottawa Holding Inc.** in respect of the Principal Amount and accrued and unpaid interest to be paid, an amount calculated and determined by **Hydro Ottawa Holding Inc.** in the same manner and subject to the same conditions (subject to any necessary changes) as the

Redemption Price respecting an equivalent payment of principal as is set out in the Series 2006 – 1 Supplemental Indenture dated as of December 20, 2006 between Hydro Ottawa Holding Inc. and BNY Trust Company of Canada;

c. Indemnify **Hydro Ottawa Holding Inc.**, in addition to the amount calculated and determined pursuant to sub-section 3 (4)(b) herein, for any damages, losses, liabilities, claims, demands, interest, charges, fines, penalties, assessments, judgments, costs and expenses suffered or asserted directly or indirectly arising from any payment made pursuant to sub-section 3 (1), (2) or (3) herein or any delay in providing such payment.

## 4. SUBORDINATION

The obligation of **Hydro Ottawa Limited** to pay the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note, together with interest thereon in accordance with and pursuant to this Promissory Note is subordinated and postponed to the obligations of **Hydro Ottawa Limited** to a third party for the payment in full of any secured indebtedness and all security interests granted to secure such obligations of **Hydro Ottawa Limited.**

## 5. WAIVER OF NOTICE IN EVENT OF DEFAULT

**Hydro Ottawa Limited** hereby waives presentment, protest and notice of any kind in the enforcement of this Promissory Note. **Hydro Ottawa Limited** further agrees to pay all costs of collection, including legal fees on a solicitor and client basis, in case the Principal Amount, or the amount remaining unpaid from time to time on this Promissory Note, or any payment of interest thereon is not made when due.

## 6. RIGHTS AND REMEDIES IN EVENT OF DEFAULT

The rights and remedies of **Hydro Ottawa Holding Inc**. under this Promissory Note which it may have at law or in equity against **Hydro Ottawa Limited** shall be distinct, separate and cumulative, and shall not be deemed inconsistent with one another, and none of the said rights, whether or not exercised by **Hydro Ottawa Holding Inc.**, shall be deemed to be to the exclusion of any other, and any one or more of said rights and remedies may be exercised at the same time. The obligations of **Hydro Ottawa Limited** under this Promissory Note shall continue until the entire debt evidenced hereby is paid, notwithstanding any court action or actions taken by **Hydro Ottawa Holding Inc**. which may be brought to recover any amounts due and payable under this Promissory Note. No delay or failure by **Hydro Ottawa Holding Inc**. in the enforcement of any covenant, promise or agreement of **Hydro Ottawa Limited** hereunder shall constitute or be deemed to constitute a waiver of such right. Any waivers of **Hydro Ottawa Holding Inc.** shall only occur and be valid when set forth in writing by **Hydro Ottawa Holding Inc.** No waiver of any event of default shall discharge or release any person at any time liable for the payment of this

Promissory Note from such liability. No single or partial exercise of any of **Hydro Ottawa Holding Inc.'s** powers hereunder shall preclude other and further exercise thereof or the exercise of any other power.

7. **ASSIGNMENT**

This Promissory Note may not be assigned by **Hydro Ottawa Limited** without the written consent of **Hydro Ottawa Holding Inc.**

8. **GOVERNING LAW**

This Promissory Note shall be governed by the laws of the Province of Ontario and the laws of Canada applicable therein.

9. **CANCELLATION OF PREVIOUS NOTE**

This interest bearing Promissory Note in the amount of fifty million dollars ($50,000,000) replaces the Demand Promissory Note dated **December 20, 2006** in the amount of fifty million dollars ($50,000,000) made between **Hydro Ottawa Limited** and **Hydro Ottawa Holding Inc.**

**IN WITNESS WHEREOF Hydro Ottawa Limited** has duly executed this Promissory Note.

# PROMISSORY NOTE

| | |
|---|---|
| Principal: $107,185,000<br>lawful money of Canada | Effective May 14th, 2013 |

For value received, **Hydro Ottawa Limited** hereby unconditionally promises to pay to the order of **Hydro Ottawa Holding Inc.** at Ottawa, Canada on May 14, 2043 (the "Due Date") the principal amount of one hundred seven million one hundred eighty five thousand dollars ($107,185,000) (the "Principal Amount") in lawful money of Canada and interest thereon upon the terms and subject to the conditions set forth below.

## 1. INTEREST RATE

The rate of interest payable on the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note shall be 4.144% per annum from May 14, 2013 to May 13, 2018 (the first five years). Subsequently, the rate of interest payable on the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note shall be 3.991% per annum from May 14, 2018 to May 13, 2043.

## 2. TERMS OF PAYMENT

The interest payable hereunder shall be calculated and payable monthly in arrears on the first day of each month, both before and after demand, default and judgment. **Hydro Ottawa Limited** shall pay to **Hydro Ottawa Holding Inc.**, on demand, interest on overdue interest at the rate described in section 1 hereof compounded on each date for the payment of interest on this Promissory Note before and after judgment.

## 3. REPAYMENT

(1) Subject to the terms and conditions set out in sub-section 3 (4) herein, **Hydro Ottawa Limited** may, at any time, repay in whole or in part the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note and interest owing under this Promissory Note.

(2) **Hydro Ottawa Holding Inc.** may require that **Hydro Ottawa Limited** repay the Principal Amount and interest payable within 30 days following a change of control of **Hydro Ottawa Limited**. For the purpose of this sub-section control means with respect to **Hydro Ottawa Limited** at any time:

a. holding, as owner or other beneficiary, other than solely as beneficiary of an unrealized security interest, directly or indirectly, securities or ownership interests of **Hydro Ottawa Limited** carrying votes or ownership interests

sufficient to elect or appoint the majority of individuals who are responsible for the supervision or management of **Hydro Ottawa Limited**, or

b. the exercise of de facto control of **Hydro Ottawa Limited**, whether direct or indirect and whether through the ownership of securities or ownership interests, by contract, trust or otherwise.

**Hydro Ottawa Holding Inc.** shall provide **Hydro Ottawa Limited** with no less than twenty (20) days' prior notice of the requirement to repay Principal and interest.

The amount to be repaid in respect of the Principal Amount and accrued and unpaid interest shall be determined in accordance with sub-section 3 (4) herein.

(3) **Hydro Ottawa Holding Inc.** may require that **Hydro Ottawa Limited** repay the Principal Amount and interest payable in the event that **Hydro Ottawa Limited:**

a. disposes of substantially all of its property or assets;

b. fails to pay any principal, premium or interest on an indebtedness however incurred beyond any period of grace applicable to such indebtedness, where the amount of the indebtedness is $25 million or greater;

c. fails to perform or observe an agreement, term or condition contained in any agreement under which an indebtedness in the amount of $25 million or greater becomes due and payable; or

d. for any other reason causes the whole or any part of the Principal Amount to be repayable to **Hydro Ottawa Holding Inc.** in advance of the Due Date;

The amount to be repaid in respect of the Principal Amount and accrued and unpaid interest shall be determined in accordance with sub-section 3 (4) herein.

(4) In the event that **Hydro Ottawa Limited** chooses to repay or is required to repay in whole or in part the Principal Amount remaining unpaid and accrued and unpaid interest in accordance with sub-sections 3 (1), (2) or (3) herein, **Hydro Ottawa Limited** shall:

a. Provide, where such repayment is initiated at the request of **Hydro Ottawa Limited,** at least fifty (50) days' prior notice in writing to **Hydro Ottawa Holding Inc.** setting out the proposed amount of the Principal Amount and accrued and unpaid interest that it proposes to pay and the date of such payment;

b. Pay to **Hydro Ottawa Holding Inc.** in respect of the Principal Amount and accrued and unpaid interest to be paid, an amount calculated and determined

by **Hydro Ottawa Holding Inc.** in the same manner and subject to the same conditions (subject to any necessary changes) as the Redemption Price respecting an equivalent payment of principal as is set out in the Series 2013 – 1 Supplemental Indenture dated as of May 14, 2013 between Hydro Ottawa Holding Inc. and BNY Trust Company of Canada;

c. Indemnify **Hydro Ottawa Holding Inc.**, in addition to the amount calculated and determined pursuant to sub-section 3 (4)(b) herein, for any damages, losses, liabilities, claims, demands, interest, charges, fines, penalties, assessments, judgments, costs and expenses suffered or asserted directly or indirectly arising from any payment made pursuant to sub-section 3 (1), (2) or (3) herein or any delay in providing such payment.

## 4. SUBORDINATION

The obligation of **Hydro Ottawa Limited** to pay the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note, together with interest thereon in accordance with and pursuant to this Promissory Note is subordinated and postponed to the obligations of **Hydro Ottawa Limited** to a third party for the payment in full of any secured indebtedness and all security interests granted to secure such obligations of **Hydro Ottawa Limited.**

## 5. WAIVER OF NOTICE IN EVENT OF DEFAULT

**Hydro Ottawa Limited** hereby waives presentment, protest and notice of any kind in the enforcement of this Promissory Note. **Hydro Ottawa Limited** further agrees to pay all costs of collection, including legal fees on a solicitor and client basis, in case the Principal Amount, or the amount remaining unpaid from time to time on this Promissory Note, or any payment of interest thereon is not made when due.

## 6. RIGHTS AND REMEDIES IN EVENT OF DEFAULT

The rights and remedies of **Hydro Ottawa Holding Inc**. under this Promissory Note which it may have at law or in equity against **Hydro Ottawa Limited** shall be distinct, separate and cumulative, and shall not be deemed inconsistent with one another, and none of the said rights, whether or not exercised by **Hydro Ottawa Holding Inc**., shall be deemed to be to the exclusion of any other, and any one or more of said rights and remedies may be exercised at the same time. The obligations of **Hydro Ottawa Limited** under this Promissory Note shall continue until the entire debt evidenced hereby is paid, notwithstanding any court action or actions taken by **Hydro Ottawa Holding Inc**. which may be brought to recover any amounts due and payable under this Promissory Note. No delay or failure by **Hydro Ottawa Holding Inc**. in the enforcement of any covenant, promise or agreement of **Hydro Ottawa Limited** hereunder shall constitute or be deemed to constitute a waiver of such right. Any waivers of **Hydro Ottawa Holding Inc.** shall only occur and be valid when set forth in writing by **Hydro Ottawa Holding Inc.** No waiver of any event of default shall

discharge or release any person at any time liable for the payment of this Promissory Note from such liability. No single or partial exercise of any of **Hydro Ottawa Holding Inc.'s** powers hereunder shall preclude other and further exercise thereof or the exercise of any other power.

7. **ASSIGNMENT**

This Promissory Note may not be assigned by **Hydro Ottawa Limited** without the written consent of **Hydro Ottawa Holding Inc.**

8. **GOVERNING LAW**

This Promissory Note shall be governed by the laws of the Province of Ontario and the laws of Canada applicable therein.

9. **CANCELLATION OF PREVIOUS NOTE**

This interest bearing Promissory Note in the amount of one hundred seven million, one hundred eighty five thousand dollars ($107,185,000) replaces the Demand Promissory Note dated **July 1, 2005** in the amount of thirty two million, one hundred eighty five thousand dollars ($32,185,000) made between **Hydro Ottawa Limited** and **Hydro Ottawa Holding Inc**. and the Grid Promissory Note dated **January 1, 2009** in the amount of seventy five million dollars ($75,000,000) made between **Hydro Ottawa Limited** and **Hydro Ottawa Holding Inc.**

# PROMISSORY NOTE

| Principal: \$138,667,000<br>lawful money of Canada | Effective February 9th, 2015 |
|---|---|

For value received, **Hydro Ottawa Limited** hereby unconditionally promises to pay to the order of **Hydro Ottawa Holding Inc.** at Ottawa, Canada on February 3, 2025 (the "Due Date") the principal amount of one hundred thirty eight million, six hundred sixty seven thousand dollars (\$138,667,000) (the "Principal Amount") in lawful money of Canada and interest thereon upon the terms and subject to the conditions set forth below.

## 1. INTEREST RATE

The rate of interest payable on the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note shall be 2.724% per annum from February 9, 2015 to February 3, 2020 (the first five years). Subsequently, the rate of interest payable on the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note shall be 2.614% per annum from February 4, 2020 to February 3, 2025.

## 2. TERMS OF PAYMENT

The interest payable hereunder shall be calculated and payable monthly in arrears on the first day of each month, both before and after demand, default and judgment. **Hydro Ottawa Limited** shall pay to **Hydro Ottawa Holding Inc.**, on demand, interest on overdue interest at the rate described in section 1 hereof compounded on each date for the payment of interest on this Promissory Note before and after judgment.

## 3. REPAYMENT

(1) Subject to the terms and conditions set out in sub-section 3 (4) herein, **Hydro Ottawa Limited** may, at any time, repay in whole or in part the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note and interest owing under this Promissory Note.

(2) **Hydro Ottawa Holding Inc.** may require that **Hydro Ottawa Limited** repay the Principal Amount and interest payable within 30 days following a change of control of **Hydro Ottawa Limited**. For the purpose of this sub-section control means with respect to **Hydro Ottawa Limited** at any time:

a. holding, as owner or other beneficiary, other than solely as beneficiary of an unrealized security interest, directly or indirectly, securities or ownership interests of **Hydro Ottawa Limited** carrying votes or ownership interests

sufficient to elect or appoint the majority of individuals who are responsible for the supervision or management of **Hydro Ottawa Limited**, or

b. the exercise of de facto control of **Hydro Ottawa Limited**, whether direct or indirect and whether through the ownership of securities or ownership interests, by contract, trust or otherwise.

**Hydro Ottawa Holding Inc.** shall provide **Hydro Ottawa Limited** with no less than twenty (20) days' prior notice of the requirement to repay Principal and interest.

The amount to be repaid in respect of the Principal Amount and accrued and unpaid interest shall be determined in accordance with sub-section 3 (4) herein.

(3) **Hydro Ottawa Holding Inc.** may require that **Hydro Ottawa Limited** repay the Principal Amount and interest payable in the event that **Hydro Ottawa Limited:**

a. disposes of substantially all of its property or assets;

b. fails to pay any principal, premium or interest on an indebtedness however incurred beyond any period of grace applicable to such indebtedness, where the amount of the indebtedness is $25 million or greater;

c. fails to perform or observe an agreement, term or condition contained in any agreement under which an indebtedness in the amount of $25 million or greater becomes due and payable; or

d. for any other reason causes the whole or any part of the Principal Amount to be repayable to **Hydro Ottawa Holding Inc.** in advance of the Due Date;

The amount to be repaid in respect of the Principal Amount and accrued and unpaid interest shall be determined in accordance with sub-section 3 (4) herein.

(4) In the event that **Hydro Ottawa Limited** chooses to repay or is required to repay in whole or in part the Principal Amount remaining unpaid and accrued and unpaid interest in accordance with sub-sections 3 (1), (2) or (3) herein, **Hydro Ottawa Limited** shall:

a. Provide, where such repayment is initiated at the request of **Hydro Ottawa Limited,** at least fifty (50) days' prior notice in writing to **Hydro Ottawa Holding Inc.** setting out the proposed amount of the Principal Amount and accrued and unpaid interest that it proposes to pay and the date of such payment;

b. Pay to **Hydro Ottawa Holding Inc.** in respect of the Principal Amount and accrued and unpaid interest to be paid, an amount calculated and determined

by **Hydro Ottawa Holding Inc.** in the same manner and subject to the same conditions (subject to any necessary changes) as the Redemption Price respecting an equivalent payment of principal as is set out in the Series 2015 – 1 Supplemental Indenture dated as of February 2, 2015 between Hydro Ottawa Holding Inc. and BNY Trust Company of Canada;

c. Indemnify **Hydro Ottawa Holding Inc.**, in addition to the amount calculated and determined pursuant to sub-section 3 (4)(b) herein, for any damages, losses, liabilities, claims, demands, interest, charges, fines, penalties, assessments, judgments, costs and expenses suffered or asserted directly or indirectly arising from any payment made pursuant to sub-section 3 (1), (2) or (3) herein or any delay in providing such payment.

4. **<u>SUBORDINATION</u>**

The obligation of **Hydro Ottawa Limited** to pay the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note, together with interest thereon in accordance with and pursuant to this Promissory Note is subordinated and postponed to the obligations of **Hydro Ottawa Limited** to a third party for the payment in full of any secured indebtedness and all security interests granted to secure such obligations of **Hydro Ottawa Limited.**

5. **<u>WAIVER OF NOTICE IN EVENT OF DEFAULT</u>**

**Hydro Ottawa Limited** hereby waives presentment, protest and notice of any kind in the enforcement of this Promissory Note. **Hydro Ottawa Limited** further agrees to pay all costs of collection, including legal fees on a solicitor and client basis, in case the Principal Amount, or the amount remaining unpaid from time to time on this Promissory Note, or any payment of interest thereon is not made when due.

6. **<u>RIGHTS AND REMEDIES IN EVENT OF DEFAULT</u>**

The rights and remedies of **Hydro Ottawa Holding Inc**. under this Promissory Note which it may have at law or in equity against **Hydro Ottawa Limited** shall be distinct, separate and cumulative, and shall not be deemed inconsistent with one another, and none of the said rights, whether or not exercised by **Hydro Ottawa Holding Inc**., shall be deemed to be to the exclusion of any other, and any one or more of said rights and remedies may be exercised at the same time. The obligations of **Hydro Ottawa Limited** under this Promissory Note shall continue until the entire debt evidenced hereby is paid, notwithstanding any court action or actions taken by **Hydro Ottawa Holding Inc**. which may be brought to recover any amounts due and payable under this Promissory Note. No delay or failure by **Hydro Ottawa Holding Inc**. in the enforcement of any covenant, promise or agreement of **Hydro Ottawa Limited** hereunder shall constitute or be deemed to constitute a waiver of such right. Any waivers of **Hydro Ottawa Holding Inc.** shall only occur and be valid when set forth in writing by **Hydro Ottawa Holding Inc.** No waiver of any event of default shall

discharge or release any person at any time liable for the payment of this Promissory Note from such liability. No single or partial exercise of any of **Hydro Ottawa Holding Inc.'s** powers hereunder shall preclude other and further exercise thereof or the exercise of any other power.

7. **ASSIGNMENT**

This Promissory Note may not be assigned by **Hydro Ottawa Limited** without the written consent of **Hydro Ottawa Holding Inc.**

8. **GOVERNING LAW**

This Promissory Note shall be governed by the laws of the Province of Ontario and the laws of Canada applicable therein.

9. **CANCELLATION OF PREVIOUS NOTE**

This interest bearing Promissory Note in the amount of one hundred thirty eight million, six hundred sixty seven thousand dollars ($138,667,000) replaces 53.33% of the Promissory Note dated **May 14, 2013** in the amount of two hundred million dollars ($200,000,000) made between **Hydro Ottawa Limited** and **Hydro Ottawa Holding Inc**. which matured February 9, 2015, and 53.33% of the $60,000,000 outstanding as of February 9, 2015 on the Grid Promissory Note dated **May 14, 2013** made between **Hydro Ottawa Limited** and **Hydro Ottawa Holding Inc**.

**IN WITNESS WHEREOF Hydro Ottawa Limited** has duly executed this Promissory Note.

|---|---|
| Principal: $121,333,000<br>lawful money of Canada | Effective February 9th, 2015 |

For value received, **Hydro Ottawa Limited** hereby unconditionally promises to pay to the order of **Hydro Ottawa Holding Inc.** at Ottawa, Canada on February 2, 2045 (the "Due Date") the principal amount of one hundred twenty one million, three hundred thirty three thousand dollars ($121,333,000) (the "Principal Amount") in lawful money of Canada and interest thereon upon the terms and subject to the conditions set forth below.

## 1. INTEREST RATE

The rate of interest payable on the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note shall be 3.769% per annum from February 9, 2015 to February 2, 2020 (the first five years). Subsequently, the rate of interest payable on the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note shall be 3.639% per annum from February 3, 2020 to February 2, 2045.

## 2. TERMS OF PAYMENT

The interest payable hereunder shall be calculated and payable monthly in arrears on the first day of each month, both before and after demand, default and judgment. **Hydro Ottawa Limited** shall pay to **Hydro Ottawa Holding Inc.**, on demand, interest on overdue interest at the rate described in section 1 hereof compounded on each date for the payment of interest on this Promissory Note before and after judgment.

## 3. REPAYMENT

(1) Subject to the terms and conditions set out in sub-section 3 (4) herein, **Hydro Ottawa Limited** may, at any time, repay in whole or in part the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note and interest owing under this Promissory Note.

(2) **Hydro Ottawa Holding Inc.** may require that **Hydro Ottawa Limited** repay the Principal Amount and interest payable within 30 days following a change of control of **Hydro Ottawa Limited**. For the purpose of this sub-section control means with respect to **Hydro Ottawa Limited** at any time:

a. holding, as owner or other beneficiary, other than solely as beneficiary of an unrealized security interest, directly or indirectly, securities or ownership interests of **Hydro Ottawa Limited** carrying votes or ownership interests

sufficient to elect or appoint the majority of individuals who are responsible for the supervision or management of **Hydro Ottawa Limited**, or

b. the exercise of de facto control of **Hydro Ottawa Limited**, whether direct or indirect and whether through the ownership of securities or ownership interests, by contract, trust or otherwise.

**Hydro Ottawa Holding Inc.** shall provide **Hydro Ottawa Limited** with no less than twenty (20) days' prior notice of the requirement to repay Principal and interest.

