#### 3.2.4.1 *Consequences of Deferral*

The completion of this project is important in providing adequate capacity to the anticipated development in the next few years. Preparing for a future voltage conversion and extending a second circuit along Prince of Wales Drive is crucial in order to supply the upcoming demand in the area. This project will enable a looped supply for the expected development near Greenbank Road and Barnsdale Road. Since this project addresses a capacity issue, the consequence of deferring the project would be the inability to service the required load. Allowing the system to experience thermal overload for an extended period of time would lead to equipment damage and customer outages. Customers working or living in the proposed developments would simply not have the electricity they required. The eventual failure of the system to keep up with demand validates the necessity of this project.

This project involves the replacement of aging assets such as poles, conductors and transformers which will improve system reliability. Poles along Prince of Wales Drive are currently in poor condition, and replacing them will minimize their likelihood of failure.

#### 3.2.4.2 *Priority*

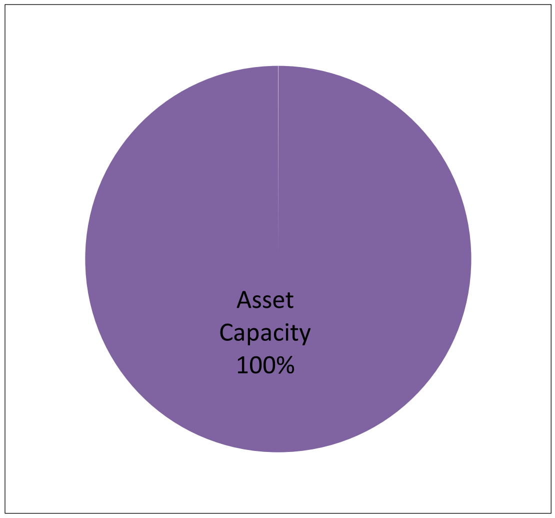

**Table 95 - Project Avoided Risk**

Project Score = 0.24

### 3.2.5 Execution Path

#### 3.2.5.1 *Implementation Plan*

This project is scheduled to begin construction in March 2015. The implementation plan involves installing new poles, conductors and transformers for the new double circuit pole line. Both circuits will be rated for 27.6kV, although only one circuit will carry 27.6kV while the other remains at 8.32kV for now. Then the existing pole line will be removed along with old transformers and other associated hardware.

This project will be done in conjunction with the Rideau Valley Voltage Conversion (92008686) project. The Rideau Valley Voltage Conversion (92008686) project will begin construction first in February 2015, followed by the Prince of Wales Voltage Conversion (92008543) project in March 2015. This order is simply a reflection of the 92008686 project design and drawings being completed first. HOL's own 11-person construction crew will work on these two projects, with a contractor to take care of pole holes and anchors. Pole replacements and framing will be completed first, starting with Rideau Valley. Following the pole replacements, conductor will be strung for both projects simultaneously. Although not dependent on each other, doing these projects together is expected to save considerable time and labour, thus reducing the overall project cost.

#### 3.2.5.2 *Risks to Completion and Risk Mitigation Strategies*

Project drawings have been submitted to the City of Ottawa for municipal consent. Once approved, HOL will request a road cut permit. Receiving municipal consent is not expected to be an issue; however, the process is known to take time. HOL is aware of the typical approval time and submitted the drawings in anticipation of the planned construction date. Crews are prepared to proceed with surveying and staking once municipal consent is approved. Approval has already been granted by the City of Ottawa for tree trimming.

Limebank MS recently received an upgrade, with the addition of a station transformer to provide more capacity to the Riverside South and Barrhaven areas. This upgrade affects the long term capability of Limebank substation to provide adequate supply to the South Nepean area. This project is proceeding as planned, with an anticipated commissioning and energization date in December 2014. All construction for this project is complete.

#### 3.2.5.3 *Timing Factors*

As with all projects involving asset replacement, timing can be affected due to unforeseen events, such as encountering rock beneath the surface of the soil or facing extreme weather conditions. Any events that arise and were not planned for will likely affect the timing of the project, either causing a delay or moving it ahead of schedule. HOL does not foresee any problems in completing this project in 2015.

The procurement of equipment and materials may affect the project timing, but this is not expected. HOL has already ordered material in 2014 which will be delivered at the end of December 2014 and beginning of January 2015.

Planned City development is the driver for this project, and it is unlikely that the priority of this project will change. It is necessary to increase the electrical supply in the area of load growth. If City development is delayed for any reason, it is possible that this project could be shifted slightly but this is unlikely, as this project contributes to expanding supply in the South Nepean area and extends needed circuits from Limebank substation. For the priority of this project to change, City development would have to be delayed and HOL would have to have a sudden change in priorities due to an unexpected requirement.

#### 3.2.5.4 *Cost Factors*

It is possible that construction crews will encounter more rock beneath the surface than anticipated when installing new poles, but this is unlikely as there is an existing pole line along Prince of Wales Drive.

#### 3.2.5.5 *Other Factors*

One public communication package will be created for both the Prince of Wales project and the Rideau Valley project. Letters of notification was done in 2014, as customers will experience planned outages and potential construction on or around their properties. Customer input is not expected to cause any problems as there is already an existing pole line along Prince of Wales Drive.

## 3.3 Rideau Valley Voltage Conversion

### 3.3.1 Project/Program Summary

The project is a line upgrade along Rideau Valley Drive in the preparation of a future voltage conversion from 8.32kV to 27.6kV. This project will contribute to upgrading the electrical capacity in the South Nepean area while improving system reliability. 37 customers will be affected on the 8.32kV FAL03 circuit from Fallowfield DS along Rideau Valley Drive, south of Prince of Wales Drive and extending as far as the current circuit to 4174 Rideau Valley Drive, including customers along Lockview Road. The project will upgrade the existing 8.32kV single-phase overhead line with new poles, conductors and transformers which will be 3-phase and rated for 27.6kV. No voltage conversion will take place yet. Although independent from the Prince of Wales Voltage Conversion (92008543), this project is being done for the same purpose, to prepare the area for the increased capacity that will accompany the New South 27.6kV Substation (92008537).

### 3.3.2 Project/Program Description

#### 3.3.2.1 *Current Issues*

The south region of Ottawa is expected to develop and expand rapidly over the next few years. It is estimated that HOL's current distribution system will not be fully capable of supporting the load growth. Expansion based on city plans in the South Nepean area is shown below.

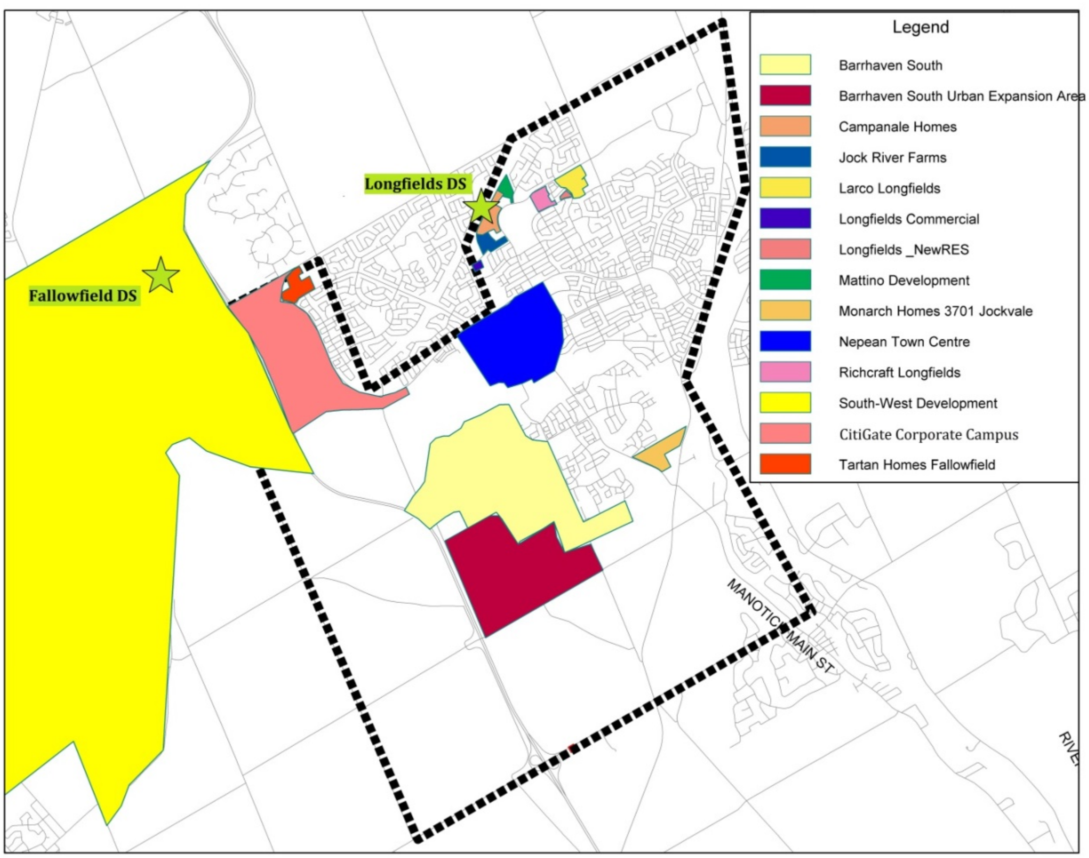

**Figure 88 - Proposed Developments**

In order to meet demand, the distribution system must be upgraded to a higher voltage. Although some portions of the south are supplied by a 27.6kV system, many areas still only have an 8.32kV supply. The overall goal is to convert the entire south area to a 27.6kV voltage supply, to support upcoming development while maintaining a reliable system.

In order to achieve the overall goal, a new 27.6kV distribution station with 6-8 feeders will be constructed to provide additional capacity to the area, as described in the business case for the New South 27.6kV Substation (92008537) project. The new station feeders will create ties with existing feeders, which will be upgraded in terms of their voltage rating. Converting the majority of the supply in the area to 27.6kV will enable backup connections between stations and feeders. Hence, reliability will be improved while anticipated capacity issues are resolved. Other major projects that have contributed or will contribute to the overall goal for the area include: Richmond South DS voltage conversion to 27.6kV, Limebank MS transformer upgrade, Fallowfield DS capacity upgrade and the transformer protection and base replacement at Longfields DS.

It can be seen in the above figures that there is proposed development on the east side of Highway 416, which is currently supplied by 8.32kV feeders. There are multiple projects taking place in the short term to prepare this section for a voltage upgrade. This includes both the Prince of Wales Voltage Conversion and the Rideau Valley Voltage Conversion projects.

The purpose of the Rideau Valley Voltage Conversion project is to prepare Rideau Valley Drive for a 27.6kV voltage conversion of the existing line. Although the current 8.32kV line is being upgraded to 27.6kV-rated equipment, no voltage conversion will take place within the scope of this project. This project will begin construction in February 2015, coordinating with the Prince of Wales Voltage Conversion project, and is expected to be completed before the end of 2015.

#### 3.3.2.2 *Program/Project Scope*

This project involves the replacement of the existing single-phase pole line, including 56 poles and 9 overhead transformers. New poles will be framed for one 3-phase 27.6kV circuit and new insulators and conductors will be installed. The new overhead transformers will be 16/4.8kV dual rated. Customer-owned insulators will be replaced on existing customer-owned poles. Secondary services will be transferred and the existing pole line and associated hardware will be removed. The plan is illustrated on the following map.

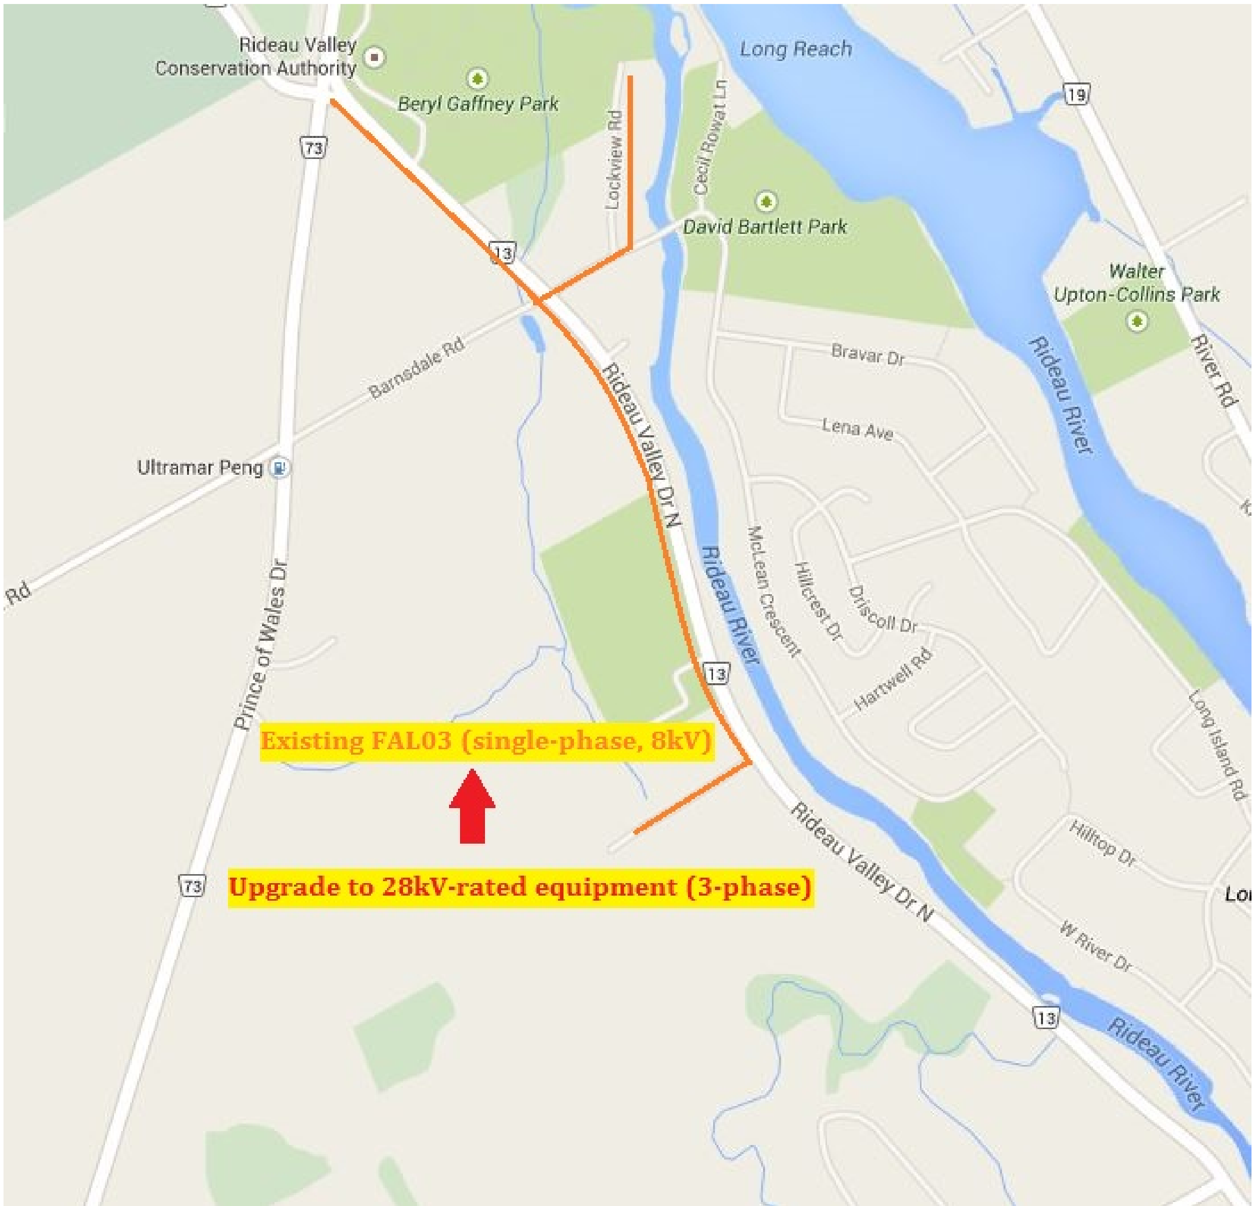

**Figure 89 - Proposed Conversion**

Not included in the scope of this project is the installation of new civil structures, the digging of pole holes, the installation of anchors, tree trimming or the transfer of communication lines. It is also important to note that this project does not include the voltage conversion itself, only the preparation for it because of capacity restrictions at the stations. The upgraded existing line will have capacity for 27.6kV but will remain at 8.32kV for now, until more capacity becomes available.

#### 3.3.2.3 *Main and Secondary Drivers*

The main driver of this project is the upcoming load growth in the area. It is expected that the area's capacity limitations will be reached within the next five years. The 8.32kV circuits in the south of Barrhaven are being prepared for a conversion to 27.6kV, which will be needed to satisfy the demand. As a secondary driver for this project, reliability will be improved with the replacement of aging assets.

The poles along Rideau Valley Drive are in bad condition and the installation of new poles and related equipment will decrease the likelihood of failure.

Additionally, when the New South 27.6kV Substation is complete, the circuit along Rideau Valley Drive will be prepared to accept ties with the new substation feeders, thus improving reliability by creating backup loops to decrease the restoration time in the event of an outage. It will also be prepared to accept the eventual tie with the 7F4 circuit that currently services Manotick Island and crosses the Rideau River to the southern portion of Rideau Valley Drive.

An important consideration which acted as a driver for the timing of this project is the magnitude of the cost savings as a result of coordinating this project with the Prince of Wales project. Construction and labour costs are expected to be $1M lower than if these two projects were to be carried out separately.

#### 3.3.2.4 *Performance Targets and Objectives*

The primary objective of this project is to prepare Rideau Valley Drive for an upcoming voltage conversion. This involves the replacement of all utility poles, overhead transformers, primary conductor and related assets, as well as an upgrade from the current single-phase line to a 3-phase circuit. The replacement of aging assets will contribute to improving reliability in this area. The upgrade will allow a voltage conversion within the next few years as needed and will create the possibility for eventual backup ties with the New South 27.6kV Substation feeders and existing lines. The project will be deemed a success if all of the core objectives are met in a timely manner while minimizing the impact to HOL's customers.

### 3.3.3 Project/Program Justification

#### 3.3.3.1 *Alternatives Evaluation*

##### 3.3.3.1.1 Alternatives Considered

The value of completing this project is found in its contribution to the overall goal of upgrading the supply voltage in the south, combined with reliability improvements. The section of overhead line to be upgraded is currently radial, and will be extended to create a tie with the 7F4 feeder from Limebank MS. This would provide backup to both circuits and utilize the upgraded transformer capacity at Limebank substation. Another alternative to this project would be to leave the existing single-phase supply as is, and install a step-down transformer at the intersection of Prince of Wales Drive and Rideau Valley Drive. This would be a temporary solution to allow the Prince of Wales Voltage Conversion to proceed, however it is desired for planning purposes to upgrade this line by the time the new station feeders are ready for construction.

##### 3.3.3.1.2 Evaluation Criteria

The evaluation criteria for project alternatives are based primarily on feasibility, reliability considerations and cost. A utility must anticipate and provide the needed services in an efficient manner. HOL strives to minimize project costs and customer interruptions. This involves planning ahead for future work that is expected to occur in the same area as the project in question.

###### 3.3.3.1.3 Preferred Alternative

The FAL03 circuit being upgraded in this project is currently radial. The 7F4 feeder is also radial along Rideau Valley Drive, and is found a few spans away from the project boundary. It is desired to connect the two segments and create a backup tie for both circuits.

Unfortunately, it was found that a large portion of the 7F4 feeder supplying Manotick Island is currently supplied through undersized conductor. Therefore, the circuit is currently unable to provide the required capacity and the Island will require an upgrade before a connection between the two circuits can be made. This upgrade was too large and costly to be considered feasible within the scope of this project.

There is also a significant advantage to the timing of this project, in coordinating it with the Prince of Wales Voltage Conversion (92008543) project. Rideau Valley Drive could have maintained adequate supply in the short term by installing a step-down transformer at the tap to Prince of Wales Drive. However, the upgrade of this line is important in contributing to the overall goal for the system, as it will provide a tie point for new feeders. It was decided that it would be cost-efficient to do this project simultaneously with the Prince of Wales project. Due to the close proximity, approximately $1M is saved in construction and labour costs by doing these projects together. As an added consideration, the poles along Rideau Valley drive are in poor condition so HOL is taking advantage of the situation by addressing two issues at once.

#### 3.3.3.2 *Project/Program Timing & Expenditure*

The total cost of this project is $1,035,465. HOL is minimizing the cost of this project by coordinating construction schedules with the Prince of Wales Voltage Conversion (92008543) project. HOL's own crew will work on both projects together, beginning with Rideau Valley. Doing these projects at the same time is convenient due to their close proximity, and this is expected to save $1M in time and labour costs.

| Historical ($M) | | | | Future ($M) | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 |
| - | - | - | - | 1.04 | - | - | - | - | - |

**Table 96 - Project Expenditures**

#### 3.3.3.3 *Benefits*

| Benefits | Description |
|---|---|
| **System Operation Efficiency and Cost-effectiveness** | This project is an important contribution to the overall goal of upgrading supply capacity in the south of Ottawa. System operation efficiency will be improved by providing an alternate supply route around Barnsdale Road, along with the ability to accommodate a future backup connection. Once the New South 27.6kV Substation is built, this project will contribute to creating a more interconnected system which will lead to faster restoration times, thus reducing SAIDI. It is expected that SAIFI will also be reduced by replacing aging assets proactively. It is known that the equipment on Rideau Valley Drive is in poor condition. Coordinating this project with the Prince of Wales Voltage Conversion (92008543) project is a cost-effective decision that saves a large amount of construction and |

| | |
|---|---|
| | labour costs. |
| **Customer** | This project will achieve two objectives: to supply future demand and to improve reliability in the south of the city. While this particular project is being driven by the need for increased capacity, HOL is taking this opportunity to better the system. The planned feeder connections will contribute to reducing outage durations and eliminating radial segments that exist in the current distribution system. By replacing assets in preparation for a voltage upgrade, this not only brings equipment up to current standard but also improves the asset condition. |
| **Safety** | Replacing aging assets will also contribute to eliminating potential safety hazards, by installing stronger poles and removing old transformers. |
| **Cyber-Security, Privacy** | (Not applicable) |
| **Co-ordination, Interoperability** | (Not applicable) |
| **Economic Development** | This project is not expected to contribute directly to economic growth or job creation, but extending circuits within HOL's service territory will inevitably lead to additional operation and maintenance. HOL's own crews will handle the construction of the project, with a contractor handling the pole holes and anchors. |
| **Environment** | (Not applicable) |

**Table 97 - Project Benefits**

### 3.3.4 Prioritization

#### 3.3.4.1 *Consequences of Deferral*

The completion of this project is important to providing adequate capacity for the anticipated development in the next few years. Preparing for a future voltage conversion is crucial in order to supply the upcoming demand in the area. This project will enable an alternate circuit route to customers on Rideau Valley Drive while providing the capability for future backup from the southern portion of the road. Although this project contributes towards the overall goal of upgrading the supply voltage in the south to address capacity limitations, it is not an essential component in the immediate future. However, HOL has decided to proceed with this project due to its importance in the short term, and the significant cost savings in preparing this segment of the system at the same time as the Prince of Wales project, which is required in 2015. For this reason, the consequence of deferring this project would be a much larger future cost.

This project involves the replacement of aging assets such as poles, conductors and transformers which will improve system reliability. Poles along Rideau Valley Drive are currently in poor condition, and replacing them will decrease their likelihood of failure.

#### 3.3.4.2 *Priority*

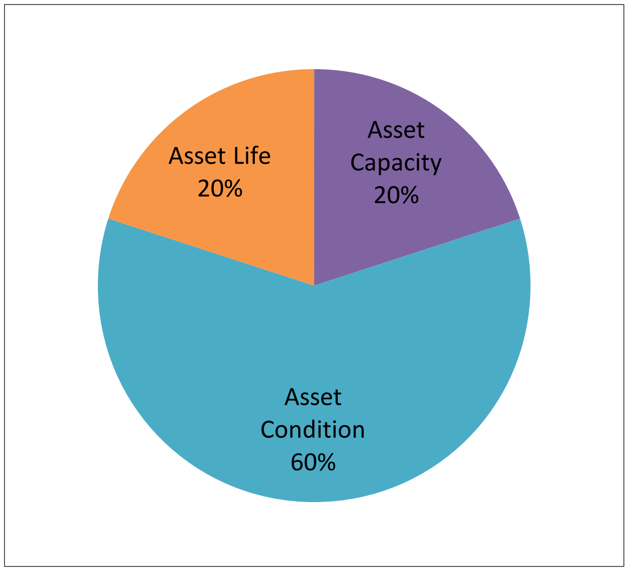

**Figure 90 - Project Avoided Risk**

Project Score = 0.42

### 3.3.5 Execution Path

#### 3.3.5.1 *Implementation Plan*

This project is scheduled to begin construction in the middle of February 2015. The implementation plan involves installing new primary and secondary poles, replacing customer owned insulators on existing customer owned poles, framing the new 27.6kV poles, and stringing new conductors. New primary conductors will be tensioned and tied along with the neutral. Then new overhead transformers will be installed as well as a 266MCM field spun bus. Secondary services will be transferred and the existing pole line and associated hardware will be removed.

This project will be done in conjunction with the Prince of Wales Voltage Conversion (92008543) project. The Rideau Valley Voltage Conversion (92008686) project will begin construction first, followed by the Prince of Wales Voltage Conversion (92008543) project. This order is simply a reflection of the 92008686 project design and drawings being completed first. HOL's own 11-person construction crew will work on these two projects, with a contractor to take care of pole holes and anchors. Pole replacements and framing will be done first for either project, starting with Rideau Valley, then conductor will be strung for both projects simultaneously. Although not dependent on each other, doing these projects together is expected to save considerable time and labour, thus reducing the overall project cost.

#### 3.3.5.2 *Risks to Completion and Risk Mitigation Strategies*

Project drawings have been submitted to the City of Ottawa for municipal consent. Once approved, HOL will request a road cut permit. Receiving municipal consent is not expected to be an issue, however the process is known to take time. HOL is aware of the typical approval time and submitted the drawings in anticipation of the planned construction date. Crews are prepared to proceed with surveying and staking once municipal consent is approved.

#### 3.3.5.3 *Timing Factors*

As with all projects involving asset replacement, timing can be altered due to unforeseen events, such as encountering rock beneath the surface of the soil or facing extreme weather conditions. Any events that arise and were not planned for will likely affect the timing of the project, either causing a delay or moving it ahead of schedule. HOL does not foresee any problems in completing this project in 2015.

The procurement of equipment and materials may affect the project timing, but this is not expected. HOL has already ordered material in 2014 which will be delivered in the middle of December 2014. Transformers and conductors still have yet to be ordered.

Planned City development is the driver for this project, and it is unlikely that the priority of this project will change. It is necessary to increase the electrical supply in the area of load growth. If City development is delayed for any reason, it is possible that this project could be shifted slightly but this is unlikely, as this project contributes to expanding supply in the South Nepean area. For the priority of this project to change, City development would have to be delayed and HOL would have to have a sudden change in priorities due to an unexpected requirement.

#### 3.3.5.4 *Cost Factors*

It is possible that construction crews will encounter more rock beneath the surface than anticipated when installing new poles, but this is unlikely as there is an existing pole line along Rideau Valley Drive.

#### 3.3.5.5 *Other Factors*

One public communication package will be created for both the Prince of Wales project and the Rideau Valley project. These letters of notification will be done in 2014, as customers will experience planned outages and potential construction on or around their properties. Customer input is not expected to cause any problems as there is an existing pole line along Rideau Valley Drive already.

Reliability improvement associated with replacement of aging assets and equipment upgrades
Reduced outage durations by allowing for future backup circuit

## 3.4 Richmond Voltage Conversion

### 3.4.1 Project/Program Summary

In the West 8.32kV Regional Planning Study, the projected developments were assessed for construction, timing and associated load. Anticipated developments in the Richmond village area include commercial, light industrial and residential developments. In 2012, Richmond was identified to increase in size by 600% over a 20 year horizon. The Richmond Voltage Conversion project is intended to upgrade infrastructure that has reached end of life to be capable of sustaining the expected load growth. The decision for a 27.6kV voltage conversion was driven by the limitation of 8.32kV circuits in terms of capacity, their inability to extend long distances and maintain adequate voltage levels and to allow for increased operability to transfer load to neighboring 27.6kV stations. Conversion from 8.32kV to 27.6kV is the long-term goal of all areas within the Stittsville, Kanata and Barrhaven communities in order improve reliability and eliminate on-going power quality issues with the 8.32kV system.

### 3.4.2 Project/Program Description

#### 3.4.2.1 *Current Issues*

Current issues in the village of Richmond include deteriorating reliability due to failure of aging infrastructure and power quality issues which can be attributed to the length of the feeders and the limitation of 8.32kV to supply the distances without significant voltage drop. The projected load growth in the village of Richmond will become an issue for the 8.32kV system within a five-year timeframe.

#### 3.4.2.2 *Program/Project Scope*

The scope of this project is to extend two (2) 27.6kV feeders along the major streets in the village of Richmond. The upgrade of Richmond South DS will continue to supply 8.32kV for the existing customers as well as 27.6kV for the voltage conversion to be completed in a phased approach. The two (2) feeders being constructed along the major streets will have one feeder energized at 8.32kV to continue supply to existing customers and one feeder at 27.6kV to begin the voltage conversion. All services supplied from the major roads undergoing re-construction will be converted during the project. The Richmond Voltage Conversion includes eleven (11) sub-projects divided in order to phase the construction in Richmond, but still have infrastructure in place for the energization of the upgraded Richmond South DS.

Phase 1, which will include all work and expenses to occur within 2016, includes two projects, 92010186 Richmond South Voltage Conversion – McBean and 92010188 Richmond South Voltage Conversion – Shea. The scopes of these two projects include the replacement of sixty-two (62) poles, eighteen (18) overhead transformers, 95m of direct buried cable with concrete encased cable and installation of two (2) new gang-operated automated switches.

Phase 2, which will include all work and expenses to occur within 2017, includes four projects: 92010920 Richmond South Egress – Garvin East, 92010922 Richmond South Voltage Conversion – Perth East, 92010924 Richmond South Voltage Conversion – Perth West, and 92010926 Richmond South Voltage Conversion – Huntley. The scopes of these four projects include the replacement of 104 poles, thirty (30) overhead transformers, four (4) padmounted transformers, 365m of direct buried cable with concrete encased cable and installation of three (3) new gang-operated automated switches.

Phase 3, which will include all work and expenses to occur within 2018, includes five projects, 92010954 Richmond South Voltage Conversion – King, 92010956 Richmond South Voltage Conversion – Fortune, 92010958 Richmond South Voltage Conversion – Ottawa, 92010960 Richmond South Voltage Conversion – Burke, and 92010962 Richmond South Voltage Conversion – Eagleson. The scopes of these five projects include the replacement of 127 poles, thirty-five (35) overhead transformers, seven (7) padmounted transformers, 545m of direct buried cable with concrete encased cable and installation of two (2) new gang-operated automated switches.

### 3.4.2.3 *Main and Secondary Drivers*

The main driver of this project is to supply the future expected load in the village of Richmond. The forecasted load for the next 20 years in the Richmond area indicates that the area's capacity limitations will be reached within the next five years. The 8.32kV system currently supplying the village of Richmond is not capable of supplying the increased capacity without exceeding thermal limitations of the infrastructure and would worsen the power quality issues that have been experienced by customers in this area.

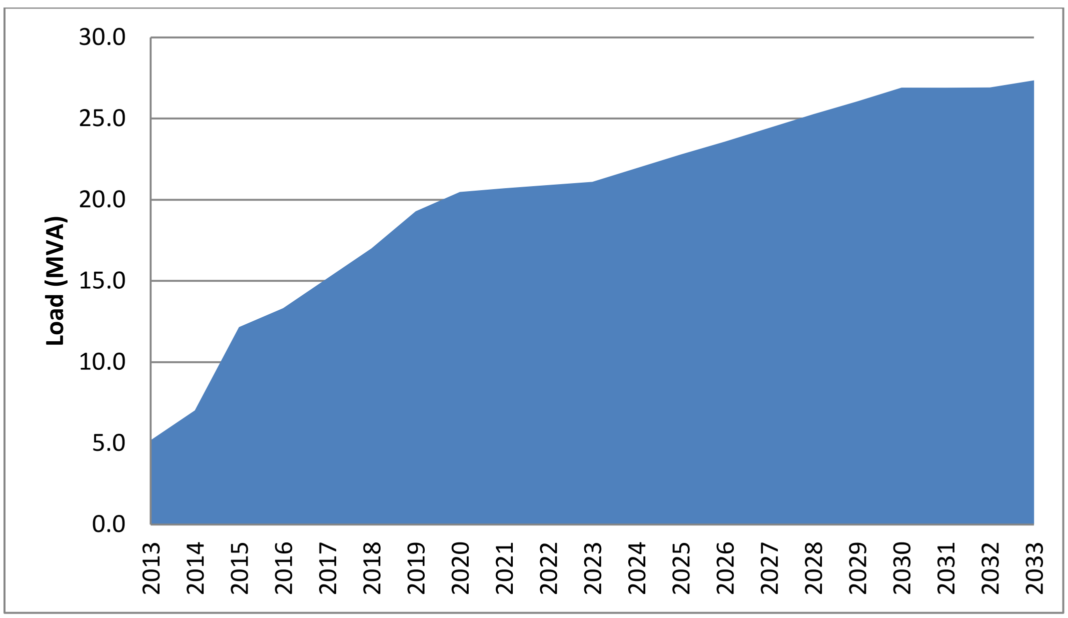

**Figure 91 - Richmond Village Load Profile**

There are many City of Ottawa development plans that have been reviewed to estimate the load demand over the next twenty years. The following outlines the development projects in the Richmond area.

**Richmond Community Design Plan**

The Village of Richmond CDP was initiated in 2008 and covers a planning period from 2010 to 2030. Based on this plan the residential capacity is planned to increase from approximately 1,550 dwelling units to between 4,400 and 5,500 units (including existing), for an increase of 2,850 – 3,950 which accounts for a load increase of 7.3 MVA – 10.1 MVA (using an estimate of 2.56 kVA/unit).

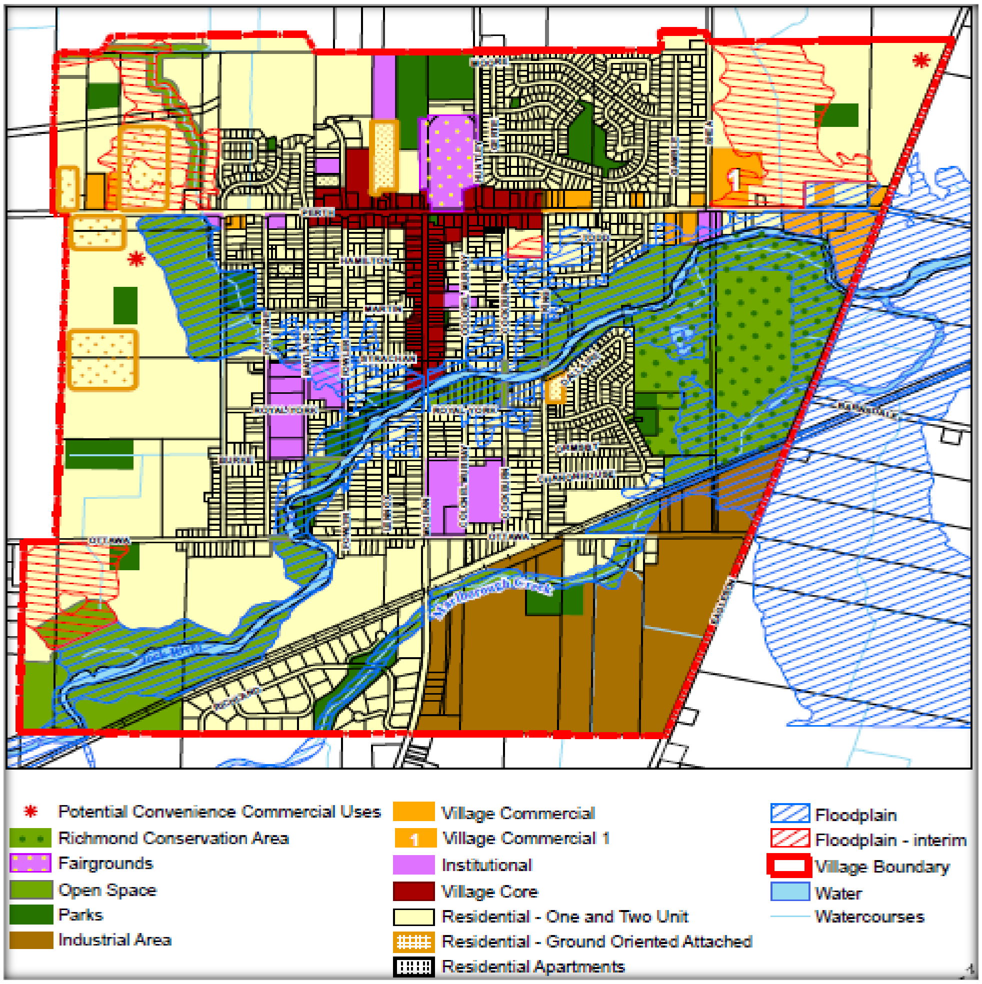

**Figure 92 - Richmond CDP Land Use**

## Industrial Lands

The Richmond CDP describes the Industrial Lands as providing “an opportunity for industrial and employment-generating uses that require large parcels of land and that are not always compatible with residential uses”. The maximum building height in this area is restricted to the equivalent of three or four storeys with the following permitted uses: light industrial, office, printing plant, service and repair shop, small batch brewery, warehouse and heavy equipment and vehicle sales, rental and servicing, research, technology, nurseries, greenhouses, catering, places of assembly, broadcasting and training. Existing areas with a similar profile have a load estimate within the range of 10 – 20 MVA/km$^2$ depending on particular uses. The proposed industrial lands cover approximately 0.9 km$^2$ which would predict a load profile within the range of 9 – 18 MVA. For planning purposes the low end, 9 MVA, will be used, assuming that no large industrial plants will develop on these lands.

Figure 93 - Industrial Lands Demonstration Plan

**Western Development Lands**

Development in the Western Development Lands will primarily consist of detached dwellings, townhouses, parks, open space, a school and a pathway system. The density and unit mix provisions for this area are contained in the chart below.

| Dwelling Type | Max Density Units/Net Ha | Unit Mix (% of Total) |
|---|---|---|
| **One & Two Units Large Lots** | 17 | 2-7% Minimum |
| **One & Two Units Small Lots** | 30 | 58-78% Maximum |
| **Townhouses** | 45 | 20-35% Minimum |
| **Townhouses with Rear Lanes** | 80 | |
| **Back-to-Back Townhouses** | 99 | |

Table 98 - Proposed Density

**Figure 94 - Western Development Lands Demonstration Plan**

The Western Development Lands demonstration plan was developed through a workshop hosted by Mattamy Homes in December 2008. Since that time Mattamy has developed a plan for a section of the western area, which is described below.

**Mattamy Homes Residential**

The Mattamy development covers the southern portion of the Western Development Lands and will account for approximately 1000 units, or 2.5 MVA of load. They have submitting the Draft Plan of Subdivision to the City of Ottawa in 2013 with closings to begin around 2017 since it is currently outside of their five year plan.

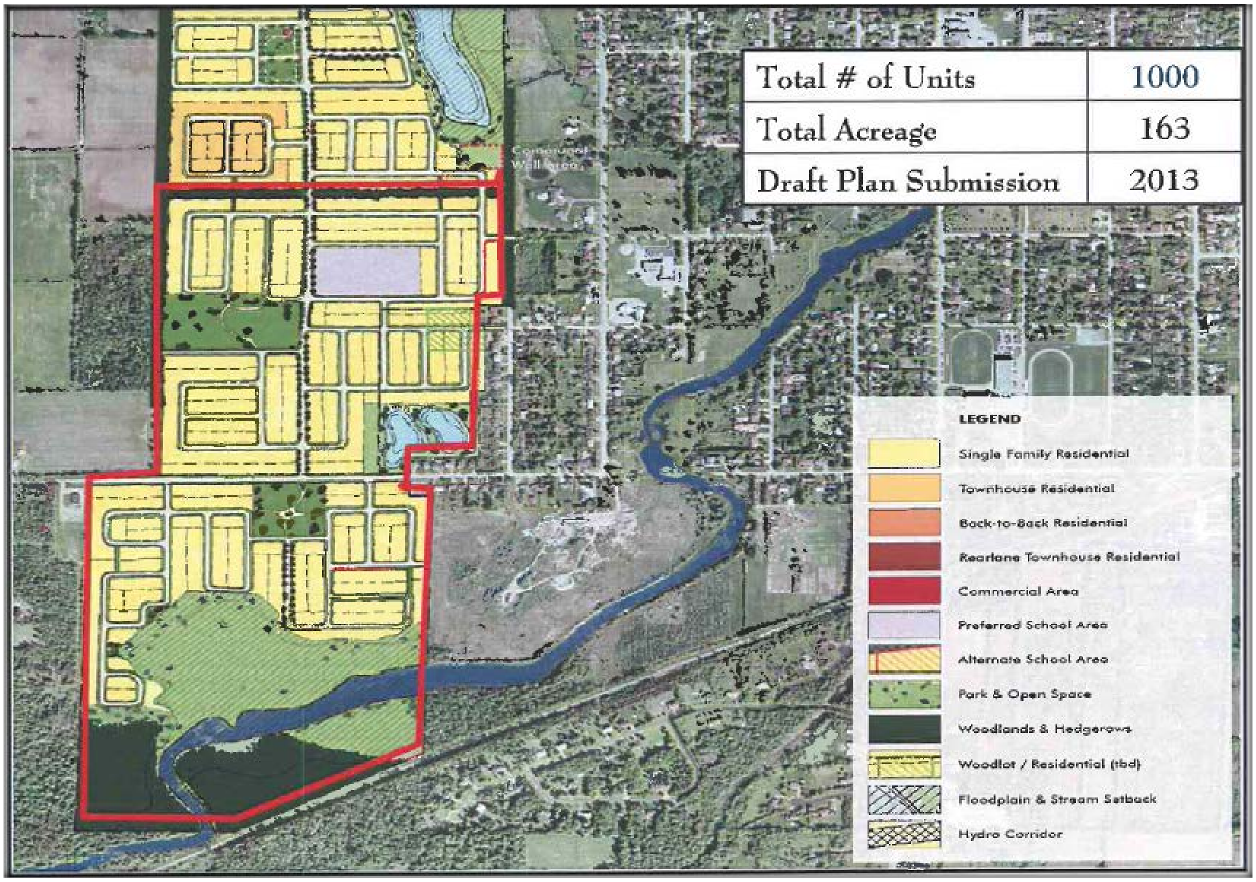

Figure 95 - Mattamy's Richmond West Development

## Northeast Development Lands

The plans for this area follow the same general outline as that for the Western Development Lands.

Figure 96 - Northeast Development Lands Demonstration Plan

## Richmond Village Square

The development known as Richmond Village Square is a commercial plaza that will consist of six single storey buildings for a total of 7,039 $m^2$. Using an estimate of 75.38 $W/m^2$ gives a load estimate of 590 kVA. The servicing for this site will consist of 3 x 1000 kVA transformers, and using an estimate of 60% of connected capacity provides a load estimate of 1.8 MVA.  A load estimate of 1.0 MVA will be used for planning purposes.

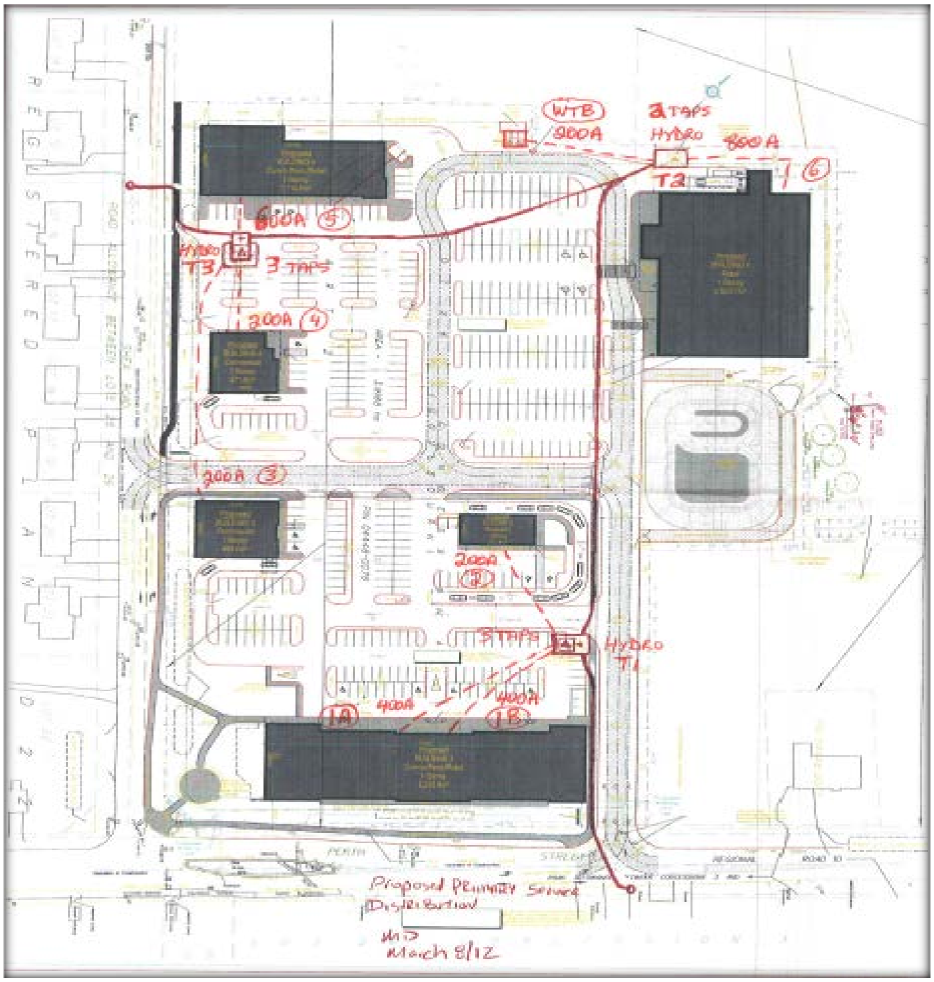

Figure 97 - Richmond Village Square Layout

As a secondary driver for this project, power quality will be improved as well as reliability by eventually creating ties to other 27.6kV stations, specifically Janet King DS, Bridlewood DS, Terry Fox MTS, Fallowfield DS and the New South 27.6kV Substation.

### 3.4.2.4 *Performance Targets and Objectives*

The main objective of this project is to be capable of supplying the new growth, while maintaining and improving power quality and reliability for customers in the village of Richmond. Conversion will directly allow developments in the village of Richmond to proceed on schedule and with adequate supply. The Richmond Voltage Conversion projects are expected to be completed in time for energization of Richmond South DS and the new 27.6kV supply.

A secondary objective is to improve reliability and power quality in the village of Richmond. New infrastructure will directly improve SAIFI and the feeder ties will directly reduce the impact on SAIDI.

Conversion will also directly reduce the impact on the System Average RMS Variation Frequency Index (SARFI) used to measure power quality issues in the system.

### 3.4.3 Project/Program Justification

#### 3.4.3.1 *Alternatives Evaluation*

##### 3.4.3.1.1 Alternatives Considered

The infrastructure in the Richmond 8.32kV system has reached end of life and requires upgrading to meet load growth requirements, reliability and power quality targets. The following eleven (11) projects have been identified to facilitate the required upgrades in order to meet these objectives:

- 92010186 Richmond South Voltage Conversion – McBean
- 92010188 Richmond South Voltage Conversion – Shea
- 92010920 Richmond South Egress – Garvin East
- 92010922 Richmond South Voltage Conversion – Perth East
- 92010924 Richmond South Voltage Conversion – Perth West
- 92010926 Richmond South Voltage Conversion – Huntley
- 92010954 Richmond South Voltage Conversion – King
- 92010956 Richmond South Voltage Conversion – Fortune
- 92010958 Richmond South Voltage Conversion – Ottawa
- 92010960 Richmond South Voltage Conversion – Burke
- 92010962 Richmond South Voltage Conversion – Eagleson

**Alternative #1:** includes the completion of all eleven (11) projects with infrastructure to support 27.6kV.

**Alternative #2:** includes the completion of all eleven (11) projects with infrastructure to support 8.32kV; direct replacements of all assets like for like.

##### 3.4.3.1.2 Evaluation Criteria

**Costs:**

Alternative #1: $8.32M

Alternative #2: $8.32M

Labour costs account for the majority of project costs and as a result material cost increments between 8.32kV and 27.6kV are considered negligible.

**Ability to supply load:**

Alternative #1: The 8.32kV system in the village of Richmond has reached end of life and cannot support additional load growth without compromising the power quality issues further. The renewal of infrastructure with 27.6kV in this area will permit further load growth.

Alternative #2: The 8.32kV system in the village of Richmond has reached end of life and cannot support additional load growth without compromising the power quality issues further.

**Reliability Benefits:**
Both alternatives would benefit reliability in the community by renewing infrastructure and ties created between feeders would ultimately reduce SAIDI.

#### 3.4.3.1.3 Preferred Alternative

Alternative #1 is the preferred alternative due to its ability to supply the anticipated future load growth, and reliability benefits associated with this alternative.

### 3.4.3.2 *Project/Program Timing & Expenditure*

The total project cost is $8,320.427 and is anticipated to be completed in 2018. HOL aims to minimize the costs and meet the deadlines associated with all projects by completing pre-planning of the construction schedule and ensuring vehicles, staff and material are all available for start of construction.

| Historical ($M) | | | | | | Future ($M) | | | |
|---|---|---|---|---|---|---|---|---|---|
| 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 |
| $0 | $0 | $0 | $0 | $0 | $0 | $1.64 | $3.02 | $3.66 | $0 |

**Table 99 - Project Expenditures**

### 3.4.3.3 *Benefits*

Key benefits that will be achieved by implementing the Richmond Voltage Conversion project are summarized below.

| Benefits | Description |
|---|---|
| **System Operation Efficiency and Cost-effectiveness** | This project is required to satisfy the upcoming load growth in the village of Richmond. It is an essential system service project to supply the needed capacity. System operation efficiency will be improved by the new station feeders' ability to connect with other 27.6kV feeders in the area. The backup ties will ensure faster restoration times in the event of an outage, as well as the capability to maintain adequate supply in a station contingency scenario. This should inevitably contribute to reducing SAIDI, which is important in an area where the overhead distribution system is subject to weather-related outages. Voltage conversion is the most cost-effective solution to provide the required demand and renew aging infrastructure. |
| **Customer** | This project will achieve two objectives: to supply future demand and to improve reliability in the south-west end of the city. Not only will development projects be given adequate electrical supply, but the feeder ties present several opportunities to improve the system. This project will contribute to a larger system plan to convert the entire south-west to a 27.6kV system, in order to keep up with city development. This larger system plan will provide enhanced capacity and improved reliability to customers in several communities: Richmond, Munster, Kanata, Stittsville and Barrhaven. The various upcoming ties between stations servicing this region will reduce outage durations and eliminate several radial segments that exist in the current distribution system. These projects involve asset replacement, which further improves system reliability. |
| **Safety** | The infrastructure in place today has begun approaching end of life and poses a small risk of failure and safety concern. By replacing the infrastructure, the |

| | |
|---|---|
| | safety risk is significantly reduced. |
| **Cyber-Security, Privacy** | Not Applicable. |
| **Co-ordination, Interoperability** | The Richmond Voltage Conversion projects will coincide with ongoing developments in the village of Richmond and will reduce the last minute expansion requirements from developers to service the new developments. |
| **Economic Development** | This project is not expected to contribute directly to economic growth or job creation, but due to the number of assets being replaced in this project, will inevitably require operation and maintenance. Contractor labour will be used extensively to complete the project. |
| **Environment** | The infrastructure in place today has begun approaching end of life and poses a small risk of failure and environmental concern. By replacing the infrastructure, the environmental risk is significantly reduced. |

**Table 100 - Project Benefits**

### 3.4.4 Prioritization

#### 3.4.4.1 *Consequences of Deferral*

Since the purpose of this project is to address an upcoming capacity issue, the most important consequence of deferral would be the inability to service the required load in 2019. Allowing the system to experience thermal overload for an extended period of time would lead to equipment damage and customer outages. Customers working or living in the proposed developments would simply not have the electricity they require. The eventual failure of the system to keep up with demand validates the necessity of this project.

The new 27.6kV feeders will create ties with other stations and backup other feeders. This presents an additional consequence of deferral, which is that the current radial segments of other feeders in the area will remain radial for a longer period of time. If an outage occurs on these segments, the affected customers will likely experience long outage times.

This project also promotes a series of equipment upgrade projects, to prepare the area for the larger 27.6kV voltage conversion. This involves replacing aging assets such as poles, conductors and transformers which inherently improves system reliability.

#### 3.4.4.2 *Priority*

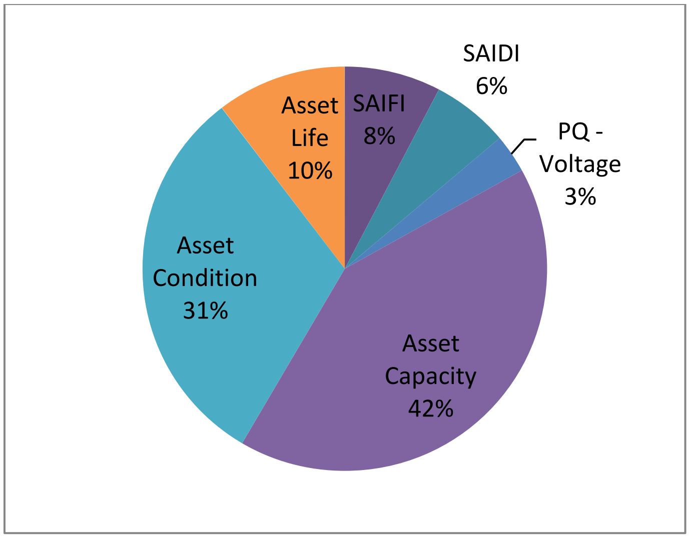

**Figure 98 - Project Avoided Risk**

Project Score: 0.867

### 3.4.5 Execution Path

#### 3.4.5.1 *Implementation Plan*

Phase 1, which will include all work and expenses to occur within 2016, includes two projects, 92010186 Richmond South Voltage Conversion – McBean and 92010188 Richmond South Voltage Conversion – Shea. The scopes of these two projects include replacement of sixty-two (62) poles, eighteen (18) overhead transformers, 95m of direct buried cable with concrete encased cable and installation of two (2) new gang-operated automated switches.

Phase 2, which will include all work and expenses to occur within 2017, includes four projects: 92010920 Richmond South Egress – Garvin East, 92010922 Richmond South Voltage Conversion – Perth East, 92010924 Richmond South Voltage Conversion – Perth West, and 92010926 Richmond South Voltage Conversion – Huntley. The scopes of these four projects include replacement of 104 poles, thirty (30) overhead transformers, four (4) padmounted transformers, 365m of direct buried cable with concrete encased cable and installation of three (3) new gang-operated automated switches.

Phase 3, which will include all work and expenses to occur within 2018, includes five projects, 92010954 Richmond South Voltage Conversion – King, 92010956 Richmond South Voltage Conversion – Fortune, 92010958 Richmond South Voltage Conversion – Ottawa, 92010960 Richmond South Voltage Conversion – Burke, and 92010962 Richmond South Voltage Conversion – Eagleson. The scopes of these five projects include replacement of 127 poles, thirty-five (35) overhead transformers, seven (7) padmounted transformers, 545m of direct buried cable with concrete encased cable and installation of two (2) new gang-operated automated switches.

#### 3.4.5.2 *Risks to Completion and Risk Mitigation Strategies*

Risks that may affect this project are easement acquisition, existing location of trees, and bedrock. HOL takes many steps in the design phase of the project to minimize these risks by investigating them early on.

#### 3.4.5.3 *Timing Factors*

Factors affecting the timing of this project include easement acquisition, City of Ottawa Municipal Consent, customer outage limitations and weather conditions. Any delays in energization of the upgraded Richmond South DS will result in delays for energizing the 27.6kV feeders.

#### 3.4.5.4 *Cost Factors*

Factors that may affect costs of the project include costs associated with digging through rock and delays due to weather conditions.

#### 3.4.5.5 *Other Factors*

Not applicable.

### 3.4.6 Renewable Energy Generation (if applicable)

Not applicable.

### 3.4.7 Leave-To-Construct (if applicable)

Not applicable.