The amount to be repaid in respect of the Principal Amount and accrued and unpaid interest shall be determined in accordance with sub-section 3 (4) herein.

(3) **Hydro Ottawa Holding Inc.** may require that **Hydro Ottawa Limited** repay the Principal Amount and interest payable in the event that **Hydro Ottawa Limited:**

a. disposes of substantially all of its property or assets;

b. fails to pay any principal, premium or interest on an indebtedness however incurred beyond any period of grace applicable to such indebtedness, where the amount of the indebtedness is $25 million or greater;

c. fails to perform or observe an agreement, term or condition contained in any agreement under which an indebtedness in the amount of $25 million or greater becomes due and payable; or

d. for any other reason causes the whole or any part of the Principal Amount to be repayable to **Hydro Ottawa Holding Inc.** in advance of the Due Date;

The amount to be repaid in respect of the Principal Amount and accrued and unpaid interest shall be determined in accordance with sub-section 3 (4) herein.

(4) In the event that **Hydro Ottawa Limited** chooses to repay or is required to repay in whole or in part the Principal Amount remaining unpaid and accrued and unpaid interest in accordance with sub-sections 3 (1), (2) or (3) herein, **Hydro Ottawa Limited** shall:

a. Provide, where such repayment is initiated at the request of **Hydro Ottawa Limited,** at least fifty (50) days' prior notice in writing to **Hydro Ottawa Holding Inc.** setting out the proposed amount of the Principal Amount and accrued and unpaid interest that it proposes to pay and the date of such payment;

b. Pay to **Hydro Ottawa Holding Inc.** in respect of the Principal Amount and accrued and unpaid interest to be paid, an amount calculated and determined

by **Hydro Ottawa Holding Inc.** in the same manner and subject to the same conditions (subject to any necessary changes) as the Redemption Price respecting an equivalent payment of principal as is set out in the Series 2015 – 2 Supplemental Indenture dated as of February 2, 2015 between Hydro Ottawa Holding Inc. and BNY Trust Company of Canada;

c. Indemnify **Hydro Ottawa Holding Inc.**, in addition to the amount calculated and determined pursuant to sub-section 3 (4)(b) herein, for any damages, losses, liabilities, claims, demands, interest, charges, fines, penalties, assessments, judgments, costs and expenses suffered or asserted directly or indirectly arising from any payment made pursuant to sub-section 3 (1), (2) or (3) herein or any delay in providing such payment.

4. **SUBORDINATION**

The obligation of **Hydro Ottawa Limited** to pay the Principal Amount or the amount remaining unpaid from time to time on this Promissory Note, together with interest thereon in accordance with and pursuant to this Promissory Note is subordinated and postponed to the obligations of **Hydro Ottawa Limited** to a third party for the payment in full of any secured indebtedness and all security interests granted to secure such obligations of **Hydro Ottawa Limited.**

5. **WAIVER OF NOTICE IN EVENT OF DEFAULT**

**Hydro Ottawa Limited** hereby waives presentment, protest and notice of any kind in the enforcement of this Promissory Note. **Hydro Ottawa Limited** further agrees to pay all costs of collection, including legal fees on a solicitor and client basis, in case the Principal Amount, or the amount remaining unpaid from time to time on this Promissory Note, or any payment of interest thereon is not made when due.

6. **RIGHTS AND REMEDIES IN EVENT OF DEFAULT**

The rights and remedies of **Hydro Ottawa Holding Inc**. under this Promissory Note which it may have at law or in equity against **Hydro Ottawa Limited** shall be distinct, separate and cumulative, and shall not be deemed inconsistent with one another, and none of the said rights, whether or not exercised by **Hydro Ottawa Holding Inc.**, shall be deemed to be to the exclusion of any other, and any one or more of said rights and remedies may be exercised at the same time. The obligations of **Hydro Ottawa Limited** under this Promissory Note shall continue until the entire debt evidenced hereby is paid, notwithstanding any court action or actions taken by **Hydro Ottawa Holding Inc**. which may be brought to recover any amounts due and payable under this Promissory Note. No delay or failure by **Hydro Ottawa Holding Inc**. in the enforcement of any covenant, promise or agreement of **Hydro Ottawa Limited** hereunder shall constitute or be deemed to constitute a waiver of such right. Any waivers of **Hydro Ottawa Holding Inc.** shall only occur and be valid when set forth in writing by **Hydro Ottawa Holding Inc.** No waiver of any event of default shall

discharge or release any person at any time liable for the payment of this Promissory Note from such liability. No single or partial exercise of any of **Hydro Ottawa Holding Inc.'s** powers hereunder shall preclude other and further exercise thereof or the exercise of any other power.

7. **ASSIGNMENT**

This Promissory Note may not be assigned by **Hydro Ottawa Limited** without the written consent of **Hydro Ottawa Holding Inc.**

8. **GOVERNING LAW**

This Promissory Note shall be governed by the laws of the Province of Ontario and the laws of Canada applicable therein.

9. **CANCELLATION OF PREVIOUS NOTE**

This interest bearing Promissory Note in the amount of one hundred twenty one million, three hundred thirty three thousand dollars ($121,333,000) replaces 46.67% of the Promissory Note dated **May 14, 2013** in the amount of two hundred million dollars ($200,000,000) made between **Hydro Ottawa Limited** and **Hydro Ottawa Holding Inc**. which matured February 9, 2015, and 46.67% of the $60,000,000 outstanding as of February 9, 2015 on the Grid Promissory Note dated **May 14, 2013** made between **Hydro Ottawa Limited** and **Hydro Ottawa Holding Inc**.

**IN WITNESS WHEREOF Hydro Ottawa Limited** has duly executed this Promissory Note.

# CALCULATION OF REVENUE DEFICIENCY OR SUFFICIENCY

## 1.0 INTRODUCTION

This Exhibit provides a summary of the revenue required by Hydro Ottawa Limited ("Hydro Ottawa") in 2016 through 2020 in order to continue delivering electricity safely and reliably. Hydro Ottawa's total Service Revenue Requirement is offset by revenues obtained by sources other than distribution rates, i.e. other revenue. The calculation of the revenue deficiency/sufficiency does not include the recovery of Deferral and Variance Accounts (Exhibit I-8-1) or Low Voltage Charges (Exhibit H-8-1). As directed in the Chapter 2 of the *Filing Requirements for Transmission and Distribution Applications,* costs and revenues related to the cost of power are kept separate from the determination of the distribution revenue sufficiency/deficiency.

The revenue deficiency/sufficiency for 2016 through 2020 was calculated using the following inputs:

- 2015 approved rates,
- 2016 through 2020 load forecast and forecast of customers and connections, as developed using the methodology described in Exhibit C-1-1, and
- The 2016 through 2020 base revenue requirement calculated as shown in Table 1 below (more details for each year can be found in the Revenue Requirement WorkForms attached to this Exhibit).

The revenue deficiency/sufficiency was then determined by calculating what the revenue would have been with 2015 rates and the forecasted 2016 through 2020 load and customer numbers. As a result, revenue deficiency in Table 1 and the Revenue Requirement WorkForms produce a cumulative revenue requirement rather than a year over year revenue requirement. Hydro Ottawa compiled the analysis in this matter as the 2015 rates give a stable base to compare each year. In Table 1 a year over year revenue deficiency has also been provided.

**Table 1 – Revenue Sufficiency/Deficiency**

| | $000 | $000 | $000 | $000 | $000 |
|---|---|---|---|---|---|
| | 2016 | 2017 | 2018 | 2019 | 2020 |
| Return on Rate Base | 54,379 | 58,359 | 62,148 | 64,531 | 67,573 |
| Distribution Expenses (not including amortization) | 87,106 | 89,932 | 92,850 | 95,863 | 98,974 |
| Amortization | 40,826 | 44,145 | 47,047 | 48,949 | 50,295 |
| Payment in Lieu of Taxes | 4,958 | 4,799 | 6,074 | 8,473 | 7,587 |
| Service Revenue Requirement | 187,269 | 197,235 | 208,120 | 217,816 | 224,430 |
| Less Revenue Offsets | 11,700 | 11,565 | 11,722 | 11,802 | 11,898 |
| 2012 Base Revenue Requirement | 175,570 | 185,670 | 196,398 | 206,014 | 212,532 |
| Transformer Ownership Allowance | 1,125 | 1,114 | 1,109 | 1,106 | 1,105 |
| Revenue Requirement from Rates | 176,694 | 186,784 | 197,507 | 207,120 | 213,637 |
| Forecasted Load at 2015 Rates | 159,358 | 158,984 | 159,419 | 159,975 | 160,461 |
| **Cumulative Revenue Deficiency (over 2015)** | **(17,337)** | **(27,800)** | **(38,088)** | **(47,146)** | **(53,176)** |
| **Yearly Revenue Deficiency over 2015** | **(17,337)** | **(10,464)** | **(10,288)** | **(9,057)** | **(6,030)** |

Table 2 provides Revenue Deficiency based on previous Test Year rates against the current Test Years load forecast.

**Table 2 – Revenue Sufficiency/Deficiency using prior Test Year's Rates**

| | $000 | $000 | $000 | $000 | $000 |
|---|---|---|---|---|---|
| | 2016 | 2017 | 2018 | 2019 | 2020 |
| Total Revenue Requirement from Rates | 176,694 | 186,784 | 197,507 | 207,120 | 213,637 |
| Forecasted Load at Prior Years Rates | 159,360 | 176,407 | 187,467 | 198,471 | 208,158 |
| Yearly Revenue Deficiency | (17,334) | (10,377) | (10,040) | (8,650) | (5,479) |

Tables 3-7 provide the 2015-2020 year over year revenue deficiency/sufficiency amounts and major cost drivers as well as references to the Exhibits where further details on year over year variance and cost drivers can be attained.

**Table 3 –2015-2016 Revenue Deficiency - Amount & Drivers**

| $000 | 2015-2016 Revenue Deficiency & Drivers | | | | |
|---|---|---|---|---|---|
| | **2015** | **2016** | **Deficiency ($)** | **Drivers** | **Reference** |
| Return on Rate Base | 53,075 | 54,379 | 1,304 | • $46.8M additions<br>• $8.2M budgeted in CIP<br>• Higher WCA | B-1-1 |
| Distribution Expenses (not including amortization) | 83,656 | 87,106 | 3,450 | • Compensation increases<br>• Inflationary increases | D-1-3 |
| Amortization | 38,558 | 40,826 | 2,268 | • Increase in sustainment additions | D-3-1 |
| Payment in Lieu of Taxes | 0 | 4,958 | 4,958 | • Higher net income<br>• Less CCA deductions | D-4-1 |
| Service Revenue Requirement | 175,289 | 187,269 | 11,980 | | |

**(8)** **(8)**

**Notes:**

**General** Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.

**(1)** All inputs are in dollars ($) except where inputs are individually identified as percentages (%)

**(2)** Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use colimn M and Adjustments in column I

**(3)** Net of addbacks and deductions to arrive at taxable income.

**(4)** Average of Gross Fixed Assets at beginning and end of the Test Year

**(5)** Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.

**(6)** Select option from drop-down list by clicking on cell M10. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.

**(7)** Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement

**(8)** 4.0% unless an Applicant has proposed or been approved for another amount.

**(9)** Starting with 2013, default Working Capital Allowance factor is 13% (of Cost of Power plus controllable expenses). Alternatively, WCA factor based on lead-lag study or approved WCA factor for another distributor, with supporting rationale.

(10) Revenue at current rates minus Transformer Ownership Allowance

(11) Distrubution Revenue not including Transformer Ownership Allowance, Total Revenue Requirement is $176,694,250

**Notes:**

**General** Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.

**(1)** All inputs are in dollars ($) except where inputs are individually identified as percentages (%)

**(2)** Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use colimn M and Adjustments in column I

**(3)** Net of addbacks and deductions to arrive at taxable income.

**(4)** Average of Gross Fixed Assets at beginning and end of the Test Year

**(5)** Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.

**(6)** Select option from drop-down list by clicking on cell M10. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.

**(7)** Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement

**(8)** 4.0% unless an Applicant has proposed or been approved for another amount.

**(9)** Starting with 2013, default Working Capital Allowance factor is 13% (of Cost of Power plus controllable expenses). Alternatively, WCA factor based on lead-lag study or approved WCA factor for another distributor, with supporting rationale.

(10) Revenue at current rates minus Transformer Ownership Allowance

(11) Distrubution Revenue not including Transformer Ownership Allowance, Total Revenue Requirement is $186,784,378

| | Short-term debt Cost Rate (%) | 2.16% | | | | | |
| | Common Equity Cost Rate (%) | 9.30% | | | | | |
| | Prefered Shares Cost Rate (%) | | | | | | |

**Notes:**

**General** Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.

**(1)** All inputs are in dollars ($) except where inputs are individually identified as percentages (%)

**(2)** Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use colimn M and Adjustments in column I

**(3)** Net of addbacks and deductions to arrive at taxable income.

**(4)** Average of Gross Fixed Assets at beginning and end of the Test Year

**(5)** Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.

**(6)** Select option from drop-down list by clicking on cell M10. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.

**(7)** Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement

**(8)** 4.0% unless an Applicant has proposed or been approved for another amount.

**(9)** Starting with 2013, default Working Capital Allowance factor is 13% (of Cost of Power plus controllable expenses). Alternatively, WCA factor based on lead-lag study or approved WCA factor for another distributor, with supporting rationale.

(10) Revenue at current rates minus Transformer Ownership Allowance

(11) Distrubution Revenue not including Transformer Ownership Allowance, Total Revenue Requirement is $197,507,477

**(8)** **(8)**

**Notes:**

**General** Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.

**(1)** All inputs are in dollars ($) except where inputs are individually identified as percentages (%)

**(2)** Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use colimn M and Adjustments in column I

**(3)** Net of addbacks and deductions to arrive at taxable income.

**(4)** Average of Gross Fixed Assets at beginning and end of the Test Year

**(5)** Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.

**(6)** Select option from drop-down list by clicking on cell M10. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.

**(7)** Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement

**(8)** 4.0% unless an Applicant has proposed or been approved for another amount.

**(9)** Starting with 2013, default Working Capital Allowance factor is 13% (of Cost of Power plus controllable expenses). Alternatively, WCA factor based on lead-lag study or approved WCA factor for another distributor, with supporting rationale.

(10) Revenue at current rates minus Transformer Ownership Allowance

(11) Distrubution Revenue not including Transformer Ownership Allowance, Total Revenue Requirement is $207,120,495

## 4 Capitalization/Cost of Capital

| | | | | |
|---|---|---|---|---|
| Capital Structure: | | | | |
| Long-term debt Capitalization Ratio (%) | 56.0% | | | |
| Short-term debt Capitalization Ratio (%) | 4.0% | (8) | (8) | (8) |
| Common Equity Capitalization Ratio (%) | 40.0% | | | |
| Prefered Shares Capitalization Ratio (%) | 0.0% | | | |
| | 100.0% | | | |

| | |
|---|---|
| Cost of Capital | |
| Long-term debt Cost Rate (%) | 4.23% |
| Short-term debt Cost Rate (%) | 2.16% |
| Common Equity Cost Rate (%) | 9.30% |
| Prefered Shares Cost Rate (%) | 0.00% |

**Notes:**

**General** Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.

**(1)** All inputs are in dollars ($) except where inputs are individually identified as percentages (%)

**(2)** Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use colimn M and Adjustments in column I

**(3)** Net of addbacks and deductions to arrive at taxable income.

**(4)** Average of Gross Fixed Assets at beginning and end of the Test Year

**(5)** Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.

**(6)** Select option from drop-down list by clicking on cell M10. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.

**(7)** Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement

**(8)** 4.0% unless an Applicant has proposed or been approved for another amount.

**(9)** Starting with 2013, default Working Capital Allowance factor is 13% (of Cost of Power plus controllable expenses). Alternatively, WCA factor based on lead-lag study or approved WCA factor for another distributor, with supporting rationale.

(10) Revenue at current rates minus Transformer Ownership Allowance

(11) Distrubution Revenue not including Transformer Ownership Allowance, Total Revenue Requirement is $213,637,062

## Tracking Form

The last row shown is the most current estimate of the cost of service data reflecting the original application and any updates provided by the applicant distributor (for updated evidence, responses to interrogatories, undertakings, etc.)
Please ensure a Reference (Column B) and/or Item Description (Column C) is entered. Please note that unused rows will automatically be hidden and the PRINT AREA set when the PRINT BUTTON on Sheet 1 is activated.
(1) Short reference to evidence material (interrogatory response, undertaking, exhibit number, Board Decision, Code, Guideline, Report of the Board, etc.)
(2) Short description of change, issue, etc.

60 Tracking Rows have been provided below. If you require more, please contact Industry Relations @ IndustryRelations@ontarioenergyboard.ca.

# COST ALLOCATION STUDY

Hydro Ottawa Limited ("Hydro Ottawa") engaged Elenchus to undertake a Cost Allocation Study using the Ontario Energy Board's ("the Board") approved model. Please find details of this study in attachment G-1(A), Elenchus' Report titled "Hydro Ottawa 2016-2020 CA – Custom IR". Hydro Ottawa has also included live Excel spreadsheets for each of its test years 2016 through 2020, excel file G-1 (B through F). PDF copies of the required pages are also available as attachments G-1 (B through F).

Per the Boards filing requirements Hydro Ottawa has completed Appendix 2-P it is attached to this exhibit in a PDF version.

Hydro Ottawa's Cost allocation study indicated that two rate classes required adjustments to bring them into the Board-approved ranges. Sentinel Lights was outside its lower range while Unmetered Scattered Load ("USL") was outside its upper range.

In Hydro Ottawa's 2012 rate application EB-2011-0054 is was stated that it was not possible to bring the Sentinel Lights class revenue to cost ratio to 80% without creating a large bill impact for the customer and proposed incremental increases. Hydro Ottawa proposes to continue to make incremental adjustment every year to the Sentinel Lights class as part of this application. Appendix 2-P outlines the yearly adjustments starting with an approximate 5% increase in 2016.

Hydro Ottawa has adjusted USL to bring this class into the Board-approved ranges. This was achieved by first increasing Sentinel Lights by approximately 5% and then proportioning the remaining revenue requirement among the other classes below 100% revenue to cost ratio.

Please refer to Appendix 2-P for final proposed revenue to cost ratio.

**Notes**

1 Customer Classification - If proposed rate classes differ from those in place in the previous Cost Allocation study, modify the rate classes to match the current application as closely as possible.

2 Host Distributors - Provide information on embedded distributor(s) as a separate class, if applicable. If embedded distributor(s) are billed as customers in a General Service class, include the allocated cost and revenue of the embedded distributor(s) in the applicable class. Also complete Appendix 2-Q.

3 Class Revenue Requirements - If using the Board-issued model, in column 7A enter the results from Worksheet O-1, Revenue Requirement (row 40 in the 2013 model). This excludes costs in deferral and variance accounts. Note to Embedded Distributor(s), it also does not include Account 4750 - Low Voltage

**B) Calculated Class Revenues**

**Notes:**

1 Columns 7B to 7D - LF means Load Forecast of Annual Billing Quantities (i.e. customers or connections X 12, (kWh or kW, as applicable). Revenue Quantities should be net of Transfomrer Ownership Allowance. Exclude revenue from rate

2 Columns 7C and 7D - Column total in each column should equal the Base Revenue Requirement

3 Columns 7C - The Board cost allocation model calculates "1+d" in worksheet O-1, cell C21. "d" is defined as Revenue Deficiency/ Revenue at Current Rates.

4 Columns 7E - If using the Board-issued Cost Allocation model, enter Miscellaneous Revenue as it appears in Worksheet O-1, row 19.

**C) Rebalancing Revenue-to-Cost (R/C) Ratios**

| Class | Previously Approved Ratios Most Recent Year: 2012 | 2016 Status Quo Ratios (7C + 7E) / (7A) | 2016 Proposed Ratios (7D + 7E) / (7A) | 2017 Status Quo Ratios (7C + 7E) / (7A) | 2017 Proposed Ratios (7D + 7E) / (7A) | 2018 Status Quo Ratios (7C + 7E) / (7A) | 2018 Proposed Ratios (7D + 7E) / (7A) | 2019 Status Quo Ratios (7C + 7E) / (7A) | 2019 Proposed Ratios (7D + 7E) / (7A) | 2020 Status Quo Ratios (7C + 7E) / (7A) | 2020 Proposed Ratios (7D + 7E) / (7A) | Policy Range |

| | | | | | | | | | | | | |
| 0 | | | | | | | | | | | | |

**Notes**

1 Previously Approved Revenue-to-Cost Ratios - For most applicants, Most Recent Year would be the third year of the IRM 3 period, e.g. if the applicant rebased in 2009 with further adjustments over 2 years, the Most recent year is 2011. For applicants whose most recent rebasing year is 2006, the applicant should enter the ratios from their Informational Filing.

2 Status Quo Ratios - The Board's updated Cost Allocation Model yields the Status Quo Ratios in Worksheet O-1. Status Quo means "Before Rebalancing".