### 3.4.8 Project Details and Justification

| **Project Name:** | Richmond Voltage Conversion - Shea |
|---|---|
| **Capital Cost:** | $665,000 |
| **O&M:** | $0 |
| **Start Date:** | 2016 |
| **In-Service Date:** | 2016 |
| **Investment Category:** | System Service |
| **Main Driver:** | Capacity |
| **Secondary Driver(s):** | Reliability |
| **Customer/Load Attachment** | 1,097 Customers/4,049kVA |

**Project Scope**

The scope of this project is to extend two (2) 27.6kV feeders along Shea Road, from Garvin Road to Perth Street. The upgrade of Richmond South DS will continue to supply 8.32kV for the existing customers as well as 27.6kV for the voltage conversion to be completed in a phased approach. The two (2) feeders being constructed along McBean Street will have one feeder energized at 8.32kV to continue supply to existing customers and one feeder at 27.6kV to begin the voltage conversion. All services supplied from the pole line along McBean Street will be converted during the project. The intent is to have this infrastructure in place for the energization of the upgraded Richmond South DS.

**Work Plan**

Work break down for this projects includes replacement of twenty-four (24) poles and seven (7) overhead transformers, all to be completed in 2016.

**Customer Impact**

By integrating new Richmond South DS feeders into the distribution system in Richmond, it will improve the flexibility of the system. The average number of customer hours per interruption should diminish significantly. This project will also increase the available capacity in the village of Richmond for the upcoming developments.

| | |
|---|---|
| **Project Name:** | Richmond Voltage Conversion - McBean |
| **Capital Cost:** | $971,000 |
| **O&M:** | $0 |
| **Start Date:** | 2016 |
| **In-Service Date:** | 2016 |
| **Investment Category:** | System Service |
| **Main Driver:** | Capacity |
| **Secondary Driver(s):** | Reliability |
| **Customer/Load Attachment** | 1,189 Customers/4,222kVA |

**Project Scope**

The scope of this project is to extend two (2) 27.6kV feeders along McBean Street, from Perth Street to Ottawa Street. The upgrade of Richmond South DS will continue to supply 8.32kV for the existing customers as well as 27.6kV for the voltage conversion to be completed in a phased approach. The two (2) feeders being constructed along McBean Street will have one feeder energized at 8.32kV to continue supply to existing customers and one feeder at 27.6kV to begin the voltage conversion. All services supplied from the pole line along McBean Street will be converted during the project. The intent is to have this infrastructure in place for the energization of the upgraded Richmond South DS.

**Work Plan**

Work break down for this projects includes replacement of twenty-seven (27) poles, eleven (11) overhead transformers and 175m of direct buried cable to be encased with concrete encased cable, all to be completed in 2016.

**Customer Impact**

By integrating new Richmond South DS feeders into the distribution system in Richmond, it will improve the flexibility of the system.  The average number of customer hours per interruption should diminish significantly. This project will also increase the available capacity in the village of Richmond for the upcoming developments.

| | |
|---|---|
| **Project Name:** | Richmond South Egress – Garvin East |
| **Capital Cost:** | $438,279 |
| **O&M:** | $0 |
| **Start Date:** | 2017 |
| **In-Service Date:** | 2017 |
| **Investment Category:** | System Service |
| **Main Driver:** | Capacity |
| **Secondary Driver(s):** | Reliability |
| **Customer/Load Attachment** | 1,097 Customers/4,049kVA |

**Project Scope**

The scope of this project is to egress three (3) 27.6kV feeders along Garvin Road, from Richmond South DS to Shea Road. The upgrade of Richmond South DS will continue to supply 8.32kV for the existing customers as well as 27.6kV for the voltage conversion to be completed in a phased approach. The three (3) feeders being constructed along Garvin Road will have one feeder energized at 8.32kV to continue supply to existing customers and two feeders at 27.6kV to begin the voltage conversion. All services supplied from the pole line along Huntley Road will be converted during the project. The intent is to have this infrastructure in place for the energization of the upgraded Richmond South DS.

**Work Plan**

Work break down for this projects includes replacement of ten (10) poles, 200m of direct buried cable to be encased with concrete encased cable and installation of one (1) gang-operated automated switch, all to be completed in 2017.

**Customer Impact**

By integrating new Richmond South DS feeders into the distribution system in Richmond, it will improve the flexibility of the system. The average number of customer hours per interruption should diminish significantly. This project will also increase the available capacity in the village of Richmond for the upcoming developments.

| | |
|---|---|
| **Project Name:** | Richmond Voltage Conversion - Huntley |
| **Capital Cost:** | $1,094,105 |
| **O&M:** | $0 |
| **Start Date:** | 2017 |
| **In-Service Date:** | 2017 |
| **Investment Category:** | System Service |
| **Main Driver:** | Capacity |
| **Secondary Driver(s):** | Reliability |
| **Customer/Load Attachment** | 1,972 Customers/6,254kVA |

**Project Scope**

The scope of this project is to extend two (2) 27.6kV feeders along Huntley Road, from Garvin Road to Perth Street. The upgrade of Richmond South DS will continue to supply 8.32kV for the existing customers as well as 27.6kV for the voltage conversion to be completed in a phased approach. The two (2) feeders being constructed along Huntley Road will have one feeder energized at 8.32kV to continue supply to existing customers and one feeder at 27.6kV to begin the voltage conversion. All services supplied from the pole line along Huntley Road will be converted during the project. The intent is to have this infrastructure in place for the energization of the upgraded Richmond South DS.

**Work Plan**

Work break down for this projects includes replacement of thirty-seven (37) poles, twelve (12) overhead transformers, three (3) padmounted transformers, 90m of direct buried cable to be encased with concrete encased cable and installation of one (1) gang-operated automated switch, all to be completed in 2017.

**Customer Impact**

By integrating new Richmond South DS feeders into the distribution system in Richmond, it will improve the flexibility of the system. The average number of customer hours per interruption should diminish significantly. This project will also increase the available capacity in the village of Richmond for the upcoming developments.

| | |
|---|---|
| **Project Name:** | Richmond Voltage Conversion – Perth East |
| **Capital Cost:** | $965,169 |
| **O&M:** | $0 |
| **Start Date:** | 2017 |
| **In-Service Date:** | 2017 |
| **Investment Category:** | System Service |
| **Main Driver:** | Capacity |
| **Secondary Driver(s):** | Reliability |
| **Customer/Load Attachment** | 1,097 Customers/4,049kVA |

**Project Scope**

The scope of this project is to extend two (2) 27.6kV feeders along Perth Street, from Huntley Road to Eagleson Road. The upgrade of Richmond South DS will continue to supply 8.32kV for the existing customers as well as 27.6kV for the voltage conversion to be completed in a phased approach. The two (2) feeders being constructed along Perth Street will have one feeder energized at 8.32kV to continue supply to existing customers and one feeder at 27.6kV to begin the voltage conversion. All services supplied from the pole line along Perth Street will be converted during the project. The intent is to have this infrastructure in place for the energization of the upgraded Richmond South DS.

**Work Plan**

Work break down for this projects includes replacement of thirty-seven (37) poles, fourteen (14) overhead transformers and installation of one (1) gang-operated automated switch, all to be completed in 2017.

**Customer Impact**

By integrating new Richmond South DS feeders into the distribution system in Richmond, it will improve the flexibility of the system. The average number of customer hours per interruption should diminish significantly. This project will also increase the available capacity in the village of Richmond for the upcoming developments.

| | |
|---|---|
| **Project Name:** | Richmond Voltage Conversion – Perth West |
| **Capital Cost:** | $525,298 |
| **O&M:** | $0 |
| **Start Date:** | 2017 |
| **In-Service Date:** | 2017 |
| **Investment Category:** | System Service |
| **Main Driver:** | Capacity |
| **Secondary Driver(s):** | Reliability |
| **Customer/Load Attachment** | 976 Customers/2,983kVA |

**Project Scope**

The scope of this project is to extend two (2) 27.6kV feeders along Perth Street, from Huntley Road to Fortune Street. The upgrade of Richmond South DS will continue to supply 8.32kV for the existing customers as well as 27.6kV for the voltage conversion to be completed in a phased approach. The two (2) feeders being constructed along Perth Street will have one feeder energized at 8.32kV to continue supply to existing customers and one feeder at 27.6kV to begin the voltage conversion. All services supplied from the pole line along Perth Street will be converted during the project. The intent is to have this infrastructure in place for the energization of the upgraded Richmond South DS.

**Work Plan**

Work break down for this projects includes replacement of twenty (20) poles, four (4) overhead transformers, one (1) padmounted transformers and 75m of direct buried cable to be encased with concrete encased cable, all to be completed in 2017.

**Customer Impact**

By integrating new Richmond South DS feeders into the distribution system in Richmond, it will improve the flexibility of the system. The average number of customer hours per interruption should diminish significantly. This project will also increase the available capacity in the village of Richmond for the upcoming developments.

| | |
|---|---|
| **Project Name:** | Richmond Voltage Conversion – King |
| **Capital Cost:** | $967,556 |
| **O&M:** | $0 |
| **Start Date:** | 2018 |
| **In-Service Date:** | 2018 |
| **Investment Category:** | System Service |
| **Main Driver:** | Capacity |
| **Secondary Driver(s):** | Reliability |
| **Customer/Load Attachment** | 1,097 Customers/4,049kVA |

**Project Scope**

The scope of this project is to extend two (2) 27.6kV feeders along King Street, from Perth Street to Ottawa Street. The upgrade of Richmond South DS will continue to supply 8.32kV for the existing customers as well as 27.6kV for the voltage conversion to be completed in a phased approach. The two (2) feeders being constructed along King Street will have one feeder energized at 8.32kV to continue supply to existing customers and one feeder at 27.6kV to begin the voltage conversion. All services supplied from the pole line along King Street will be converted during the project. The intent is to have this infrastructure in place for the energization of the upgraded Richmond South DS.

**Work Plan**

Work break down for this projects includes replacement of thirty-two (32) poles, nine (9) overhead transformers, two (2) padmounted transformers, 170m of direct buried cable to be encased with concrete encased cable and installation of one (1) gang-operated automated switch, all to be completed in 2018.

**Customer Impact**

By integrating new Richmond South DS feeders into the distribution system in Richmond, it will improve the flexibility of the system. The average number of customer hours per interruption should diminish significantly. This project will also increase the available capacity in the village of Richmond for the upcoming developments.

| | |
|---|---|
| **Project Name:** | Richmond Voltage Conversion – Fortune |
| **Capital Cost:** | $774,500 |
| **O&M:** | $0 |
| **Start Date:** | 2018 |
| **In-Service Date:** | 2018 |
| **Investment Category:** | System Service |
| **Main Driver:** | Capacity |
| **Secondary Driver(s):** | Reliability |
| **Customer/Load Attachment** | 976 Customers/2,983kVA |

**Project Scope**

The scope of this project is to extend two (2) 27.6kV feeders along Fortune Street, from Perth Street to Ottawa Street. The upgrade of Richmond South DS will continue to supply 8.32kV for the existing customers as well as 27.6kV for the voltage conversion to be completed in a phased approach. The two (2) feeders being constructed along Fortune Street will have one feeder energized at 8.32kV to continue supply to existing customers and one feeder at 27.6kV to begin the voltage conversion. All services supplied from the pole line along Fortune Street will be converted during the project. The intent is to have this infrastructure in place for the energization of the upgraded Richmond South DS.

**Work Plan**

Work break down for this projects includes replacement of twenty-two (22) poles, six (6) overhead transformers, three (3) padmounted transformers and 250m of direct buried cable to be encased with concrete encased cable, all to be completed in 2018.

**Customer Impact**

By integrating new Richmond South DS feeders into the distribution system in Richmond, it will improve the flexibility of the system. The average number of customer hours per interruption should diminish significantly. This project will also increase the available capacity in the village of Richmond for the upcoming developments.

| | |
|---|---|
| **Project Name:** | Richmond Voltage Conversion – Ottawa |
| **Capital Cost:** | $821,750 |
| **O&M:** | $0 |
| **Start Date:** | 2018 |
| **In-Service Date:** | 2018 |
| **Investment Category:** | System Service |
| **Main Driver:** | Capacity |
| **Secondary Driver(s):** | Reliability |
| **Customer/Load Attachment** | 1,097 Customers/4,049kVA |

**Project Scope**

The scope of this project is to extend two (2) 27.6kV feeders along Ottawa Street, from Eagleson Road to McBean Street. The upgrade of Richmond South DS will continue to supply 8.32kV for the existing customers as well as 27.6kV for the voltage conversion to be completed in a phased approach. The two (2) feeders being constructed along Ottawa Street will have one feeder energized at 8.32kV to continue supply to existing customers and one feeder at 27.6kV to begin the voltage conversion. All services supplied from the pole line along Ottawa Street will be converted during the project. The intent is to have this infrastructure in place for the energization of the upgraded Richmond South DS.

**Work Plan**

Work break down for this projects includes replacement of thirty-two (32) poles, nine (9) overhead transformers, two (2) padmounted transformers and 125m of direct buried cable to be encased with concrete encased cable, all to be completed in 2018.

**Customer Impact**

By integrating new Richmond South DS feeders into the distribution system in Richmond, it will improve the flexibility of the system. The average number of customer hours per interruption should diminish significantly. This project will also increase the available capacity in the village of Richmond for the upcoming developments.

| | |
|---|---|
| **Project Name:** | Richmond Voltage Conversion – Burke |
| **Capital Cost:** | $475,320 |
| **O&M:** | $0 |
| **Start Date:** | 2018 |
| **In-Service Date:** | 2018 |
| **Investment Category:** | System Service |
| **Main Driver:** | Capacity |
| **Secondary Driver(s):** | Reliability |
| **Customer/Load Attachment** | 1,860 Customers/5,793kVA |

**Project Scope**

The scope of this project is to extend two (2) 27.6kV feeders along Burke Street, from McBean Street to Fortune Street. The upgrade of Richmond South DS will continue to supply 8.32kV for the existing customers as well as 27.6kV for the voltage conversion to be completed in a phased approach. The two (2) feeders being constructed along Burke Street will have one feeder energized at 8.32kV to continue supply to existing customers and one feeder at 27.6kV to begin the voltage conversion. All services supplied from the pole line along Burke Street will be converted during the project. The intent is to have this infrastructure in place for the energization of the upgraded Richmond South DS.

**Work Plan**

Work break down for this projects includes replacement of thirteen (13) poles and four (4) overhead transformers, all to be completed in 2018.

**Customer Impact**

By integrating new Richmond South DS feeders into the distribution system in Richmond, it will improve the flexibility of the system. The average number of customer hours per interruption should diminish significantly. This project will also increase the available capacity in the village of Richmond for the upcoming developments.

| | |
|---|---|
| **Project Name:** | Richmond Voltage Conversion – Eagleson |
| **Capital Cost:** | $622,450 |
| **O&M:** | $0 |
| **Start Date:** | 2018 |
| **In-Service Date:** | 2018 |
| **Investment Category:** | System Service |
| **Main Driver:** | Capacity |
| **Secondary Driver(s):** | Reliability |
| **Customer/Load Attachment** | 1,097 Customers/4,049kVA |

**Project Scope**

The scope of this project is to extend two (2) 27.6kV feeders along Eagleson Road, from Perth Street to Ottawa Street. The upgrade of Richmond South DS will continue to supply 8.32kV for the existing customers as well as 27.6kV for the voltage conversion to be completed in a phased approach. The two (2) feeders being constructed along Eagleson Road will have one feeder energized at 8.32kV to continue supply to existing customers and one feeder at 27.6kV to begin the voltage conversion. All services supplied from the pole line along Eagleson Road will be converted during the project. The intent is to have this infrastructure in place for the energization of the upgraded Richmond South DS.

**Work Plan**

Work break down for this projects includes replacement of twenty-eight (28) poles, seven (7) overhead transformers and nineteen (19) poles that require change of insulators, all to be completed in 2018.

**Customer Impact**

By integrating new Richmond South DS feeders into the distribution system in Richmond, it will improve the flexibility of the system.  The average number of customer hours per interruption should diminish significantly. This project will also increase the available capacity in the village of Richmond for the upcoming developments.

## 3.5 Goulbourn Street Voltage Conversion

### 3.5.1 Project/Program Summary

The Goulbourn Street Voltage conversion is intended to fix power quality issues experienced by customers in and around Goulbourn Street in Stittsville. This community has seen significant change since the time of its first development. Properties have experienced multiple severances of land in order to build multiple homes and have resulted in unbalanced load and over loading of the one phase supplying this area, which has ultimately led to low voltage experienced by these customers. By converting these customers and looing them in with the 27.6kV JKGF4 feeder, renewed infrastructure and balancing load amongst the phases will eliminate their low voltage issues. Limited expansion is required in order to have 27.6kV available to the area. Conversion from 8.32kV to 27.6kV is the end goal of all areas within the Stittsville community in order improve reliability and eliminate power quality issues on-going with the 8.32kV system.

### 3.5.2 Project/Program Description

#### 3.5.2.1 *Current Issues*

Current issues in the Goulbourn Street community include deteriorating power quality due to land splitting for residential development that has resulted in unexpected customers being added to a single 8.32kV phase at the end of the 44F1 feeder. Aging infrastructure has also contributed to the degradation of power the customers are experiencing.

#### 3.5.2.2 *Program/Project Scope*

The scope of this project is illustrated below, which is to extend one (1) 27.6kV phase from JKGF4 along Goulbourn Street to convert the 8.32kV to 27.6kV and incorporate changes to the distribution layout to enhance operability. This includes a 90m extension along Cypress Gardens through the use of a direct buried duct system to encase the single phase cable, that will then rise up to the existing 8.32kV overhead system on Goulbourn Street. Incorporated in this project will be the replacement of forty-seven (47) poles, nine (9) overhead transformers, five (5) padmounted transformers and a total of 220m of direct buried duct encased trunk. Also included will be the change of phase on five (5) transformers that will allow each phase of the feeder to most efficiently extend through the neighbourhood and remain relatively balanced. The 27.6kV phases will then meet at a primary pedestal located on Elm Crescent which will be used to complete the residential developments. Completion of the developments in the community will create a tie between JKGF4 and TFXF5 that will improve reliability to this community.

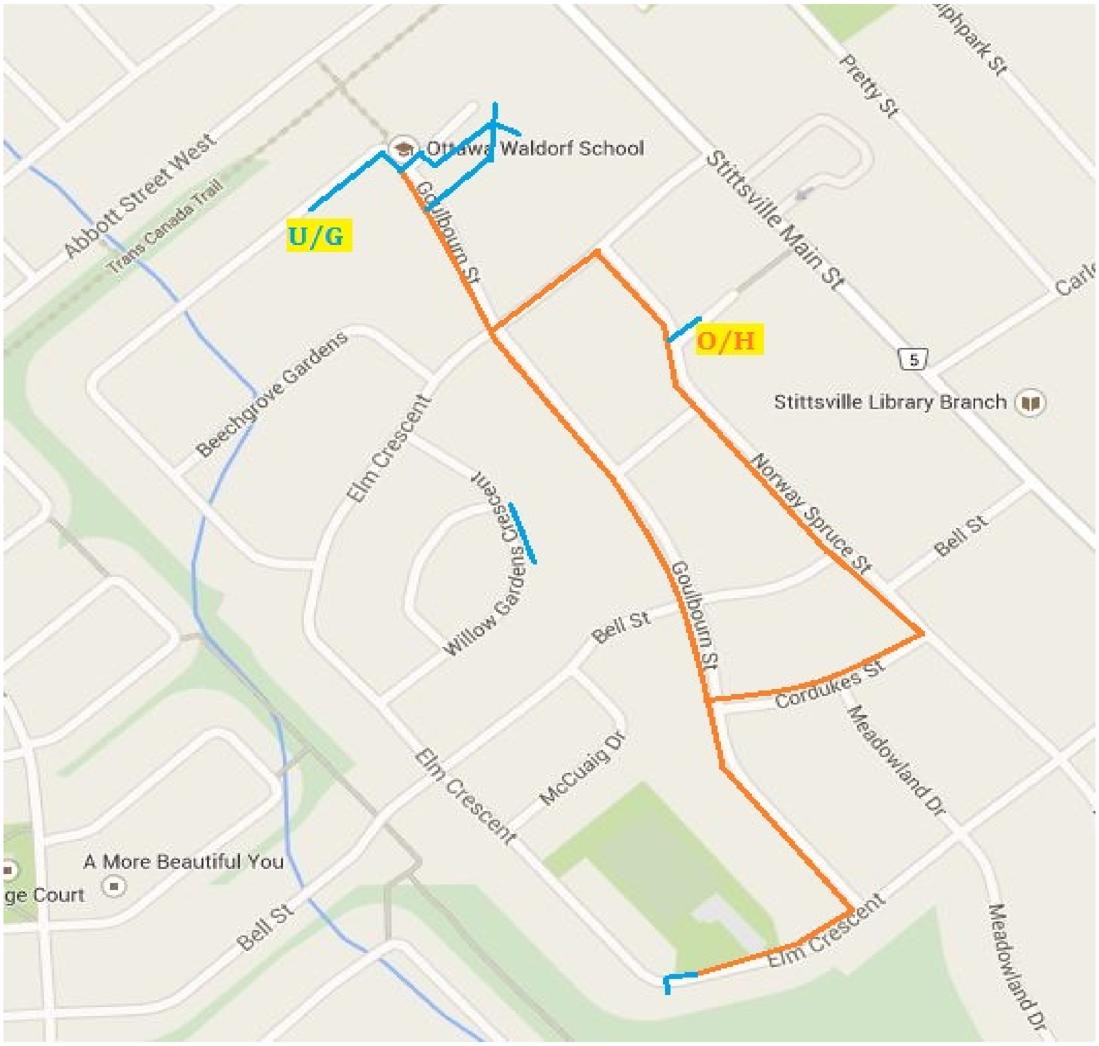

Figure 99 - Goulbourn Street Voltage Conversion Scope

### 3.5.2.3 *Main and Secondary Drivers*

The main driver of this project is to improve power quality on the 8.32kV system around Goulbourn Street. The area is supplied from 8.32kV by a single phase from 44F1 and due to the load and the location of the neighbourhood at the end of the feeder; customers have experienced voltage drops below acceptable limits during summer peak periods. The 27.6kV system is within 90m of the 8.32kV and requires minimal adjustment in order to extend a phase to convert the 27.6kV. Converting the customers on Goulbourn Street will improve the power quality that these customers experience, but will also benefit the customers remaining on the 8.32kV system.

The secondary driver of this project is to improve reliability as the 8.32kV system in this neighbourhood is radially supplied with no source of alternate supply. Through the completion of the development in this neighbourhood, a tie will be created between TFXF5 and JKGF4 which will be beneficial to more customers as a result of the conversion. Renewed infrastructure will directly improve SAIFI and the feeder ties will directly reduce the impact on SAIDI.

#### 3.5.2.4 *Performance Targets and Objectives*

The main objective of this project is to improve power quality experienced by customers in the community surrounding Goulbourn Street. Conversion will directly benefit the customers being converted and those remaining on the 8.32kV system. This project will directly reduce the impact on the System Average RMS Variation Frequency Index (SARFI) used to measure power quality issues in the system.

A secondary objective is to improve reliability in the Goulbourn Street community. New infrastructure will directly improve SAIFI and the feeder ties will directly reduce the impact on SAIDI.

### 3.5.3 Project/Program Justification

#### 3.5.3.1 *Alternatives Evaluation*

##### 3.5.3.1.1 Alternatives Considered

Power quality in the Goulbourn Street community has been greatly impacted by the increasing number of customers on a radial 8.32kV supply at the end of the feeder, due to land splitting that has occurred.

**Alternative #1:** Routing considered is along Goulbourn Street. This route would extend the JKGF4 from Cypress Gardens to Elm Crescent. This option is the most direct route to extend 27.6kV to be capable of converting the 8.32kV infrastructure. Conversion will directly benefit the customers being converted and those remaining on the 8.32kV system. This project will directly reduce the impact on the System Average RMS Variation Frequency Index (SARFI) used to measure power quality issues in the system. New infrastructure will directly improve SAIFI and the feeder ties will directly reduce the impact on SAIDI.

**Alternative #2:** Routing considered is along Elm Crescent and Goulbourn Street. This route would replace the existing forty-one (41) poles and single phase 8.32kV infrastructure with three phases of the 44F1 8.32kV feeder. Having all three phases would permit the balancing of load across each phase. Also required would be a three phase voltage regulator to be installed on Stittsville Main Street that would provide the ability to better regulate voltage at the end of the 44F1 feeder and in the Goulbourn Street community.

##### 3.5.3.1.2 Evaluation Criteria

**Costs:**

Alternative #1: $0.802M

Alternative #2: $0.940M

**Ability to supply load:**

Alternative #1: The 8.32kV system in the Goulbourn Street community cannot support additional load growth without compromising the power quality issues further. Extension of 27.6kV into this area will permit further load growth, which this area has experienced due to large lot sizes being split to accommodate more residential homes.

Alternative #2: This option will permit load growth in the Goulbourn Street community, but may not completely eliminate the power quality issues due to its location at the end of the 44F1 8.32kV feeder.

**Reliability Benefits:**
Both alternatives would benefit reliability in the community by renewing infrastructure; however Alternative #1 would create a tie between two feeders that would ultimately reduce SAIDI.

#### 3.5.3.1.3 Preferred Alternative

Alternative #1 is the preferred alternative due to power quality improvements, project costs and reliability benefits associated with this alternative.

### 3.5.3.2 *Project/Program Timing & Expenditure*

The total project cost is $802,000 and the project is anticipated to be completed in 2016. HOL aims to minimize the costs and meet the deadlines associated with all projects, by completing pre-planning of the construction schedule and ensuring vehicles, staff and material are all available for start of construction.

| Historical ($M) | | | | | | Future ($M) | | | |
|---|---|---|---|---|---|---|---|---|---|
| **2010** | **2011** | **2012** | **2013** | **2014** | **2015** | **2016** | **2017** | **2018** | **2019** |
| $0 | $0 | $0 | $0 | $0 | $0 | $0.802 | $0 | $0 | $0 |

**Table 101 - Project Expenditures**

### 3.5.3.3 *Benefits*

Key benefits that will be achieved by implementing the Goulbourn Street Voltage Conversion project are summarized below.

| Benefits | Description |
|---|---|
| **System Operation Efficiency and Cost-effectiveness** | This project is required to improve reliability in the Goulbourn Street community. It is an essential system service project needed in order to improve power quality issues and system operation efficiency by interconnecting the new Terry Fox TS to the distribution system in Stittsville and provide an alternative source when restoring outages. This should inevitably contribute to reducing SARFI and SAIDI. Re-constructing the infrastructure on Goulbourn Street is the most cost-effective solution and has the greatest benefit of improving the power quality and reliability in the Goulbourn Street community. |
| **Customer** | This project will achieve power quality and reliability improvement for customers in the Goulbourn Street community. The conversion of 8.32kV to 27.6kV should eliminate the power quality issues experienced by these customer and renewed infrastructure that will ultimately improve SAIFI. |
| **Safety** | The infrastructure in place today has begun approaching end of life and poses a small risk of failure and safety concern. By replacing the infrastructure, the safety risk is significantly reduced. |
| **Cyber-Security, Privacy** | Not Applicable. |
| **Co-ordination, Interoperability** | Not Applicable. |
| **Economic** | This project is not expected to contribute directly to economic growth or job |

| | |
|---|---|
| **Development** | creation, but due to the number of assets being replaced in this project, will inevitably require operation and maintenance. Contractor labour will be used extensively to complete the project. |
| **Environment** | Not Applicable. |

**Table 102 - Project Benefits**

### 3.5.4 Prioritization

#### 3.5.4.1 *Consequences of Deferral*

The consequence of deferring this project will result in further power quality issues experienced by customers of the Goulbourn Street community. Infrastructure that currently supplies this community will continue to deteriorate and both power quality and reliability can be expected to continue to worsen, which contributes highly to the total system SARFI and reliability statistics due to the number of customers in the community.