**D) Proposed Revenue-to-Cost Ratios**

| Class | Proposed Revenue-to-Cost Ratios 2016 | 2017 | 2018 | 2019 | 2020 | Policy Range |
|---|---|---|---|---|---|---|
| | % | % | % | % | % | % |
| Residential | 102.38 | 102.86 | 103.43 | 103.83 | 104.13 | 85 - 115 |
| GS < 50 kW | 119.21 | 119.15 | 119.12 | 119.12 | 119.15 | 80 - 120 |
| GS > 50 kW < GS 1,500 | 87.84 | 87.42 | 86.93 | 86.65 | 86.51 | 80 - 120 |
| GS > 1,500 '4,999 kW | 104.48 | 102.90 | 100.99 | 99.34 | 97.80 | 80 - 120 |

| Sentinel Lighting | 60.00 | 62.60 | 65.97 | 69.33 | 73.32 | 80 - 120 |
| Unmetered Scattered Load (USL) | 120.00 | 119.94 | 119.96 | 119.97 | 119.92 | 80 - 120 |
| Standby | 22.45 | 21.91 | 21.42 | 20.97 | 20.80 | N/A |
| | | | | | | 0 |
| 0 | | | | | | |

**Note**

1 The applicant should complete Table D if it is applying for approval of a revenue to cost ratio in 2014 that is outside the Board's policy range for any customer class. Table (d) will show the information that the distributor would likely enter in the IRM model) in 2014. In 2015 Table (d), enter the planned ratios for the classes that will be 'Change' and 'No Change' in 2014 (in the current Revenue Cost Ratio Adjustment Workform, Worksheet C1.1 'Decision – Cost Revenue Adjustment', column d), and enter TBD for class(es) that will be entered as 'Rebalance'.

# Hydro Ottawa 2016-2020 CA - Custom IR

A Report Prepared by
Elenchus Research Associates Inc.

On Behalf of
Hydro Ottawa

17/04/2015

*Page Intentionally Blank*

# Table of Contents

*Page Intentionally Blank*

# 1 INTRODUCTION

Hydro Ottawa Limited ("Hydro Ottawa") has prepared its 2016-2020 Custom IR Application as a cost of service rate application based on a forward test year. The relevant filing requirements for this Application are set out in Chapter 2 of the July 18, 2014 update to the document entitled *Ontario Energy Board, Filing Requirements for Electricity Distribution Rate Applications* ("Filing Requirements").

Section 2.10 of the Filing Requirements sets out the expectations of the Board with respect to Exhibit 7: Cost Allocation. The Filing Requirements on page 48 state:

> *A completed cost allocation study using the Board-approved methodology or a comparable model must be filed. This filing must reflect future loads and costs and be supported by appropriate explanations and live Microsoft Excel spreadsheets. The most current update of the model (version 3.2) will be available on the Board's web site. Appendix 2-P must also be completed.* [1]

Hydro Ottawa asked Elenchus Research Associated (Elenchus)[2] to assist it by preparing an appropriate cost allocation study for its 2016-2020 Custom IR rate application.

In addressing the cost allocation issues, Elenchus was guided by the Filing Requirements, the November 28, 2007 *Report of the Board, Application of Cost Allocation for Electricity Distributors* (EB-2007-0667) ("CA Application Report") which "sets out the Board's policies in relation to specific cost allocation matters for electricity distributors"[3] and the March 31, 2011 *Report of the Board, Review of Electricity Distribution Cost Allocation Policy* (EB-2010-0219) ("CA Review Report") in which the Board narrowed some revenue to cost ratio ranges, and committed to further consultations on unmetered and standby loads, as well as the Board's decisions in various electricity distributor cost of service proceedings that addressed relevant issues.

## 1.1 PURPOSE OF THE COST ALLOCATION STUDY

In the context of a cost of service rate application based on 2016-2020 forward test years, the primary purpose of the cost allocation study ("CA Study") is to determine the

---

1 *Ontario Energy Board, Filing Requirements for Electricity Distribution Rate Applications (July 18, 2014), p. 48.*

2 John Todd, President of Elenchus Research Associates, was the lead consultant for the development and implementation of the methodology used by Hydro Ottawa and documented in this report. John Todd's curriculum vitae is available at www.elenchus.ca.

3 Ontario Energy Board, *Report of the Board, Application of Cost Allocation for Electricity Distributors* (EB-2007-0667), November 28, 2007, page 1.

proportions of a distributor's total revenue requirement that are the "responsibility" of each rate class.

In addition, cost allocation studies provide revenue to cost ratios for each customer class that can be examined to ensure that they generally fall within the Board-specified ranges (or move toward those ranges where appropriate to mitigate rate impacts) and generally are not moving away from 100%.

Conceptually, Hydro Ottawa's prospective year CA Study for the 2016-2020 test years is based on an allocation of the 2016-2020 test year costs (i.e., the 2016-2020 forecast revenue requirement) to the various customer classes using allocators that are based on the forecast class loads (kW and kWh) by class, customer counts, etc. By definition, this approach will result in a total revenue to cost ratio at proposed rates of 100%. Given a revenue deficiency for the test year, the total revenue to cost ratio at current rates will be somewhat below 100%.

## 1.2 HYDRO OTTAWA'S 2012 COST ALLOCATION

The last cost allocation study filed by Hydro Ottawa was in 2011 in Proceeding EB-2011-0054, was based on the v 2.0 Cost Allocation Model. The 2016-2020 models were performed in accordance with the internal documentation in the v 3.2 Cost Allocation Model (CA Model).

Hydro Ottawa's 2012 CA Study was prepared in accordance with the Filing Requirements, the November 28, 2007 *Report of the Board, Application of Cost Allocation for Electricity Distributors* (EB-2007-0667) ("CA Application Report") which "sets out the Board's policies in relation to specific cost allocation matters for electricity distributors"[4] and the March 31, 2011 *Report of the Board, Review of Electricity Distribution Cost Allocation Policy* (EB-2010-0219) ("CA Review Report").

## 1.3 STRUCTURE OF THE REPORT

The remainder of this report is divided into three additional sections. Section 2 provides an overview of the Hydro Ottawa CA Study, explaining the model run included in the study, as well as the load and cost information used for the run. Section 3 explains the methodology used to develop the 2016-2020 Hydro Ottawa models by documenting each step taken in completing the model. Section 4 summarizes the results of the Hydro Ottawa CA Study, showing the class revenue requirements and revenue to cost ratios generated by the CA model. Section 5 shows the fixed charge unit costs per month and

[4] Ontario Energy Board, *Report of the Board, Application of Cost Allocation for Electricity Distributors* (EB-2007-0667), November 28, 2007, page 1.

the fixed charge boundary values as calculated in the cost allocation models for 2016 to 2020.

# 2 Overview of the Hydro Ottawa 2016-2020 CA Study

## 2.1 Model Run Included in the Hydro Ottawa Cost Allocation Study

Section 2.10.3 of the updated Filing Requirements specifies that the third table in Appendix 2-P, "...includes the following information for each class" that should be provided based on:

- *The previously approved ratios most recently implemented by the distributor;*
- *The ratios that would result from the most recent approved distribution rates and the distributor's forecast of billing quantities in the test year, prorated upwards or downwards (as applicable) to match the revenue requirement, expressed as a ratio with the class revenue requirements derived in the updated cost allocation model; and*
- *The ratios that are proposed for the Test Year, which are the proposed class revenues, together with the updated cost allocation model.*

For clarity, the following designations are used.

- Ottawa-2012: The Hydro Ottawa 2012 revenue to cost ratios.
- Ottawa-2016: The version 3.2 CA Model with 2016 loads, costs, and revenues.
- Ottawa-2017: The version 3.2 CA Model with 2017 loads, costs, and revenues.
- Ottawa-2018: The version 3.2 CA Model with 2018 loads, costs, and revenues.
- Ottawa-2019: The version 3.2 CA Model with 2019 loads, costs, and revenues.
- Ottawa-2020: The version 3.2 CA Model with 2020 loads, costs, and revenues.

## 2.2 Load and Customer Information

The updated Filing Requirements specify that "This filing must reflect future loads and costs..." and "If updated load profiles are not available, the load profiles of the classes may be the same as those provided by Hydro One for use in the Informational Filing, scaled to match the load forecast as it relates to the respective rate classes", (Section 2.10.1, p. 48)

The Hydro Ottawa 2016-2020 models have been prepared using the following load and load profile information:

- Annual Loads (kW and kWh, as appropriate) and customer counts: The 2016-2020 load forecast and customer counts by class being used by Ottawa in its application were also used for the 2016-2020 CA models.
- Hourly load profile: The hourly load profiles prepared by Hydro One for the 2006 CAIF were used for all classes except the Large Use class. Updating of the hourly load profiles for this class was necessary because of the small number of customers in this class. Furthermore, actual 2013 hourly load data are available for these classes (all customers have interval meters) and the hourly load data does not require weather adjustment, making it a straightforward task to determine the updated hourly load shape of these classes in a manner that is consistent with the Hydro One methodology.

The hourly load profiles provided by Hydro One for all of the classes for the 2006 model were considered to be appropriate for use in the 2016-2020 models for the following reasons.

1. Elenchus has previously explored alternatives for updating the hourly load profiles by rate class comparable to the estimated load profiles that Hydro One prepared for the LDCs for their 2006 CA Models. Hydro One advised that they no longer have the capacity to produce a significant number of LDC-specific hourly load profiles. As far as Elenchus is aware, no other entity has the necessary information and models to produce comparable quality hourly load profiles for Ontario LDCs. It therefore was not practical for distributors to update their hourly load profiles by class except in exceptional circumstances.
2. It is Elenchus' opinion that there would be little point in investing in updated load profiles without also investing in updated saturation surveys for the residential class in each service area. These are expensive and time consuming to undertake as they involve a survey of a statistically significant sample of customers.
3. With the widespread rollout of smart meters and the collection of smart meter data, Ontario distributors will have better hourly load profile by class data than the Hydro One estimates. Unless there is evidence of a significant change in circumstances, investing in new hourly load profile by class estimates would be a questionable use of ratepayer funds when superior hourly load profile information may be available in the future.
4. Both time-of-use commodity pricing and changes to the design of distribution rates are influencing the hourly load profiles of the affected classes; however, it will not be practical to use smart meter data to update the load profiles of the weather sensitive classes until a sufficient number of years of data have been collected to determine demand on a weather normalized basis.

## 2.3 COST INFORMATION

As noted earlier, the Filing Requirements mandate that the cost allocation models be prepared on the basis of prospective test year information. In the case of Hydro Ottawa, the financial information for the forecast years has been prepared at the USoA level with respect to capital assets; however, OM&A spending is expected to be more stable over the period of the Custom IR, and has been forecast at a less granular level.

# 3 Hydro Ottawa Cost Allocation Study Methodology

This section documents Elenchus' methodology for the Hydro Ottawa Cost Allocation Study, the 2016-2020 CA Models.

## 3.1 2016-2020 Hydro Ottawa CA Models

### 3.1.1 Hourly Load Profile (HONI File)

For the Hydro Ottawa CAIF, HONI provided data files with three worksheets that were to be used as input to the 2006 CAIF:

- Data Summary: actual and weather normalized monthly kWh by class, disaggregated by weather sensitive and non-weather sensitive load for relevant classes.
- Hourly Load Shape by Class: GWh by class for each hour in 2004.
- Input to Cost Allocation Model: The 1CP, 4CP, 12CP, 1NCP, 4NCP, 12NCP allocators are derived from the hourly load profiles.

The Hydro Ottawa hourly load shapes derived by Hydro One for the 2006 CAIF were not updated. However, the demand allocators derived by Hydro One for the 2006 CAIF were revised to reflect changes in the relative loads for the classes from 2004 to 2016-2020. This was done by scaling the hourly load profiles of each class on the Hourly Load Shape by Class worksheet of the HONI file to levels consistent with the 2016-2020 load forecast years while maintaining the hourly load shapes.

For the Large User customer class, 2013 actual interval hourly data was used, scaled to levels consistent with the 2016-2020 load forecast years while maintaining the hourly load shapes.

### 3.1.2 Demand Allocators (HONI File)

The demand allocators used in the Hydro Ottawa-2016-2020 CA models were derived using the same methodology as Hydro One used for the 2006 file; however, they were re-determined using the forecast 2016-2020 hourly load profiles resulting from the preceding step. Using the 2016-2020 hourly load profiles by class, the 12 monthly coincident and non-coincident peaks for the rate classes were determined on the Hourly Load Shape by Rate Class worksheet.  The allocators were then derived as follows.

- The 1, 4 and 12 NCP values for each class were calculated by selecting the peak in the year (1 NCP), summing the four highest monthly peaks (4 NCP) and summing the 12 monthly peaks for each class (12 NCP), respectively.
- The total 1, 4 and 12 NCP values are the totals of the corresponding class NCP values.
- The 1, 4 and 12 CP values for each class were derived by identifying the hour in each month when the coincident peak occurred and then selecting the peak in the year (1 CP), adding the demands during the four highest coincident peak hours (4 CP) and summing the demand for each class during the 12 monthly coincident peak hours (12 CP), respectively.
- The total 1, 4 and 12 CP values are the totals of the corresponding class CP values, which are the values used to identify the relevant coincident peak hours.

### 3.1.3 2016-2020 Demand Data (Hydro Ottawa-2016-2020 Models)

The demand allocators derived in the updated Hydro One file as described in the preceding section were input at the appropriate cells at sheet I8 Demand Data of the 2016-2020 Hydro Ottawa CA Models. However, the Line Transformer and Secondary 1NCP, 4NCP and 12NCP values for GS > 50 to 1499, GS > 1500 to 4999, and Large User customer classes are not equal to the full class NCP values since not all customers in these customer classes use these facilities. The Line Transformer and Secondary 1NCP, 4NCP and 12NCP values were therefore determined from the full load data NCP values using the ratio of values in the 2006 CA Model.

# 4 SUMMARY OF REVENUE TO COST RATIOS

The class revenue-to-cost ratios as determined in the Hydro Ottawa cost allocation models are shown in Table 7, below.

**Table 7: Revenue to Cost Ratios**

| Customer Class | Ottawa-2012 | Ottawa-2016 Status Quo Rates | Ottawa-2017 Status Quo Rates | Board Target Range |
|---|---|---|---|---|
| Residential | 97.35 | 102.38 | 102.82 | 85-115 |
| GS < 50 kW | 114.70 | 119.21 | 119.13 | 80-120 |
| GS > 50 to 1,499 kW | 95.62 | 87.82 | 87.46 | 80-120 |
| GS > 1,500 to 4,999 kW | 114.41 | 104.48 | 102.97 | 85-115 |
| Large Use | 107.12 | 88.76 | 87.91 | 85-115 |
| Street Light | 75.04 | 73.21 | 72.28 | 70-120 |
| Sentinel | 41.00 | 55.45 | 57.84 | 80-120 |
| USL | 123.66 | 121.51 | 121.99 | 80-120 |
| Standby Power | 230.47 | 22.45 | 21.93 | 80-120 |
| Total | 100.00 | 100.00 | 100.00 | |

| Customer Class | Ottawa-2018 Status Quo Rates | Ottawa-2019 Status Quo Rates | Ottawa-2020 Status Quo Rates | Board Target Range |
|---|---|---|---|---|
| Residential | 103.39 | 103.79 | 104.04 | 85-115 |
| GS < 50 kW | 119.03 | 118.97 | 118.97 | 80-120 |
| GS > 50 to 1,499 kW | 86.97 | 86.65 | 86.48 | 80-120 |
| GS > 1,500 to 4,999 kW | 101.16 | 99.69 | 98.51 | 80-120 |
| Large Use | 86.90 | 86.25 | 85.92 | 85-115 |
| Street Light | 71.42 | 70.64 | 70.36 | 70-120 |
| Sentinel | 60.87 | 64.24 | 68.34 | 80-120 |
| USL | 122.34 | 122.61 | 123.23 | 80-120 |
| Standby Power | 21.45 | 21.02 | 20.88 | 80-120 |
| Total | 100.00 | 100.00 | 100.00 | |

The Hydro Ottawa-2016-2020 ratios (at Status Quo rates) reflect the impact of changes in throughput by class as well as changes in costs from 2012 through the 2016-2020 forecast test years.

Table 8 presents the revenue responsibility (i.e., allocation of the total revenue requirement to the rate classes) in each of the models. This revenue responsibility is presented in both dollar and percentage terms.

**Table 8: Revenue Responsibility by Rate Class**

| Customer Class | Ottawa-2012 | | Ottawa-2016 | | Ottawa-2017 | |
|---|---|---|---|---|---|---|
| | $ | % | $ | % | $ | % |
| Residential | 94,436,258 | 52.2 | 101,241,491 | 54.1 | 106,345,499 | 53.9 |
| GS < 50 kW | 19,093,962 | 11.4 | 19,819,301 | 10.6 | 20,746,678 | 10.5 |
| GS > 50 to 1,499 kW | 39,359,863 | 23.4 | 45,860,732 | 24.5 | 48,217,445 | 24.4 |
| GS > 1,500 to 4,999 kW | 7,805,712 | 4.6 | 11,093,288 | 5.9 | 12,029,406 | 6.1 |
| Large Use | 5,754,313 | 3.4 | 7,272,098 | 3.9 | 7,761,426 | 3.9 |
| Street Light | 1,183,502 | 0.7 | 1,393,557 | 0.7 | 1,492,351 | 0.8 |

# UNMETERED LOADS

Hydro Ottawa Limited ("Hydro Ottawa') is aware of a study being undertaken by Navigant Consulting Limited ("Navigant") and related working group activities examining unmetered loads as initiated by the Ontario Energy Board (OEB) pursuant to the proceeding EB-2012-0383 Review of Cost Allocation Policy for Unmetered Loads. Based on the record of the proceeding, the Navigant study and a revised cost allocation model are expected to be completed prior to the 2016 Board filing requirements release. Should the cost allocation model be updated with the 2016 filing requirements, Hydro Ottawa intends to review the model for any material impacts to the Company's current proposed cost to revenue allocation ratios.

# FIXED/VARIABLE PROPORTION

## 1.0 INTRODUCTION

This Exhibit explains how the proposed rates have been designed in order to collect the requested revenue requirement from 2016 through 2020. The current 2015 and proposed 2016 through 2020 Tariff of Rates and Charges are provided in Exhibit H-10-1. Bill Impacts can be found in Exhibit H-12-1.

Hydro Ottawa Limited ("Hydro Ottawa") is requesting approval of a Base Revenue Requirement in 2016 of $175,570k and Transformer Ownership Credit of $1,125k for total revenue from distribution rates of $176,694k. Please see Table 1 for the requested revenue from distribution rates from 2016 through 2020.

**Table 1 - Revenue from Distribution Rates[1]**

| | 2016<br>**$000** | 2017<br>**$000** | 2018<br>**$000** | 2019<br>**$000** | 2020<br>**$000** |

| Base Revenue Requirement | 175,570 | 185,670 | 196,398 | 206,014 | 212,532 |
| Transformer Ownership Credit | 1,125 | 1,114 | 1,109 | 1,106 | 1,105 |
| **Revenue from distribution rates** | **176,694** | **186,784** | **197,507** | **207,120** | **213,637** |

Please see Exhibit F-1-1 for the compilation of revenue required from distribution rates and calculation of revenue deficiency.

## 2.0 FIXED/VARIABLE PROPORTION

The current fixed/variable ratio split was approved as part of Hydro Ottawa's 2012 rate application EB-2011-0054. As part of this application Hydro Ottawa has started to apply the Ontario Energy Board's ("the Board") principles in its Draft Report on Rate Design for

[1] Totals may not match due to rounding

Electricity Distributors (EB-2012-0410). On April 2, 2015 the Board released the Board Policy, A New Distribution Rate Design for Residential Electricity Customers. Hydro Ottawa will wait until the Board's Working Groups has put forth its recommendations prior to incorporating these directions. Table 2 provides Hydro Ottawa's current and proposed fixed/variable ratio split.

**Table 2 - Current and Proposed Fixed/Variable Split**

| | 2015 | | 2016 | | 2017 | | 2018 | | 2019 | | 2020 | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Fixed % | Variable % | Fixed % | Variable % | Fixed % | Variable % | Fixed % | Variable % | Fixed % | Variable % | Fixed % | Variable % |
| Residential | 37.8% | 62.2% | 45.6% | 54.4% | 50.7% | 49.3% | 55.9% | 44.1% | 61.9% | 38.1% | 66.2% | 33.8% |
| GS <50 | 22.7% | 77.3% | 29.9% | 70.1% | 34.9% | 65.1% | 40.0% | 60.0% | 45.0% | 55.0% | 50.1% | 49.9% |
| GS 50 to 1,499 kW | 28.3% | 71.7% | 29.3% | 70.7% | 34.5% | 65.5% | 39.3% | 60.7% | 44.4% | 55.6% | 49.0% | 51.0% |
| GS 1,500 to 4,999 kW | 37.3% | 62.7% | 37.3% | 62.7% | 37.3% | 62.7% | 39.4% | 60.6% | 44.3% | 55.7% | 49.3% | 50.7% |
| Large Use | 33.8% | 66.2% | 35.2% | 64.8% | 35.3% | 64.7% | 39.3% | 60.7% | 44.2% | 55.8% | 49.1% | 50.9% |
| Street Light | 43.5% | 56.5% | 44.7% | 55.3% | 45.5% | 54.5% | 46.2% | 53.8% | 47.3% | 52.7% | 46.0% | 54.0% |
| Sentinel | 50.8% | 49.2% | 45.1% | 54.9% | 40.8% | 59.2% | 45.4% | 54.6% | 44.0% | 56.0% | 45.3% | 54.7% |
| Unmetered Scattered Load | 30.1% | 69.9% | 32.9% | 67.1% | 38.1% | 61.9% | 44.4% | 55.6% | 45.9% | 54.1% | 45.2% | 54.8% |
| Standby Power | 2.2% | 97.8% | 28.8% | 71.2% | 28.8% | 71.2% | 28.7% | 71.3% | 29.1% | 70.9% | 29.5% | 70.5% |

Hydro Ottawa moved each customer class closer to a 50/50 variable/fixed split, with the exception of the Residential and Unmetered Classes. The Residential Class was adjusted with the Board's April 2015 Report in mind and therefore goes beyond a 50% fixed component. Per Exhibit G-1-2 Hydro Ottawa is waiting for the final Navigant Consulting Limited Report to the Board prior to making any adjustments to the variable/fixed split.

Table 3 Provides Hydro Ottawa's current and proposed fixed and variable charges.

## 3.0 TRANSFORMER OWNERSHIP CREDIT

Hydro Ottawa is not proposing any change to the current Transformer Ownership Credit (“TOC”) of $0.45/kW for customers who own their transformers.

# RATE DESIGN POLICY CONSULTATION

## 1.0 INTRODUCTION

As part of this application Hydro Ottawa Limited ("Hydro Ottawa") is not proposing the implementation of a fully fixed rate. Hydro Ottawa is however looking at its fixed and variable split in order to move all rate classes into a similar fixed and variable split. Please refer to Exhibit H-1-1.

On April 2, 2015 the Ontario Energy Board ("the Board") released the Board Policy[1], A New Distribution Rate Design for Residential Electricity Customers. At this time, as the implementation details and filing guidelines have not been released, Hydro Ottawa will wait until the Board's Working Groups has put forth it's recommends prior to incorporating the directions.

[1] EB-2012-0410, Board Policy: A New Distribution Rate Design for Residential Electricity Customers, April 2, 2015

# RETAIL TRANSMISSION SERVICE RATES

## 1.0 INTRODUCTION

The Ontario Energy Board (the “Board”) issued a revision to Guideline G-2008-0001 – Electricity Distribution Retail Transmission Service Rates (the “Guideline”), which outlined information that the Board requires electricity distributors to file to adjust their retail transmission service rates (“RTSR”). Subsequently, the Board also provided a filing model which distributors are required to complete and file, 2015_RTSR Adjustment Work Form – version 4.0 issued by the Board June 26, 2014.

## 2.0 REVISED 2016 THROUGH 2020 RTSR

Hydro Ottawa Limited (“Hydro Ottawa”) proposes to use the Retail Transmission Service rates (“RTSRs”) for its 2016 rates as calculated by the Board RTSRs model. Currently the 2013 billing determinants are the most recently reported in the Reporting and Record Keeping Requirements (“RRR’s”). When the 2016 RTSR model is available the 2014 billing determinants will have been filed in the RRR’s. For the purpose of this filing, including bill impacts, Hydro Ottawa has used the 2015 approved RTSRs and will update the application based on the 2016 RTSR model when available. This is also the approach taken for calculation of the working capital allowance.

Hydro Ottawa has attached the 2015 RTRS Model in PDF format as part of this Exhibit and has also provided a live Excel version.

Hydro Ottawa is proposing to update the RTSRs on an annual basis, 2017 through 2020, based on Board Approved adjustments to the Hydro One Uniform Transmission Rates (“UTRs”) using the RTSR model. For the purpose of this rate application, including bill impacts, Hydro Ottawa has used the 2015 approved RTSRs for 2017 through 2020.

Given Hydro One UTRs are not typically approved in time for adjusting Hydro Ottawa's rates on January 1, Hydro Ottawa is proposing to set each year's RTSRs using the previous year's UTRs. Hydro Ottawa is proposing that the differences from the new yearly rates be captured in Uniform System of Accounts 1584 – RSVA Network and 1586 – RSVA Connection for future disposition.

# RETAIL SERVICE CHARGES

## 1.0 INTRODUCTION

Retail service charges apply to services provided by a distributor to retailers or customers with respect to the supply of competitive electricity through Retailer contracts, in accordance with the Retail Settlement Code ("RSC"). Currently, Hydro Ottawa applies the retail service rates and charges, in accordance with Chapter 12 of the 2006 Electricity Distribution Rate Handbook.

Variances between the charges applied to retailers and the direct costs associated with the provision of these services are recorded in the Board established variance accounts 1518 Retail Cost Variance Retail and 1548 Retail Cost Variance STR, in accordance with Section 12.2.5 of the 2006 Electricity Distribution Rate Handbook.

As outlined in Exhibit H-7-1, Section 4.0, Hydro Ottawa is proposing changes to the current retail rates and charges in 2016, with modest adjustments for inflation between the years 2017 to 2020.

Recognizing the Board's plan to undertake a review of all Specific Service Charges in 2015[1], Hydro Ottawa undertook a review of service charges, as part of this Application, and is requesting a modest adjustment, as an interim step towards improving business efficiencies and appropriate cost recovery.

Hydro Ottawa has not informed Retailers of the proposed rates; however, plans to do so, as part of the standard notification process that will follow the submission of this Application.

[1] EB-2014-0365, Wireless Attachment Consultation, December 11, 2014. Pg. 3.

## WHOLESALE MARKET SERVICE RATE

As part of this application, Hydro Ottawa Limited ("Hydro Ottawa'") has used the Ontario Energy Board's ("the Board") generic Wholesale Market Service Rate of $0.0044 per kilowatt hour and the Rural and Remote Rate Protection of $0.0013 per kilowatt hour to bill its customers. Therefore, a total combined rate of $0.0057 per kilowatt hour is being used.

Hydro Ottawa is not proposing a distributor specific rate.

Hydro Ottawa proposes to update these rates in accordance with any Board approved rate changes during the 2016 through 2020 period.

## SMART METERING CHARGE

On March 28, 2013, the Ontario Energy Board ("the Board") issued a Decision and Order (EB-2012-0100/EB-2012-0211) establishing a Smart Metering charge of $0.79 per month for Residential and General Service < 50kW customers effective May 1, 2013.

Hydro Ottawa Limited ("Hydro Ottawa") has reflected this charge in their application. As the Smart Metering Charge is currently in effect until October 31, 2018, Hydro Ottawa has only included the charge until October 31, 2018.

# SERVICE CHARGES

## 1.0 INTRODUCTION

As part of this application, Hydro Ottawa Limited ("Hydro Ottawa") is proposing to revise some previously established service charges, introduce additional service charges, eliminate some existing service charges and rename certain service charges to more accurately reflect the services provided. Service charges apply to services that are over and above Hydro Ottawa's standard level of service offerings and may result from a customer's action or inaction. The revenue from these charges offset the total revenue requirement.

During 2014, Hydro Ottawa undertook a review of many routine service charges to ensure they reflected the associated costs of providing services. In addition, the costs for new services requested by customers were also appropriately determined. Finally, Hydro Ottawa assessed certain repeated requests by a small number of customers which result in resources being expended by Hydro Ottawa. Service charges are proposed for such requests to encourage efficient use of Hydro Ottawa's resources.

The following, currently approved, service charges will not be revised or eliminated as part of this application:

i. Arrears Certificate (proposed terminology "Account Certificate");
ii. Duplicate Invoices from Previous Billing;
iii. Credit Reference/Credit Check;
iv. Unprocessed Payment Charge;
v. Account Set-up/Change of Occupancy Charge;
vi. Disconnect/Reconnect Charge (all 4 categories).

With regard to the disconnect/reconnect charge, Hydro Ottawa seeks approval to apply the currently approved rate(s) for the provision of service calls and disconnecting/reconnecting services which may result from occupancy changes, as outlined in Sections 6.4 and 6.1, respectively. As such, these current rates will apply between the years 2016 to 2020.

Hydro Ottawa proposes to increase some existing service charges, as well as, introduce new service charges. No existing service charges have been reduced. Unless otherwise indicated, the proposed rate changes and additions shall be adjusted for the years 2017 and 2020 by formulaic inflationary increases.

## 2.0 SUMMARY OF PROPOSED REVISED AND NEW SERVICE CHARGES

Tables 1 and 2 below summarize the proposed revised and new service charges, respectively, for the years 2016 through 2020. All of the proposed service charges are to be included in Hydro Ottawa's tariff sheet.

## Table 1 – Revised Service Charges

| Service Charges – Revised | 2012-2015 | 2016 | 2017 | 2018 | 2019 | 2020 |
|---|---|---|---|---|---|---|
| Special Billing Service (formerly Other Billing Information Request), per hour | $15.00 | $95.00 | $97.00 | $100.00 | $102.00 | $104.00 |
| Temporary service install & remove – overhead – no transformer | $500.00 | $797.00 | $813.00 | $830.00 | $848.00 | $866.00 |
| Temporary service install & remove – underground – no transformer | $500.00 | $1,156.00 | $1,180.00 | $1,205.00 | $1,230.00 | $1,256.00 |
| Temporary service install & remove – overhead – with transformer | $500.00 | $2,840.00 | $2,900.00 | $2,961.00 | $3,023.00 | $3,087.00 |
| Specific Charge for Access to the Power Poles | $22.35/pole | $57.00 | $57.00 | $58.00 | $58.00 | $58.00 |
| Dry Core Transformer Charge – Demand | Attachment H-7(A) | Attachment H-7(A) | Attachment H-7(A) | Attachment H-7(A) | Attachment H-7(A) | Attachment H-7(A) |
| Standard Charge, per Retailer | $100.00 | $117.00 | $122.00 | $129.00 | $135.00 | $140.00 |
| Monthly Fixed Charge, per Retailer | $20.00 | $24.00 | $25.00 | $26.00 | $27.00 | $28.00 |
| Monthly Variable Charge, per Customer, per Retailer | $0.50 | $0.60 | $0.60 | $0.65 | $0.65 | $0.70 |
| Monthly Billing Charge ("DCB"), per Customer, per Retailer | $0.30 | $0.35 | $0.35 | $0.40 | $0.40 | $0.40 |
| Service Transaction Requests ("STR" ) Fee, per request | $0.25 | $0.30 | $0.30 | $0.30 | $0.35 | $0.35 |
| Service Transaction Requests ("STR") Fee, per process | $0.50 | $0.60 | $0.60 | $0.65 | $0.65 | $0.70 |
| Micro-FIT and Micro-Net-Metering Energy Resource Facility Monthly Account Management Charge (formerly MicroFIT monthly account management charge) | $5.40 | $18.00 | $18.00 | $19.00 | $19.00 | $19.00 |

**Table 2 – New Service Charges**

| Service Charges – New | 2012-2015 | 2016 | 2017 | 2018 | 2019 | 2020 |
|---|---|---|---|---|---|---|
| Disconnect/Reconnect at meter – regular hours (under account administration – new account) | | $65.00 | $65.00 | $65.00 | $65.00 | $65.00 |
| Disconnect/Reconnect at meter – after regular hours (under account administration section – new account) | | $185.00 | $185.00 | $185.00 | $185.00 | $185.00 |
| Interval Meter – Field Reading | | $347.00 | $355.00 | $362.00 | $370.00 | $378.00 |
| High Bill Investigation – If billing is correct | | $213.00 | $218.00 | $222.00 | $227.00 | $232.00 |
| Service Call – Customer missed appointment (Regular Hours) | | $65.00 | $65.00 | $65.00 | $65.00 | $65.00 |
| Service Call – Customer missed appointment (After Regular Hours) | | $185.00 | $185.00 | $185.00 | $185.00 | $185.00 |
| Energy Resource Facility Administration Charge – Without Account Set Up (one-time) | | $127.00 | $130.00 | $133.00 | $135.00 | $138.00 |
| Energy Resource Facility Administration Charge – With Account Set Up (one-time) | | $157.00 | $160.00 | $163.00 | $165.00 | $168.00 |
| FIT Energy Resource Facility Monthly Account Management Charge | | $119.00 | $121.00 | $124.00 | $126.00 | $129.00 |
| HCI, RESOP, Other Energy Resource Facility Monthly Account Management Charge | | $259.00 | $264.00 | $270.00 | $276.00 | $281.00 |

## 3.0 REVISED SERVICE CHARGES

Hydro Ottawa is proposing to revise a number of Specific, Retailer and Generator charges.

### 3.1 Special Billing Service (formerly Request for other Billing Information)

This proposed charge applies to all requests for billing information that involves sourcing, compiling and presenting several months or years of billing information for customers or their agents. Services of this nature were historically charged the $15.00 "Request for other Billing Information" charge. Typically, these services vary in terms of resource effort and time; therefore, the proposed charge is based upon Hydro Ottawa's work for others hourly labour rate. A one-hour minimum is proposed for all related services.

Services in excess of one-hour would be billed in 15-minute increments, thereafter. This approach ensures that the associated costs are captured and appropriately recovered. As noted in Section 7.2, Hydro Ottawa proposes to eliminate the "Request for other Billing Information" charge description and replace it with the "Special Billing Service" charge.

### 3.2 Temporary Services

Hydro Ottawa requests approval for three (3) temporary electricity service charges to reflect the actual costs associated with the provision of an overhead service with and without a transformer, as well as, the provision of an underground service. Historically, Hydro Ottawa has been applying the OEB-approved $500 service charge, regardless of service type. An analysis of the types of temporary services commonly provided and associated costs determined that the generic rate was no longer sufficient. The proposed rates have been developed in accordance with the Electricity Distribution Rate Handbook ("EDRH") methodology.

### 3.3 Specific Charge for Access to the Power Poles

As of yearend 2013, Hydro Ottawa had seven companies attaching to Hydro Ottawa poles. Telecom cables and street lighting represented the majority of attachments; however, Bell Canada and Hydro One ("HONI") also had attachments. With the exception of HONI, which applies its own OEB-approved rate, the remaining companies pay the current, province-wide annual pole charge of $22.35 per pole. This rate has applied for more than 10 years and no longer reflects the direct and indirect costs associated with maintaining third-party attachments. A review and analysis of the Access to Power Poles charge has resulted in a proposed rate of $57 for 2016, which will be adjusted for inflation on an annual basis between the years 2017 and 2020.

A detailed history and analysis of the proposed revised rate is set out in Attachment H-7(A). The proposed rate pertains to wire attachments, only.

### 3.4 Dry Core Transformers

The dry core transformer charge is applied to recover energy lost in the operation of a dry core transformer. A specific charge is calculated for each transformer size. A detailed analysis indicated that the existing charges are no longer sufficient. Hydro Ottawa is, therefore, requesting the approval of revised rates for the 26 dry core transformer sizes within Hydro Ottawa's service area, for each of the years 2016 through 2020 as outlined in Appendix H-7(A). On an annual basis, these proposed rates will be further adjusted to reflect any related changes in RPP and Hydro One rates.

## 4.0 REVISED RETAIL SERVICE CHARGES

Hydro Ottawa has been applying the Retail Service Charges set by the OEB, since the competitive electricity market opened in May, 2002. A detailed review and analysis of costs associated with serving this market has resulted in modest adjustments for each of the years 2016 through 2020.

The proposed 2016 rates are based upon the 2013 to 2015 IRM rate increases, plus the estimated 2016 percentage increase in revenue requirement. The 2017 to 2020 rate increases are based upon the estimated percentage increase in revenue requirement for those years.

## 5.0 REVISED GENERATOR CHARGES

### 5.1 Micro-FIT and Micro-Net-Metering Energy Resource Facility Monthly Account Management Charge (formerly Micro-FIT Service charge)

The Micro-FIT monthly service charge of $5.40 is an Ontario Energy Board ("the Board") approved province-wide charge. A review and analysis of the associated costs providing monthly services to Micro-FIT and Micro-Net-Metering customers has resulted in proposed increases ranging from $18 to $19, per month, in the years 2016 to 2020.

## 6.0 NEW SERVICE CHARGES

### 6.1 Disconnect/Reconnect at Meter – New Account (Regular and After Hours)

In response to the Boards customer service rules regarding the opening and closing of customer accounts (EB-2007-0722), Hydro Ottawa's business practices were augmented to disconnect services in situations where the financially-responsible account holder is unknown or does not confirm account responsibility within the prescribed 15 calendar day period, where Hydro Ottawa is advised by a third-party (ref: Sections 2.8.1 and 2.8.2 of the DSC).

Applying the service charges associated with disconnection and reconnection for non-payment of account (at meter), Hydro Ottawa seeks approval to apply the same service charge where a responsible account holder is not confirmed and disconnection proceeds. These service charges would be reflected under the Customer Administration category.

### 6.2 Interval Meter Field Reading Charge

As outlined in Section 2.3.7.2 of Hydro Ottawa's Conditions of Service, interval-metered customers are responsible for providing a dedicated telephone line for remote meter data interrogation. Should this dedicated telephone line become defective, the customer shall be responsible for arranging the necessary repairs within 7 business days upon being notified by Hydro Ottawa. After this timeframe, should the defect remain and require Hydro Ottawa to visit the metering site to obtain a scheduled reading, an interval meter field reading charge will apply to each related visit. This proposed charge is intended to promote timely telephone communication line repairs and, when necessary, recover the costs associated with interval metering field readings due to unresolved telephone line defects.

### 6.3 High Bill Investigation Charge

This proposed charge is intended to recover the direct costs associated with offsite high bill investigations, when all other means of addressing customer high bill concerns have not been satisfactory to the customer. If, as a result of an onsite investigation, it is determined that the billing amount was inaccurate, this charge would be waived.

**6.4 Service Call – Customer Missed Appointment (Regular and After Hours)**

This charge is proposed for all scheduled appointments, wherein, Hydro Ottawa personnel arrive at the agreed-upon time, but, work cannot proceed due to the absence of the customer or designated party. This charge would not apply where the customer makes a reasonable attempt to advise Hydro Ottawa, in advance, that the appointment cannot be kept, in sufficient time for Hydro Ottawa personnel to be redeployed. The costs associated with missed appointments by customers are similar to those associated with disconnection and reconnection for non-payment of account. Therefore, the currently approved charges for disconnection and reconnection for non-payment (at meter) during and after regular hours are similarly proposed for scheduled appointments that are attended by Hydro Ottawa personnel, however, insufficient or no notice is provided by the customer or designated party that the scheduled appointment can no longer be kept.

**6.5 Energy Resource Facility Administration Charge**

This proposed charge applies to all energy resource facilities when there is an assignment of contracts which require legal services and service entrance assessments on the part of Hydro Ottawa. This charge would apply to any new generation facility associated with a new or existing generation account, regardless of size. Where a generation account does not already exist, the OEB-approved Account Set-Up charge will also be applied. This charge does not apply to micro-FIT and micro-net-metering generators.

**6.6 FIT Energy Resource Facility Monthly Account Management Charge**

This proposed charge is applicable to the services provided to FIT Energy Resource Facilities on a monthly basis with respect to settlement. Currently there are no associated charges for the provision of Finance, Accounting, Billing and Metering services.

### 6.7 HCI, RESOP & Other Energy Resource Facility Monthly Account Management Charge

This proposed charge is applicable to the services provided to HCI, RESOP & Other Energy Resource Facilities on a monthly basis with respect to settlement. Currently there are no associated charges for the provision of Finance, Accounting, Billing and Metering services.

## 7.0 REVISED SERVICE CHARGE DESCRIPTIONS

### 7.1 Account Certificate (formerly Arrears Certificate)

Hydro Ottawa is currently authorized to charge for the production of an Arrears Certificate. Typically, such requests are made prior to closing a real estate transaction. Some requests may also involve inquiries regarding Hydro Ottawa property easements. To accurately reflect the potential provision of arrears and/or easement information, Hydro Ottawa proposes to replace the existing “Arrears Certificate” description with “Account Certificate”. No change in the approved charge is requested at this time.

### 7.2 Special Billing Service (formerly Request for Other Billing Information)

As noted in Section 3.1, Hydro Ottawa proposes to eliminate the “Request for other Billing Information” terminology and replace it with the proposed “Special Billing Service” description to accurately reflect the variety of services requests and provided by Billing.

### 7.3 Micro-FIT & Micro-Net-Metering Energy Resource Facility Monthly Account Management Charge (formerly Micro-FIT Service)

As noted in Section 5.1, Hydro Ottawa proposes to replace the monthly “Micro-FIT Service” charge description with the “Micro-FIT and Micro-Net-Metering Energy Resource Facility Monthly Account Management Charge” to more accurately reflect the facilities for which this charge would apply.

## 8.0 SERVICE CHARGE CALCULATIONS

In accordance with the methodology outlined in the Electricity Distribution Rate Handbook (“EDRH”), the 2016 service charge calculations are provided in Attachment H-7(A).

## 9.0 SERVICE CHARGE REVENUES

A schedule of the associated revenues from all specific service charges between 2016 and 2020 is provided in Exhibit C-2-2.

**SPECIFIC SERVICE CHARGES**

**PROPOSED NEW CHARGE: FIT, MICROFIT, HCI, RESOP & OTHER MONTHLY ACOUNT MANAGEMENT CHARGE**

# LOW VOLTAGE SERVICE RATES

## 1.0 INTRODUCTION

Hydro Ottawa Limited ("Hydro Ottawa") receives low voltage ("LV") charges from Hydro One Networks Inc. ("Hydro One") for a number of Shared Distribution Stations, Specific Lines and Shared Lines. The Ontario Energy Board's (the "Board") Decision dated March 21, 2006 (EB-2005-0529) determined that it was appropriate for an embedded Local Distribution Company ("LDC"), or an LDC with embedded distribution points (such as Hydro Ottawa), to establish and maintain a variance account for LV charges from its host LDC.