#### 3.5.4.2 *Priority*

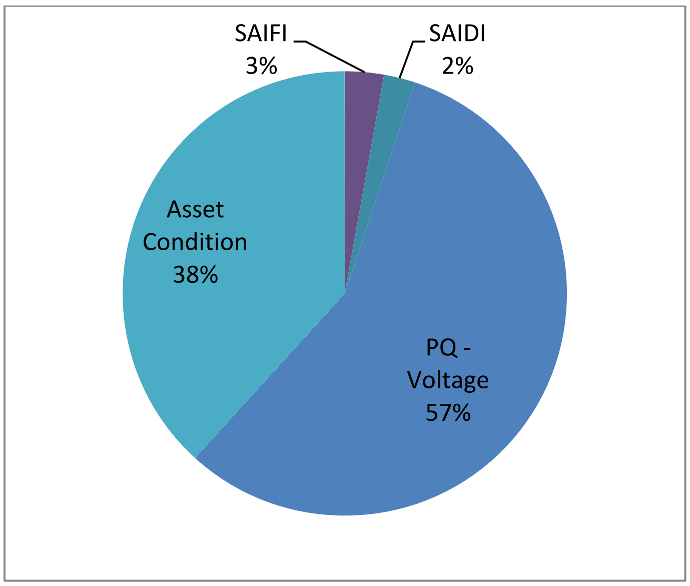

**Table 103 - Project Avoided Risk**

Project Score: 0.235

### 3.5.5 Execution Path

#### 3.5.5.1 *Implementation Plan*

This project is to be entirely completed in 2016 and includes extension of JKGF4 90m along Cypress Gardens through use of direct buried duct system to encase the single phase cable, that will then rise up to the existing 8.32kV overhead system on Goulbourn Street. Incorporated in this project will be the replacement of forty-seven (47) poles, nine (9) overhead transformers, five (5) padmounted transformers and a total of 220m of direct buried duct encased trunk. Also included will be the change of phase on five (5) transformers that will allow each phase of the feeder to most efficiently extend through the neighbourhood and remain relatively balanced.

#### 3.5.5.2 *Risks to Completion and Risk Mitigation Strategies*
Risks that may affect this project are easement acquisition, existing location of trees, and bedrock. HOL takes many steps in the design phase of the project to minimize these risks by investigating them early on.

#### 3.5.5.3 *Timing Factors*
Factors affecting the timing of this project include easement acquisition, City of Ottawa Municipal Consent, customer outage limitations and weather conditions.

#### 3.5.5.4 *Cost Factors*
Factors that may affect costs of the project include costs associated with digging through rock and delays due to weather conditions.

#### 3.5.5.5 *Other Factors*
Not applicable.

### 3.5.6 Renewable Energy Generation (if applicable)
Not applicable.

### 3.5.7 Leave-To-Construct (if applicable)
Not applicable.

### 3.5.8 Project Details and Justification

| | |
|---|---|
| **Project Name:** | 92010184 – Goulbourn Street Voltage Conversion |
| **Capital Cost:** | $0.802M |
| **O&M:** | $0 |
| **Start Date:** | 2016 – Q1 |
| **In-Service Date:** | 2016 – Q4 |
| **Investment Category:** | System Service |
| **Main Driver:** | Power Quality |
| **Secondary Driver(s):** | Reliability |
| **Customer/Load Attachment** | 200 Customers/500kVA |
| **Project Scope** | |
| The Goulbourn Street Voltage conversion is intended to fix power quality issues experienced by customers in and around Goulbourn Street in Stittsville. This community has seen significant change since the time of its first development. Properties have experienced multiple severances of land in order to build multiple homes and have resulted in unbalanced load and over loading of the one phase supplying this area, which has ultimately led to low voltage experienced by these customers. By converting these customers and looing them in with the 27.6kV JKGF4 feeder, renewed infrastructure and balancing load amongst the phases will eliminate their low voltage issues. Limited expansion is required in order to have 27.6kV available to the area. Conversion from 8.32kV to 27.6kV is the end goal of all areas within the Stittsville community in order improve reliability and eliminate power quality issues on-going with the 8.32kV system. | |
| **Work Plan** | |
| The scope of this project, to be completed in 2016, is to extend one (1) 27.6kV phase from JKGF4 to convert the 8.32kV to 27.6kV. This includes 220m direct buried duct system to encase the single phase cable extension, replacement of forty-seven (47) poles, nine (9) overhead transformers, and five (5) padmounted transformer. Also included will be the change of phase on five (5) transformers that will allow each phase of the feeder to most efficiently extend through the neighbourhood and remain relatively balanced. | |
| **Customer Impact** | |
| By integrating 27.6kV into the distribution system in the Gouldbourn Street community, it will improve system power quality and reliability. The number of customers experiencing power quality issues should diminish significantly. This project will also increase reliability through development completion and integrating with Terry Fox feeders on Fernbank Road. | |

# 4 Distribution Automation

## 4.1 Telecommunications Master Plan

### 4.1.1 Project/Program Summary

The Telecommunications Master Plan is a project to focus all of the HOL communications spending into one core network architecture. With a single converged network, HOL will make efficient use of its telecommunication budget while at the same time establishing the capacity that will accommodate all future traffic needs. This network plan involves a mix of radio systems which comprise the Field Area Network (FAN) connected to a core Wide Area Network (WAN) made up primarily of high capacity fibre optic links. Therefore, this project will involve the architecting, design, procurement, and construction of a complete communications network solution.

### 4.1.2 Project/Program Description

#### 4.1.2.1 *Current Issues*

Currently, HOL makes use of a variety of communications technologies and services across various business units including:

- SCADA Communications:
  - A leased fibre optic network connecting 41 locations (substations, SCADA head offices) across the service territory with low bandwidth serial communications channels. This system was installed by a predecessor utility (Ottawa Hydro) in the early to mid-1990's and was divested at the time of deregulation. Therefore as the assets are approaching the end of their useful life, and given the size of the network, replacement should begin in the very near future.
  - Leased public owned telephone service (POTS) lines connect several substations with the SCADA head-end using legacy serial modem technology. These links are particularly expensive considering their low capacity. Furthermore, due to the age of the modems used for these lines a replacement in the near term is preferable.
  - Leased 3G/4G services providing higher-capacity links to substations that are equipped with distribution automation equipment and sensors. This hardware is fairly new however the services are costly for data intensive locations.
  - Two serial radio systems (both licensed and un-licensed 900MHz spectrum) connect various automation devices to substations and the SCADA head offices. These low cost technologies will be carried forward into the proposed network as a connection from the substations to the surrounding distributed sensors and devices. The hardware involved in these networks has been installed for several years and can be reused in the proposed network.
  - A pilot WiMAX network which is being trialed as a new point-to-multipoint communications system to reach distant substations and devices that are outside of the feasible reach of a private fibre network (e.g. rural substations).
- Corporate communications:

- Leased high-capacity data services are used to connect the various offices to each other for network connectivity between sites. This asset is not owned by HOL.
- Microwave point-to-point radio links. These links are designed to provide a backup communication path in the event of a failure in the leased data link. The radio equipment is owned by HOL while the spectrum is licensed from Industry Canada.
- Office telephone lines are leased however in-building infrastructure is at a significantly advanced age and is requiring repair.

The fibre optical cable assets proposed in this project have a typical lifespan of 25 years which will make this an excellent long term investment. This network will be designed in a highly reliable configuration to accommodate all SCADA and Office communications traffic with sufficient capacity to handle future growth.

While the age of the assets discussed above is not the primary driver of this project, many parts of the network that HOL uses are nearing their end of life. Given the time required to deploy a large communications network, it is important that the planning begin at once.

The bulk of the communications assets are not owned by HOL but are approaching the end of their expected life span (particularly the leased SCADA fibre network). Due to its size, complexity, and cost, it is important that the planning phase for a replacement begin immediately. As a result, this project aims to systematically consolidate all of the disparate communications systems into one coherent wide area network to accommodate all of HOL's network communications needs.

Without a comprehensive network built and operated by HOL, we will be forced into unfavorable contracts with service providers that will charge based on the amount of data capacity required. This will result in a financially untenable situation as the demand for data increases exponentially as the amount of smart grid devices and sensors are deployed on the distribution system.

#### 4.1.2.2 *Program/Project Scope*

This project encompasses the communications needs of HOL across its entire service territory. Therefore, the scope of this project is exceptionally wide as there will be multiple stakeholders across the organization and the project will span a significant geographical area.

At the conclusion of this project, HOL will own and operate the following assets:

- A high capacity fibre optic network which will provide connectivity between all offices and the bulk of the centrally located substations.
- A point to multi-point microwave or WiMAX radio network which will provide connectivity to rurally located substations and to field equipment requiring broadband network connections (e.g. distribution automation groups, AMI gatekeepers etc.)
- A point to multi-point unlicensed radio network which will provide connectivity to end-point equipment in the local proximity to a higher bandwidth node. (e.g. individual distribution automation equipment, sensors, smart meters etc.)

Therefore, all communications equipment owned or leased by HOL and communications services purchased by HOL will fall within the scope of this project. The overall objective of this project is to eliminate both legacy communications equipment, and the use of expensive communications services. These will be replaced with a private, high bandwidth network capable of securely handling all of HOL's communications needs.

#### 4.1.2.3 *Main and Secondary Drivers*

The primary driver for this telecommunications master plan project is to ensure the long term financial viability of the HOL field (SCADA) and office networks. This is due in part to the fact that customers of the 21st century are more demanding than ever before. They expect service providers to be pro-active, responsive and cost-effective. HOL customers are no different. They expect us to be fully aware of the distribution system performance at all times: outages, brown outs, voltage disturbances, and power quality issues. In the age of electronics, all of these issues are critical to our customers. These new expectations are reshaping how utilities will deliver service now and in the future. HOL believes the Smart Grid is the future.

In 2012, HOL commissioned a study called Grid Transformation Action Plan (GTAP) which articulated what the Smart Grid means in the context of both the Ontario electricity market and HOL's distribution system. Amongst the conclusions of this study was the idea that the Smart Grid has three key qualities: it is instrumented, intelligent, and interconnected. Although power systems have remained virtually unchanged over the years, how they are monitored and restored has changed greatly in the last 25 years. New automated switches, sensors and smart meters all connected to a high speed network help make the system more reliable and efficient. This is the Smart Grid. By merging the distribution system with high-performance communications, HOL will achieve its goal of providing reliable service and value to its customers and shareholder.

Therefore, the primary drivers for this project are:

- The long term financial viability of HOL's communications needs.
- To accommodate the ever increasing communications needs of intelligent devices and distribution automation (i.e. to accommodate the 'Smart Grid').

The secondary drivers for this project are:

- To create a private network that can be fully controlled by HOL in the interest of improving the cyber-security of the SCADA system thereby protecting the critical infrastructure of the nation's capital city.
- To expand connectivity and allow each and every substation to become a data aggregation point capable of communicating with thousands of devices.

#### 4.1.2.4 *Performance Targets and Objectives*

With a unified communications infrastructure connecting the bulk of the HOL substations, the ability to collect and utilize data from the field will be dramatically improved both in terms of bandwidth and reliability. As mentioned in the introduction, HOL has invested wisely in intelligent devices and sensors within the substation environment. By having these devices connected to each other and the office through reliable high speed links, a vast array of smart-grid applications will become available for implementation. These include:

- Bringing device and operational data into the asset management system, enabling more intelligent maintenance and investment
- Real-time collection of fault data for calculating the fault location, thereby reducing outage time and person-hours lost to discovering the root cause
- Device coordination between substations and field devices, allowing for automatic fault isolation which could significantly reduce outage statistics

One of the most important benefits of the core network strategy is enhanced financial strength. As discussed in the introduction above, HOL currently has several different systems with independent communications links. The consolidation of these communications links onto a core network will help monetize HOL's communications dollars. While there will still be the need to reach each individual device with a link, a core wide area network (WAN) will allow each and every substation to become a data aggregation point for many types of devices. Moving these aggregation points from the main office further into the field will reduce the distance to each individual sensor and allow for the use of lower cost wireless links (such as unlicensed 900MHz or WiMAX). Furthermore, by having a high capacity core network the future growth of data intensive field connections (as driven by Smart Grid applications) will be easily accommodated, thereby containing future costs per connection.

In addition to data coming in from the field, the core WAN network will allow corporate data traffic to be accessible from the substations. This connectivity will serve to increase the productivity of the outdoor staff by allowing access to documents and drawings without the need for expensive cellular connectivity or the delays of returning to the corporate office. Further productivity gains may be realized with the IT operations staff as well. This is due to the fact that a single core WAN infrastructure will serve to reduce overall complexity (with use of similar hardware) of the HOL communications networks. The reduced complexity will aid in monitoring and maintenance of a single network.

The most important aspect of this telecommunications master plan is that it aligns well with our corporate strategy - the customer. With a fully interconnected grid, this utility will be able to make use of advanced Smart Grid technologies which could drastically improve the customer experience. From the reduction of both the frequency and duration of outages, to making more information available in a timely manner; the customer experience will be enhanced. While there will still be a need to proactively analyze and act on the state of the intelligent devices, the communications infrastructure provides the invaluable ability to collect the data from the field.

### 4.1.3 Project/Program Justification

#### 4.1.3.1 *Alternatives Evaluation*

##### 4.1.3.1.1 Alternatives Considered

HOL evaluated four main alternatives for the communications master plan. Alternative one would be to maintain the status quo; with each application continuing to use and maintain its own separate infrastructure on a case by case basis (e.g. Meter data collection and SCADA uses separate backhaul infrastructure). The second and third alternatives involve the design and construction of a complete wireless or fibre system to cover the entire HOL service territory (e.g. Entirely wireless system or entirely Fibre based system). Finally, the fourth alternative would create a hybrid network which would see a core wide area network made primarily from fibre links with wireless systems providing connectivity where most appropriate (e.g. the Field Area Network and to remote substations).

#### 4.1.3.1.2 Evaluation Criteria

Each of these alternatives was evaluated against the following criteria:

1) Cost-effectiveness
   a) Is the current infrastructure cost-effective or sustainable?
   b) Is the considered alternative more cost efficient in the long term?
   c) Is it sustainable as a HOL owned asset?
2) Functionality
   a) Can the considered alternative accommodate the current data requirements?
   b) Can the considered alternative accommodate the future growth in data traffic?
   c) Can the considered alternative accommodate different traffic priorities?
3) Future expandability
   a) Is the considered alternative expandable to accommodate future needs?
4) Security (both cyber-security and in terms of reliability
   a) Is the considered alternative more or less secure against cyber-attack?
   b) Is the considered alternative more or less reliable than the current network?

#### 4.1.3.1.3 Preferred Alternative

The preferred alternative is to create a hybrid-network with a core comprised of a fibre optical network between the main office locations and the majority of substations augmented with wireless systems to connect field devices and remote substations. This hybrid network offers the most functionality and the best overall connectivity. In addition, the core fibre network offers the highest cyber-security and reliability while the peripheral wireless networks will aid in balancing the overall cost of the network. The hybrid-network approach is the most cost efficient over the long term, particularly as more and more data intensive sensors and devices are deployed across HOL's service territory. As each device is deployed, a pre-planned network will easily accommodate the new connections with limited ongoing cost as opposed to the cost growth from purchasing new data services from an outside vendor as is typically done today.

Beyond the preferred alternative were the two monolithic network solutions of an all fibre network and an all wireless network. While both of these solutions can provide the connectivity required, they do not have the cost advantages of the hybrid topology. Finally, the least preferred alternative is to do nothing and continue to deploy connections on individual disparate communications networks. This 'do nothing' alternative will become unsustainably expensive as smart devices and sensors become necessary across the distribution grid.

### 4.1.3.2 *Project/Program Timing & Expenditure*

As described in the above sections, the communications system proposed in this Telecommunications Master Plan is a significantly large undertaking. In order to fully deploy the hybrid network it will involve over 10 years of capital investment as well as ongoing OM&A expenses. While this may seem to be an overly ambitious expenditure, the project is broken down into three phases of investment in order to ease the transition to a new communications infrastructure.

Phase 1 of the project is the initial design and construction of the core high-speed optical network, including pilot projects and their associated studies. Included here is the equipment required to transition the current leased fibre from a low-speed serial link to a high-speed network connection. This phase also sees the installation of new fibre optical cable in order to bring the network up to the required level of redundancy for passing all of HOL's network traffic.

Phase 2 of the project is focused on expansion of the fibre network to connect additional substations to the core wide area network. More importantly is the installation of the wireless equipment needed to connect field area devices to base station radios located within selected substations.

Finally, phase 3 is designed to incrementally replace the leased fibre optic cable with HOL owed infrastructure. This will prevent the need from entering into another unfavorable lease and to replace infrastructure that would be at the end of its useful life.

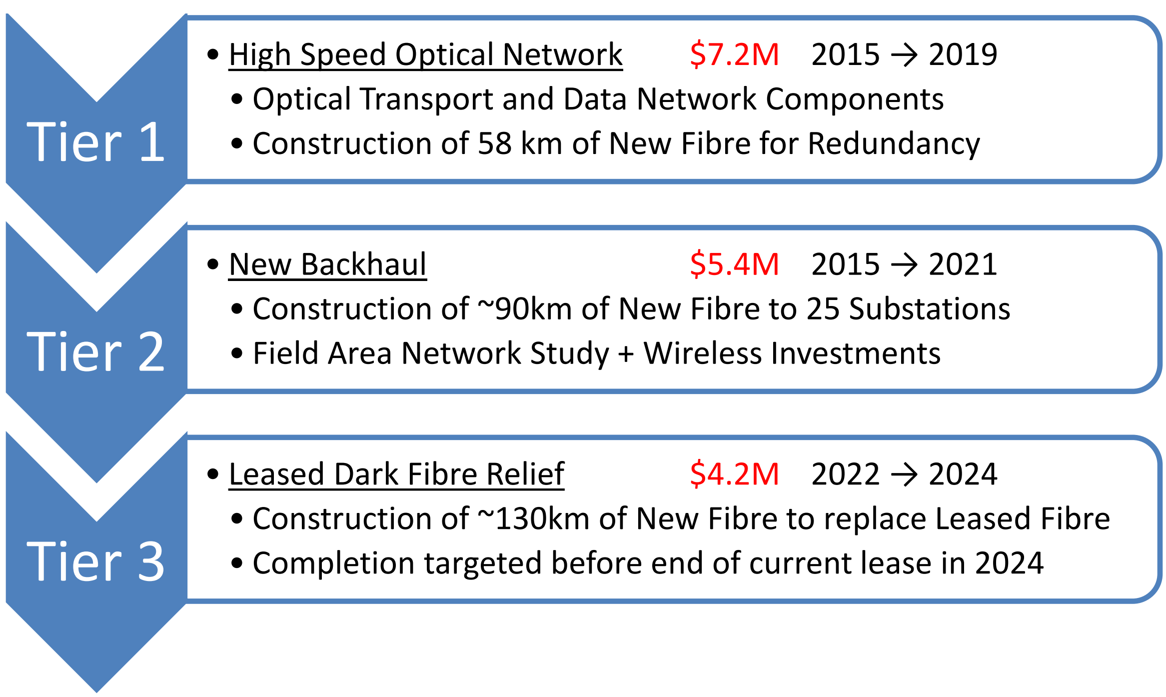

**Figure 100 - Project Timing**

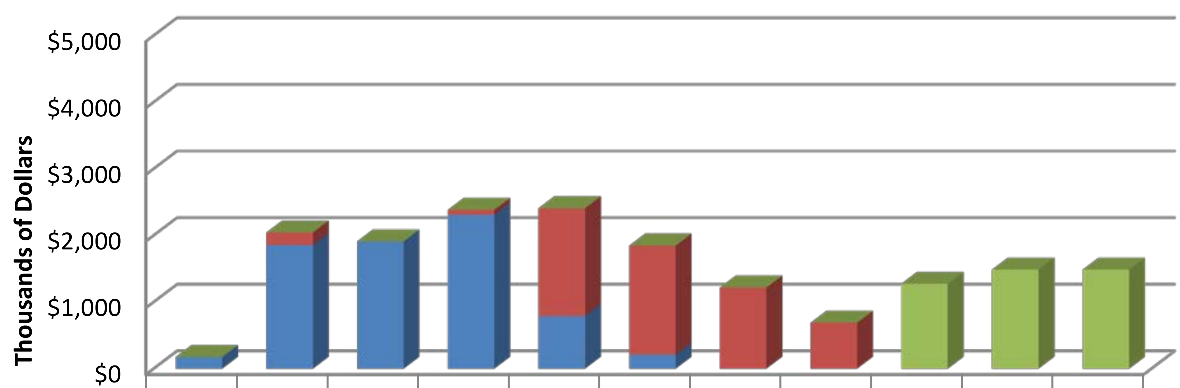
The following chart illustrates the breakdown in the capital expenditure for each year and shows the category in which the investments are made. While this initial plan shows a steady stream of investment over the next 10 years, the modular nature of the proposed infrastructure means that individual investments can be shifted around into more favorable years.



| | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | 2024 |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Total | $175 | $2,044 | $1,910 | $2,383 | $2,408 | $1,846 | $1,218 | $689 | $1,274 | $1,487 | $1,487 |
| Tier 3 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $0 | $1,274 | $1,487 | $1,487 |
| Tier 2 | $0 | $189 | $0 | $77 | $1,616 | $1,638 | $1,218 | $689 | $0 | $0 | $0 |
| Tier 1 | $175 | $1,855 | $1,910 | $2,306 | $792 | $208 | $0 | $0 | $0 | $0 | $0 |

**Figure 101 - ROM Capital Investment by Year and Tier**

Due to the transformational nature of this telecommunications plan, the analysis of the impacts on the OM&A budget is significantly more complicated. Therefore, the following section will address the assumptions that were made in three parts; IT costs, communications cost reductions, and avoided future costs. Following the description of the assumptions, the total impacts on the operations budget will be combined in a high level analysis summary.

One key area of HOL that will be impacted by this network infrastructure change is the IT department. While a larger and more advanced network will increase the demands on IT resources, the fact that it will be designed for manageability as a single network will serve to streamline operations. To address this increased demand there will be a need for additional resources. Furthermore, there will be associated costs for a network operations centre, network management systems, and associated software licenses.

As described earlier one of the drivers for creating a new core wide area network is to control the current communications costs. With the construction of the new high-speed network, HOL will be able to eliminate both the fibre lease and the leased public telephone lines. These leased network costs together with the cellular and licensed radios represent a significant burden on the overall OM&A budget. Unfortunately, given the size and the complexity of the leased infrastructure, it will take several years before these lease costs transition to the maintenance and operational costs associated with a private infrastructure. Therefore, until the communications master plan is complete, the majority of this expenditure will remain in the annual budget.

Most importantly, this telecommunications master plan is about controlling the future costs of communications as the HOL distribution system is transformed into a smarter grid. With the increased interconnectedness as demanded by smart grid applications, this core WAN strategy will provide all of the required connectivity at a drastically lower cost than the current solutions. In order to realize these savings it is assumed that HOL will be incrementally transitioning to a fully connected and automated distribution system over 25 years. In order to achieve this end state, HOL will need to install sensors and automated systems out onto the distribution grid each and every year which has indeed been the case.

Therefore with the future investments in distribution sensors and automated devices, HOL requires lower cost, high bandwidth connections across its service territory.

#### 4.1.3.3 *Benefits*

| Benefits | Description |
|---|---|
| **System Operation Efficiency and Cost-effectiveness** | With an advanced communications network connecting office locations and substations across its service territory, HOL will be able to add new connections for a very limited additional cost. Therefore, as more and more devices are connected, the communications network will become more and more cost efficient. These additional sensors and devices are an unavoidable reality for a modern distribution utility. |
| **Customer** | With a comprehensive communications network across the service territory, HOL will be able to deploy advanced sensors and distribution automation equipment. These devices will have a direct and measurable effect on the duration of outages experienced by customers (SAIDI).<br>Furthermore, by collecting more and more data from substation and field devices, there will be a significant improvement in the prioritization of maintenance activities. This evidence based maintenance will lead to significant reductions in the frequency of asset failures over the longer term. Therefore, customers will see an associated reduction in asset failure based outages thereby reducing the outage frequency (SAIFI) |
| **Safety** | In designing a complete, reliable communications network with redundant paths built in, HOL will eliminate its dependence on third part networks which can fail at inopportune moments. Therefore, a more reliable network will allow for higher reliability in the SCADA connections thereby improving the overall safety of system operations. |
| **Cyber-Security, Privacy** | With a private network HOL will no longer be dependent on third party carriers for the bulk of its network traffic. This will serve to reduce the overall exposure of the HOL SCADA system to cyber-attacks. |
| **Co-ordination, Interoperability** | The proposed network will make extensive use of standards based technology in order to ensure the long term availability of replacement parts. Furthermore, by creating a common network for all HOL traffic there will be a significant improvement in the internal co-ordination of communications systems deployment and usage. |

| | |
|---|---|
| **Economic Development** | Given the size and scope of this investment, it is likely that the construction phase will require the support of third party firms in the Ottawa area. These design and construction contracts will provide direct economic benefits to both the high tech community as well as the construction firms within the capital region. |
| **Environment** | The communications network proposed in this project is an enabling technology. By connecting the sensors and devices across the distribution system, HOL will be in a better position to operate the grid in a more efficient and environmentally friendly way. |

**Table 104 - Project Benefits**

### 4.1.4 Prioritization

#### 4.1.4.1 *Consequences of Deferral*

While this communications network is not critical to providing electricity to HOL's customers, it will aid in the transformation of HOL's business. This transformation will result in a significant improvement in the capabilities of this utility to collect, analyze, and act on data collected from the field. These actions will have a direct and significant benefit to both HOL's customers and its shareholder. The former will see improved outage statistics while the latter will see improved financial performance garnered from a reduction in the cost growth associated with communications expenses. Therefore, any delay in this project will delay the realization of the associated benefits to HOL's stakeholders.

#### 4.1.4.2 *Priority*

The overall priority of this project is medium. Due to the fact that the communications systems are not central to the distribution of electricity to HOL customers, this investment cannot be rated as a high priority. However, due to the benefits that will be garnered from the connectivity and the associated cost growth of 3rd party connections, this project cannot be listed as a low priority.

### 4.1.5 Execution Path

#### 4.1.5.1 *Implementation Plan*

As discussed in section 3.2 above, this project will be executed in three distinct phases. The first phase will be the initial design and the conversion of the current fibre network to a high-speed network. The second phase will involve enhancement to the capacity of the network in terms of geographical coverage. This expansion will be in the form of new fibre optical cabling as well as the deployment of radio systems into the field. Finally, the third phase will see construction of fibre optic connections to replace the connections that are currently leased from a third party network provider.

#### 4.1.5.2 *Risks to Completion and Risk Mitigation Strategies*

The largest risk to completion of this project is the overall cost of implementing the network. While it appears to be a significant expenditure, the overall cost of owning this network will be far lower than the associated service costs from third parties.

#### 4.1.5.3 *Timing Factors*

Due to the fact that this is a long term investment, there is little risk that schedule pressure will be an issue. HOL requires a replacement to the leased fibre optic network before the end of the year 2024. While it is advisable that the full network be implemented as soon as possible, there is a significant amount of time remaining for execution.

#### 4.1.5.4 *Cost Factors*

Given any project of this magnitude, the overall cost of implementation is a factor. Due to the fact that the network proposed in this project will cost in excess of $17 million dollars to fully implement, it has been broken down into much smaller investments. While it would be ideal to implement this network as fast as possible, it is recognized that this would prove infeasible. Therefore to mitigate the risk of cancellation, the project will be delivered in smaller investments over the next 10 years thereby positioning HOL to be independent of a costly lease at the end of its current contract.

### 4.1.7 Leave-To-Construct (if applicable)

N/A

### 4.1.8 Project Details and Justification

| | |
|---|---|
| **Project Name:** | Telecommunications Master Plan |
| **Capital Cost:** | Approximately $17M |
| **O&M:** | TBD |
| **Start Date:** | January 1 2014 |
| **In-Service Date:** | December 31 2024 |
| **Investment Category:** | System Service |
| **Main Driver:** | Long-Term Economic Viability of Communications Infrastructure |
| **Secondary Driver(s):** | Accommodate Ever Increasing Demands for Device Connectivity |
| **Customer/Load Attachment** | 305,000 |

**Project Scope**

This project encompasses the entire network communications infrastructure of HOL. This includes corporate data and voice traffic between offices as well as SCADA traffic between facilities, substations, and field devices.

**Work Plan**

This project will be executed over a 10 year time frame starting from 2014 and ending in the year 2024. The work will be broken out into three distinct phases of work, phase one will see the transition of the existing system to a high-speed network. Phase two will feature expansion of the communications infrastructure to include more field devices and substations. Finally the third phase will feature replacement of the leased fibre infrastructure.

**Customer Impact**

A comprehensive and advanced communications infrastructure will allow HOL to improve both its ability to react to customer outages as well as its ability pro-actively maintain its assets, thereby preventing outages from occurring. This improvement will come from HOLs ability to collect more data from assets in the field, and its ability to interactively communicate with intelligent devices on the distribution system.