In a June 13, 2006 memo, the Board notified LDCs that Account 4750, Charges - LV and Account 4075, Billed - LV and Account 1550 – LV Variance Account had been added to the Uniform System of Accounts ("USofA"). As a result, effective May 1, 2006 Account 1550 has been used to record the net of the amounts recorded in Accounts 4750 (amount charged by Hydro One for low voltage services) and 4075 (amount customers are billed for low voltage services). In 2008 Hydro Ottawa removed the LV charges from the distribution revenue requirement and proposed that a separate charge be calculated to recover the LV charges from the customer. These separate charges were approved by the Board as part of the EB-2007-0713 Decision, issued on March 17, 2008. The current low voltage rates are shown below in Table 1.

**Table 1 – Low Voltage Charges as of January 1, 2015**

| Class | Per | LV Charge |
|---|---|---|
| Residential | kWh | $0.00006 |
| General Service < 50 kW | kWh | $0.00006 |
| General Service 50 to 1,499 kW | kW | $0.02354 |
| General Service 1,500 to 4,999 kW | kW | $0.02516 |
| Large Use (> 5000 kW) | kW | $0.02833 |
| Unmetered Scattered Load | kWh | $0.00006 |
| Sentinel Lights | kW | $0.01785 |
| Street Lighting | kW | $0.01749 |

## 2.0 PROPOSED LV CHARGES FOR 2016 THROUGH 2020

In Table 2 below are the actual LV Charges for 2012 and 2013 and the forecasted LV Charges for 2014 and 2015.

**Table 2 – LV Charges 2012 to 2015**

| | 2012 Actual $000 | 2013 Actual $000 | 2014 Forecast $000 | 2015 Forecast $000 |
|---|---|---|---|---|
| LV Charges | $452 | $458 | $451 | $453 |

An average of the total actual LV Charge for 2012 and 2013 was the basis for the 2016 through 2020 forecast. As the dollar value was used it was not necessary to forecast the 2016 through 2020 billing determinants for LV charges.

The LV charge has been allocated to the customer classes based on the class percentage of Retail Transmission Connection dollars (using 2015 rates), as shown in Tables 3 through 7.

**Table 3 – 2016 Calculation of LV Charge**

# LOSS ADJUSTMENT FACTORS

## 1.0 DISTRIBUTION LOSSES

Table 1 below provides losses as a percentage of purchases for the previous five years. Hydro Ottawa Limited's ("Hydro Ottawa") losses have not been greater than 5% in the past five years. Hydro Ottawa contains no distributors embedded in its area and is not an embedded distributor itself; however it does have a number of delivery points embedded in Hydro One Network Inc.'s service territory.

***Table 1 – Losses as a % of Purchases for Previous Five Years***

| | 2009 | 2010 | 2011 | 2012 | 2013 |
|---|---|---|---|---|---|
| Electricity Purchases (MWh) | 7,784,723 | 7,839,865 | 7,853,159 | 7,856,204 | 7,722,152 |
| Electricity Sales (MWh) | 7,560,847 | 7,594,977 | 7,607,711 | 7,570,226 | 7,519,454 |
| Losses (MWh) | 223,876 | 244,888 | 245,447 | 285,978 | 202,698 |
| Losses % | 2.88% | 3.12% | 3.13% | 3.64% | 2.62% |

## 2.0 LOSS ADJUSTMENT FACTORS

Hydro Ottawa's current loss adjustment factors, which have been approved by the Ontario Energy Board (the "Board") as part of the EB-2011-0054 Decision, are shown below:

| | |
|---|---|
| Total Loss Factor – Secondary Metered Customer < 5,000 kW | 1.0358 |
| Total Loss Factor – Secondary Metered Customer > 5,000 kW | 1.0170 |
| Total Loss Factor – Primary Metered Customer < 5,000 kW | 1.0254 |
| Total Loss Factor – Primary Metered Customer > 5,000 kW | 1.0069 |

Hydro Ottawa has completed Appendix 2-R of the Board's Update to Chapter 2 of the Filing Requirements for Transmission and Distribution Applications, July 18, 2014, which is also attached as a PDF to this Exhibit.

As a result of the updated calculation in Appendix 2-R, Hydro Ottawa is requesting approval of the following revised loss factors, for Secondary and Primary Metered Customers:

| | |
|---|---|
| Total Loss Factor – Secondary Metered Customer < 5,000 kW | 1.0338 |
| Total Loss Factor – Secondary Metered Customer > 5,000 kW | 1.0163 |
| Total Loss Factor – Primary Metered Customer < 5,000 kW | 1.0234 |
| Total Loss Factor – Primary Metered Customer > 5,000 kW | 1.0062 |

| **E** | Portion of "Retail" kWh delivered by distributor to its Large Use Customer(s) | 633,982,714 | 685,666,594 | 662,045,474 | 646,432,433 | 613,513,830 | 648,328,209 |
| **F** | Net "Retail" kWh delivered by distributor = **D - E** | 6,926,864,162 | 6,909,310,491 | 6,945,665,882 | 6,923,793,982 | 6,905,940,300 | 6,922,314,963 |
| **G** | Loss Factor in Distributor's system = **C / F** | 1.0252 | 1.0281 | 1.0280 | 1.0338 | 1.0220 | 1.0274 |
| | ***Losses Upstream of Distributor's System*** | | | | | | |
| **H** | Supply Facilities Loss Factor | 1.0060 | 1.0061 | 1.0061 | 1.0063 | 1.0062 | 1.0062 |
| | ***Total Losses*** | | | | | | |
| **I** | Total Loss Factor = **G x H** | 1.0314 | 1.0344 | 1.0343 | 1.0403 | 1.0284 | 1.0338 |

***Notes***

**A(1)** If directly connected to the IESO-controlled grid, kWh pertains to the virtual meter on the primary or high voltage side of the transformer at the interface with the transmission grid. This corresponds to the "With Losses" kWh value provided by the IESO's MV-WEB. It is the higher of the two values provided by MV-WEB.

If fully embedded within a host distributor, kWh pertains to the virtual meter on the primary or high voltage side of the transformer, at the interface between the host distributor and the transmission grid. For example, if the host distributor is Hydro One Networks Inc., kWh from the Hydro One Networks' invoice corresponding to "Total kWh w Losses" should be reported. This corresponds to the higher of the two kWh values provided in Hydro One Networks' invoice.

If partially embedded, kWh pertains to the sum of the above.

**A(2)** If directly connected to the IESO-controlled grid, kWh pertains to a metering installation on the secondary or low voltage side of the transformer at the interface with the transmission grid. This corresponds to the "Without Losses" kWh value provided by the IESO's MV-WEB. It is the lower of the two kWh values provided by MV-WEB.

If fully embedded with the host distributor, kWh pertains to a metering installation on the secondary or low voltage side of the transformer at the interface between the embedded distributor and the host distributor. For example, if the host distributor is Hydro One Networks Inc., kWh from the Hydro One Networks' invoice corresponding to "Total kWh" should be reported. This corresponds to the lower of the two kWh values provided in Hydro One Networks' invoice.

If partially embedded, kWh pertains to the sum of the above.

Additionally, kWh pertaining to distributed generation directly connected to the distributor's own distribution network should be included in **A(2)**.

**B** If a Large Use Customer is metered on the secondary or low voltage side of the transformer, the default loss is 1% (i.e., **B** = 1.01 X **E**).

**D** kWh corresponding to D should equal metered or estimated kWh at the customer's delivery point.

**G** and **I** These loss factors pertain to secondary-metered customers with demand less than 5,000 kW.

**H** If directly connected to the IESO-controlled grid, SFLF = 1.0045.

If fully embedded within a host distributor, SFLF = loss factor re losses in transformer at grid interface X loss factor re losses in host distributor's system. If the host distributor is Hydro One Networks Inc., SFLF = 1.0060 X 1.0278 = 1.0340. If partially embedded, SFLF should be calculated as the weighted average of above.

Distributors that wish to propose a different SFLF should provide appropriate justification for any such proposal including supporting calculations and any other relevant material.

# CURRENT AND PROPOSED TARIFF OF RATES AND CHARGES

Hydro Ottawa Limited's ("Hydro Ottawa") 2015 tariff of rates and charges is provided as attachment H-10(A). Hydro Ottawa's 2016 through 2020 proposed tariff of rates and charges is provided in Appendix 2-Z and included as PDF's to this exhibit.

# Hydro Ottawa Limited
# TARIFF OF RATES AND CHARGES
## Effective and Implementation Date January, 2016

**This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors**

**EB-2015-0004**

## RESIDENTIAL SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase where the electricity is used exclusively in a separately metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triple or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customes. Further servicing details are

### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES – Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

### MONTHLY RATES AND CHARGES - Delivery Component

| | | |
|---|---|---|
| Service Charge | $ | 12.25 |
| Rate Rider for Smart Metering Entity Charge - effective until October 31, 2018 | $ | 0.79 |
| Distribution Volumetric Rate | $/kWh | 0.0235 |
| Low Voltage Service Rate | $/kWh | 0.00007 |
| Retail Transmission Rate - Network Service Rate | $/kWh | 0.0077 |
| Retail Transmission Rate - Line and Transformation Connection Service Rate | $/kWh | 0.0042 |
| Rate Rider for Lost Revenue Adjustment Mechanism (LRAM) Recovery - effective until December 31, 2016 | $/kWh | (0.0003) |
| Rate Rider for Disposition of Deferral/Variance Accounts - effective until December 31, 2016 | $/kWh | (0.0006) |

## Micro-FIT and Micro-Net-Metering SERVICE CLASSIFICATION

This classification applies to an electricity generation facility contracted under the Ontario Power Authority's or Independent Electricity System Operator's microFIT program and connected to the distributor's distribution system. Further servicing details are available in the distributor's Conditions of Service.

### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.
Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessements or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

## RETAIL SERVICE CHARGES (if applicable)

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

| | | |
|---|---|---|
| One-time charge, per retailer, to establish the service agreement between the distributor and the retailer | $ | 117.00 |
| Monthly Fixed Charge, per retailer | $ | 24.00 |
| Monthly Variable Charge, per customer, per retailer | $/cust. | 0.6000 |
| Distributor-consolidated billing monthly charge, per customer, per retailer | $/cust. | 0.3500 |
| Retailer-consolidated billing monthly credit, per customer, per retailer | $/cust. | (0.3500) |
| Service Transaction Requests (STR) | | |
| Request fee, per request, applied to the requesting party | $ | 0.30 |
| Processing fee, per request, applied to the requesting party | $ | 0.60 |
| Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail Settlement Code directly to retailers and customers, if not delivered electronically through the Electronic Business Transaction (EBT) system, applied to the requesting party | | |
| Up to twice a year | $ | no charge |
| More than twice a year, per request (plus incremental delivery costs) | $ | 2.00 |

## LOSS FACTORS

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

| | |
|---|---|
| Total Loss Factor – Secondary Metered Customer < 5,000 kW | 1.0338 |
| Total Loss Factor – Secondary Metered Customer > 5,000 kW | 1.0163 |
| Total Loss Factor – Primary Metered Customer < 5,000 kW | 1.0234 |
| Total Loss Factor – Primary Metered Customer > 5,000 kW | 1.0062 |

## RESIDENTIAL SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase where the electricity is used exclusively in a separately metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triple or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customes. Further servicing details are

### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES – Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

### MONTHLY RATES AND CHARGES - Delivery Component

| | | |
|---|---|---|

| | | |
|---|---|---|
| Service Charge (per connection) | $ | 5.75 |
| Distribution Volumetric Rate | $/kWh | 0.0237 |
| Low Voltage Service Rate | $/kWh | 0.00006 |
| Retail Transmission Rate - Network Service Rate | $/kWh | 0.0070 |
| Retail Transmission Rate - Line and Transformation Connection Service Rate | $/kWh | 0.0040 |

## MONTHLY RATES AND CHARGES - Regulatory Component

| | | |
|---|---|---|
| Wholesale Market Service Rate | $/kWh | 0.0044 |
| Rural Rate Protection Charge | $/kWh | 0.0013 |
| Standard Supply Service - Administrative Charge (if applicable) | $ | 0.25 |

# STANDBY POWER SERVICE CLASSIFICATION

This classification refers to an account that has Load Displacement Generation equal to or greater than 500 kW and requires the distributor to provide back-up service. Further servicing details are available in the distributor's Conditions of Service.

## APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

## MONTHLY RATES AND CHARGES - Delivery Component

| | | |
|---|---|---|
| Service Charge | $ | 143.00 |
| General Service 1,500 to 4,999 kW customer | $/kW | 1.7652 |

## MONTHLY RATES AND CHARGES - Regulatory Component

Wholesale Market Service Rate
Rural or Remote Electricity Rate Protection Charge (RRRP)
Standard Supply Service - Administrative Charge (if applicable)

# SENTINEL LIGHTING SERVICE CLASSIFICATION

This classification refers to accounts that are an unmetered lighting load supplied to a sentinel light. Further servicing details are available in the distributor's Conditions of Service.

## APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES – Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

## MONTHLY RATES AND CHARGES - Delivery Component

| | | |
|---|---|---|
| Service Charge (per connection) | $ | 3.25 |
| Distribution Volumetric Rate | $/kW | 13.3241 |
| Low Voltage Service Rate | $/kW | 0.01893 |
| Retail Transmission Rate - Network Service Rate | $/kW | 2.1461 |
| Retail Transmission Rate - Line and Transformation Connection Service Rate | $/kW | 1.2058 |

## MONTHLY RATES AND CHARGES - Regulatory Component

| | | |
|---|---|---|
| Wholesale Market Service Rate | $/kWh | 0.0044 |
| Rural or Remote Electricity Rate Protection Charge (RRRP) | $/kWh | 0.0013 |
| Standard Supply Service - Administrative Charge (if applicable) | $ | 0.25 |

# STREET LIGHTING SERVICE CLASSIFICATION

This classification refers to an account for roadway lighting with a Municipality, Regional Municipality, Ministry of Transportation and private roadway lighting controlled by photocells. The consumption for these customers is based on the calculated connected load times the required lighting times established in the approved OEB street lighting load shape template. Further servicing details are available in the distributor's Conditions of Service.

## APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES – Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessements or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

## MONTHLY RATES AND CHARGES - Delivery Component

| | | |
|---|---|---|
| Service Charge (per connection) | $ | 0.70 |
| Distribution Volumetric Rate | $/kW | 4.5389 |
| Low Voltage Service Rate | $/kW | 0.01933 |
| Retail Transmission Rate - Network Service Rate | $/kW | 2.1570 |
| Retail Transmission Rate - Line and Transformation Connection Service Rate | $/kW | 1.2310 |

## MONTHLY RATES AND CHARGES - Regulatory Component

## MONTHLY RATES AND CHARGES - Delivery Component

| | | |
|---|---|---|
| Service Charge | $ | 18.0000 |

## MONTHLY RATES AND CHARGES - Regulatory Component

# FIT SERVICE CLASSIFICATION

This classification applies to an electricity generation facility contracted under the Ontario Power Authority's or Independent Electricity System Operator's FIT program and connected to the distributor's distribution system. Further servicing details are available in the distributor's Conditions of Service.

## APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.
Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessements or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

## MONTHLY RATES AND CHARGES - Delivery Component

| | | |
|---|---|---|
| Service Charge | $ | 121.00 |

## MONTHLY RATES AND CHARGES - Regulatory Component

## HCI, RESOP, Other Energy Resource SERVICE CLASSIFICATION

This classification applies to an electricity generation facility contracted under the Ontario Power Authority's or Independent Electricity System Operator's HCI, RESOP and Other Energy Resource programs and connected to the distributor's distribution system. Further servicing details are available in the distributor's Conditions of Service.

### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessements or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

### MONTHLY RATES AND CHARGES - Delivery Component

| | | |
|---|---|---|
| Service Charge | $ | 264.00 |

### MONTHLY RATES AND CHARGES - Regulatory Component

## ALLOWANCES

Transformer Allowance for Ownership - per kW of billing demand/month
Primary Metering Allowance for transformer losses – applied to measured demand and energy

## SPECIFIC SERVICE CHARGES

### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

| | | |
|---|---|---|
| **Customer Administration** | | |
| Arrears certificate | $ | 15.00 |
| Duplicate Invoices for previous billing | $ | 15.00 |
| Special Billing Service Per Hour (Min 1 hour, 15 min incremental billing thereafter) | $ | 97.00 |
| Credit Reference/credit check (plus credit agency costs) | $ | 15.00 |
| Unprocessed Payment Charge (plus bank charges) | $ | 15.00 |
| Account set up charge/change of occupancy charge (plus credit agency costs if applicable) | $ | 30.00 |
| Reconnect at Meter - Regular Hours (Under Account Administration - New Account) | $ | 65.00 |
| Reconnect at Meter - After Regular Hours (Under Account Administration - New Account) | $ | 185.00 |

| Late Payment – per annum | % | 19.5600 |
| Collection of account charge – no disconnection | $ | 30.00 |
| Disconnect/Reconnect at meter – during regular hours | $ | 65.00 |
| Disconnect/Reconnect at meter – after regular hours | $ | 185.00 |
| Disconnect/Reconnect at pole – during regular hours | $ | 185.00 |
| Disconnect/Reconnect at pole – after regular hours | $ | 415.00 |
| **Other** | | |
| Temporary Service – Install & remove – overhead – no transformer | $ | 813.00 |
| Temporary Service – Install & remove – underground – no transformer | $ | 1,180.00 |
| Temporary Service – Install & remove – overhead – with transformer | $ | 2,900.00 |
| Specific Charge for Access to the Power Poles - $/pole/year | $ | 57.00 |
| Dry core transformer distribution charge | Per Attached Table | |
| Service Call - Customer Missed Appointment - during regular hours | $ | 65.00 |
| Service Call - Customer Missed Appointment - after regular hours | $ | 185.00 |
| Energy Resource Facility Administration Charge - Without Account Set Up (One Time) | $ | 130.00 |
| Energy Resource Facility Administration Charge - With Account Set Up (One Time) | $ | 160.00 |

## RETAIL SERVICE CHARGES (if applicable)

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

| | | |
|---|---|---|
| One-time charge, per retailer, to establish the service agreement between the distributor and the retailer | $ | 122.00 |
| Monthly Fixed Charge, per retailer | $ | 25.00 |
| Monthly Variable Charge, per customer, per retailer | $/cust. | 0.6000 |
| Distributor-consolidated billing monthly charge, per customer, per retailer | $/cust. | 0.3500 |
| Retailer-consolidated billing monthly credit, per customer, per retailer | $/cust. | (0.3500) |
| Service Transaction Requests (STR) | | |
| Request fee, per request, applied to the requesting party | $ | 0.30 |
| Processing fee, per request, applied to the requesting party | $ | 0.60 |
| Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail Settlement Code directly to retailers and customers, if not delivered electronically through the Electronic Business Transaction (EBT) system, applied to the requesting party | | |
| Up to twice a year | $ | no charge |
| More than twice a year, per request (plus incremental delivery costs) | $ | 2.00 |

## LOSS FACTORS

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

| | |
|---|---|
| Total Loss Factor – Secondary Metered Customer < 5,000 kW | 1.0338 |
| Total Loss Factor – Secondary Metered Customer > 5,000 kW | 1.0163 |
| Total Loss Factor – Primary Metered Customer < 5,000 kW | 1.0234 |
| Total Loss Factor – Primary Metered Customer > 5,000 kW | 1.0062 |

## GENERAL SERVICE 1,500 TO 4,999 KW SERVICE CLASSIFICATION

This classification refers to non residential accounts whose monthly average peak demand is equal to or greater than, or is forecast to be equal to or greater than 1,500 kW but less than 5,000 kW. Further servicing details are available in the distributor's Conditions of Service.

**APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES – Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

### MONTHLY RATES AND CHARGES - Delivery Component

| | | |

## RETAIL SERVICE CHARGES (if applicable)

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

| | | |
|---|---|---|
| One-time charge, per retailer, to establish the service agreement between the distributor and the retailer | $ | 129.00 |
| Monthly Fixed Charge, per retailer | $ | 26.00 |
| Monthly Variable Charge, per customer, per retailer | $/cust. | 0.6500 |
| Distributor-consolidated billing monthly charge, per customer, per retailer | $/cust. | 0.4000 |
| Retailer-consolidated billing monthly credit, per customer, per retailer | $/cust. | (0.4000) |
| Service Transaction Requests (STR) | | |
| Request fee, per request, applied to the requesting party | $ | 0.30 |
| Processing fee, per request, applied to the requesting party | $ | 0.65 |
| Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail Settlement Code directly to retailers and customers, if not delivered electronically through the Electronic Business Transaction (EBT) system, applied to the requesting party | | |
| Up to twice a year | $ | no charge |
| More than twice a year, per request (plus incremental delivery costs) | $ | 2.00 |

## LOSS FACTORS

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

| | |
|---|---|
| Total Loss Factor – Secondary Metered Customer < 5,000 kW | 1.0338 |
| Total Loss Factor – Secondary Metered Customer > 5,000 kW | 1.0163 |
| Total Loss Factor – Primary Metered Customer < 5,000 kW | 1.0234 |
| Total Loss Factor – Primary Metered Customer > 5,000 kW | 1.0062 |

## RESIDENTIAL SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase where the electricity is used exclusively in a separately metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triple or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customes. Further servicing details are

### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES – Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

# TARIFF OF RATES AND CHARGES
### Effective and Implementation Date January 1, 2019

**This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors**

**EB-2015-0004**

## RETAIL SERVICE CHARGES (if applicable)

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

| | | |
|---|---|---|
| One-time charge, per retailer, to establish the service agreement between the distributor and the retailer | $ | 135.00 |
| Monthly Fixed Charge, per retailer | $ | 27.00 |
| Monthly Variable Charge, per customer, per retailer | $/cust. | 0.6500 |
| Distributor-consolidated billing monthly charge, per customer, per retailer | $/cust. | 0.4000 |
| Retailer-consolidated billing monthly credit, per customer, per retailer | $/cust. | (0.4000) |
| Service Transaction Requests (STR) | | |
| Request fee, per request, applied to the requesting party | $ | 0.35 |
| Processing fee, per request, applied to the requesting party | $ | 0.65 |
| Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail Settlement Code directly to retailers and customers, if not delivered electronically through the Electronic Business Transaction (EBT) system, applied to the requesting party | | |
| Up to twice a year | $ | no charge |
| More than twice a year, per request (plus incremental delivery costs) | $ | 2.00 |

## LOSS FACTORS

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

| | |
|---|---|
| Total Loss Factor – Secondary Metered Customer < 5,000 kW | 1.0338 |
| Total Loss Factor – Secondary Metered Customer > 5,000 kW | 1.0163 |
| Total Loss Factor – Primary Metered Customer < 5,000 kW | 1.0234 |
| Total Loss Factor – Primary Metered Customer > 5,000 kW | 1.0062 |

## RESIDENTIAL SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase where the electricity is used exclusively in a separately metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triple or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customes. Further servicing details are

### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES – Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

## STREET LIGHTING SERVICE CLASSIFICATION

This classification refers to an account for roadway lighting with a Municipality, Regional Municipality, Ministry of Transportation and private roadway lighting controlled by photocells. The consumption for these customers is based on the calculated connected load times the required lighting times established in the approved OEB street lighting load shape template. Further servicing details are available in the distributor's Conditions of Service.

**APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES – Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessements or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

## RETAIL SERVICE CHARGES (if applicable)

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

| | | |
|---|---|---|
| One-time charge, per retailer, to establish the service agreement between the distributor and the retailer | $ | 140.00 |
| Monthly Fixed Charge, per retailer | $ | 28.00 |
| Monthly Variable Charge, per customer, per retailer | $/cust. | 0.7000 |
| Distributor-consolidated billing monthly charge, per customer, per retailer | $/cust. | 0.4000 |
| Retailer-consolidated billing monthly credit, per customer, per retailer | $/cust. | (0.4000) |
| Service Transaction Requests (STR) | | |
| Request fee, per request, applied to the requesting party | $ | 0.35 |
| Processing fee, per request, applied to the requesting party | $ | 0.70 |
| Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail Settlement Code directly to retailers and customers, if not delivered electronically through the Electronic Business Transaction (EBT) system, applied to the requesting party | | |
| Up to twice a year | $ | no charge |
| More than twice a year, per request (plus incremental delivery costs) | $ | 2.00 |

## LOSS FACTORS

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

| | |
|---|---|
| Total Loss Factor – Secondary Metered Customer < 5,000 kW | 1.0338 |
| Total Loss Factor – Secondary Metered Customer > 5,000 kW | 1.0163 |
| Total Loss Factor – Primary Metered Customer < 5,000 kW | 1.0234 |
| Total Loss Factor – Primary Metered Customer > 5,000 kW | 1.0062 |

## RESIDENTIAL SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase where the electricity is used exclusively in a separately metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triple or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customes. Further servicing details are available in the distributor's Conditions of Service.

### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES – Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

### Effective and Implementation Date January 1, 2015

**This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors**

EB-2014-0085

## LARGE USE SERVICE CLASSIFICATION

This classification refers to an account whose monthly average peak demand is equal to or greater than, or is forecast to be equal to or greater than 5,000 kW. Further servicing details are available in the distributor's Conditions of Service.

### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES – Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

### MONTHLY RATES AND CHARGES - Delivery Component

| | | |
|---|---|---|
| Service Charge | $ | 15,231.32 |
| Distribution Volumetric Rate | $/kW | 3.3129 |
| Low Voltage Service Rate | $/kW | 0.02833 |
| Retail Transmission Rate - Network Service Rate | $/kW | 3.3462 |
| Retail Transmission Rate - Line and Transformation Connection Service Rate | $/kW | 1.9535 |

## UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase whose monthly average peak demand is less than, or is forecast to be less than, 50 kW and the consumption is unmetered. These connections include cable TV power packs, bus shelters, telephone booths, traffic lights, railway crossings, etc. The customer will provide detailed manufacturer information/documentation with regard to electrical demand/consumption of the proposed unmetered load. Qualification for this classification is at the discretion of Hydro Ottawa as defined in its Conditions of Service.

### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES – Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

### MONTHLY RATES AND CHARGES - Delivery Component

| | | |

**This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors**

EB-2014-0085

## RETAIL SERVICE CHARGES (if applicable)

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Debt Retirement Charge, the Global Adjustment, the Ontario Clean Energy Benefit and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

| | | |
|---|---|---|
| One-time charge, per retailer, to establish the service agreement between the distributor and the retailer | $ | 100.00 |
| Monthly Fixed Charge, per retailer | $ | 20.00 |
| Monthly Variable Charge, per customer, per retailer | $/cust. | 0.50 |
| Distributor-consolidated billing monthly charge, per customer, per retailer | $/cust. | 0.30 |
| Retailer-consolidated billing monthly credit, per customer, per retailer | $/cust. | (0.30) |
| Service Transaction Requests (STR) | | |
| Request fee, per request, applied to the requesting party | $ | 0.25 |
| Processing fee, per request, applied to the requesting party | $ | 0.50 |
| Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail Settlement Code directly to retailers and customers, if not delivered electronically through the Electronic Business Transaction (EBT) system, applied to the requesting party | | |
| Up to twice a year | $ | no charge |
| More than twice a year, per request (plus incremental delivery costs) | $ | 2.00 |

## LOSS FACTORS

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

| | |
|---|---|
| Total Loss Factor – Secondary Metered Customer < 5,000 kW | 1.0358 |
| Total Loss Factor – Secondary Metered Customer > 5,000 kW | 1.0170 |
| Total Loss Factor – Primary Metered Customer < 5,000 kW | 1.0254 |
| Total Loss Factor – Primary Metered Customer > 5,000 kW | 1.0069 |

No Load and load losses from CSA standard C802-94: Maximum losses for distribution, power and dry-type transformers commercial use.
Average load factor = 0.46 average loss factor = 0.2489

*For non-preferred KVA ratings no load and load losses are interpolated as per CSA standard

# REVENUE PER RATE CLASS UNDER CURRENT AND PROPOSED RATES

Please see Tables 1 through 5 for detailed calculations of revenue per rate class under current rates and a reconciliation of rate class revenue at current rates and other revenue to total revenue requirement.

Detailed calculations of revenue per rate class under proposed rates can be found in Appendix 2-V and as a PDF to this Exhibit. The difference in revenue deficiency is due to the different way in calculating average customers/connects. Hydro Ottawa Limited has used a monthly calculation whereas Appendix 2-V calculates the average by using the beginning and end of the year customer/connection numbers.

## Table 1 – Revenue per rate class and reconciliation to 2016 Revenue Requirement

| Rate Class | Average # Customers/ Connections | 2016 Consumption | | 2015 Rates | | Revenues at 2015 Rates (000) | Transformer Allowance Credit (000) | Difference |
|---|---|---|---|---|---|---|---|---|
| | | MWh | KW | Monthly Service Charge | Volumetric Rate (kWh/KW) | | | |

**Note**

1 The class specific revenue requirements in column N must be the amounts used in the final rate design process. The total of column N should equate to the proposed base revenue requirement.

# BILL IMPACT INFORMATION

This schedule describes bill impacts for typical customers in each rate class arising from Hydro Ottawa Limited's ("Hydro Ottawa") revenue requirement adjusted for cost allocation.

Details of the impacts of the proposed rates are provided in Appendix 2-W attached. The Appendix illustrates individual and the combined impacts of the distribution component of the rate transmission and network charges and the total bill impact, as based on the typical consumption level used for each rate class.

Table 1 provides a summary of bill impacts per rate class including the total change in monthly bill, including variance accounts, as expressed in both monetary and percentage terms. Please note additional bill impacts are provided in Appendix 2-W which are not shown on the summary table.

## Table 1 Summary of Rate Impacts

| *Rate Class* | | *2015 Approved* | *2016 Proposed* | *2017 Proposed* | *2018 Proposed* | *2019 Proposed* | *2020 Proposed* |
|---|---|---|---|---|---|---|---|

# CURRENT DEFERRAL AND VARIANCE ACCOUNTS

## 1.0 INTRODUCTION

Hydro Ottawa Limited ("Hydro Ottawa") has included a request for approval of the disposition for the Group 1 and Group 2 Deferral and Variance Accounts ("DVAs") based on the balances at December 31, 2013 and the forecasted interest through December 31, 2014 in this Custom Incentive Rate Application. Hydro Ottawa intends to file an updated request based on December 31, 2014 balances and forecasted interest for 2015 as part of the rate application process.

## 2.0 DETAILS OF DEFERRAL AND VARIANCE ACCOUNTS

Included in the following Tables 1 and 2 is a complete list of Hydro Ottawa's active DVAs categorized based on the Report of the Board on Electricity Distributors' Deferral and Variance Account Review Initiative ("EDDVAR Report"), which categorizes the DVA accounts into Group 1 and Group 2 accounts.

**Table 1 – Group 1 Deferral and Variance Accounts**

| Group 1 Account – Description | Account |
|---|---|
| Low Voltage ("LV") Account | 1550 |
| Smart Meter Entity Charge Variance Account | 1551 |
| Retail Settlement Variance Account ("RSVA")- Wholesale Market Service Charge | 1580 |
| RSVA - Retail Transmission Network Charge | 1584 |
| RSVA - Retail Transmission Connection Charge | 1586 |
| RSVA - Power (Excluding Global Adjustment) | 1588 |
| RSVA - Global Adjustment | 1589 |
| Disposition and Recovery/Refund of Regulatory Balances Account | 1595 |

**Table 2 – Group 2 Deferral and Variance Accounts**

| Group 2 Account – Description | Account |
|---|---|
| Other Regulatory Assets | 1508 |
| Retail Cost Variance Account – Retail | 1518 |
| Renewable Connection OM&A Deferral Account | 1532 |
| Smart Grid OM&A Deferral Account | 1535 |
| Retail Cost Variance Account – STR | 1548 |
| Smart Meter Capital Account | 1555 |
| Smart Meter OM&A Account | 1556 |
| LRAM Variance Account ("LRAMVA") | 1568 |
| IFRS-CGAAP Transitional PP&E Amounts | 1575 |
| RSVA - One-time Wholesale Market Service | 1582 |
| PILs and Tax Variance | 1592 |

Hydro Ottawa confirms that no deferral and variance accounts are being used differently than as prescribed in the Accounting Procedures Handbook ("APH").

## 3.0 CONTINUITY SCHEDULE

Attachment I-8(A) to this Exhibit is a complete continuity schedule for all Deferral and Variance accounts based on the Deferral and Variance Account (Continuity Schedule) Work Form – version 2.4 Excel spreadsheet as posted by the Board on its website June 26, 2014.

Hydro Ottawa is proposing to dispose of Group 1 and Group 2 accounts, except for those listed in section 3 of Exhibit I-8-1, the total DVA disposal of $8.2 million is to be returned to customers over a period of one year. This will be divided into three rate riders, the total proposed disposition for Group 1 and Group 2, excluding Global Adjustment and LRAMVA is a credit of $6.3 million to be returned to all customer classes. The global adjustment rate rider proposed would return $1.3 million to non-Regulated Price Plan ("non-RPP") customers. The LRAM rate rider proposed would return $679k to all customer classes. Please refer to Exhibit I-8-1 for further details on the disposition plan.

## 4.0 CARRYING CHARGES

The interest rate used for the calculation of all carrying charges was as prescribed by the Board and published quarterly on its website. Please refer to Table 3 for a listing of these interest rates up to 2015 Q2. Hydro Ottawa confirms it uses these interest rates as provided by the Board.

**Table 3 – Interest Rates for Carrying Charges on Deferral and Variance Accounts**

| Approved Deferral and Variance Accounts | |
|---|---|
| **Quarter by Year** | **Prescribed Interest Rate** |
| Q2 2015 | 1.10% |
| Q1 2015 | 1.47% |
| Q4 2014 | 1.47% |
| Q3 2014 | 1.47% |
| Q2 2014 | 1.47% |
| Q1 2014 | 1.47% |
| Q4 2013 | 1.47% |
| Q3 2013 | 1.47% |
| Q2 2013 | 1.47% |
| Q1 2013 | 1.47% |
| Q4 2012 | 1.47% |
| Q3 2012 | 1.47% |
| Q2 2012 | 1.47% |
| Q1 2012 | 1.47% |
| Q4 2011 | 1.47% |
| Q3 2011 | 1.47% |
| Q2 2011 | 1.47% |
| Q1 2011 | 1.47% |
| Q4 2010 | 1.20% |
| Q3 2010 | 0.89% |
| Q2 2010 | 0.55% |
| Q1 2010 | 0.55% |

Carrying charges were calculated on all deferral and variance accounts with the exception of:

- USofA's 1575 – IFRS –CGAAP Transitional PP&E Amounts
- USofA 1508, Other Regulatory Assets, Sub-Account P&OPEB Deferral Account and,
- 1592 - PILs and Tax Variance for 2006 and Subsequent Years - Sub-Account HST/OVAT.

## 5.0 RECONCILIATION OF CONTINUITY SCHEDULE VS. RRR's

As per the Continuity Schedule in Appendix I-8(A), there are two differences in the account balances as of December 31, 2013 between the continuity schedule and 2.1.7 Electricity Reporting and Record-keeping Requirements ("RRR's") reported to the Board.

The Lost Revenue Adjustment Mechanism Variance Account ("LRAMVA") – USofA 1568 has a difference of $104k when compared to the December 31, 2013 2.1.7 RRR as reported to the OEB. The Continuity Schedule includes balances to the end of 2014 so they can be disposed of as part of this rate application, resulting in a timing difference.

There is also a difference in USofA 1592 - PILs and Tax Variance for 2006 and Subsequent Years - Sub-Account HST/OVAT Input Tax Credits (ITCs). Question 1 from the Board's APH FAQ's dated December 23, 2010, stated that for regulatory reporting purposes the sub-account and contra account for HST/OVAT will have a reporting amount for RRR's that nets to zero. This is consistent with Hydro Ottawa's RRR 2.1.7 filing. The same document from the Board states that the balance in this sub-account should be reported for disposition; therefore, the credit balance of $545k will be returned to customers.

The result is a variance between the RRR filing and the balance to be disposed of $441k.

## 6.0 STATUS OF GROUP 2 ACCOUNTS

Hydro Ottawa identified active Group 2 accounts in Table 2 of this Exhibit. Please refer to Table 4 for an outline of Group 2 accounts that Hydro Ottawa is proposing to continue or discontinue.

**Table 4 - Status of Group 2 Accounts**

| Group 2 Account - Description | Account | Continue/Discontinue |
|---|---|---|
| Other Regulatory Assets | 1508 | Continue |
| Retail Cost Variance Account – Retail | 1518 | Continue[1] |
| Renewable Connection OM&A Deferral Account | 1532 | Continue |
| Smart Grid OM&A Deferral Account | 1535 | Continue |
| Retail Cost Variance Account – STR | 1548 | Continue[1] |
| Smart Meter Capital Account | 1555 | Discontinue[2] |
| Smart Meter OM&A Account | 1556 | Discontinue |
| LRAM Variance Account ("LRAMVA") | 1568 | Continue |
| IFRS-CGAAP Transitional PP&E Amounts | 1575 | Discontinue |
| RSVA - One-time Wholesale Market Service | 1582 | Continue |
| PILs and Tax Variance | 1592 | Discontinue |

1. Proposal to Continue tracking until end of 2015, Dispose of remaining balance in 2018 for 2019 rates, see Exhibits I-7-1 and I-8-1

2. 1555 upon approval of disposition through 1595 rate rider

## 7.0 NEW DEFERRAL AND VARIANCE ACCOUNTS AND SUB-ACCOUNTS

Please refer to Exhibit I-1-2 for details regarding new DVAs that Hydro Ottawa is requesting.

## 8.0 ADJUSTMENTS TO DEFERAL AND VARIANCE ACCOUNTS

Hydro Ottawa confirms it has not made any adjustments to DVA balances that were previously approved by the board on a final basis, in either a Cost of Service or Incentive Regulation Mechanism ("IRM") proceedings.

## 9.0 ENERGY SALES AND COST OF POWER EXPENSE BALANCES

The sale of energy and cost of power are flow through items. The components of energy sales and the cost of power are broken down by USofA in Table 5. Hydro Ottawa does not report any difference for financial purposes between the energy sales and the cost of power. As a result, Hydro Ottawa does not derive any economic gain or loss in the flow through of these accounts.

**Table 5 – Cost of Power and Energy Sales**

| ENERGY SALES | | |
|---|---|---|
| **Account and Description** | **2012** | **2013** |
| 4006 Residential Energy Sales | ($178,314,106) | ($192,253,659) |
| 4020 Energy Sales to Large Users | (38,006,458) | (47,291,162) |
| 4025 Street Lighting Energy Sales | (934,382) | (2,907,587) |
| 4030 Sentinel Lighting Energy Sales | (8,926) | (8,727) |
| 4035 General Energy Sales | (370,884,811) | (401,258,444) |
| 4050 Revenue Adjustment | 1,123,181 | - |
| 4062 Billed WMS | (40,131,924) | (39,786,424) |
| 4066 Billed NW | (49,877,881) | (51,001,142) |
| 4068 Billed CN | (32,396,995) | (31,148,466) |
| 4075 Billed – LV | (502,730) | (438,498) |
| 4076 Billed Smart Metering Entity Charge | | (1,984,655) |
| **Sum of Energy Sales** | **($709,935,032)** | **($768,078,763)** |
| **COST OF POWER** | | |
| **Account and Description** | **2012** | **2013** |
| 4705 Power Purchased | $ 622,335,248 | $ 643,719,579 |
| 4708 Charges-WMS | 37,219,173 | 39,786,424 |
| 4714 Charges-NW | 49,877,881 | 51,001,142 |
| 4716 Charges-CN | | 31,148,466 |
| 4750 Charges – LV | 502,730 | 438,498 |
| 4751 Charges - Smart Metering Charge | | 1,984,655 |
| **Sum of Cost of Power** | **$ 709,935,032** | **$ 768,078,763** |
| **Sum of Energy Sales and Cost of Power** | **-** | **-** |

The totals of energy sales and cost of power are reconciled to the audited financial statements, please refer to Table 6.

**Table 6 – Reconciliation to Audited Financial Statements**

| **Reconciliation to Audited Financial Statements - $000's** | | |
|---|---|---|
| **Energy Sales** | 2012 | 2013 |
| Total Energy Sales as per Audited Financial Statements | ($709,935) | ($768,079) |
| **Cost of Power** | | |
| Total Cost of Power as per Audited Financial Statements | $ 709,935 | $ 768,079 |
| **Net Energy Sales and Cost of Power** | **0** | **0** |

## 10.0 IESO GLOBAL ADJUSTMENT CHARGE (RPP AND NON-RPP)

Hydro Ottawa confirms that the Independent Electricity System Operator ("IESO") Global Adjustment Charge is pro-rated between Regulated Price Plan ("RPP") and non-RPP portions.

# NEW DEFERRAL AND VARIANCE ACCOUNTS

## 1.0 INTRODUCTION

This Schedule describes Hydro Ottawa Limited ("Hydro Ottawa") proposal for six new deferral and variance accounts ("DVAs"). Below Hydro Ottawa describes the eligibility criteria regarding causation, materiality and prudence for each of the new accounts proposed. In addition, a draft accounting order including mechanics of the account and illustrations of general ledger entries using the Uniform System of Accounts ("USofA") for new DVAs is included as applicable.

## 2.0 PROPOSED TREATMENT OF GROUP 1 AND GROUP 2 ACCOUNTS

Hydro Ottawa proposes to dispose of Group 1 and Group 2 DVAs by way of this application. Pursuant to Hydro Ottawa's Custom Incentive Regulation (Custom IR) rate setting model, as set out in Exhibit A-2-1, Hydro Ottawa proposes to lock-in final distribution rates for 2016, 2017 and 2018. As a consequence, Hydro Ottawa will not file an annual Incentive Regulation Mechanism ("IRM") to change distribution rates, however it will file an annual update to Hydro One Transmission and Connection Rates, as per Exhibit H-3-1. To be clear, Hydro Ottawa proposes to update the retail transmission service rates ("RTSRs") on an annual basis, 2017 through 2020, based on Board Approved adjustments to the Hydro One Uniform Transmission Rates ("UTRs") using the RTSR model, which is part of the IRM model. Given Hydro One UTRs are not typically approved in time for adjusting Hydro Ottawa's rates on January 1, Hydro Ottawa proposes to set each year's RTSRs using the previous year's UTRs. Hydro Ottawa proposes that the differences from the new yearly rates be captured in Uniform System of Accounts 1584 – RSVA Network and 1586 – RSVA Connection for future disposition. With respect to the Group 1 accounts, Hydro Ottawa proposes to reserve the ability to dispose of these balances on an annual basis, as contemplated in Boards *Filling Requirements for Electricity Distribution Rate Applications – 2014 Edition for 2015 Rate Applications,* Section 3.2.3, page 10 there is a pre-set disposition threshold of $0.001

per kWh and consistent with a letter from the Board dated July 25, 2014, distributors may now elect to dispose of Group 1 account balances below the threshold. For Group 2 accounts Hydro Ottawa proposes to dispose of these balances when applying for 2019 & 2020 rates, with the exception of Lost Revenue Adjustment Mechanism Variance Account ("LRAMVA"), which may be disposed of on an annual basis using a separate rate rider. This is consistent with the Boards *Filling Requirements for Electricity Distribution Rate Applications – 2014 Edition for 2015 Rate Applications* Section 3.2.4.1 on page 9, that allows distributors to apply for disposition of the LRAMVA balance on an annual basis, if said balance is deemed significant by the applicant. Hydro Ottawa proposes these methods for disposing of DVAs to avoid or reduce the impact of intergenerational rate inequities.

## 3.0 NEW DEFERRAL AND VARIANCE ACCOUNTS BEING REQUESTED

### 3.1 Facilities Implementation Plan – Y Factor

Hydro Ottawa proposes to recover the costs associated with the construction of a new South Operations and Warehouse facility and an Eastern Operations and Administrative Campus facility through use of a Y factor. The Y factor recovers routine or expected cost changes outside the scope of the annual adjustment mechanism; these are considered to be a cost pass-through. Hydro Ottawa proposes to use a Y factor to pass along to ratepayers the costs associated with the construction of the administrative and operational buildings as outlined in section 3.4.5.3 of Hydro Ottawa Distribution System Plan found in Exhibit B-1-2. Hydro Ottawa proposes to use the Y factor as opposed to embedding the full cost into revenue requirement as the precise costs and the timing in which they will be incurred remain unknown at this time. Hydro Ottawa proposes to record the expenses incurred due to the construction of new head office and operations facilities by using a Y factor Variance or Deferral Account.

The associated project costs will be allocated in accordance pursuant to the Board-approved cost allocation methodologies and the rate setting principles approved as a result of Hydro Ottawa's 2016 custom rate application. The incremental revenue impact associated with the Y factors will be passed through to rates and allocated to rate classes and collected via rate riders.

Hydro Ottawa shall maintain the deferral and variance accounts related to the Y factor for the term of the custom IR.

Hydro Ottawa proposes to recover the rate rider amounts on a fixed per customer basis using the same customer class allocation methodology as distribution revenue for the year the Y factor is introduced.

Please find below Hydro Ottawa's proposed accounting entries for tracking this Y Factor by USofA.

Accounting Entries (Proposed)

**A) Asset Capitalization**

| | Debit | Credit |
|---|---|---|
| Regulatory Asset – Expense | | |
| Sub-Account – Depreciation | x,xxx.xx | |
| Sub-Account – Interest | x,xxx.xx | |
| Sub-Account – Return | x,xxx.xx | |
| Sub-Account – PILs | x,xxx.xx | |
| Distribution Revenue | | x,xxx.xx |

To record expenses once asset has been capitalized

**B) Revenue Collection**

| | Debit | Credit |
|---|---|---|
| Distribution Revenue | x,xxx.xx | |
| Regulatory Asset – Sub Account Revenue | | x,xxx.xx |

To collect Revenue after Rate Rider is in place.

These journal entries would continue until Hydro Ottawa's next Custom IR application or rebasing, at which point the residual balances will be requested to be cleared.

### 3.2 Proceeds of Sale of Existing Facilities

Following the move to its new office facilities, Hydro Ottawa's existing Albion Road, Merivale Road and Bank Street facilities ("Existing Facilities") will be marketed for sale. Presently Hydro Ottawa does not know the market value or sale price for the Existing Facilities nor the year in which the sale will occur.

Hydro Ottawa proposes to set up a deferral account to record the after tax gain/loss from the sale of the Existing Facilities. Hydro Ottawa proposes to credit/debit ratepayers with the entire value of the after-tax net gain/loss on the sale for the buildings and for 50% of the after-tax net gain for the sale of the lands. The 50% share of the after tax net gain for the sale of the land recognizes that land is an undepreciated asset. This deferral account will be forwarded for clearance in a future proceeding(s) once the after tax net gain/loss on the buildings and plots of land have been assessed by Canada Revenue Agency. Hydro Ottawa proposes using a sub-account of USofA 1508 – Other Regulatory Assets, or a new deferral account as ordered by the Board. Simple interest is to be calculated on the monthly opening balance of this account using approved EB-2006-0117 interest rate methodology. Please find below proposed accounting entries for tracking these deferral accounts by USofA.

Accounting Entries (Proposed)

**A) Sale of Land**

| | Debit | Credit |
|---|---|---|
| Dr. Account 1005 - Cash | x,xxx.xx | |
| Cr. Account 1905 - Land | | x,xxx.xx |
| Cr. Account 1508 - Other Regulatory Assets, Sub-account Deferred Gain on Sale of Land | | x,xxx.xx |
| Cr. Account 2294 - Accrual for Taxes, "Payments in Lieu" of Taxes, Etc. | | x,xxx.xx |
| Cr.Account 4355 - Gain on Disposition of Utility and Other Property | | x,xxx.xx |

To record the sale of land and the shareholders' 50% share of the after-tax net gain on the sale of the land. This example is for a gain on the sale of land, should the sale result in a loss the accounting entry would be adjusted accordingly.

| | Debit | Credit |
|---|---|---|
| Dr. Account 6035 – Other Interest Expense | x,xxx.xx | |
| Cr. Account 1508 - Other Regulatory Assets, Sub-account Deferred Gain on Sale of Land | | x,xxx.xx |

To record simple interest on the monthly opening balance of the Other Regulatory Assets, Sub-account Deferred Gain on Sale of Land using the Board approved EB-2006-0117 interest rate methodology. This example is for a net gain on the sale of land, should the sale result in a net loss the accounting entry would be adjusted accordingly.

**B) Sale of Building**

| | Debit | Credit |
|---|---|---|
| Dr. Account 1005 - Cash | x,xxx.xx | |
| Dr. Account 2105 - Accumulated Depreciation of Electric Utility Plant - Property, Plant and Equipment | x,xxx.xx | |
| Dr. Account 1508 - Other Regulatory Assets, Sub-account Deferred Loss on Sale of Building | x,xxx.xx | |
| Dr. Account 2294 - Accrual for Taxes, "Payments in Lieu" of Taxes, Etc. | x,xxx.xx | |
| Cr. Account 1908 - Buildings and Fixtures | | x,xxx.xx |

To record the sale of the building and the ratepayers' 100% share of the after tax net loss on the sale of the building. This example is for a net loss on the sale of the building, should the sale result in a gain the accounting entry would be adjusted accordingly.

| | Debit | Credit |
|---|---|---|
| Dr. Account 1508 – Other Regulatory Assets, Sub-account Deferred Loss on Sale of Building | x,xxx.xx | |
| Cr. Account 6105 – Other Interest Expense | | x,xxx.xx |

To record simple interest on the monthly opening balance of the Other Regulatory Assets, Sub-account Deferred Loss on Sale of Building using the Board approved EB-2006-0117 interest rate methodology. This example is for a net loss on the sale of the building, should the sale result in a net gain the accounting entry would be adjusted accordingly.

### 3.3 Energy East – Trans Canada Pipeline

In its letter dated April 15, 2014, the Board advised that a portion of the costs associated with consultations regarding the TransCanada PipeLines Limited's Proposed Energy East Pipeline Project would be recovered from all entities which are subject to the Board's cost assessment under section 26 of the *Ontario Energy Board Act*. In its letter the Board noted that it is prepared to make deferral accounts available to affected rate-regulated entities in relation to those costs. Hydro Ottawa hereby requests the Board to allow all costs apportioned with respect to the Energy East Canada Project to be recorded in deferral account USofA 1508 Other Regulatory Assets, Sub-account Energy East Consultation Costs, as per the Board's letter of June 13, 2014 for Board File Number: EB-2013-0398. Carrying charges shall apply to this account.

### 3.4 DVA for Transition to Monthly Billing

Pursuant to the Board's letter of April 15, 2015, regarding Amendments to the Distribution Code, board file number EB-2014-0198, Hydro Ottawa hereby applies for the deferral account to record costs associated with the transition to monthly billing. Hydro Ottawa will analyze these costs at a later date.

### 3.5 Loss on Disposal of Fixed Assets

Hydro Ottawa requests a deferral or variance account for the net loss on disposal of fixed assets. This proposed new DVA would account for the difference between the forecast and actual loss on disposal of fixed assets, related to retirement of assets or damage to plant. Please refer to the Other Revenue section of this rate application – Exhibit C-2-1 for details on the forecasted amount. The forecasted amounts are in USofA 4362 – Loss from Retirement of Utility and Other Property.

### 3.6 Earnings Sharing Mechanism

Hydro Ottawa proposes to include an Earnings Sharing Mechanism ("ESM") as a component of its Custom Incentive rate-setting framework. Consequently, Hydro Ottawa requests a new deferral or variance account for its ESM. If Hydro Ottawa's actual utility annual Return on Equity ("ROE"), calculated on a normalized basis, differs from the approved ROE, Hydro Ottawa proposes the following:

- Under Earning – borne entirely by the shareholder
- 0 – 150 basis points – fully retained by shareholder
- 151-250 basis points – 50:50 sharing of ratepayer/shareholder
- 251 basis points and above – 90:10 sharing of ratepayer/shareholder

The regulatory net income will be calculated, for the purpose of earnings sharing, in the same manner as net income for regulatory purposes under the Reporting and Record Keeping Requirements ("RRR") filings. This will exclude revenue and expenses that are not otherwise included for regulatory purposes, such as:

- Settlement of any regulatory assets or regulatory liabilities including the lost revenue adjustment mechanism ("LRAM");
- Changes in taxes/PILS to which the USofA 1592 – PILs and Tax Variance for 2006 and Subsequent Years applies, which will be shared through that account rather than through earning sharing mechanism;

The ratepayer share of earnings will be credited to the newly proposed deferral or variance account for ESM to be cleared at the next applicable annual rate filing. For example if Hydro Ottawa over-earned in 2016, it would report the balance in the deferral or variance account in 2017, and apply for disposal of this account as part of the custom IRM in order to return to ratepayers over the twelve months commencing January 1, 2018. Please see below for the proposed accounting entries for tracking these deferral accounts by USofA.

Accounting Entries (Proposed)

**A) Ratepayers' share of earnings**

| | Debit | Credit |
|---|---|---|
| Dr. Account e.g. 4390 – Operating revenue | x,xxx.xx | |
| Cr. Account TBD – ESM – Deferral or Variance Account | | x,xxx.xx |

To record the ratepayers' share of earnings as a result of the earnings sharing mechanism

**B) Interest on ESM account**

| | | |
|---|---|---|
| Dr. Account 6035 – Other Interest Expense | x,xxx.xx | |
| Cr. Account – TBD Interest on 'yyyy' ESM – Deferral or Variance Account | | x,xxx.xx |

To record interest accrual

### 3.7 Z Factor

Within Hydro Ottawa's Custom IR Application, it would like to keep open the possibility of using a Z Factor cost recovery mechanism in the future. Hydro Ottawa will only resort to using the Z factor mechanism if costs incurred arise from unforeseen events, decisions or activities, the results of which cannot be reasonably anticipated or quantified at this juncture and where the costs exceed Hydro Ottawa's materiality threshold. Examples include unforeseen weather events or changes to laws or regulations requiring significant implementation investment. Hydro Ottawa would apply to the Board for a Z factor within 6 months of the Z factor event. Should this occur and be approved by the Board, any related costs would be recorded in USofA 1572, Extraordinary Event Costs and Hydro Ottawa would follow the guidelines discussed in section 2.6 of the Board's Report on 3rd Generation Incentive Regulation for Ontario's Electricity Distributors – July 14, 2008.

# ACCOUNT 1592 - PILS AND TAX VARIANCE

## 1.0 INTRODUCTION

Hydro Ottawa Limited has filed for and been approved for disposition of Uniform System of Account ("USofA") 1592 – PILS and Tax Variance in a previous rate application. Hydro Ottawa completed the disposition as ordered by the OEB and seeks no further requests regarding USofA 1592 for this rate application. In addition, Appendix 2-TA has not been completed by Hydro Ottawa as per the reasons above.

# HARMONIZED SALES TAX DEFERRAL ACCOUNT

## 1.0 INTRODUCTION

Hydro Ottawa Limited ("Hydro Ottawa") is proposing to dispose of the balances in the Uniform System of Accounts ("USofA") 1592 – PILS and Tax Variances for 2006 and Subsequent Years, Sub-account HST/OVAT Input Tax Credits (ITCs) in this Custom Incentive Rate Application. The amount proposed for disposal in this account is a $545k credit, payment to customers as part of the Group 2 disposal. Please refer to Exhibit I-8-1 for further details regarding the disposal of Group 2 deferral and variance accounts.

The proposed disposal is made up of $122k from 2010 (July 1 – December 31) and $423k from 2011 for provincial sales tax ("PST") savings. As Hydro Ottawa rebased in 2012, no further amounts were added to this account in 2012 and onwards.

Hydro Ottawa followed the Ontario Energy Board's frequently asked questions (No. 1 – 5) issued December 23, 2010 to determine the PST savings to include in USofA 1592.

# Appendix 2-TB
## Account 1592, PILs and Tax Variances for 2006 and Subsequent Years, Sub-account HST/OVAT Input Tax Credits (ITCs)

The following table should be completed based on the information requested below. An explanation should be provided for any blank entries.

100% of the balance in Account 1592, PILs and Tax Variances for 2006 and Subsequent Years, Sub-account HST/OVAT Input Tax Credits (ITCs), should be recorded in this table.

**Summary of PST Savings from 2009 Historic Year Analysis**

| | Principal 2010 | Principal 2011 | Principal 2012 | Principal 2013 | Principal 2014 | Principal Jan-April 2015 [1] | Carrying Charges to April 30, 2015 |
|---|---|---|---|---|---|---|---|
| OM&A Expenses PST Savings | | | | | | | |
| Capital Items PST Savings | | | | | | | |
| Total Annual PST Savings [2] | $ 121,512 | $ 423,171 | $ - | $ - | | $ - | $ - |

[1] Include January to April 30, 2015 PST savings if the rate year begins May 1, 2015. If the rate year begins Jan 1, 2015, include PST savings to December 31, 2014.
[2] Derived PST savings proxy for each year per 2009 historic year analysis

**Note:** Assumes level OM&A and Capital Spending year over year. An alternative detailed transactional analysis may also be performed using actual expenditures from 2010 to the start

# ONE-TIME INCREMENTAL IFRS COSTS

## 1.0 INTRODUCTION

Hydro Ottawa Limited ("Hydro Ottawa") adopted International Financial Reporting Standards ("IFRS") effective January 1, 2015 for financial reporting purposes. The first day of the comparative year is referred to as the "transition date" and the first day of the year in which the utility has chosen to adopt IFRS for financial reporting purposes is referred to as the "changeover date". For Hydro Ottawa, the transition date was January 1, 2014, and the changeover date was January 1, 2015.

## 2.0 BACKGROUND

On February 13, 2008, the Canadian Accounting Standards Board ("AcSB") confirmed that publicly accountable enterprises ("PAEs") would be required to transition to IFRS effective January 1, 2011. While Hydro Ottawa is not a PAE, it is a Government Business Enterprise, given its status as a municipally owned utility, and such enterprises are required to follow the same basis of accounting as PAEs.

On the original transition date IFRS did not contain a standard governing rate-regulated activities ("RRA"). Due to the significance of this issue in Canada, the Canadian AcSB postponed the original IFRS transition date to January 1, 2015 for qualifying entities with RRA, pending the completion of an interim standard by the International Accounting Standards Board ("IASB"). Until January 1, 2015, qualifying entities were permitted to continue reporting under Part V of the *Chartered Professional Accountants Canada Handbook* for publicly accountable entities ("CGAAP").

While early adoption was permitted by the Canadian AcSB, Hydro Ottawa elected to defer the adoption of IFRS for financial reporting purposes due to the continued uncertainty around the timing, scope and eventual adoption of a rate-regulated accounting standard under IFRS, and its potential material impact on Hydro Ottawa's financial statements.

In a letter issued March 15, 2011, the Ontario Energy Board (the "Board") directed electricity distributors filing cost of service applications for rates for 2012 to make all reasonable efforts to provide the forecasts for the 2012 test year in modified IFRS ("MIFRS") accounting format.

In compliance with the Board's direction, Hydro Ottawa filed its 2012 Cost of Service Application on June 17, 2011 using MIFRS as the accounting basis.

Hydro Ottawa adopted MIFRS for regulatory accounting and reporting purposes effective January 1, 2012 with a transition date of January 1, 2011.

## 3.0 ADOPTION OF IFRS FOR FINANCIAL REPORTING

On January 30, 2014, the IASB issued interim standard *IFRS 14 - Regulatory Deferred Accounts* ("IFRS 14") which permits rate-regulated entities that have not yet transitioned to IFRS to use its existing RRA practices. This standard is effective January 1, 2016 with early adoption permitted. Hydro Ottawa adopted IFRS and early adopted IFRS 14 on January 1, 2015 with a transition date of January 1, 2014 for financial reporting purposes.

Hydro Ottawa continues to report under MIFRS to the Board while providing reconciliation to its audited financial statements, prepared in accordance with Part V of the *Chartered Professional Accountants Canada Handbook* for publicly accountable entities ("CGAAP"). To limit the differences caused by the different accounting basis, Hydro Ottawa has sought to align its CGAAP accounting policies with IFRS requirements wherever possible as of January 1, 2012. Nonetheless, a difference in the effective implementation dates gave rise to a $ 502k difference in the carrying values of certain Property, Plant and Equipment for CGAAP and MIFRS reporting purposes.

Consequently, Hydro Ottawa recorded a one-time adjustment to align MIFRS and CGAAP. Please see Exhibit A-4-7 Accounting Standards for further details.

## 4.0 ALIGNING REGULATORY REPORTING AND FINANCIAL REPORTING

Hydro Ottawa maintains two sets of records: i) a set of records using MIFRS as the accounting basis to satisfy regulatory reporting or rate-making requirements, and ii) a set of records using the applicable Canadian accounting principles (CGAAP/IFRS) to satisfy financial or statutory reporting requirements. The aligning of the regulatory and financial reporting set of records will allow Hydro Ottawa to maintain one set of records which will satisfy both reporting requirements. The consolidation of the records will serve to enhance operational efficiency and reduce the burden on Hydro Ottawa's IT systems.

With the adoption of IFRS and early adoption of IFRS 14 as the accounting basis for financial reporting purposes on January 1, 2015, Hydro Ottawa's regulatory and financial reporting records are now aligned from an accounting standards basis.

## 5.0 IFRS - INCREMENTAL TRANSITION COSTS ACCOUNT

The variance account is a continuation of the account established in 2009, as per the Board's guidance in the Accounting Procedures Handbook ("APH") Frequently Asked Questions ("FAQs") #3, October 2009. Hydro Ottawa confirms that no capital costs, on-going IFRS compliance costs or impacts arising from adopting accounting policy changes are recorded in the Uniform System of Account ("USofA") 1508 – Other Regulatory Assets sub-account Deferred IFRS Transition Costs Variance Account.

Hydro Ottawa confirms that all costs included meet the criteria in the APH FAQs #3, October 2009, as they are all related to professional accounting and legal fees, salaries, wages and benefits of staff as a result of one-time administrative costs caused by the transition of accounting policies, procedures and processes to IFRS. Descriptions of these costs can be found in Appendix 2-U under the column, 'Reasons why the costs recorded meet the criteria of one-time IFRS administrative incremental costs.' Refer to Appendix 2-U for details on the costs up to December 31, 2015.

## 6.0 DISPOSITION REQUEST – UsofA 1508 – OTHER REGULATORY ASSETS SUB-ACCOUNT DEFERRED IFRS TRANSITION COSTS

Hydro Ottawa requests as part of this rate application, the OEB review USofA 1508– Other Regulatory Assets sub-account Deferred IFRS Transition Costs for disposition. As per Appendix 2-U Hydro Ottawa is requesting disposition of costs and carrying charges in the amount of $1,432k. This includes audited incremental transition costs to 2013, unaudited actuals for 2014 and a forecast for remaining costs to be included in the bridge year, 2015. Hydro Ottawa is not forecasting any one-time administrative incremental IFRS transition costs for the test years, 2016 to 2020. Please refer to Exhibit I-8-1 for a comprehensive outline of all Hydro Ottawa's accounts proposed for disposition.