# 5 SCADA Upgrades

## 5.1 SCADA Upgrade Project

### 5.1.1 Project/Program Summary

The Supervisory Control and Data Acquisition (SCADA) System replacement project is necessary to bring both the hardware and software components up to date. Installed in the fall of 2006, the current system uses an out of date operating system, end of life hardware, and is no longer regularly maintained by the vendor. It is therefore necessary to install new hardware and software that utilizes a modern architecture and is designed for both maximum security and reliability.

### 5.1.2 Project/Program Description

#### 5.1.2.1 *Current Issues*

The current SCADA system was installed in the fall of 2006 and has been operational for over 8 years. This operational period is well beyond the typical 5-year lifespan of information technology hardware. Over the past year, there have been several hardware failures within the server equipment which clearly indicate that the assets are approaching the end of their useful life and should be replaced immediately.

In addition, the software used in the HOL SCADA system is running on an operating system that is no longer being supported by the vendor and (according to our SCADA vendor) cannot be migrated to a new operating system. It is the intention of this project to bring the HOL SCADA system back onto a solution where regular maintenance of the software, operating systems, and hardware is once again possible.

The SCADA system at HOL provides real-time situational awareness of the state of the distribution system and assets to the control room. Equally important is the fact that the SCADA system provides the control room with the ability to operate devices remotely without the need to dispatch field staff. This remote operation is extremely important in cases of public or employee safety where a device needs to be opened with little or no advanced warning.

As a result of the above mentioned dependencies, the HOL SCADA system cannot be allowed to fail. Without the ability to supervise and control the distribution system, there would be a significant impact on the ability to detect and mitigate outages and, as a result, the customers would be severely impacted (particularly the SAIDI measure of outage duration).

While the current system does have redundancy across multiple servers in two locations by design, the similar age and software dependencies of all systems serves to erode any reliability gained.

#### 5.1.2.2 *Program/Project Scope*

This project will involve the purchase and installation of an entirely new SCADA system for the HOL control room. Due to the fact that the current system is no longer on an upgrade path with the vendor (i.e. there are no patches or service packs available) a new installation will be required. This replacement project presents an opportunity to architect a new system that takes into account matters of functionality, reliability and cyber-security.

Therefore, this project will be focused on acquiring new hardware including: database servers (9), engineering servers (3), interface servers (13), workstations (25), networking equipment, firewalls (8), and communications equipment. More importantly this project will have a significant software purchase including: the Supervisory Control and Data Acquisition system, advanced distribution management systems, intrusion detection systems, and firewall software.

These systems will be located across several HOL locations including the Merivale Road and Albion Road offices as well as either the Bank Street or Maple Grove Road facilities. The project will not include any of the remote terminal units in the field or substations unless absolutely necessary.

#### 5.1.2.3 *Main and Secondary Drivers*

The primary driver for this project is to ensure the continued operation and reliability of the HOL SCADA system. This will be achieved by replacing the computer and networking equipment with newer hardware and acquiring the software from a trusted and proven vendor.

The secondary objectives of this project are to enhance the functionality and reliability of the SCADA system moving forward. Under this functionality and reliability goals are the following:

- Improving Cyber Security: The current system does not have any specific intrusion detection measures or third party tools for monitoring traffic within the SCADA network.
- Enhancing Functionality: The current SCADA system does not have any advanced distribution management system functionality. These new functions serve to provide operators with analysis and in some cases can help to automatically restore customers.
- Improving reliability: While the current system has redundant hardware in two physical locations, it would be beneficial to expand this hardware to cover a third location. This third site would be used as both a disaster recovery location as well as a quality assurance (development) environment for testing any changes or new technologies. With this third location available the overall reliability of the system will be improved as new patches and other improvements can be tested without affecting the production environment.

#### 5.1.2.4 *Performance Targets and Objectives*

The following represents the targets and objectives for the SCADA replacement project.

1) The primary objective of the SCADA replacement project is to have a new SCADA system deployed at HOL by the end of 2017. This new system must be:
   a) Capable of aggregating data from all of the current sensors and devices
   b) Capable of controlling all of the current remotely operated devices
   c) Capable of distributing information to engineering systems and related control systems
2) The second objective is to improve upon the reliability of the current system with:
   a) New enterprise class server hardware capable of running 24x7 for several years
   b) New networking equipment capable of routing SCADA traffic with high reliability
   c) Deployed systems configured for high reliability (dual power sources etc.)
   d) Regular maintenance and patching from the system vendor
3) The first upgrade objective is to improve the cyber-security posture of the HOL SCADA system

   a) Advanced Firewalls and network security equipment capable of securing SCADA traffic
   b) Enhanced user roles and management to prevent unauthorized access
   c) Detailed auditing capability for capturing all SCADA connected assets and users
4) The second upgrade objective is to include a third physical location in the network topology
   a) This will provide a disaster recovery location that could save the system database
   b) This will also allow for an environment for the purposes of testing and training
   c) It will aid in the transition to new facilities sometime over the next 5 years
5) The third upgrade objective is to enhance the features available to the control room staff
   a) Adding Distribution Management System (DMS) features can improve outage response
   b) Adding system drawing and pin-board features can reduce the number of additional tools needed within the control room

### 5.1.3 Project/Program Justification

#### 5.1.3.1 *Alternatives Evaluation*

##### 5.1.3.1.1 Alternatives Considered

Unfortunately, due to the age of the current SCADA system and the consequences of failure, the 'do nothing' alternative is not a valid option. Like any modern utility, HOL is dependent on the information collected from, and the control provided by the SCADA system. Operating without a reliable SCADA system over the long term would represent an untenable situation.

Alternative 1 is to perform a full replacement of both the hardware and software of the SCADA system. Given the age of the software and the operating systems used in the HOL SCADA system, it makes the most sense to perform a full replacement while the hardware is also being upgraded. This project should include expansion of the system and enhancement to the features in order to have the most impact on reliability, security and performance.

Therefore, there is essentially only one other alternative to the proposed replacement project which involves replacing only the hardware of the currently installed system. To do this, HOL would still require the purchase of new servers and networking equipment as the current equipment is near end of life. In order to keep the current SCADA software running, a set of virtual machines would need to be created from the existing systems and ported over to the new hardware. While the underlying operating system running on the servers would be new, both the operating system and the SCADA software running on the virtual machines would not be new. Although the primary objective of ensuring the continued operation of the SCADA system would be met, the secondary objectives of increasing functionality, reliability, and cyber security would either not be met or only partially met.

##### 5.1.3.1.2 Evaluation Criteria

The following criteria will be used to evaluate the alternatives for the SCADA replacement project:

1) Mitigate Risk of System Failure: The proposed solution should address the current risk of hardware failure.

2) Improved System Reliability: The chosen solution should serve to improve the ability to recover from a major disaster.
3) Improved Cyber Security: The chosen solution should contain features that improve the defense in depth as well as the ability to audit the system hardware, network traffic, and users.
4) Cost: The selected alternative should serve to minimize the future replacement costs of the SCADA system.

##### 5.1.3.1.3 Preferred Alternative

The preferred project alternative is to perform a full replacement of the SCADA hardware and software, with the enhancements described in alternative 1 above. This option is preferred over all others as it accomplishes all of the primary and secondary goals, but more importantly it is the option with the least amount of future risk. By upgrading the system with additional features for cyber security as well as a third redundant location, the risk posture of the HOL SCADA system would be dramatically reduced. This reduced risk posture more than compensates for the delta cost for adding these features to the new system. Additionally, installing new hardware during the acquisition of new software will allow for an easier transition to the new system while reducing disruption to the existing system.

Among the benefits of deploying a new system is the ability to engage ongoing support from the system vendor. Due to the fact that the current system is no longer on the vendor's development path it is not getting regular maintenance patches.  With a properly selected replacement system (i.e. one with a clear development future) the future upgrades can come in the form of regular maintenance as opposed to infrequent major upgrade projects such as this one. This type of process is currently being used to maintain the HOL Outage Management System (OMS) which has resulted in both regular system improvements and predictable maintenance costs.

#### 5.1.3.2 *Project/Program Timing & Expenditure*

This upgrade is coming at the very end of the typical life cycle of a SCADA system; therefore there is no comparable project for which costs can be directly compared over the recent past. However, by building a modern and fully featured system, HOL will be mitigating the costs and potential impacts of either a cyber-event or a disaster event.

The currently installed SCADA system at HOL has the following hardware: database servers (6), engineering servers (1), interface servers (3), workstations (17), networking equipment, firewalls (3), and communications equipment. The proposed system has 2 additional database servers (8), one additional engineering server (2), 10 additional interface servers (13), 8 additional workstations (25), additional networking equipment, 5 additional firewalls (8), and additional communications equipment.

The following chart illustrates the expected capital expenditure over the course of the SCADA replacement project. It is expected that the bulk of the spending is on vendor equipment and services from 2016 to 2018 while costs in 2015 are primarily for consulting and design services.

| Historical ($M) | | | | | Future ($M) | | | | |
|---|---|---|---|---|---|---|---|---|---|
| 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 |
| N/A | N/A | N/A | N/A | N/A | 0.3 | 1.0 | 1.0 | 0.5 | 0 |

Table 105 - Project Expenditures

### 5.1.3.3 *Benefits*

| Benefits | Description |
|---|---|
| **System Operation Efficiency and Cost-effectiveness** | A new SCADA system will provide direct benefits on system operation efficiency as it is used to collect data and provide a real time picture of the distribution system. Therefore any improvements will result in greater situational awareness and enhanced capabilities for the control room staff. Furthermore, by increasing the capabilities and intelligence available in the control room, decisions will be made faster and result in more effective use of field resources. |
| **Customer** | As mentioned above, the enhanced situational awareness and advanced functionality provided to the control room staff from a new SCADA system will result in improved response times which will serve to reduce outage durations (SAIDI). Furthermore, added functionality of a new SCADA system can provide information to support day-to-day system operations and help to offload at risk assets and reduce the number of preventable outages (thereby improving SAIFI).<br><br>While it is infeasible to quantify these impacts, features such as a Distribution Management System (DMS) and Power Flow analysis are designed to aid the system operators in the performance of their duties. |
| **Safety** | As described in an earlier section, the SCADA system is an integral part of protecting employees during planned and emergency work. Therefore this replacement project serves to improve the overall safety of staff by fully mitigating the risk of failure of the current system. |
| **Cyber-Security, Privacy** | As stated in the upgrade objectives above, one of the key elements specified in the new system will be tools and hardware dedicated to the defense of the SCADA system. These security features will be procured in accordance with industry best practices. With the improved security posture, HOL will be in a better position to protect the critical electrical infrastructure within the Ottawa area. |
| **Co-ordination, Interoperability** | The new SCADA system will employ industry standard technologies and best practices. A solution will be selected that allows for continued coordination and communications (over Inter-Control Centre Communications Protocol or ICCP) with both Hydro One and with the Independent Electricity System Operator.<br><br>The new SCADA system will also be selected based partially on the ability to collect data from a variety of new sensors and technology that has been deployed throughout the HOL distribution system since the last SCADA solution was installed. |
| **Economic Development** | Due to the distinct nature of SCADA systems and the particular skills required to install them, it would be unwise to restrict purchasing to one geographic area at this time. While there are SCADA vendors and service providers within the province of Ontario, they should be evaluated for their ability to address the project objectives first, before addressing the economic development objectives. |
| **Environment** | A modern and fully featured SCADA system will help HOL's operations utilize |

| | |
|---|---|
| | assets in the field more effectively (with features such as volt-var control) which will help reduce losses. Furthermore, a reliable SCADA system will allow HOL to readily detect issues with failing assets and to easily remove them from service (with features such as power flow analysis) and prevent catastrophic failures which can lead to environmental spills (e.g. transformer oil leakage). |

**Table 106 - Project Benefits**

### 5.1.4 Prioritization

#### 5.1.4.1 *Consequences of Deferral*

As discussed above, the SCADA system that is currently installed at HOL is at the end of its useful life and is no longer receiving regular updates from the vendor. Therefore a replacement system is required in the short term. Should this replacement project be deferred, the risk of hardware failure will become unacceptably high. Furthermore, due to the fact that the Operating Systems and SCADA software are no longer receiving regular updates, the risk of new vulnerabilities will not be fully mitigated as they would be with a new system. As a result, deferral of this project would be an inappropriate risk to the safe and reliable operation of the HOL distribution system.

#### 5.1.4.2 *Priority*

As a result of the consequences of deferral discussed above, this project is considered a very high priority when compared to most other projects (in this and other categories). Without an updated SCADA system in place, HOL operations could be significantly affected by a failure in the current system. To recover from such an unplanned failure would result in significant additional expenses for emergency work over and above those planned in this project.

### 5.1.5 Execution Path

#### 5.1.5.1 *Implementation Plan*

This project will be completed in several phases over the next 4 years starting in 2015.

- Phase 1: Beginning in early 2015, HOL will engage the services of a consulting firm with experience in helping distribution companies select and install new SCADA systems. At the completion of this phase, it is expected that a detailed set of specifications would be used to select a SCADA vendor for the replacement system.
- Phase 2: During the course of 2016-17, the successful vendor will install the hardware and software for the new SCADA system and will complete the transition of the existing database to the new system. This will include the bulk of the server and workstation hardware for the control room. This end of phase will have the HOL control room fully trained and transitioned to the new system.
- Phase 3: The final phase occurring in 2017-18 will involve transitioning the SCADA system to the new facilities and to create and install the disaster recovery location.

#### 5.1.5.2 *Risks to Completion and Risk Mitigation Strategies*

There are risks to any project of this size and complexity including documentation issues, project mismanagement, poor resourcing etc. Recognizing that HOL is unable to commit the number of resources with the required skills to mitigate those risks, an outside firm will be contracted to manage the replacement project. This project management service will serve to reduce the level of risk that HOL is exposed to by leveraging experienced professionals for the duration of the project.

Of course, this additional relationship between HOL and the consulting firm, comes with some level of risk. Therefore, a risk to the successful completion of this project is a failure on the part of the project management firm selected. To mitigate this risk, only a small group of firms with previous experience in SCADA deployments are being invited to bid on the contract. Furthermore, part of the criteria in selecting the successful bidder will be a thorough review of the staff and involvement in previous projects.

#### 5.1.5.3 *Timing Factors*

There are several factors which could affect the timing of this project including:

- Early failure of existing SCADA system: It is possible that the existing system fails in such a way that requires immediate replacement. This would necessitate a significant advancement of the schedule.
- Vendor and support availability: This risk has been mitigated by starting the project a full three years before the target completion date.
- Additional time required to integrate with existing HOL systems: This risk has been mitigated by engaging a consultant to help define the requirements of the new system early on in the project.

#### 5.1.5.4 *Cost Factors*

With any project involving IT hardware and software, there are risks that additional features, licenses, or modules will be required that could serve to inflate the cost of the overall project. Furthermore, while every effort has been made to ensure that adequate funding has been earmarked for this project, it is possible that there will be additional funds required to ensure the smooth transition from the old system and that all of the data is preserved in the new system. This risk has been partially mitigated by bringing in an outside firm to aid in the selection of the new system vendor.

#### 5.1.5.5 *Other Factors*

N/A

### 5.1.6 Renewable Energy Generation (if applicable)

N/A

### 5.1.7 Leave-To-Construct (if applicable)

N/A

### 5.1.8 Project Details and Justification

| | |
|---|---|
| **Project Name:** | SCADA Replacement Project |
| **Capital Cost:** | $2.8 M Est. |
| **O&M:** | $50k/yr Est |
| **Start Date:** | January 2015 |
| **In-Service Date:** | January 2018 |
| **Investment Category:** | System Service |
| **Main Driver:** | Current Assets at End of Life |
| **Secondary Driver(s):** | Improving Cyber-Security<br>Improving Overall Reliability<br>Improving the Tool Set |
| **Customer/Load Attachment** | 305,000 |

**Project Scope**

This project will encompass the selection, design, installation, and commissioning of an entirely new SCADA system at HOL. The project will begin with a requirements definition phase beginning in 2015 and end with user training and the transition to the new system in 2017/18.

**Work Plan**

This project will occur in the basic phases:

- Phase 1: With outside support, requirements will be defined and a new system selected
- Phase 2: System installation, training n and commissioning
- Phase 3: Reliability Enhancement and transition to new facilities.

**Customer Impact**

With the new SCADA system customers will see enhanced system reliability and improved outage performance. The system reliability will be improved through hardening of the SCADA system itself from failure or cyber-attacks. The improved outage performance will come from the advanced features which will help the HOL system office respond faster and more effectively to outage events.

# General Plant

# 1 Facilities Implementation Plan

## 1.1 Project/Program Summary

Hydro Ottawa's Facilities Implementation Plan is the result of a determination by executive management team and Board of Directors to procure new facilities intended to:

a) consolidate operations and administrative staff;
b) to move its operational centers out of high traffic residential districts to land parcels or sites with easy access to major highways within the Ottawa area;
c) to replace the aging buildings; and
d) to upgrade the operational centers in order to provide better response to customers.

This is a once in a 50 year generation investment that has already been deferred by Hydro Ottawa for 15 years.

## 1.2 Project/Program Description

During the 2016-2020 Custom IR period Hydro Ottawa will construct facilities on two parcels of land, namely an Eastern Operations & Administrative Campus and a Southern Operations & Warehouse. The facilities will be built on two parcels of land already purchased by Hydro Ottawa in the eastern and southern regions of the City of Ottawa. The Eastern Operations & Administration Campus land parcel was purchased in April 2013 and is located at the corner of Hunt Club and Hawthorne beside the 417 highway. The Southern Operations land parcel was purchased December, 2012 and is located at the corner of Moodie & Fallowfield drives near the 416 highway. Construction is expected to begin in 2016 with the eastern and southern facilities build being treated as two separate and distinct projects.

## 1.3 Project/Program Justification

The need for new facilities was identified 15 years ago when Hydro Ottawa amalgamated from five former municipal utilities, namely Ottawa Hydro, Gloucester Hydro, Nepean Hydro, Kanata Hydro and Goulbourn Hydro. Due to the short timeframe given for amalgamation and the magnitude of capital required Hydro Ottawa opted to temporarily keep its existing facilities. Since then, the need for new facilities has been revisited internally an in consultation with real estate experts a number of times. The current facilities are beyond their useful lives.

## 1.4 Main and Secondary Drivers

| Driver | | Explanation |
|---|---|---|
| **Primary** | **Asset End of Life** | Like other LDCs in Ontario, Hydro Ottawa's investment in new facilities is a once in a generation investment. This generational investment was identified 15 years ago to consolidate administrative functions, to better locate the operation centres, to modernize the work environment and to provide for future growth. Buildings such as the Albion Road facility of Hydro Ottawa are 60 years old and were designed and built in an era to meet a very different need from what is currently and prospectively serves. Hydro Ottawa's facilities are at capacity, |

| | | |
|---|---|---|
| | | are poorly located and in need of repair. |
| **Secondary** | **Public Safety** | Due to commercial and residential growth in the areas surrounding Hydro Ottawa facilities, truck and employee traffic now pose safety risks to the general public. At the Albion Road facility for example, school children board and debark from school buses just outside the Hydro Ottawa facility. Wide turning trucks must navigate heavily populated residential streets posing significant risk to public safety. |
| **Secondary** | **Operational Efficiency** | Hydro Ottawa's move to new facilities is further motivated by the need to align its administrative and operational staff in a manner allowing better cultural and organizational synergies. Consolidating administrative, technical and operational staff will permit greater operating efficiencies by increasing opportunities for collaboration and cross-functional teamwork. In addition to providing a greater foundation for productive collaboration, the new facilities are being located close to major traffic arteries in the City of Ottawa are expected to significantly reduce travel time to work locations by all work crews resulting in better customer service and response times. |
| **Secondary** | **Health & Safety (employees)** | Hydro Ottawa existing facilities are being extended beyond their useful lives but are unable to meet future capacity requirements without major renovations or requiring new construction/leasing off-site facilities. The current facilities have several deficiencies many of which present health and safety concerns for Hydro Ottawa's staff, crews and customers and/or require substantial investment to replace or repair. Examples of major investments that would be required include bringing the buildings up to code to meet the Accessibility for Ontarians with Disabilities Act (hereinafter "AODA Act"), or investments necessary to upgrade the building envelope (roof, windows, flooring, HVAC system) to facilitate a more favourable work environment. Examples of safety concerns include numerous and increasing incidents of theft and crime in the areas surrounding the Albion head office including a recent incident of an intruder found in the garage. Other examples include uneven pavement and flooring causing risks for slips or trips. |

**Table 107 - Facilities Implementation Plan Drivers**

## 1.5 Alternatives Considered

### 1.5.1 Alternatives Evaluation

In Exhibit B1, Tab 2, Schedule 4 filed by Hydro Ottawa in 2012 in support of its cost of service rate case (EB-2011-0054), it described in detail beginning in section 4.3 the numerous options considered by Hydro Ottawa in consultation with its expert consultants for deriving the optimal facilities arrangement. Some of the options considered include:

a) retaining and retrofitting Hydro Ottawa's existing facilities;

b) consolidating all administrative staff at the Albion Road location;
c) consolidating all Administration staff at the Merivale location; and
d) constructing new facilities.

In Section 4.4 of Exhibit B1, Tab 2, Schedule 4 provided its analysis of the alternatives as well as its conclusion that Option 4, namely to construct new facilities, was the superior economic option resulting in long term value to ratepayers.

The evidence filed by Hydro Ottawa in Exhibit B1, Tab 2, and Schedule 4 was thoroughly explored in interrogatories exchanged with the stakeholders including Board Staff, VECC, SEC and Energy Probe. The capital expenditures proposed in Hydro Ottawa's 2012 Cost of Service Application were addressed in the context of the settlement agreement. Hydro Ottawa's proposal to construct new facilities and its proposal to set aside an initial $4.0 million to purchase land was reviewed and in its settlement agreement. Consequently, Hydro Ottawa does not propose to review the alternatives of staying in its existing facilities versus building new facilities as this issue was addressed in the context of Hydro Ottawa's 2012 Cost of Service application as reviewed pursuant to the proceeding initiated under EB-2011-0054.

## 1.6 Project/Program Timing

Below is a table that sets out the activities associated with the realization of Hydro Ottawa's Facilities Implementation Plan and the approximate timelines within which each of these activities is currently scheduled to take place.

| Activity | Estimated Timeline |
|---|---|
| **Dibblee Land Purchase** | Closed December 2012 |
| **Hunt Club Land Purchase** | Closed April, 2013 |
| **Issue Request for Qualification** | May 2013 |
| **Engage Fairness Commissioner** | May - October 2013 |
| **Review request for Qualification responses and Shortlisting of Design Build Proponents** | December 2013 - May 2014 |
| **Issue & Review Design Build RFP** | Q2 2015 |
| **RFP Evaluation and Award** | Q32015 |
| **East Operations and Administrative Campus** | |
| **Design** | Q3-Q4 2015 |
| **Site Plan Approval and Permitting** | Q4 2015 – Q2 2016 |
| **Construction** | Q3 2016- 2018 |
| **Move In** | 2018 |
| **South Operations, Warehouse** | |
| **Design** | Q3-Q4 2015 |
| **Site Plan Approval and Permitting** | Q4 2015 –Q2 2016 |
| **Construction** | Q3 2016 - 2017 |
| **Move In** | 2017 |

**Table 108 - Facilities Implementation Plan Timelines**

## 1.7 Project/Program Expenditure

As discussed in section 3.4.3 of B-5(A) HOL's Distribution System Plan, the historical spend (2011-2015) is attributed to monies spent to procure the land upon which Hydro Ottawa will construct its new facilities. Forecasted spend (2016-2020) represents monies that Hydro Ottawa estimates it will need to facilitate the construction of the new facilities. The table below sets out the historical and forecasted spend on the land and building for each of the two projects.

| Facility | | 2011 Act | 2012 Act | 2013 Act | 2014 Q2 | 2015 Bud | 2016 Bud | 2017 Bud | 2018 Bud | Total |
|---|---|---|---|---|---|---|---|---|---|---|
| | | $'000 | | | | | | | | |
| **East Ops / Admin Campus** | Land | - | 250 | 12,445 | 21 | - | - | - | - | 12,716 |
| | Building | 234 | 492 | 287 | 432 | 3,835 | 19,642 | 25,818 | 6,073 | 56,813 |
| **South Ops** | Land | - | 6,704 | 94 | - | - | - | - | - | 6,798 |
| | Building | 68 | 140 | 83 | - | 1,098 | 5,620 | 9011 | - | 16,020 |
| **Total** | | 302 | 7,586 | 12,909 | 453 | 4,933 | 25,262 | 34,829 | 6,073 | 92,347 |

**Table 109 - Facilities Implementation Plan Expenditures**

## 1.8 Prioritization

### 1.8.1 Consequences of Deferral

Hydro Ottawa has deferred the current projects by 15 years. The consequences of further deferral are escalating repair and replacement costs as well as health and safety costs. Further deferring Hydro Ottawa's facilities implementation plan would have cascading impacts on inflationary values of construction materials and costs necessary to construct the facilities. In addition to inflationary costs, Hydro Ottawa would also incur costs associated with replacing key elements of the building envelop such as the roofs, windows and HVAC systems. This does not include the costs to upgrade each of Hydro Ottawa's facilities to comply with the AODA. Like many other investments project deferral introduces significant risks and associated costs of risk.

## 1.9 Execution Path

### 1.9.1 Implementation Plan

#### 1.9.1.1 *Land Purchase (historical implementation)*

The land parcels upon which the two projects will be built were purchased in 2012 and 2013. The purchase of these land parcels followed a lengthy search and evaluation of approximately forty candidate listings. The search was complicated by restrictions on land use imposed by National Capital Commission and the unavailability of vacant lands due to protected status. Bidding for the two properties was done on a "no-name" anonymous basis to avoid attracting a price premium.

In total Hydro Ottawa purchased approximately 41 acres at an average price of $460K per acre totalling $19 million. Ultimately market availability and alignment with Hydro Ottawa's stated criteria[1] dictated the parcels purchased.

#### 1.9.1.2 *Building Construction (historical and prospective implementation)*

Following the appointment of PPI Consulting Limited (hereinafter PPI) as Fairness Commissioner in the fall of 2013, Cresa Partners[2], Hydro Ottawa and PPI prepared a Request for Qualification ("RFQ") to prequalify design-build contractors for the design and construction of Hydro Ottawa's new Administrative Building and Operations Centers. The RFQ was divided into two projects, the first covering the Administrative Building and the second covering the East and South Operations Centers. Respondents to the RFQ were given the option to respond to and prequalify for one or both projects. For each project as many as five respondents could pre-qualify for the design-build RFP.

The RFQ was posted on MERX December 24, 2013 and closed on February 28, 2014. Upon closing eight Statements of Qualification ("SOQ") were received for the Administrative Building and ten for the Operations Centers.

Hydro Ottawa expects to issue an RFP in Q2 2015 to the five design-build proponents who pre-qualified for the Head Office and Training Center and the five design-build proponents that pre-qualified to build the two Operations Centers.

Hydro Ottawa again hired the services of PPI to oversee the RFP process and documentation to ensure its fairness and transparency.

#### 1.9.1.3 *Estimated Square Footage/Employee and Workstation Estimates*

In designing the space requirements for the new building and operations centers, Hydro Ottawa estimates that the Administrative Campus will provide for 166,000 square feet of space which works out to be approximately 332 gross square feet per employee. Hydro Ottawa notes that this is well below the International Facility Management Association ("IFMA"[3])'s average of 396 gross square feet per occupant as well as the IFMA average of 425 gross square feet per occupant for utilities. Hydro Ottawa further notes that its estimated gross square foot per employee is also well below Enersource's move in, five year and ten year forecast gross square footage per employee allotment and below Powerstream's. See Table 110.

[1] Hydro Ottawa's criteria were a) to be near a major artery for ease of access to highways; b) be central and accessible for employees and visitors; c) to be located beside public transit or proposed light rail transit system and d) have suitable zoning within an industrial area.