## Appendix 2-U
## One-Time Incremental IFRS Transition Costs

The following table should be completed based on the information requested below. An explanation should be provided for any blank entries. The entries should include one-time incremental IFRS transition costs that are currently included in Account 1508, Other Regulatory Assets, sub-account Deferred IFRS Transition Costs Account, or Account 1508, Other Regulatory Assets, sub-account IFRS Transition Costs Variance Account.

| Nature of One-Time Incremental IFRS Transition Costs [1] | Audited Actual Costs Incurred 2009 | Audited Actual Costs Incurred 2010 | Audited Actual Costs Incurred 2011 | Audited Actual Costs Incurred 2012 | Audited Actual Costs Incurred 2013 | Audited Carrying Charges to Dec 31, 2013 | Unaudited Actual Costs 2014 | Forecasted Costs 2015 | Total Costs Excluding Carrying Charges | Carrying Charges January 1, 2014 to December 31, 2015 | Total Costs and Carrying Charges | Reasons why the costs recorded meet the criteria of one-time IFRS administrative incremental costs |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| professional accounting fees | $ 487,258 | $ 166,626 | $ 395,863 | $ 84,485 | $ 13,037 | | | $ 81,000 | $ 1,228,269 | | $ 1,228,269 | IFRS consulting, advisory and comparative audit works |
| professional legal fees | | | $ 90,000 | | | | | | $ 90,000 | | $ 90,000 | IFRS legal opinion |
| salaries, wages and benefits of staff added to support the transition to IFRS | $ 23,992 | $ 261,457 | $ 218,943 | $ 189,811 | $ 118,018 | | $ 110,160 | $ 59,945 | $ 982,326 | | $ 982,326 | Internal project lead and temporary staff |
| associated staff training and development costs | | $ 3,198 | $ 477 | $ 53 | $ 2,142 | | | | $ 5,869 | | $ 5,869 | Internal project lead and temporary staff |
| costs related to system upgrades, or replacements or changes where IFRS was the major reason for conversion | | | | | | | | | $ - | | $ - | |
| | | | | | | | | | $ - | | $ - | |
| Carrying Charges | | | | | | $ 50,886 | | | $ - | $ 37,132 | $ 88,018 | |
| | | | | | | | | | $ - | | $ - | |
| | | | | | | | | | $ - | | $ - | |
| Amounts, if any, included in previous Board approved rates (amounts should be negative) [3] | | | -$ 942,530 | | | -$ 20,145 | | | -$ 942,530 | | -$ 962,675 | |
| | | | | | | | | | $ - | | $ - | |
| Insert description of additional item(s) and new rows if needed. | | | | | | | | | $ - | | $ - | |
| **Total** | $ 511,250 | $ 431,280 | -$ 237,248 | $ 274,349 | $ 133,197 | $ 30,741 | $ 110,160 | $ 140,945 | $ 1,363,934 | $ 37,132 | $ 1,431,808 | |

**Note:**

1. The Deferred IFRS Transition Costs Account and the IFRS Transition Costs Variance Account are exclusively for necessary, incremental transition costs and shall not include ongoing IFRS compliance costs or impacts arising from adopting accounting policy changes that reflect changes in the timing of the recognition of income. The incremental costs in these accounts shall not include costs related to system upgrades, or replacements or changes where IFRS was not the major reason for conversion. In addition, incremental IFRS costs shall not include capital assets or expenditures.
2. If there were any amounts approved in previous Board approved rates, please state the EB #: EB-2011-0054

# BREAKDOWN OF BALANCE RELATED TO IFRS-CGAAP TRANSITIONAL PP&E

## 1.0 INTRODUCTION

Hydro Ottawa Limited's ("Hydro Ottawa") 2012 rate application was submitted under Modified International Financial Reporting Standards ("MIFRS") with a transition date of January 1, 2011 as directed by Ontario Energy Board (the "Board"). International Financial Reporting Standards ("IFRS") at that time did not contain standard governing rate-regulated activities. In May 2012 the International Accounting Standards Board ("IASB") decided to develop a project on Rate-regulated Activities. With this pending the Canadian Accounting Standards Board allowed qualifying Rate Regulated entities to defer the adoption of IFRS to January 1, 2015. Hydro Ottawa Limited elected to take this deferral for financial reporting purposes while continuing to maintain MIFRS for regulatory purposes. The IASB has since issued interim standard IFRS 14 - Regulatory Deferred Accounts ("IFRS 14") which permits rate-regulated entities that have not yet transitioned to IFRS to use its existing rate-regulated accounting.

As per Hydro Ottawa's 2012 decision and rate order Addendum, January 16, 2012, Hydro Ottawa was instructed to establish a deferral account to recover $123k over a four year period, 2012 to 2015. Uniform System of Accounts ("USofA") account 1575 IFRS-CGAAP Transitional Property, Plant and Equipment ("PP&E") Amounts was established. Amortization of approximately $31k per year is being recorded, as of December 31, 2015 no balance will exist. As Hydro Ottawa elected to defer transitioning to IFRS for financial reporting purposes, no further amounts will be added to USofA deferral account 1575. Hydro Ottawa confirms that no carrying charges have been applied to the balances in USofA 1575 IFRS-CGAAP Transitional PP&E Amounts.

## 2.0 BREAKDOWN OF BALANCE RELATED TO IFRS-CGAAP

Given Hydro Ottawa's 2012 rate application dealt with the transitional amount of PP&E, there is no need to provide it in Hydro Ottawa's 2016 rate application. Hence Appendix

2-EA – Account 1575 – IFRS-CGAAP Transitional PP&E Amounts is not necessary as part of this application.

## 3.0 LISTING AND QUANTIFICATION OF DRIVERS

USofA 1575 was established upon Hydro Ottawa's 2012 decision and rate order Addendum. Hydro Ottawa does not propose any further additions to USofA deferral account 1575 IFRS-CGAAP Transitional PP&E Amounts.

## 4.0 RATE RIDER – NOT REQUESTED

Hydro Ottawa is not requesting a separate volumetric rate rider for Account 1575 – IFRS-CGAAP Transitional PP&E Amounts.

## 5.0 BALANCE IN 1575 AS PER THE DVA CONTINUITY SCHEDULE

As per Attachment I-8(A) EDDVAR Continuity Schedule, the balance in USofA 1575 – IFRS-CGAAP Transitional PP&E Amounts, as of December 31, 2013 was $62k. Hydro Ottawa has continued with scheduled amortization of $31k in year 2014 and will continue in year 2015, to achieve a zero balance in this account by December 31, 2015.

# ACCOUNT 1576 – ACCOUNTING CHANGES UNDER CGAAP

## 1.0 INTRODUCTION

Hydro Ottawa Limited ("Hydro Ottawa") confirms that Uniform System of Accounts ("USofA") 1576 – Accounting Changes under CGAAP was not used by Hydro Ottawa as it adopted International Financial Reporting Standards ("IFRS") on January 1, 2012 for rate settling purposes. Please refer to Exhibit B-2-1 for further details regarding Hydro Ottawa's conversion to IFRS.

Hydro Ottawa did not record financial differences arising as a result of changes to accounting depreciation or capitalization policies as permitted by the Ontario Energy Board ("the Board") into USofA 1576 – Accounting Changes under CGAAP.

As per Attachment I-8(A) EDDVAR Continuity Schedule, the balance in USofA 1576 – Accounting Changes under CGAAP, as of December 31, 2013 is zero dollars. Consequently Hydro Ottawa has omitted Chapter 2 Appendices 2-EB and 2-EC from this filing as they are not relevant.

Hydro Ottawa's confirms that Appendix 2-BA Fixed Asset Continuity Schedule for years 2012 to 2020 has not been adjusted for balances related to USofA 1576.

# RETAIL SERVICE CHARGES

## 1.0 INTRODUCTION

Table 1 below shows the balance of Uniform System of Accounts ("USofA") 1518 RCVA Retail ("1518") and 1548 RCVA STR ("1548") for 2013.

**Table 1 – Account Balances - Uniform System of Accounts 1518 and 1548**

| Uniform System of Account Number | Uniform System of Account Description | Principal at December 31, 2013 | Interest at December 31, 2013 | Total at December 31, 2013 | 2.1.7 RRR Balances as of December 31, 2013 | Variance to 2.1.7 RRR |
|---|---|---|---|---|---|---|
| 1518 | RCVA-Retail | (286,798) | (36,736) | (323,534) | (323,534) | 0 |
| 1548 | RCVA-STR | 1,288,821 | 68,243 | 1,357,064 | 1,357,065 | 1 |
| | **Total-RVCA** | **$ 1,002,023** | **$ 31,507** | **$ 1,033,530** | **$ 1,033,531** | |

Hydro Ottawa Limited ("Hydro Ottawa") confirms that all costs incorporated into the variances for 1518 RCVA Retail and 1548 RCVA STR are incremental costs associated with providing a retail service for Hydro Ottawa customers. Hydro Ottawa has complied with Article 490, Retail Services and Settlement Variances of the Ontario Energy Board's ("Board") Accounting Procedures Handbook ("APH"), with respect to the costs and balances in these accounts.

The main cost drivers for USofA 1518 are:

- Wages and Benefits - employees working directly with retailer activities (5615 - General Administrative Salaries and Expenses; 5315 - Customer Billing and 5610 - Management Salaries and Expenses)
- Call center retailer inquiry costs (5410 - Community Relations - Sundry)

The main cost drivers for the USofA 1548 are:

- Wages and Benefits - employees working directly with retailer activities (5315 - Customer Billing)
- Annual maintenance costs of Hydro Ottawa's Customer Information System ("CIS") – percentage of retailer customers (5315 - Customer Billing)

Hydro Ottawa will be seeking clearance of both the USofA 1518 and 1548 as part of this rate application, please refer to Exhibit I-8-1, for the full explanation of the Group 2 regulatory accounts to be cleared.

Starting in 2016 Hydro Ottawa is requesting to cease tracking and recording costs and revenues for both USofA 1518 and 1548 into variance accounts. Hydro Ottawa feels that it can reasonably estimate both revenues and costs associated with retailer transactions and no longer requires variance accounts. Both revenues and costs related to retailer transactions are included in Hydro Ottawa's requested Revenue Requirement. Additionally, since Hydro Ottawa presently expends a significant amount of effort to track and record the costs and revenues in USofA 1518 and 1548, the proposal to cease tracking these activities into the variance accounts would be more administratively efficient.

# DISPOSITION OF DEFERRAL AND VARIANCE ACCOUNTS

## 1.0 INTRODUCTION

Hydro Ottawa Limited ("Hydro Ottawa") is requesting the disposition of the Deferral and Variance Accounts ("DVAs") identified in Table 1 in compliance with the Electricity Distributors' Deferral and Variance Account Review Initiative ("EDDVAR Report").

**Table 1 – Hydro Ottawa's Proposed DVA Dispositions**

| Group | USofA Number | Deferral/Variance Account Description | Amount | Principal | Interest |
|---|---|---|---|---|---|
| 1 | 1550 | LV Variance Account | $15,559 | $15,980 | $(421) |
| 1 | 1551 | Smart Metering Entity Charge Variance Account | $163,191 | $159,042 | $4,149 |
| 1 | 1580 | RSVA - Wholesale Market Service Charge | $(5,350,768) | $(5,223,230) | $(127,538) |
| 1 | 1584 | RSVA - Retail Transmission Network Charge | $581,580 | $563,007 | $18,573 |
| 1 | 1586 | RSVA - Retail Transmission Connection Charge | $(1,736,487) | $(1,703,997) | $(32,490) |
| 1 | 1588 | RSVA - Power (excluding Global Adjustment) | $5,024,770 | $4,969,223 | $55,547 |
| 1 | 1595 | Disposition and Recovery/Refund of Regulatory Balances (2010) | $(736,696) | $(1,287,221) | $550,525 |
| 1 | 1595 | Disposition and Recovery/Refund of Regulatory Balances (2011) | $(677,884) | $(1,281,760) | $603,876 |
| 1 | 1595 | Disposition and Recovery/Refund of Regulatory Balances (2012) | $(150,510) | $(11,831) | $(138,679) |
| 2 | 1508 | Other Regulatory Assets - Sub-Account - Deferred IFRS Transition Costs | $1,431,808 | $1,363,935 | $67,873 |
| 2 | 1518 | Retail Cost Variance Account - Retail | $(327,751) | $(286,799) | $(40,952) |
| 2 | 1532 | Renewable Generation Connection OM&A Deferral Account | $431,555 | $408,537 | $23,018 |
| 2 | 1535 | Smart Grid OM&A Deferral Account | $199,090 | $188,477 | $10,613 |
| 2 | 1548 | Retail Cost Variance Account - STR | $1,376,010 | $1,288,821 | $87,189 |
| 2 | 1582 | RSVA - One-time | $(6) | $(123) | $117 |
| 2 | 1592 | PILs and Tax Variance for 2006 and Subsequent Years - Sub-Account HST/OVAT Input Tax Credits (ITCs) | $(544,683) | $(544,683) | $0 |
| 2 | 1555 | Smart Meter Capital and Recovery Offset Variance - Sub-Account - Stranded Meter Costs10 | $(5,973,776) | $(5,973,776) | $0 |
| | | **TOTAL - DVA Excluding Global Adjustment and LRAM)** | **$(6,274,998)** | **$(7,356,398)** | **$1,081,400** |
| 1 | 1589 | RSVA - Global Adjustment | $(1,250,514) | $(1,288,246) | $37,732 |
| 2 | 1568 | LRAM Variance Account | $(679,243) | $(678,660) | $(583) |
| | | **TOTAL DVA's** | **$(8,204,755)** | **$(9,323,304)** | **$1,118,549** |

Hydro Ottawa has complied with the EDDVAR Report guidelines and is requesting a disposition period of one year. Please refer to Attachment I-8(A) after Exhibit I-8-1 for the complete Deferral and Variance Account (Continuity Schedule). Differences between Table 1 and the EDDVAR report are primarily due to timing differences, please see section 4.2 of this exhibit for a discussion of these variances. When available, Hydro Ottawa intends to use an updated 2016 EDDVAR model that will provide principle balances to December 31, 2014 and forecasted interest to December 31, 2015.

The principle and interest for each DVA are identified in Table 1. Per the Deferral and Variance Account (Continuity Schedule) Work Form – version 2.4 Excel spreadsheet posted by the Board on June 26, 2014, principle balances are up to December 31, 2013 and interest is forecasted to December 31, 2014. Currently Hydro Ottawa is proposing to dispose of $8.2 million to be returned to customers. This amount for disposal includes Group 1 accounts, Group 2 accounts, the Lost Revenue Adjustment Mechanism Variance Account (“LRAMVA”) – Uniform System of Accounts (“USofA”) 1568 and Smart Meter Capital and Recovery Offset Variance - Sub-Account - Stranded Meter Costs – USofA 1555. USofA 1575 - IFRS-CGAAP Transition PP&E Amounts Balance and Return Component is not included for disposition as this account will have a zero balance at the end of December 31, 2015 and therefore does not require disposition.

## 2.0 ACCOUNTS FOR WHICH HYDRO OTTAWA IS SEEKING DISPOSITION

Please refer to Table 1 above for a list of the DVA’s for which Hydro Ottawa is seeking disposition.

## 3.0 ACCOUNTS FOR WHICH HYDRO OTTAWA IS NOT SEEKING DISPOSITION

The following are accounts for which Hydro Ottawa is not seeking disposition for.

USofA 1575 - IFRS-CGAAP Transition PP&E Amounts Balance and Return Component is not included for disposition as this account will have a zero balance at the end of December 31, 2015. The balance at December 31, 2013 is $62k. As per Hydro Ottawa’s Draft Rate Order filed: January 16, 2012 for EB-2011-0054, Hydro Ottawa was to recover $123k over the four year period (2012 – 2015) in the amount of $31k per year, leaving a closing balance of $0 in USofA 1575. As Hydro Ottawa is on track to recover the amount, no further disposition is requested, Hydro Ottawa is requesting to discontinue using this account after December 31, 2015, please refer to section 6 of Exhibit I-1-1 for more details.

USofA 1508 Other Regulatory Assets, Sub-Account P&OPEB Deferral Account, Hydro Ottawa does not propose to dispose of this account and will continue to use seeks a continuance of this account. This account was originally approved in Hydro Ottawa's 2012 Rate Application (EB-2011-0054) of which the Draft Rate Order filed: January 16, 2012, states the purpose of the account is to record the retirement liability as a result of an election under IFSR 1 that would otherwise result in a change to Hydro Ottawa's retained earnings. Hydro Ottawa proposes disposal of this DVA will occur sometime in the future in accordance with Board guidelines in effect at the appropriate time. As of December 31, 2013 the balance in this account is $3.1M.

USofA 1555 – Smart Meter Capital and Recovery Offset Variance – Sub-Account – Recoveries and USofA 1556 – Smart Meter OM&A Variance, at the end of 2014 these two accounts have zero balances, hence Hydro Ottawa is not seeking to dispose of these accounts, and is proposing to discontinue use of these accounts.

## 4.0 VARIANCE ANALYSIS

### 4.1 Balances proposed for disposition consistent with Audited Financial Statements

Hydro Ottawa intends to use 2016 updated Deferral and Variance Account model that will provide principle balances to December 31, 2014 and forecasted interest to December 31, 2015. At the time the updated model is filed with the Ontario Energy Board ("the Board"), Hydro Ottawa will confirm the amounts proposed for disposition align with Hydro Ottawa's Financial Statements and/or provide explanations for any variances at the time of this update.

### 4.2 Explanation of Variances

Please see below for explanations for variances greater than the 5% threshold between the amounts proposed for disposition (Table 1 – above) and the amount reported on the December 31, 2013 2.1.7 RRR as per the EDDVAR report in Attachment I-8(A). Hydro Ottawa does not have any variances below the 5% threshold that relate to matters of principle and/or the cumulative effect of immaterial differences over several accounts that total to a material difference between what is proposed for disposition in total before forecasted interest and what is proposed for disposition in total before forecasted interest and what is recorded in the RRR filings.

The Lost Revenue Adjustment Mechanism Variance Account ("LRAMVA") – USofA 1568 has a difference of $104k when compared to the December 31, 2013 2.1.7 RRR as reported to the OEB. For this account the Continuity Schedule includes balances to the end of 2014 so they can be disposed of in this rate application, the result shows as a difference when compared to the December 31, 2013 2.1.7 RRR as reported to the OEB. Hydro Ottawa proposes to dispose of $584k the balance at the end of 2014.

There is also a difference in USofA 1592 - PILs and Tax Variance for 2006 and Subsequent Years - Sub-Account HST/OVAT Input Tax Credits (ITCs). Question 1 from the Board's APH FAQ's dated December 23, 2010 stated that for regulatory reporting purposes the sub-account and contra account for HST/OVAT will have a reporting amount for RRR's that nets to zero. This is consistent with Hydro Ottawa's RRR 2.1.7 filing. The same document from the Board states that the balance in this sub-account should be reported for disposition; therefore, the credit balance of $545k will be returned to customers. The result is a variance between the RRR filing and the balance to be disposed of $545k.

The amount Hydro Ottawa proposed to dispose of in USofA 1508 – Other Regulatory Assets – Sub Account – Deferred IFRS Transition Costs is $1.4 million. This includes audited incremental transition costs to 2013, unaudited actuals for 2014 and a forecast for remaining costs to be included in the bridge year, 2015. The EDDVAR report balance to the end of 2013 is $1.1 million, causing a variance of $288k, due to the allowance of forecasted amounts. Please refer to Exhibit I-4-1 and Appendix 2-U for further details.

## 5.0 ALLOCATION OF DVA's AND LENGTH OF DISPOSITION PERIOD

Hydro Ottawa is requesting a one year rate rider for the recovery or refund of balances proposed for disposition. This adheres to the default disposition period in EDDVAR.

## 6.0 PROPOSED RATE RIDERS

Tables 2 to 4 identify the proposed rate riders to clear the DVA balances in Group 1 and Group 2 accounts Hydro Ottawa is seeking disposition for. These all have a rate rider recovery period of 1 year. Hydro Ottawa is proposing allocators that it feels best suit the type of group or individual variance account.

### Table 2 – Rate Riders for DVAs (excluding Global Adjustment)

| Rate Class (Enter Rate Classes in cells below) | Units | kW / kWh / # of Customers | Allocated Balance (excluding 1589) | Rate Rider for Deferral/Variance Accounts | |
|---|---|---|---|---|---|
| RESIDENTIAL | kWh | 2,216,045,000 | $(1,223,158) | (0.0006) | $/kWh |
| GENREAL SERVICE LESS THAN 50KW | kWh | 726,360,000 | $(635,933) | (0.0009) | $/kWh |
| GENERAL SERVICE 50 TO 1,499 KW | kW | 7,027,979 | $(2,897,218) | (0.4122) | $/kW |
| GENERAL SERVICE 1,500 TO 4,999 KW | kW | 1,847,365 | $(849,446) | (0.4598) | $/kW |
| LARGE USE | kW | 1,121,449 | $(610,399) | (0.5443) | $/kW |
| UNMETERED SCATTERED LOAD | kWh | 16,651,000 | $(15,957) | (0.0010) | $/kWh |

| **Total** | | | **$(679,243)** | | |

## 7.0 RATE RIDERS FOR MARKET PARTICIPANTS ("MPs")

Hydro Ottawa currently has one market participant ("MP") that settles directly with the Independent Electricity System Operator ("IESO"). When updating the EDDVAR model for 2014 year end balances, Hydro Ottawa will create a separate rate riders for this customer, and will file the related evidence at a later date.

## 8.0 RATE RIDER FOR GLOBAL ADJUSTMENT

Hydro Ottawa has both Class A and Class B Global Adjustment ("GA") customers. Currently the disposition of USofA 1589 – RCVA – Global Adjustment is allocated to all non-Rate Regulated Plan ("non-RPP") customers on a kWh basis; this method has been used consistently for several years and was maintained upon the introduction of Class A GA customers. This method is consistent with the Incentive Regulation Mechanism ("IRM") and EDDVAR models used to determine these rate riders. Hydro Ottawa recognizes that the Board would like to establish separate rate riders for the Class A GA customers and upon updating data for 2014 year end balances Hydro Ottawa will work with the Board to modify the EDDVAR model or develop custom models to supplement this model so these newly required separate rate riders can be established.

## 9.0 PROPOSED ESTABLISHMENT OF NEW DVA's

Please refer to Exhibit I-1-2 for new deferral and variance accounts being proposed by Hydro Ottawa.