[2] Cressa Partners Corporate Real Estate Advisors

[3] (see website: http://www.ifma.org/publications/books-reports/research---benchmarks-iv ).

| | Hydro Ottawa (proposed) | Enersource | Powerstream |
|---|---|---|---|
| **Total Space (Admin building only)** | 155,000[4] | 79,000 | 92,000 |
| **# of Employees (@ move in)** | 511 | 150 | 270 |
| **Gross Square foot per employee** | 303 | 526 | 341 |

**Table 110 - Gross Square Footage per Employee**

In assessing comparable space allocations for employees, Hydro Ottawa commissioned a study of comparable office and workstation standards. Table 111 sets out the results of its findings. It was determined that Hydro Ottawa's current office and workstation space allocations are consistent with or lower than the space allocations of other utilities within Ontario. As such, Hydro Ottawa determined that it would retain the existing office and workstation space allocations for current and future staff.

| **Comparable Office and Workstation Standards (SF)** | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | **CEO** | **EMT** | **DIR** | **MGR** | **WS1** | **WS2** | **WS3** | **WS4** |
| **Comp 1** | 300 | 200-225 | | 150 | 80 | 64 | 48 | 15 |
| **Comp 2** | n/a | 200 | | 125 | 72 | 61 | 42-55 | 12 |
| **HOL Current** | n/a | 225 | 150 | 150 | 80 | 64 | 48 | n/a |
| **HOL Proposed** | 300 | 225 | 150 | 150 | 80 | 64 | 48 | 15 |

**Table 111 - Space Allocations per Employee**

### 1.9.1.4 *Sale of Existing Facilities*

Part of the implementation of Hydro Ottawa's facilities plan entails the sale of Hydro Ottawa's vacated facilities. To gauge the relative value of Hydro Ottawa's existing facilities, Hydro Ottawa engaged the services of Altus Group Limited to estimate the approximate market value of the Albion, Merivale and Bank Street facilities. In estimating the market value for each of the three facilities that Hydro Ottawa intends to sell, Altus advises that the valuations will be positively or negatively impacted by current zoning designations and the ability to change said designations. Decisions on zoning will not be known until Hydro Ottawa is closer to the sale date.

Other factors that could impact the market value are the need that a purchaser may have to demolish the buildings or any need to undertake any supplemental remediation in order to repurpose the sites.

[4] Space Design allows for 30% growth in number of employees to accommodate at the facility.

## 1.10 Project Details and Justification

| | |
|---|---|
| **Project Name:** | Facilities Implementation Plan |
| **Capital Cost:** | $66.3M |
| **O&M:** | $0 |
| **Start Date:** | January 2015 |
| **In-Service Date:** | Date to be confirmed |
| **Investment Category:** | General Plant |
| **Main Driver:** | Current Assets at End of Life |
| **Secondary Driver(s):** | Public Safety<br>Operational Efficiency<br>Health & Safety |
| **Customer/Load Attachment** | N/A |

**Project Scope**

During the 2016-2020 Custom IR period Hydro Ottawa will construct three new facilities on two sites, namely an Eastern Operations & Administrative Campus and a Southern Operations & Warehouse. The facilities will be built on two parcels of land already purchased by Hydro Ottawa in the eastern and southern regions of the City of Ottawa.

**Work Plan**

This project will occur in the basic phases:

- Phase 1: Land parcels purchase
- Phase 2: Construction of three facilities
- Phase 3: Move from existing facilities to new facilities
- Phase 4: Sale of existing facilities

**Customer Impact**

N/A

# 2 CC&B Enhancements

## 2.1 Project/Project Summary

Operational Efficiency: Ensure efficient and effective operations of the Customer Care & Billing (CC&B) application which is used to produce all customer bills by ensuring that the application remains fully supported by IBM and Oracle.

## 2.2 Project/Program Description

### 2.2.1 Current Issues

Hydro Ottawa's customer information system environment was implemented in March 2014 with a Customer Care and Billing (CC&B) v2.3.1 component and the premier support for this component ends in June of 2016. To ensure this critical application remains fully supported by Oracle and IBM, an upgrade to either version 2.4 or 2.5 (considered a minor lift) would be performed in 2016 with a preliminary estimate of $2.5M. In 2019, we plan on performing a significant lift to what we believe will be the next major version of CC&B (version 3.0) with a preliminary estimate of $6M.

### 2.2.2 Program/Project Scope

- To perform an upgrade of a key component, CC&B, including enhancement & interfaces, of Hydro Ottawa's customer information system environment which consists of CC&B, OIM/OVD, interfaces including ODI & Globalscape, In-tool-lect Dashboard, BI Publisher and Hypertension SQR, from v2.3.1 to v2.x (minor lift) and from version 2.x to version 3.0 (significant lift).
- To confirm all components of the Hydro Ottawa customer information system environment work with these upgraded components (i.e. CC&B, enhancements and interfaces)

### 2.2.3 Main and Secondary Drivers

- Provide a solid supported system as the foundational platform that will position Hydro Ottawa to better leverage our other technologies and provide enhanced services to our customers
- To remain in Premier Support for the CC&B application which is industry standard and to be compliant with the maintenance contract for the CC&B system with IBM covering 2014 to 2022 inclusive ($21M) which specifies that HOL must keep current with upgrades throughout the duration of the contract.
- Additional functionality in CC&B v2.x & v3.0 which would imply that less future enhancements would be required as they would be included as part of base CC&B.
- To strengthen HOL's position with Oracle and with our regulators by being on the same version as other large distribution companies in Ontario (i.e., Toronto Hydro-currently on v2.2, Enersource -currently on v2.2 and Powerstream- will be going live with v2.4).

### 2.2.4 Performance Targets and Objectives

Performing upgrades to Hydro Ottawa's core customer information system would meet the following objectives:

- Ensure that the Oracle CC&B product, which is a key component of our meter to cash system remains in premier or extended support which is required by our managed service provider IBM to deliver on our contracted service level agreements.

## 2.3 Project/Program Justification

### 2.3.1 Alternatives Evaluation

#### 2.3.1.1 *Alternatives Considered*

**Alternative 1: Upgrade to version 2.x in 2016 and v3.0 in 2019**

This alternative is to perform an upgrade to CC&B v2.x in 2016 (considered a minor lift) and v3.0 (considered a significant lift) in 2019 to allow HOL to remain on a fully supported platform.

**Alternative 2: No upgrade in 2016 and upgrade to version 3.0 in 2019**

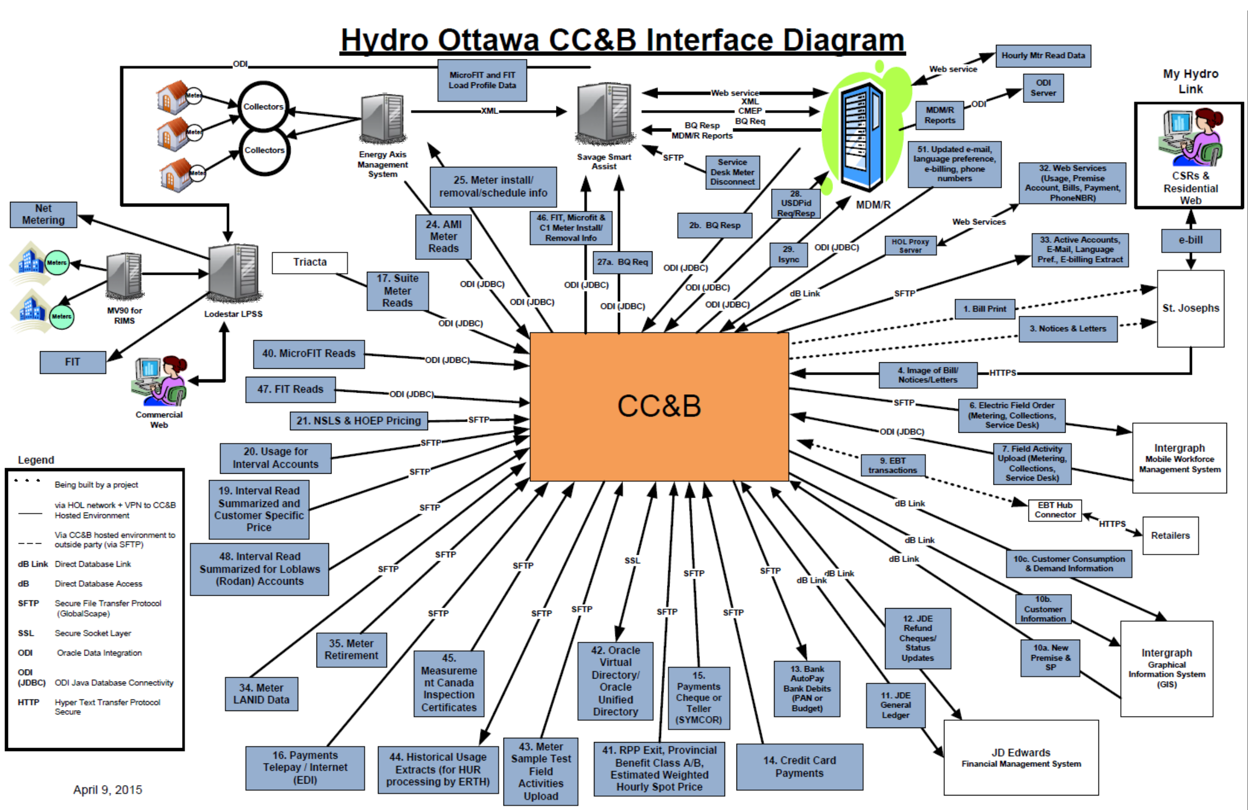
This alternative is to remain on CC&B v2.3.1 and only perform an upgrade to CC&B v3.0 in 2019. By having no upgrade in 2016 consuming resources, this would allow the tuning of CC&B v2.3.1 in the years of 2016, 2017 & 2018.

**Alternative 3: Do not perform any upgrades**

This alternative would be to remain on CC&B v2.3.1 and not perform any upgrades (between the years of 2015- 2020).

Figure 102 demonstrates the number of interfaces to/from CC&B that would need to be considered as part of the analysis for each upgrade.

**Figure 102 - CC&B Interfaces**



#### 2.3.1.2 *Evaluation Criteria*

Evaluation criteria: Below are the criteria's used to evaluate the alternatives for the CC&B path as well as the points used to rank these criteria's.

1. **Capital costs:** outweighing upgrading to a later version of CC&B versus capital costs avoided to build new functionality to make up for features not available should the upgrades not occur
   a. Ranking: 10 points = lowest, 20 points = medium, 30 points = highest
2. **Impact on OM&A costs:** due to additional licensing costs tied to Oracle support (premier vs extended vs sustaining) for CC&B and increased managed services cost with IBM.
   a. Ranking: 10 points = highest, 20 points = medium, 30 points = lowest
3. **Risk profile:** due to not being on a fully supported platform. This will impact the managed services with IBM as they will not have access to all security patches, fixes to the database, operating system and or servers. Therefore, should a critical issue occur, or a new regulatory change is imposed on HOL, we would be left exposed if we did not have access to premier or extended support.
   a. Ranking: 10 points = lowest, 20 points = medium, 30 points = highest

**<u>Detailed assessment</u>:**

**Alternative 1: Upgrade to version 2.x in 2016 and v3.0 in 2019**

The alternative is to perform an upgrade to CC&B v2.x in 2016 and v3.0 in 2019:

- Capital Costs (Ranking: 10 points):
  - o Capital investments will continue to be required to maintain regulatory compliance in years 2017, 2018 & 2020
- No increased OM&A (Ranking: 30 points)
  - o Hydro Ottawa would remain in premier support, included in 22% of Oracle support fees
  - o No additional fees for IBM managed services and Oracle licensing costs
- Risk profile is low as we will have access to all patching and will be fully supported (Ranking: 30 points)

| Costs | 2016 | 2017 | 2018 | 2019 | 2020 | Total |
|---|---|---|---|---|---|---|
| **Capital** | $2.5M | $500K | $500K | $6M | $500 | $11.7M |
| **Increased OM&A** | $0 | $0 | $0 | $0 | $0 | $0 |

**Table 112 - CC&B Alternative 1 Costs**

**Alternative 2: No upgrade in 2016 and upgrade to version 3.0 in 2019**

The alternative is to remain on CC&B v2.3.1 and perform an upgrade to CC&B v3.0 in 2019:

- Capital Costs (Ranking: 20 points):
  - o An additional $25K per year (2016, 2017 & 2018) for capital costs will be required to enhance CC&B due to not acquiring the new features with a later version of CC&B (version 2.x)
- Increased OM&A (Ranking: 20 points):
  - o Increase in Oracle support from 22% per year to 37% per year (~$100K/year) due to being on extended support.

  - Potential increases to the monthly fees paid to IBM for managed services on an increasing scale based on being on extended (i.e., hosting and application support- a rough estimate of what this additional cost could be $240K/year which is approximately 10% increase to monthly fees). Then on sustaining support a rough estimate of what this additional cost could be $480K/year which is approximately 20% increase to monthly fees.
- Risk profile is medium based on the fact that for a year and half (Ranking: 20 points):
  - We will be on sustaining support from July 2018 to Dec 2019 as extended support for version 2.3.1 runs out in June 2018 which leaves HOL exposed to not be able to meet new regulations.
  - IBM will not be able to apply all security patches and fixes to the database, operating system and or servers as they will be limited by the interoperability of CC&B v2.3.1 with these components of the solution stack.
  - It should be noted that Oracle still needs to confirm the feasibility of upgrading from CC&B v2.3.1 directly to CC&B version 3.0

| Costs | 2016 | 2017 | 2018 | 2019 | 2020 | Total |
|---|---|---|---|---|---|---|
| **Capital** | $525K | $525K | $525K | $6M | $500K | $8.075M |
| **Increased OM&A** | $170K | $340K | $410K | $480K | $0 | $1.4M |

**Table 113 - CC&B Alternative 2 Costs**

**Alternative 3: Do not perform any upgrades**

This alternative would be to remain on CC&B v2.3.1 and not perform any upgrades (between the years of 2015- 2020):

- Capital Costs(Ranking: 30 points):
  - An additional $25K per year (up to June 2018) for capital costs will be required to enhance CC&B due to not acquiring the new features with a later version of CC&B (version 2.x). From June 2018 to 2020, an additional $50K per year to cover capital costs for features not acquired in major version of CC&B 3.0.
- Increased OM&A (Ranking: 10 points):
  - Increase in Oracle support from 22% per year to 37% per year (~$100K/year) due to being on extended support.
  - Potential increases to the monthly fees paid to IBM for managed services on an increasing scale based on being on extended (i.e., hosting and application support- a rough estimate of what this additional cost could be $240K/year which is approximately 10% increase to monthly fees). Then on sustaining support a rough estimate of what this additional cost could be $480K/year which is approximately 20% increase to monthly fees.
- Risk profile is high based on the fact that for 2 and a half years (Ranking: 10 points):
  - We will be on sustaining support from July 2018 to 2020 as extended support for version 2.3.1 runs out in June 2018, which leaves HOL exposed to not be able to meet new regulations.
  - IBM will not be able to apply all security patches and fixes to the database, operating system and or servers as they will be limited by the interoperability of CC&B v2.3.1 with these components of the solution stack.

| Costs | 2016 | 2017 | 2018 | 2019 | 2020 | Total |
|---|---|---|---|---|---|---|
| **Capital** | $525K | $525K | $538K | $550K | $550K | $2.688M |
| **Increased OM&A** | $170K | $340K | $410K | $480K | $480 | $1.880M |

**Table 114 - CC&B Alternative 3 Costs**

#### 2.3.1.3 *Preferred Alternative*

Based on the above analysis, Hydro Ottawa recommends alternative 1: Upgrade to version 2.x in 2016 and v3.0 in 2019. Although the capital investments are the highest of all alternatives ($11.7M), we would be avoiding the increased OM&A costs of $1.4M (Alternative 2) and $1.88M (Alternative 3). Of all of the alternatives, alternative 1 is the least risky as it would allow HOL to remain on a fully supported platform with access to all security patching, fixes to the database, operating system and or servers without any increase to OM&A costs.

A points system was used to rank the alternatives against the evaluation criteria outlines above. The chart below demonstrates the outcome of how each alternative ranked:

| Criteria | Alternative 1 | Alternative 2 | Alternative 3 |
|---|---|---|---|
| **Capital Costs** | 10 | 20 | 30 |
| **OM&A Costs** | 30 | 20 | 10 |
| **Risk Profile** | 30 | 20 | 10 |
| **Total** | **70** | **60** | **50** |

**Table 115 - CC&B Alternative Evaluation**

### 2.3.2 Project/Program Timing & Expenditure

| Historical ($M) | | | | | Future ($M) | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| **2010** | **2011** | **2012** | **2013** | **2014** | **2015** | **2016** | **2017** | **2018** | **2019** | **2020** |
| | | | | | 1.70 | 2.50 | 0.50 | 0.50 | 6.06 | 0.50 |

**Table 116 - Project Expenditures**

### 2.3.3 Benefits

| Benefits | Description |
|---|---|
| **System Operation Efficiency and Cost-effectiveness** | • Ensuring efficient and effective operations of the CC&B application which is used to produce all customer bills by ensuring that the application remains fully supported by IBM and Oracle.<br>• Keeping CC&B fully upgraded to the latest versions would save the organization in increased OM&A ($1.4M with alternative 2) and ($1.880M with alternative 3).<br>• An upgraded CC&B system will be capable of meeting more of our future regulatory and business requirements through configuration changes, instead of developing code. |
| **Customer** | • Will allow HOL to fully automate customer moves without the manual involvement of our resources.<br>• Is the foundational platform that will position Hydro Ottawa to better leverage our other technologies and services such as our award-winning Outage Communications system and MyHydroLink (our account management web portal).<br>• Will enable us to strengthen our relationships with landlord customers |

| | |
|---|---|
| | through automated landlord agreements. |
| **Safety** | N/A |
| **Cyber-Security, Privacy** | Performing these upgrades to CC&B would allow for IBM to continue to have access to all security patches as HOL would continue to be supported via premier or extended support. |
| **Co-ordination, Interoperability** | Increased cooperation/sharing of best practices among Ontario LDCs who are also on CC&B (Toronto Hydro, Enersource & Powerstream) on business critical systems leading to cost savings and improvements in customer service. |
| **Economic Development** | N/A |
| **Environment** | N/A |

**Table 117 - Project Benefits**

## 2.4 Prioritization

### 2.4.1 Consequence of Deferral

If the decision was to defer the CC&B upgrades, the consequences / risks of deferring these projects would be the following:

- Increased in OM&A costs for both licensing and managed services costs for IBM OM&A ($1.4M with alternative 2) and ($1.880M with alternative 3).
- IBM would not have access to the latest security patches, fixes to the database, operating system and or servers as they will be limited by the interoperability of CC&B v2.3.1 with these components of the solution stack.
- HOL would not be able to leverage additional functionality easily to further automate processes that would benefit our customers.
- HOL would be on sustaining support for several years, which leaves HOL exposed to not be able to meet new regulations.
- Collaborating with other local distributors in the Ontario market (Toronto Hydro, Powerstream & Enersource) would be less feasible if we are all operating under different CC&B versions.

### 2.4.2 Priority

**High**

- With these upgrades it is expected that some future enhancements will not be required as they are now base functionality in the newer versions of the application

## 2.5 Execution Path

### 2.5.1 Implementation Plan

### 2.5.2 Risks to Completion and Risk Mitigation Strategies

| Risk | Mitigation Strategy |
|---|---|
| Resource constraint potentially required for other projects | • Prioritize projects<br>• Combine CC&B enhancements within the upgrade to free up resources |
| CC&B version 3.0 would be considered “bleeding | • Detailed analysis of functionality offered in |

| | |
|---|---|
| edge" | version 3.0 to make an informed decision of whether to proceed with CC&B version 3.0 or to a different version |

**Table 118 - Risks & Mitigation Strategy**

### 2.5.3 Timing Factors

- Premier Support of CC&B v2.3.1 ending in June 2016 and Extended Support in June 2018
- Premier Support of CC&B v2.4 ending November 2017 and Extended Support in November 2020
- Release date of CC&B v2.5 June/July 2015 – support timelines not currently available
- Release date of CC&B v3.0 and maintenance support is tied to it is not currently available

### 2.5.4 Cost Factors

- Preliminary estimates were provided by our managed services contractor IBM for these upgrades, these estimates could change once the detailed analysis of these projects have been performed
- Duration of the upgrade projects extending longer than original estimates
- Potential for increased scope

## 2.6 Project Details and Justification

| | |
|---|---|
| **Project Name:** | CC&B Upgrade from v2.3.1 to v2.x |
| **Capital Cost:** | $2.5M |
| **O&M:** | N/A |
| **Start Date:** | January 2016 |
| **In-Service Date:** | September 2016 |
| **Investment Category:** | General Plant |
| **Main Driver:** | • Provide a solid supported system as the foundational platform that will position Hydro Ottawa to better leverage our other technologies and provide enhanced services to our customers<br>• To remain in premier support for the CC&B application which is industry standard and to honour the maintenance contract for the CC&B system with IBM covering 2014 to 2022 inclusive ($21M) which outlines that HOL must keep current with upgrades throughout the duration of the contract.<br>• Additional functionality in CC&B v2.x & v3.0 which would mean that we do not need some future enhancements – as they would be included as part of base CC&B. |
| **Secondary Driver(s):** | To strengthen HOL's position with Oracle and with our regulators by being on the same version as other large distribution companies in Ontario (i.e., Toronto Hydro-currently on v2.2, Enersource -currently on v2.2 and Powerstream- will be going live with v2.4). |
| **Customer/Load Attachment** | N/A |

**Project Scope**

Analysis, design and build of this technical upgrade of CC&B customizations, interfaces and reports (35 interfaces (see diagram below), 50 customizations, 100 reports)

- Functional testing, integration testing
- User acceptance testing
- Organizational Change Management
- Training
- CC&B Functional configuration
- Coordinate and manage participation of third parties

**Work Plan**

1. Assign a dedication project team (HOL and contractors)
2. Assess upgrade requirements
3. Design Upgrade changes
4. Build/Develop Upgrade changes
5. System Functional Testing
6. System Integration Testing
7. Training
8. User Acceptance & Regression Testing
9. Deploy into production
10. Stabilization period

**Customer Impact**

| |
|---|
| The impact to Hydro Ottawa's customers would be that we could achieve further efficiencies in the future that would benefit our customer, for example:<br>• It will allow us to fully automate customer moves without the manual involvement of our resources.<br>• Will be the foundational platform that will position Hydro Ottawa to better leverage our other technologies and services such as our award-winning Outage Communications system and MyHydroLink (our account management web portal).<br>• Will enable us to strengthen our relationships with landlord customers through automated landlord agreements. |

| | |
|---|---|
| **Project Name:** | CC&B Upgrade from version 2.x to v3.0 |
| **Capital Cost:** | $6M |
| **O&M:** | N/A |
| **Start Date:** | January 2019 |
| **In-Service Date:** | December 2019 |
| **Investment Category:** | General Plant |
| **Main Driver:** | Same as above |
| **Secondary Driver(s):** | Same as above |
| **Customer/Load Attachment** | N/A |
| **Project Scope** | |
| Same as above.<br>However seeing as this upgrade is a significant lift to the application (moving from version 2.x to 3.0), this usually entails architectural changes which then equates to more work:<br>• Review all existing enhancement interfaces created to work with v2.x to ensure that they are still required with CC&B v3.0. Some may require re-work due to the changes between versions.<br>• Regression testing phase would be extended due to the potential for more architectural changes to the application. | |
| **Work Plan** | |
| Same as above | |
| **Customer Impact** | |
| Same as above | |

# 3 Outage Communications System

## 3.1 Project/Project Summary

Hydro Ottawa's current Outage Communications System (OCS) needs to be replaced with a state-of-the art and scalable mobile solution, designed to be a specifically compatible foundation for all current and future Customer Experience Management initiatives. While the existing solution was delivered to resolve a broken outage communications process, Hydro Ottawa is now embarking on a proactive mission to deliver outage communications at the next level. Hydro Ottawa's vision of "2-way, proactive, personalized, and premise-based Outage Communications" is totally consistent with industry thought leaders.

## 3.2 Project/Program Description

### 3.2.1 Current Issues

Customers are demanding proactive two-way communications with relevant, timely and accurate outage information being provided not only via the call centre and Interactive Voice Recognition (IVR) but also through social media, utility websites and modern communication devices (e.g. tablets, smartphones) and apps.

The existing APEX point based outage system is made up of a number of subsystems that all play specific roles in arriving at the point of creating information, or notifying customers, with respect to outages. Factoring in APEX application history and current vulnerabilities, Outage Communications risk profile, and reliability, supportability, and scalability needs, we have reached the conclusion that the current APEX OCS application is not a suitable foundation upon which to build the future vision.

### 3.2.2 Program/Project Scope

In keeping with our strong commitment to improving customer service, we intend to provide a rich customer experience with 2-way, proactive, personalized, premise-based outage communications. In doing so, the following objectives must be met:

**Reporting Personalization:** Allowing the customer to report an outage utilizing the channel that they prefer. Typically this will include the traditional outage line, augmented by mobile, web, and text.

**Notification Personalization:** Allowing the customer to specify preferences that determine how and when they receive outage alerts, updates, and restoration information.

**Message Personalization:** Provides the intelligence for the overall solution. It determines the messaging to go out for a particular outage, the customers it should be delivered to, and via which channel, as dictated by the customer's stated preferences.

Customer Administration: A robust customer administration capability is a core requirement in allowing Hydro Ottawa to scale from administering a few hundred key customers to our base of over 318,952 customers.

#### 3.2.3 Main and Secondary Drivers

The main driver for this project is the ability to meet evolving customer needs as identified above.

#### 3.2.4 Performance Targets and Objectives

A new OCS solution must be architected and designed in the context of Hydro Ottawa's reality. IVR, Web, OMS, CC&B, MHL, and Mobile are all key contributors to the business and full compatibility with those systems is a pre-requisite for any replacement.

**Customer Value:** Hydro Ottawa has a customer-centric view to the future. As of December 31, 2014, there were 122,300 MyHydroLink accounts. Hydro Ottawa will establish a multi-channel communication strategy that reached customers across a variety of communication channels.

**Organizational Effectiveness:** The custom solution will be developed using current application development standards. Hydro Ottawa will not be locked in to a proprietary toolset. Skilled resources should be common and permit risk avoidance/mitigation in the need of hiring or future partner development.

**Corporate Citizenship:** The development of a replacement Outage Communications System will enable Hydro Ottawa to communication with our customers using the methods that they want to be communicated with. Hydro Ottawa will continue to offer a customer-centric view, raising the bar on customer satisfaction even further, and reaching the broadest number of customers possible.

**Financial Strength:** Proactive communication has resulted in the reduction in the cost per customer contact as well as decreased the number of calls to our Outage Reporting call centre during outages. As a specific example, redirecting customers to using the Outage Web Maps reduced telephone call volumes to the Call Centre by 67,926 over 2013/14 at a savings of almost $900k.

### 3.3 Project/Program Justification

#### 3.3.1 Alternatives Evaluation

##### 3.3.1.1 *Alternatives Considered*

Commercial-Off-The-Shelf (COTS), Hybrid, and Custom solutions were all deemed to be approaches that could meet the needs of Hydro Ottawa.

In the initial high level pricing estimate, COTS was most expensive, followed by Hybrid, then Custom as the least expensive. In the latest estimates, Outage Maps have been excluded, making the Hybrid approach redundant. In terms of magnitude, the custom solution costs 40% of the cost for the COTS solution.

##### 3.3.1.2 *Evaluation Criteria*

Business decisions will drive the solution evaluation, with the following mandatory requirements:

- Reduce operational burdens while extending customer interaction capabilities. This is critical, as any new Outage Communication process should create less work for Operations, not more.

- Manage customer preferences efficiently while allowing a high level of personalization. The customers' wishes must be integral to any Customer Experience Management initiative.
- The Messaging Engine must be able to support all known channels. Although business decisions must drive which channels will be supported and when, the engine must be designed in such a way as to be capable of supporting all channels. No development work should be required should the company choose to add channels at a later date.

#### 3.3.1.3 *Preferred Alternative*

The recommendation to proceed with a custom solution significantly reduces the total cost of ownership over the 5 Year Total Cost of Ownership assessment, realizing a cost savings of approximately $1,234,000 over the five year period.

### 3.3.2 Project/Program Timing & Expenditure

| Historical ($k) | | | | | | | Future ($k) | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| **2010** | **2011** | **2012** | **2013** | **2014** | **2015** | **2016** | **2017** | **2018** | **2019** | **2020** |
| - | - | - | - | - | - | - | 910 | - | - | - |

**Table 119 - Project Expenditures**

### 3.3.3 Benefits

| Benefits | Description |
|---|---|
| **System Operation Efficiency and Cost-effectiveness** | Proactive communication has resulted in the reduction in the cost per customer contact as well as decreased the number of calls to our Outage Reporting call centre during outages. As a specific example, redirecting customers to using the Outage Web Maps reduced telephone call volumes to the Call Centre by 67,926 over 2013/14 at a savings of almost $900K. |
| **Customer** | Hydro Ottawa has a customer-centric view to the future. As of December 31, 2014, there were 122,300 MyHydroLink accounts. Hydro Ottawa will establish a multi-channel communication strategy that reaches customers across a variety of communication channels.<br>The development of a replacement Outage Communications System will enable Hydro Ottawa's to communicate with our customers using the methods that they want to be communicated with. Hydro Ottawa will continue to offer a customer-centric view, raising the bar on customer satisfaction even further, and reaching the broadest number of customers possible. |
| **Safety** | N/A |
| **Cyber-Security, Privacy** | HOL will ensure all applicable laws and standards are met throughout. |
| **Co-ordination, Interoperability** | N/A |
| **Economic Development** | N/A |
| **Environment** | N/A |

**Table 120 - Project Benefits**

## 3.4 Prioritization

### 3.4.1 Consequence of Deferral

To maintain customer satisfaction and reach the broadest number of customers possible, and to respond to widespread internet use and mobile phone ownership, utilities need to establish a multi-channel communication strategy that reaches customers across a variety of communication channels. As the internet becomes the new communication standard, utilities will need to adapt to continue meeting customers' expectations for responsiveness, accuracy, and personalization. Customers will be frustrated by websites that are not formatted for mobile phone access or communication that doesn't include text messages.

With the increase in the frequency and duration of outages caused by extreme weather events across North America, customers are expecting utilities to keep them continually updated on the status of outages; especially the estimated restoration time. In fact, customers are requiring utilities to keep them informed via two-way communications using the IVR, call centre, social media, utility websites and modern communications devices (e.g. tablets, smartphones) and applications (apps).

Hydro Ottawa has a customer-centric view to the future. Outage communications, planned or unplanned, are key customer interactions. An increasing number of utility companies are now launching proactive communication channels – that is, channels (usually voice messaging, text or email) through which they can "push" alerts to customers. These allow the utility to contact the customer many times with updates during an event, informing them when their estimated restoration time changes or when crews have determined the cause of their outage.

Failure to provide the power outage information accurately and in a timely manner will result in customer complaints, create unwanted media attention, and negatively impact customer satisfaction.

### 3.4.2 Priority

High – the project will allow HOL to meet customer expectations.

## 3.5 Execution Path

### 3.5.1 Implementation Plan

This project will be initiated and completed in 2017.

### 3.5.2 Risks to Completion and Risk Mitigation Strategies

As with any planned project, the limited availability of skilled resources with competing priorities may impact the timely implementation of an Outage Communications System. With executive support, stakeholder engagement, and careful planning and attention to schedules, this risk can be managed effectively.

## 3.6 Project Details and Justification

| | |
|---|---|
| **Project Name:** | Outage Communications Systems |
| **Capital Cost:** | $910 |
| **O&M:** | $412 (2016-2020) |
| **Start Date:** | 2017 |
| **In-Service Date:** | 2017 |
| **Investment Category:** | General Plant |
| **Main Driver:** | Customer Service |
| **Secondary Driver(s):** | Communication efficiency |
| **Customer/Load Attachment** | N/A |
| **Project Scope** | |
| **Reporting Personalization:** Allowing the customer to report an outage utilizing the channel that they prefer. Typically this will include the traditional outage line, augmented by mobile, web, and text.<br>**Notification Personalization:** Allowing the customer to specify preferences that determine how and when they receive outage alerts, updates, and restoration information.<br>**Message Personalization:** Provides the intelligence for the overall solution. It determines the messaging to go out for a particular outage, the customers it should be delivered to, and via which channel, as dictated by the customer's stated preferences.<br>**Customer Administration:** A robust customer administration capability is a core requirement in allowing Hydro Ottawa to scale from administering a few hundred key customers to our base of over 318,952 customers. | |
| **Work Plan** | |
| Implementation 2017 | |
| **Customer Impact** | |
| The development of a replacement Outage Communications System will enable Hydro Ottawa's to communicate with our customers using the methods that they want to be communicated with. Hydro Ottawa will continue to offer a customer-centric view, raising the bar on customer satisfaction even further, and reaching the broadest number of customers possible. | |

# 4 JDE Application Upgrade

## 4.1 Project/Project Summary

An effective Enterprise Resource Planning (ERP) solution is a critical component to Hydro Ottawa's ongoing business operations. In 2003, J.D. Edwards (JDE) EnterpriseOne Xe was implemented. Since that time, investments were made to provide enhancements and stay relatively current on related technology components to enable ongoing business requirements and mitigate risk. The current ERP solution is JDE EnterpriseOne v9.0. After a decade of using the JDE solution as Hydro Ottawa's ERP, there was cause to pause and consider multiple factors impacting future ERP decisions. Assessment by Hydro Ottawa's Executive Management, IM&IT support and input from key impacted Stakeholder groups of a variety of consideration criteria, concluded that a full upgrade within the JDE product line should be pursued with adherence to Out of the Box (OOTB) product wherever possible to leverage best practices. Since Hydro Ottawa is currently operating on JDE version 9 (v9.0) for which only Sustaining Support will be available from the vendor after Sept. 2016, time is of the essence to proceed with the project.

**Figure 103 - JDE EntrepriseOne Releases**

Oracle's JD Edwards EnterpriseOne Releases

| Release | GA Date | Premier Support Ends | Extended Support Ends | Sustaining Support Ends |
|---|---|---|---|---|
| Xe | Sep 2000 | Dec 2013 | Not Available | Indefinite |
| 8 | Jun 2002 | Dec 2013 | Not Available | Indefinite |
| 8.9 | Sep 2003 | Sep 2008 | Not Available | Indefinite |
| 8.10 | Jun 2004 | Jun 2009 | Not Available | Indefinite |
| 8.11 | Dec 2004 | Dec 2009 | Dec 2012 | Indefinite |
| 8.11 CRM Mobile Sales(both i-Series and non i-Series) | Dec 2004 | Dec 2009 | Dec 2010 | Indefinite |
| 8.12 | Apr 2006 | Apr 2011 | Apr 2014 | Indefinite |
| 8.12 CRM Mobile Sales(both i-Series and non i-Series) | Apr 2006 | Apr 2011 | Dec 2010 | Indefinite |
| 9.0 | Sep 2008 | Sep 2013 | Sep 2016 | Indefinite |
| 9.0.2 | Nov 2010 | Nov 2015 | Nov 2018 | Indefinite |
| 9.1 | Mar 2012 | Mar 2017 | Mar 2020 | Indefinite |

Source: http://www.oracle.com/us/support/library/lifetime-support-applications-069216.pdf (Note: Our current status context has been highlighted for ease of reference)

## 4.2 Project/Program Description

### 4.2.1 Current Issues

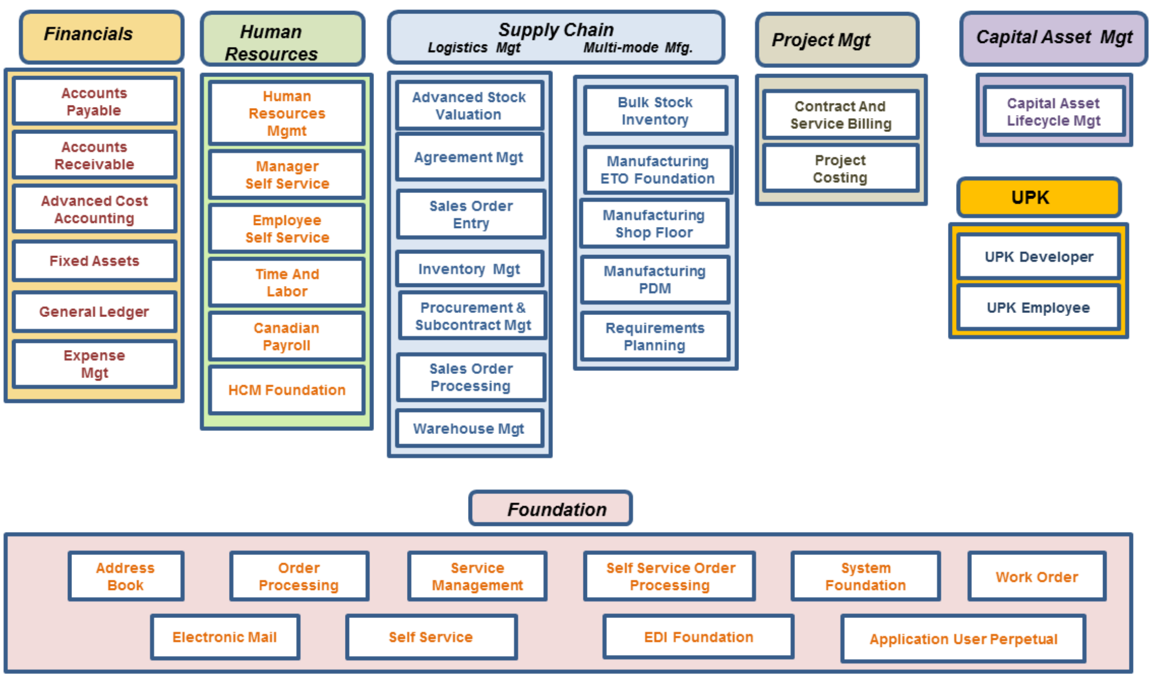
Since its implementation, JDE has proven to be a consistently dependable solution for core operational outcomes like financial accounting, accounts payable and receivable, budget management, procurement administration, inventory management, and payroll. However, the ERP solution did have some adaptability shortcomings to address specific, evolving business needs and/or business processes. These resulted in the extraction of business outcomes like Fleet Management from the ERP footprint and customizations to the JDE solution which can cause ongoing support complexities and/or challenges.

Ensuring full vendor support for ERP as a critical business solution is aligned with prudent stewardship. Since JDE v9.0 will lapse into Sustaining Support soon, a project is necessary to mitigate the risk.

### 4.2.2 Program/Project Scope

As shown in Figure 104, the JDE solution encompasses multiple modules to provide a comprehensive solution enabling vital business capabilities such as financial accounting, Accounts Payable and Receivable, budget management, procurement administration, inventory management, human resource management, payroll etc.

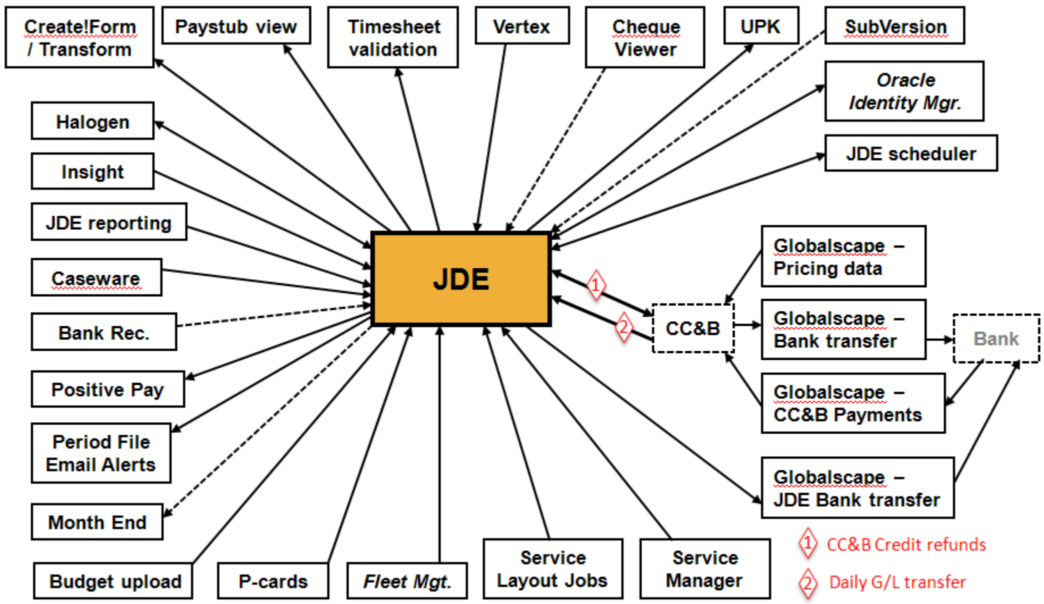
**Figure 104 - JDE Solution Modules**



Ongoing operational support is achieved by a small Enterprise Solutions team in the Systems Management group within IM & IT in collaboration with functional Stakeholder Subject Matter Experts (SME's) as part of a matrix support model. In addition, vendor engagements are leveraged when necessary to augment skills, complete development and/or provide additional capacity for support. Adherence to the future OOTB product vision will enhance the opportunities for external assistance. Infrastructure, hardware and database support services are currently provided by resources within Hydro Ottawa's CIO Division.

JDE is a highly integrated solution as evidenced by interfaces with both internal systems as well as external systems, as shown in Figure 105.

Figure 105 - JDE Interfaces



Various functional areas at Hydro Ottawa rely on JDE to achieve their operational mandates in an expedient, cost-effective manner. Stakeholder desires to maximize business efficiency and/or effectiveness, or address emerging legal or business requirements can lead to requests for further integration and/or JDE changes.

### 4.2.3 Main and Secondary Drivers

The main driver for this project is to ensure efficient, effective ERP business outcomes are sustained for HOL's ongoing business operations in a manner that mitigates immediate and longer term risk. In addition, the identified project is directly aligned with key guiding principles in HOL's approved IM&IT Strategy (excerpt below).

- HO's business strategies and corporate priorities will be the primary driver of the IM&IT initiatives.
- Where feasible, HO will leverage existing systems and services prior to investing in new solutions and will leverage its IT Investments in Oracle, Intergraph, and Microsoft by adhering to a "Best of Brand" strategy.
- Commercial-off-the-Shelf (COTS) solutions will be implemented with limited customization, in preference to custom-developed business applications, to reduce risks and costs, and to facilitate software supportability and upgrade paths.
- Standard architectural framework will be established to improve integration, facilitate access to key data, re-engineer business processes to improve outcomes, productivity and efficiency.

## 4.3 Project/Program Justification

### 4.3.1 Alternatives Evaluation

Alternatives considered for the future ERP strategy include:

1. Remain operating on current ERP solution (JDE v9.0 with customizations) and accept the inherent risks of not retaining the maximum support from the vendor
2. Upgrade/re-implement a newer OOTB version of JDE with a strategy to divest of customizations and fully leverage the products' best practices, support
3. Upgrade to a newer version of JDE with a mandate to port forward current customizations
4. Evaluate available Tier 1 ERP solutions for the best alignment to HOL's identified fit/form/function requirements
5. Evaluate potential Tier 2 ERP solutions for the best alignment to HOL's identified fit/form/function requirements against a heightened risk profile for ERP outcomes.

#### 4.3.1.1 *Alternatives Considered*

#### 4.3.1.2 *Evaluation Criteria*

After a decade of using the JDE solution as HOL's ERP, there was cause to pause and consider multiple factors impacting future ERP decisions from immediate, short and long term perspectives. Evaluation criteria considerations included:

- Anticipated business requirements to define essential scope;
- Functionality features and adaptability capabilities in the out-of-the-box (OOTB) product version;
- Degree and complexity of integration needs;
- Industry trends for ERP solutions;
- Vendor commitment towards future investments in the product line;
- Business operational risks of change;
- Alignment with technology strategy and ongoing stewardship; and
- Cost effectiveness of options

#### 4.3.1.3 *Preferred Alternative*

Assessments by HOL's Executive Management, IM&IT support and input from key impacted stakeholder groups to date, have concluded that the preferred alternative would be a full application upgrade within JDE product line should be pursued with adherence to a strategy to divest of current customizations in favour of the OOTB product wherever possible. The outlined budget and project path details are reflective of this intention, but are subject to change based on evolving information.

### 4.3.2 Project/Program Timing & Expenditure

The projected overall costs are $6.5M and will take 1 year to complete. Recommended project timeline will target a Q3 2016 transition.

| Historical ($M) | | | | | | Future ($M) | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 |
| - | - | - | - | - | 1.5 | 5.0 | - | - | - | - |

**Table 121 - Project Expenditures**

#### 4.3.3 Benefits

Operating on a current OOTB ERP solution within the JDE product line will align with desire to mitigate critical business outcome risks caused by the transition, leverage in-house knowledge of the JDE solution and related investments such as Insight reporting, improve overall system operational efficiency and provide new opportunities for cost-effective support and/or development assistance from vendors when needed.

### 4.4 Prioritization

#### 4.4.1 Consequence of Deferral

Deferral of this project will negatively impact the risk for critical ERP business outcomes once the maximum level of product support from the vendor will lapse in 2016.

#### 4.4.2 Priority

This project is considered to be a High priority based on risk to critical ERP business outcomes.

### 4.5 Execution Path

#### 4.5.1 Implementation Plan

The JDE upgrade/re-implementation plan will follow best practices for change and project management. The plan's approach will also align with Oracle's Unified Method (OUM) for JD Edwards implementations which prescribes five distinct phases (Inception, Elaboration, Construction, Transition and Production). Based on the mandate of achieving OOTB installation, a preliminary phase will be needed to assess current customizations against standard offerings to identify business processes and/or outcome impacts. Outcomes of this preliminary phase will help to define specifics of project scope.

#### 4.5.2 Risks to Completion and Risk Mitigation Strategies

Risks to completion include resource availability of key subject matter experts, strains to desired business outcomes caused by adherence to OOTB approach, potential extended timeline and/or scope creep. These risks will be mitigated through involvement of HOL's Executive Management Team in the Steering Committee to reinforce expectations, independent project management oversight, strict scope containment through change management process that restricts approvals to essential items only, and internal resource reassignments for full-time dedicated participation in the project along with empowerment to make decisions.

#### 4.5.3 Timing Factors

To avoid the risk of not having maximum vendor product support for our critical ERP solution, the recommended project timeline will target a Q3 2016 transition.

#### 4.5.4 Cost Factors

Final cost of the project will be affected by negotiated contracts with vendors.

## 4.6 Project Details and Justification

| | |
|---|---|
| **Project Name:** | JDE Application Upgrade |
| **Capital Cost:** | $6.5M |
| **O&M:** | No change from existing program |
| **Start Date:** | 2015 |
| **In-Service Date:** | Q3 2016 |
| **Investment Category:** | General Plant |
| **Main Driver:** | Business operations efficiency |
| **Secondary Driver(s):** | N/A |
| **Customer/Load Attachment** | N/A |
| **Project Scope** | |
| Upgrade/re-implement a newer OOTB version of JDE with a strategy to divest of customizations and fully leverage the products' best practices, support | |
| **Work Plan** | |
| The plan's approach will also align with Oracle's Unified Method (OUM) for JD Edwards implementations which prescribes five distinct phases (Inception, Elaboration, Construction, Transition and Production). Based on the mandate of achieving OOTB installation, a preliminary phase will be needed to assess current customizations against standard offerings to identify business processes and/or outcome impacts. Outcomes of this preliminary phase will help to define specifics of project scope. | |
| **Customer Impact** | |
| Provide HOL with a more effective framework to address evolving business needs and customer expectations in a more timely and efficient manner by utilizing an OOTB approach and not having to build custom applications. | |

# 5 Fleet Replacement

## 5.1 Project/Program Summary

Hydro Ottawa Limited ("Hydro Ottawa") requires a fleet of specialized vehicles to complete many daily activities. Hydro Ottawa maintains approximately 270 vehicles and other related equipment. Vehicles are an essential component in providing efficient and reliable service to customers through the quick restoration of power, the efficient construction and maintenance of the distribution system and the safety of employees.

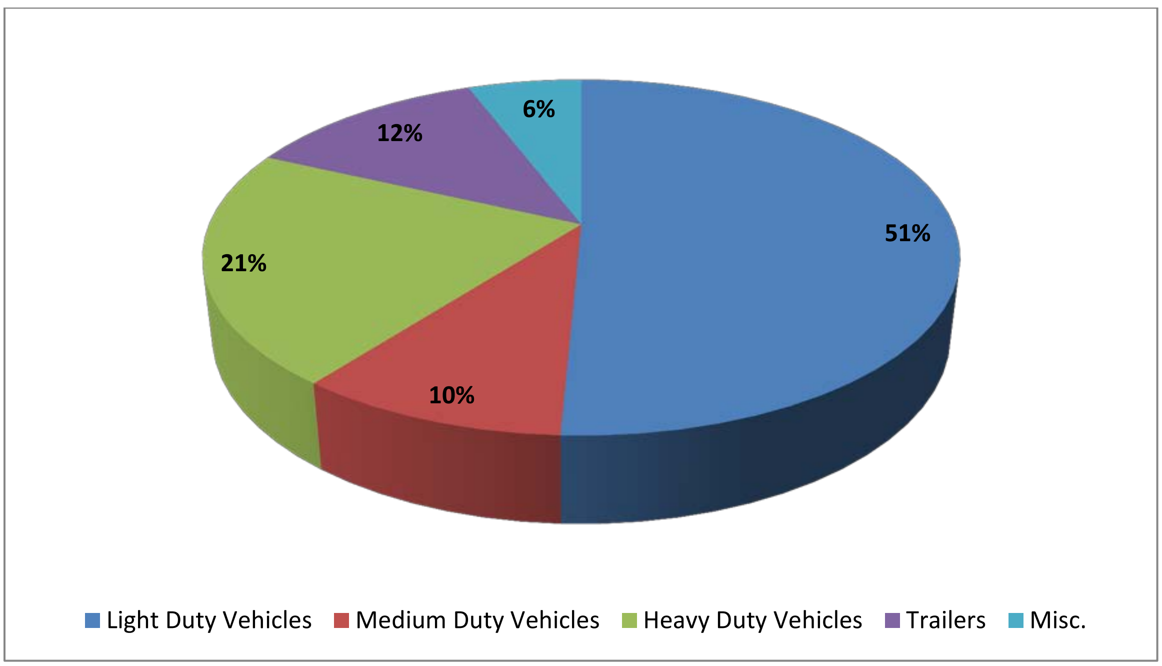
Hydro Ottawa maintains a multiple year capital plan to effectively manage its fleet assets. This plan is an essential tool for both long and short term planning and budgeting. This document outlines the 2016-2020 Fleet capital replacement plans.

## 5.2 Project/Program Description

### 5.2.1 Current Composition of Fleet

Figure 106 below shows the current composition of Hydro Ottawa fleet grouped by major category of asset.

**Figure 106 - Composition of Fleet**



### 5.2.2 Program/Project Scope

Hydro Ottawa's Fleet replacement plan lists all current vehicles and proposes future replacement dates and costs, based on past experience and accepted industry standard vehicle lifecycles. Factors taken into consideration in establishing the replacement date of individual vehicles include:

- Vehicle age

- Mileage
- Engine hours
- Power take off hours
- Operating and maintenance costs
- Overall general condition of the vehicle

As the result of these evaluations, vehicles may be retained longer due to being in better than average condition and while others may be replaced earlier due to being in poorer condition.

Preventative scheduled maintenance on the entire Fleet is conducted regularly. Schedules are implemented per the manufacturers' recommendations, unless Fleet determines the condition of equipment is extreme or the equipment is lightly operated.

Hydro Ottawa operates a repair centre to maintain a large majority of our fleet internally. We strive to minimize potential risks involved by subcontracting our aerial units to unqualified vendors. Hydro Ottawa provides extensive training to our technicians in order to achieve the qualifications necessary to sign off on inspection documents. These documents are signed by our technicians stating that the aerial units are safe to operate in proximity of high voltage power lines.

Hydro Ottawa regularly inspects the aerial equipment on a 4-month basis, as well as monitors mileage and engine hours, which may trigger an earlier inspection. On light duty equipment, Hydro Ottawa performs regular scheduled maintenance every six months or 6,000 km.

## 5.3 Main and Secondary Drivers

The main driver of this program is System Capital Investment Support: providing safe, reliable and efficient vehicles and equipment that meet operational requirements.

## 5.4 Performance Targets and Objectives

The objectives of Hydro Ottawa's Fleet replacement plan are:

- Provision of safe, reliable and efficient vehicles and equipment to meet the operational requirements;
- Compliance with legislation and regulations, as well as accepted industry norms and practices,
- Cost effectiveness;
- Optimization of size of fleet;
- Standardization of equipment specifications; and
- Environmental considerations such as fuel economy and exhaust emissions.

## 5.5 Project/Program Justification

Hydro Ottawa applies the following metrics in determining fleet asset life cycle replacement projections (see Table 121).

| Unit Type | Years | Kilometres | Engine Hours | Power Take Off (PTO) Hours |
|---|---|---|---|---|
| **Automobile** | 10 | 150,000 | 4,000 | |
| **Vans – Compact** | 7 | 150,000 | 5,000 | |
| **Vans - Cargo** | 8 | 150,000 | 6,000 | |
| **Vans – Step / Cube** | 10 | 150,000 | 8,000 | |
| **Trucks – Pickup (Compact)** | 7 | 100,000 | 5,000 | |
| **Trucks – Pickup (Conventional)** | 8 | 150,000 | 6,000 | |
| **Trucks – Dump** | 10 | 125,000 | 6,000 | |
| **Trucks – Stake** | 10 | 150,000 | 8,000 | |
| **Trucks – Knuckle Boom** | 15 | 200,000 | 10,000 | 5,000 |
| **Trucks – Buckets** | 12 | 200,000 | 10,000 | 5,000 |
| **Trucks – Line / RBD** | 12 | 200,000 | 10,000 | 5,000 |
| **Forklifts** | 15 | | 10,000 | |
| **Trailers** | 12 | | | |
| In addition to the above quantitative metrics, the overall general condition of the vehicle is also assessed leading to some vehicles replaced in advance of reaching these metrics while others are retained for a longer period. | | | | |

**Table 122 - Fleet Replacement Metrics**

Note that the plan does not provide for any growth to the current size of the fleet but rather just the replacement of aging vehicles.

Hydro Ottawa uses a passive GPS tracking system to collect data any time while a vehicle is running. The data is stored onboard the GPS until such time the vehicle returns to a home base and shuts off. At this time, the data is downloaded to Hydro Ottawa's internal system and the data is calculated. This data includes routes, idling time, kilometer traveled, excessive accelerating/braking, speeding, and unacceptable operation.

### 5.5.1 Project/Program Timing & Expenditure

In the first few years following amalgamation in 2000 (2000 – 2004) insufficient capital was spent on fleet replacement however between 2005 and 2009 an accelerated replacement plan was implemented. Replacement spending is now required annually to maintain the fleet. Table 122 shows the vehicle purchase history from 2012 to 2013 and the budgeted vehicle purchases from 2014 to 2020. In 2013, a large group of vehicles were due to be replaced, causing the capital expenditures to be higher than normal in that year. Again in 2020, a higher than normal amount of vehicles are due for replacement as shown in the table below.

In order to increase fleet efficiencies, Hydro Ottawa purchased a fleet management software system, FleetWave, in 2014. With this fleet software, Hydro Ottawa was able to streamline processes. FleetWave is a web-based enterprise fleet management software solution. It utilises the very latest technologies to provide comprehensive fleet management for Hydro Ottawa fleet operation:

- Asset Tracking and Management including Capital Replacement Planning
- Preventative Maintenance Scheduling
- Workshop Management (Workflow Planning, Scheduling, Job Assignment);
- Work Order Management;
- Warranty, Recalls & Campaigns;
- Operating Cost Management (Fuel, Licences, Permits, etc.);
- Inventory Management (parts supply system);
- Motor Pool Management;
- Risk Management (MVA, Safety, MOT Compliance, Records, etc.); and
- Technician Records and Training Plan.

| Historical ($M) | | | | Future ($M) | | | | |
|---|---|---|---|---|---|---|---|---|
| **2011** | **2012** | **2013** | **2014** | **2015** | **2016** | **2017** | **2018** | **2019** |
| **2.02** | 2.54 | 3.06 | 1.44 | 1.54 | 1.45 | 1.21 | 1.45 | 1.48 |

**Table 123 - Project Expenditures**

### 5.5.2 Benefits

| Benefits | Description |
|---|---|
| **System Operation Efficiency and Cost-effectiveness** | Fleet replacement is required to support the day to day business activities and sustain operations by minimizing down-time and minimizing the total vehicle life cycle costs. |
| **Customer** | Newer vehicles are required to maintain and sustain operations and ensure appropriate response times to customers, older vehicles require more repairs resulting in increased downtime. |
| **Safety** | Newer vehicles are needed to maintain safe work practices, new safety features in newer models also improve workplace safety |
| **Cyber-Security, Privacy** | N/A |
| **Co-ordination, Interoperability** | N/A |
| **Economic Development** | N/A |
| **Environment** | New vehicles are more fuel efficient than older units, improvements in emission standards and engine design also result in a reduction of green house gas emissions. |

**Table 124 - Project Benefits**

## 5.6 Prioritization

### 5.6.1 Consequence of Deferral

If this program is deferred the crews will not have the vehicles and equipment that they require in order to complete daily activities to meet customer expectations in a safe, reliable and efficient manner.

## 5.7 Execution Path

### 5.7.1 Implementation Plan

HOL uses the criteria identified in sections 5.2.2 and 5.5 to prioritize and stage the work.

## 5.8 Project Details and Justification

| | |
|---|---|
| **Project Name:** | Fleet Replacement |
| **Capital Cost:** | $7.47M (2016-2020) |
| **O&M:** | N/A |
| **Start Date:** | Ongoing |
| **In-Service Date:** | N/A |
| **Investment Category:** | General Plant |
| **Main Driver:** | System Capital Investment Support |
| **Secondary Driver(s):** | N/A |
| **Customer/Load Attachment** | N/A |

**Project Scope**

Hydro Ottawa's Fleet replacement plan lists all current vehicles and proposes future replacement dates and costs, based on past experience and accepted industry standard vehicle lifecycles. Factors taken into consideration in establishing the replacement date of individual vehicles include:

- Vehicle age
- Mileage
- Engine hours
- Power take off hours
- Operating and maintenance costs
- Overall general condition of the vehicle

As the result of these evaluations, vehicles may be retained longer due to being in better than average condition and while others may be replaced earlier due to being in poorer condition.

**Work Plan**

Preventative scheduled maintenance on the entire Fleet is conducted regularly. Schedules are implemented per the manufacturers' recommendations, unless Fleet determines the condition of equipment is extreme or the equipment is lightly operated.

Hydro Ottawa operates a repair centre to maintain a large majority of our fleet internally. We strive to minimize potential risks involved by subcontracting our aerial units to unqualified vendors. Hydro Ottawa provides extensive training to our technicians in order to achieve the qualifications necessary to sign off on inspection documents. These documents are signed by our technicians stating that the aerial units are safe to operate in proximity of high voltage power lines.

Hydro Ottawa regularly inspects the aerial equipment on a 4-month basis, as well as monitors mileage and engine hours, which may trigger an earlier inspection. On light duty equipment, Hydro Ottawa performs regular scheduled maintenance every six months or 6,000 km.

**Customer Impact**

Newer vehicles are required to maintain and sustain operations and ensure appropriate response times to customers, older vehicles require more repairs resulting in increased downtime.

# 6 Enterprise Architecture Program

## 6.1 Project/Project Summary

The HOL vision is that information is accessible, when and where it is needed to support customer interaction, decision making, ongoing business operations, regulatory compliance and business sustainability. As and where ever possible cost effectiveness will be sought to ensure all information technology and information management measures are managed appropriately. A guiding principle, to achieve the vision, is that a standard architectural framework is to be established to improve integration, facilitate access to key data, re-engineer business processes to improve outcomes, productivity and efficiency, and implement master data management.

The ***Enterprise Architecture Program – Enterprise Service Bus*** project was launched in 2014 to establish a Service Oriented Architecture (SOA) methodology for managing, measuring, executing, and optimizing processes within HOL to help better achieve business outcomes and enable realization of the above visions. A key component of the SOA methodology is the deployment of an Enterprise Service Bus (ESB) to establish and prioritize a standard architectural framework for all system and solution work across HOL that leverages industry best practices and enables real-time integration of business applications.

HOL's strategy is to put the customer at the centre of everything HOL does, to that end this project will be a major enabler/contributor to that strategy and the associated critical areas of performance as addressed in Table 124 below.

| HOL Corporate Objectives | Details |
|---|---|
| Customer Value | ESB/SOA Enables:<br>• Leveraging of existing IT investments (e.g., Contact Centre 6) to provide consistent inbound and outbound communications for customers across media (phone, website, text, etc.)<br>• Providing customers with real-time access to data as well as providing them with self-service that flows automatically to the various business applications (e.g., today the move-in/move-out web form that customers fill out on the website is actually processed manually through HOL<br>• Automating processes/workflows to provide more timely response to customer requests (e.g., Orlando Utility can achieve a service re-connect request in 3 min. from time request is entered on website to when electricity is reconnected, used to be days) |
| Organizational Effectiveness | ESB/SOA Enables:<br>• Access to real-time data for more timely decision making<br>• Automating processes/workflows to increase productivity, reduce staff labour, and complete tasks more quickly, thereby reducing OM&A<br>• Wrapping of legacy/existing applications with Web Services in order to provide better service to internal users, provide new services more quickly than waiting for an application refresh<br>• Applications developed using Service Oriented Architecture (SOA) principles to perform faster, thus increasing productivity and timeliness (Studies have SOA applications to perform up to 30% faster) |
| Financial Strength | ESB/SOA Enables: |

| | |
|---|---|
| | • Delivery of new services/functionality at lower costs and more quickly<br>• Access to real-time data for faster financial decision making<br>• Providing internal users with new services/functionality by leveraging investments in existing applications and wrapping with Web Services which can defer/or reduce application refresh/rip & replace, thereby reducing costs and risks |
| Corporate Citizenship | n/a |

**Table 125 - ESB/SOA as an Enabler to HOL's Strategy**

Industry has realized significant business benefits from aligning on the Service Oriented Architecture (SOA) methodology and deploying an Enterprise Service Bus (ESB) platform for application integration. Some of the business benefits of SOA/ESB, from recent studies, are shown in Table 125. It is expected that HOL can realize many of these benefits from this project.

| Data Point | Source |
|---|---|
| • 30% improvement in application performance using SOA/ESB<br>• 100% system uptime.<br>• Replaced >30 point-to-point integration links with a flexible, standardized business platform | HydroOne – Case Study (Oracle)<br>http://www.oracle.com/jp/hydro-one-business-benefit-brief-335567-ja.pdf |
| • 36% faster implementation and integration of new applications using SOA/ESB<br>• 50% reduction in time spent on supporting and maintaining the system using SOA/ESB | Tucson Electric Power Company – Case Study (Oracle)<br>http://www.oracle.com/us/corporate/press/015318_EN.doc |
| • 35% of IT activity in a typical enterprise is dedicated to application integration – includes development, maintenance and operational cost. | Gartner<br>http://www.serenecorp.com/v3/pdf/Serene_DS_EAI.pdf |

**Table 126 - Realized Benefits of SOA/ESB by Industry**

## 6.2 Project/Program Description

### 6.2.1 Current Issues

With a significant portion of the company's business tied to information systems and technology, tighter alignment and a more integrated environment is needed to achieve standardization of technology, broader use of functionality across business lines with better grouping of specific purpose services, improved user-interfaces and significantly reduced development of point-to-point integrations and associated on-going support.

Current projections are that, during the period 2015 to 2020, potentially 20 or more new applications will be deployed which will result in a significant increase in application-to-application integration. Based on current methods used in Hydro Ottawa today, this growth will drive up operating and support costs further and increase data flow complexity. This is an unsustainable trend that has led other industries, including those within the utility sector, to deploy enterprise-wide Enterprise Service Bus architecture, as a best practice.

Preparation of the Smart Grid data environment in terms of greater integration between systems is needed to more fully realize the benefits of the Smart Grid.

There is a significant amount of replicated data stored across HOL in application specific databases (staging tables and staging folders) and user specific databases which indicates a master data management strategy is needed for better protection of data, and reduction of database and storage costs. Real-time access to data, will enable stricter management of master data, establishment of authoritative sources of data, ensure access to most current data and reduce data storage costs.

No uniform and standard structured approach is used to transfer data between HOL and external businesses (service providers, partners, banks, IESO, etc.) for Business-to-Business communications.

Processes are typically isolated at the application level (application-centric) and there is little use of automated business processes/workflows and real-time monitoring of process data flows. Inconsistencies are experienced in the transfer of data between Operational Technologies systems and the HOL business systems.

The time to market for offering new services (customer or internally facing) is slow due to the reliance on the application vendor's feature release roadmap or the need to customize the application (which leads to on-going support challenges and higher costs). The investments in some existing applications are not fully leveraged for offering new services.

HOL IT environment was not well positioned to leveraging public cloud services or for integrating them in to existing processes.

### 6.2.2 Program/Project Scope

The project involves adopting a "service-centric" model for providing new internal and external services based on Service Oriented Architecture (SOA) methodology, use of web services for creating new services and the deployment of an Enterprise Service Bus (ESB).

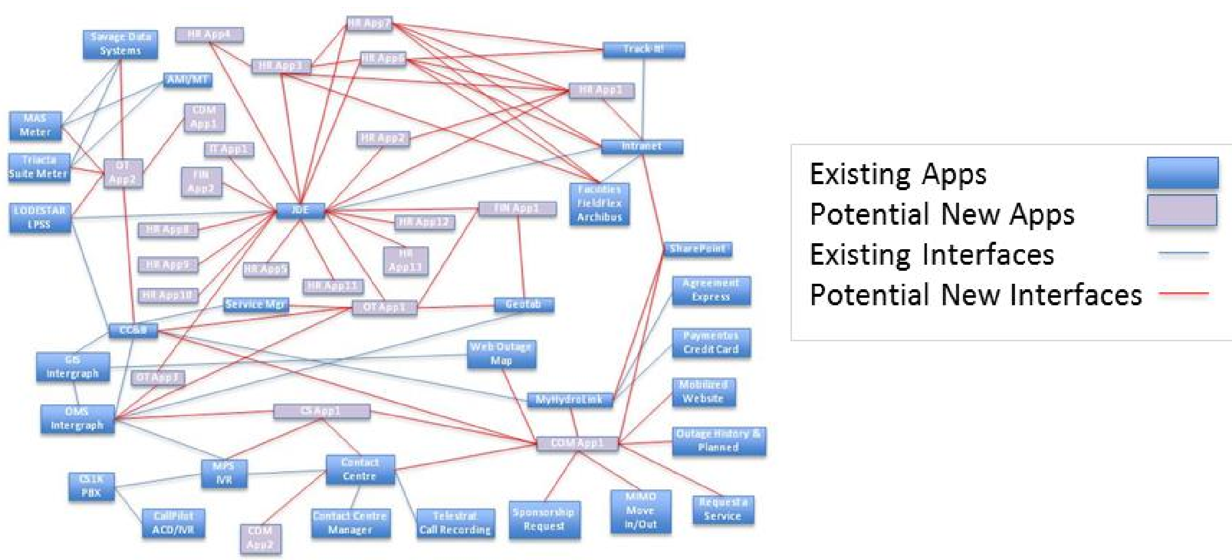
There are three major phases to the project which began in 2014:

- Architecture Planning and Design: ESB Solution Design; Governance; Application Integration Roadmap; and Operational Pre-Planning – *completed in 2014*
- ESB Platform Deployment: Deployment of the ESB platform in the following environments: Development Workstation; Test/Quality Assurance; and Production with high availability (HA) – *targeted for completion in 2015*
- Application Integration and Service Orchestration: Integration of initial foundational applications and subsequent new applications, with a view to automating key processes through service orchestration – *targeted to begin in 2015*

This project is using the industry leading Oracle Enterprise Service Bus technology that has been implemented by many Utilities and other enterprises in North America, as well as globally. HOL is benefitting from the maturity of this technology, over the past ten years and wide deployment.

### 6.2.3 Main and Secondary Drivers

**Figure 107 - Illustration of the Projected Growth in Applications & Interworking**



The main drivers for the project:

- Stability and standardization of data interworking across HOL applications / systems
- Fully realize the benefits of Smart Grid with greater integration of applications in Operations Technologies and with business applications
- Stronger and more consistent controls on application interworking
- Scalable and cost-effective approach to application integration (to address growth illustrated in Figure 107 and the potential 350% increase in point to point integrations)
- Centralized security controls for applications on the ESB and data traversing the ESB
- Real-time flow of data across Hydro Ottawa for improved decision making and improved employee productivity
- Automating processes through service orchestration to reduce costs, increase reliability, and increased employee productivity

- Centralized application and management of security to all data traversing the ESB

Secondary drivers for the project:

- Master data management with significant reduction and avoidance of data replication
- Leverage and extend current investments and de-risk rollout of new services
- Faster and lower cost approach to delivering new services for customers and improving internal operations
- Avoid the need to “rip & replace” some legacy applications, by wrapping legacy applications with web services to enhance user access to information
- Easy integration of public cloud services to on premise applications, as well as integrate public cloud services in to existing processes

Reduction in number of secondary databases as well as reduction in the myriad of personal databases.

### 6.2.4 Performance Targets and Objectives

The performance targets and objectives are:

- Automate key processes, through service orchestration, to reduce cost of processes, increase reliability, and reduce completion time of processes
- Reduce the number of new point to point integrations and the associated costs of maintaining integrations
- Reduce the amount of replicated data, through real-time access to data, that will be realized by reduction in databases and storage
- Enable faster integration for new applications
- Potentially reduce further the number of existing point to point integrations

## 6.3 Project/Program Justification

### 6.3.1 Alternatives Considered

The only alternative is to continue to experience the “current issues” and projected increase in the point to point integrations growing exponentially to the point of being unsustainable in size, variety and purpose and on-going maintenance and support, as illustrated in Figure 107.

#### 6.3.1.1 *Preferred Alternative*

This project is a shift in the way applications will be integrated, and data shared between applications.

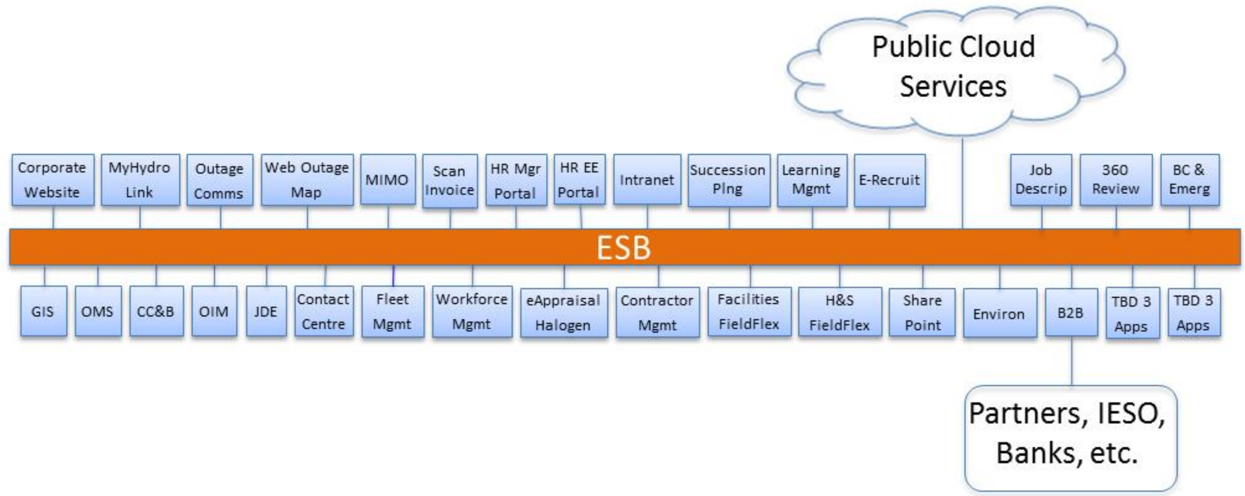
### 6.3.2 Project/Program Timing & Expenditure

This business case for 2016 to 2020 is focused on Phase 3 “Application Integrations”

- Architecture Planning and Design (2014)
- ESB Platform Deployment (2015)
- Application Integration and Service Orchestration (2015 to 2020)

A view of the 2020 “To Be State”, consisting of projected application integrations to the ESB is shown in Figure 108.

**Figure 108 - Illustration of the Projected Integration of Applications to ESB**



**2014**

The upfront Architecture Planning and Design work done in 2014, in terms of: Business Case; Analysis; Research; ESB Solution Design; Governance; Application Integration Roadmap; and Operational Pre-Planning, has set the foundation for the work outlined in this project and will be used to issue the associated RFPs for the consulting work. The HOL investment in the detailed Architecture Planning and Design work has contributed significantly to minimizing risk and unexpected expenses.

**2015**

In 2015, there will be the deployment of the ESB platform in the following environments: Development Workstation; Test/Quality Assurance; and Production with high availability (HA). As well starting in 2015 and continuing in 2016 will be the integration of initial foundational applications.

**2016 to 2020**

The work done in 2014 to 2016 will lay the foundation for all application integration work, as well as process automation, through to 2020 and beyond. It will comprise and embrace all existing integrations (where eligible) and all net new acquisitions, services (including Public Cloud), and solutions.

HOL minimized and will control costs in this project by:

- Securing high discounts on the software licensing and thus reducing the annual software maintenance expenses
- Deploying integrated system/server platform (Oracle Database Appliance) for hosting the ESB software, as well as other future applications and databases, that improves: reliability through built-in redundancy; reduces on-going support efforts and costs through simplified patching procedures and centralized monitoring and management; and flexible software license management

| Historical ($k) | | | | Future ($k) | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| **2010** | **2011** | **2012** | **2013** | **2014** | **2015** | **2016** | **2017** | **2018** | **2019** | **2020** |
| | | | | 783 | 797 | 787 | 364 | 290 | 295 | 300 |

**Table 127 - Project Expenditures**

### 6.3.3 Benefits

**Near-Term Benefits**

The expected near-term benefits of SOA/ESB to HOL are:

- Reduce number of links needed to integrate new applications.
- Reduce current data flow issues, especially for OMS to CC&B and Corporate website, by improving integration of disparate applications.
- Build new applications, such as Outage Communications and Employee Self-Service Portal by leveraging existing enterprise assets and making them accessible for reuse outside their original purpose.
- Expose web services of Contact Centre to build communications functionality in new applications.
- Using existing services /reusable software to build new application reduces the risk of delayed IT projects and thus increasing the likelihood of timely new product and service introductions.
- Enable OT to harness full capability of Intergraph OMS, will apply to other purchased apps.

**Longer Term Benefits**

The expected longer term benefits of SOA/ESB to HOL are:

- Enable Hydro Ottawa to adapt quickly in response to changes in the industry, regulatory, marketplace, by quickly deploying new services.
- Use of the Security Services of ESB/SOA, enables quick application of any security changes once, in one location and used throughout the enterprise, to comply with CIP, NSERC, etc.
- Extending life of current investments and exposing functionality as services (re-useable) for other applications
- Any component can be connected, ejected, or modified without impacting the performance of others.
- Increase efficiency in working with partners for saving costs, off-loading non-core functions.

| Benefits | Description |
|---|---|
| System Operation Efficiency and Cost Effectiveness | • Stability and standardization of data interworking across HOL applications / systems<br>• Fully realize the benefits of Smart Grid with greater integration of applications in Operations Technologies and with business applications<br>• Stronger and more consistent controls on application interworking<br>• Scalable and cost-effective approach to application integration<br>• Centralized security controls for applications on the ESB and data traversing the ESB<br>• Real-time flow of data across Hydro Ottawa for improved decision making and improved employee productivity<br>• Automating processes through service orchestration to reduce costs, increase reliability, and increased employee productivity<br>• Master data management with significant reduction and avoidance of data |

| | |
|---|---|
| | replication<br>• Centralized application and management of security to all data traversing the ESB |
| Customer | • Faster response to customer enquiries will be realized through real-time access to data and automated services<br>• Potential automation of Outage Communications and enabling solutions such as mobile workforce management, and will provide more reliable service and enhance the level of service<br>• Increased reliability of external and internal services through well managed and monitored data flows and automated processes |
| Safety | • Health and safety processes could be automated to provide real-time access to information and to ensure consistent processes |
| Cyber-Security, Privacy | • Centralized security controls will be applied at the ESB level thus providing consistent and enhanced security for all data traversing the ESB<br>• Changes to security controls can be quickly applied centrally via the ESB |
| Co-ordination, Interoperability | • Utilities and enterprises across North America are standardizing on Service Oriented Architecture (SOA) methodologies for interoperability<br>• ESB enables the leveraging of publicly available web services to create new services<br>• The SOA technologies purchased from Oracle and used for the Enterprise Service Bus include B2B (Business to Business) application for standardized data transfer with 3rd parties, including IESO, Banks, etc.<br>• The deployment of an ESB will enable HOL to easily integrate to services provided through Public Cloud providers. |
| Economic Development | n/a |
| Environment | Reduction in point to point environment (footprint), code, and change management at individual interface layer. |

**Table 128 - Project Benefits**

## 6.4 Prioritization

### 6.4.1 Consequence of Deferral

Deferral of this project would result in HOL continuing to incur the costs and operational issues identified under “current issues”, and with a projection of approximately 30 new applications being deployed in the next 5 years, the impact of the current issues and exponential growth of point to point integrations will continue to increase.

This is a multi-year project and deferral of the project at this time would strand the current investments with no operational benefit, while at the same time having to pay the annual maintenance on the software licenses (over $110K per year).

### 6.4.2 Priority

This project is rated as a High priority project relative to the other IT projects. The execution of this project with Service Oriented Architecture (SOA), web services, and Enterprise Service Bus (ESB) will fundamentally change how applications are integrated, new services/functionality is implemented, processes are automated, and public cloud services are leveraged. This project will enable HOL to achieve its goals of reducing costs, increasing productivity, delivering new services, and providing access to information anywhere, anytime (as stated in IMIT Strategy).

## 6.5 Execution Path

### 6.5.1 Implementation Plan

The implementation plan is as follows:

- Phase 1 – Architecture planning and design
- Phase 2 – Build and deploy ESB platform, and establish the operational model
- Phase 3
    - Integrate foundational applications via ESB
    - Automate major processes through service orchestration
    - Integrate new applications

### 6.5.2 Risks to Completion and Risk Mitigation Strategies

Delay in rolling out potential to allow current practices to build more point to point integrations.

### 6.5.3 Timing Factors

Phase 1 has been completed, Phase 2 is underway in 2015 and work has begun for Phase 3 in 2015.

A factor that may affect the timing of the project completion is the availability of skilled resources to operate and manage the ESB. Vendor expertise has been identified to address and de-risk any potential deficiency/need.

### 6.5.4 Cost Factors

The total staffing effort to operate and manage the ESB once in operation and the need for external expertise to resolve operational issues have been estimated and may end up being lower or higher than the estimates.

## 6.6 Project Details and Justification

| | |
|---|---|
| **Project Name:** | Enterprise Architecture Program – Enterprise Service Bus |
| **Capital Cost:** | 2,036,416 |
| **O&M:** | n/a |
| **Start Date:** | 2014-09-26 |
| **In-Service Date:** | 2020-12-31 |
| **Investment Category:** | General Plant |
| **Main Driver:** | System Operation Efficiency and Cost Effectiveness |
| **Secondary Driver(s):** | Enabling master data management and reducing database and storage costs |
| **Customer/Load Attachment** | n/a |

**Project Scope**

The scope of the project from 2016 to 2020 will be focused on integrating applications via the Enterprise Service Bus and automating major processes using SOA service orchestration. The integration will mainly involve integrating new applications to existing applications.

**Work Plan**

The work plan for 2016 to 2020 is to continue the integration and service orchestration work begun in 2015. In particular, this will involve supporting the Field Service Management project planned to begin in 2015 and that will be leveraging SOA and service orchestration.

**Customer Impact**

- Faster response to customer enquiries will be realized through real-time access to data and automated services
- Potential future automation of Outage Communications will provide more reliable service and will enhance the level of service
- Increased reliability of external and internal services through well managed and monitored data flows and automated processes

# 7 Mobile Workforce Management

## 7.1 Project/Project Summary

Hydro Ottawa has a large mobile workforce that is responsible for a wide range of work from simple disconnect, reconnects or meter changes to the more complex and longer duration pole changes and cable replacements. To date we have been using a combination of Excel spreadsheets, in-house developed databases, and our Intergraph In-Service system for scheduling and dispatching work. This is accomplished in a decentralized model with several different groups dispatching mainly to their own resources. Although this has been relatively effective, the organization needs to invest in a Mobile Workforce Management (MWM) tool to drive productivity to the next level.

## 7.2 Project/Program Description

### 7.2.1 Current Issues

Effective mobile workforce management is critical to our ongoing corporate success, especially as it relates to Customer Service, Productivity, Operating Costs, and System Reliability. A comprehensive review of the systems currently in use for managing field service workloads confirmed that there are significant opportunities to drive improvements across many facets of our field operations.

We currently use a combination of tools to schedule and dispatch work. Medium and long term work is managed using spreadsheets which are useful, but very manual and labour intensive to manage and maintain. We also have a home grown solution called Service Manager that assists with managing the checklists and information for service connections and other work managed by the Service Desk. We are able to send service layout requests out to field staff and it includes some calendar functionality for booking Service Truck appointments. From a mobile perspective we are using the Outage Management System (OMS) as a basic dispatch system. Flat files of work orders are received from systems like Service Manager and Customer Care & Billing (CC&B). Staff from various groups then needs to access OMS to dispatch this work to internal and contract resources. There is no schedule or optimizer available in OMS to ensure that the right jobs are allocated to the right resource based on all the other work and variables to take into account for that day.

Furthermore, we do not have ready access to data and information to track, monitor, report and manage the day to day performance of field staff. Many of the tools we have reviewed have strong performance management capabilities to provide Supervisors and Managers access to timely, relevant and accurate data. Supervisors will have access to reports that will summarize activity from the prior day while allowing them to drill down into specific areas of concern quickly and easily.

Hydro Ottawa operations teams have done well with their current disparate systems, however new tools are required to drive improvements being demanded around service delivery and cost reduction/containment. The current system is resulting in tangible expenditures that could and should be avoided. The current process has some limitations that impact Hydro Ottawa's continued ability to effectively dispatch work, and generate more "on the job" time.

These limitations include:

- All jobs available to dispatch are not held in one system, complicating the job of optimizing the dispatch of work;
- Forecasting and profiling are separate from dispatching systems;
- Significant amounts of manual dispatching is required;
- Sub-optimal routing of crews against jobs;
- Significant limitations in real time control of planned work, and new work, emergent or otherwise; and
- A lack of performance management capabilities to understand current and future work dynamics.

In summary:

- HOL must focus on increasing the productivity across the organization;
- The Field Service teams are doing well managing with their current tool set;
- The current systems and processes result in less than optimal dispatching of work leading directly to latent capacity in field service teams;
- Sub-optimal routing for jobs is contributing to excess fuel costs, truck rolls, and kilometers being driven;
- Lack of a unified dispatching system and processes has resulted in a steady backlog of work potentially impacting reliability, bad debt expense, etc.;
- There is a need for improved real time analysis to support intraday decision making; and
- Performance management capabilities along with compliance on capturing key job metrics is an absolute must to allow for better decision making.

### 7.2.2 Program/Project Scope

To purchase and implement an industry leading Mobile Workforce Management tool to enhance scheduling and dispatch at Hydro Ottawa.

### 7.2.3 Main and Secondary Drivers

The main driver for this project is business operations efficiency. Workforce Management systems enable an organization to centralize all of the scheduling and dispatch functions for all field resources, improve overall visibility of workload and resource availability and ensure consistent application of scheduling policies to all types of work. With features such as schedule optimization and route planning, it improves field resource productivity, reduces mileage and overtime costs, and increases the ability to meet customer commitments. It also reduces the time spent on scheduling allowing the dispatcher to focus on handling exceptions or emergencies like trouble calls or outages.

The result is a consolidated view of both immediate and long term jobs and a vehicle to consistently make smart decisions about prioritization, crew scheduling, and fast response to emergencies and outages. Through more effective planning, scheduling and dispatch the company will ensure that the right resource, with the right skills is at the right location, with the right tools, parts and equipment to complete the work at the lowest cost while meeting customer needs.

### 7.2.4 Performance Targets and Objectives

The objective of the project is to purchase and implement an industry leading MWM tool to enhance scheduling and dispatch at Hydro Ottawa. These tools provide the ability to optimize work load versus resources in real time while balancing priorities that will enable the following:

**Improve Productivity** – Less than optimal dispatching and routing of work using Hydro Ottawa's current systems and tools is leading to latent capacity in the field service teams, and presents a real opportunity to increase daily job completion rates. Another area of opportunity is that of administration tasks, more specifically, time capture. Timesheets are completed by all field service personnel daily, and timesheets are a significant time drain when viewed over the course of a full year. Our review of the capabilities of newer systems indicated the ability to automate time capture for field service staff.

A portion of this improved productivity could be used to complete tasks currently being contracted out to third party resources including things like infrared scans and asset inspections. There will be an increase in the need for quality asset condition information to populate the new Asset Investment Planning tool that was recently implemented. We have several skilled resources that can complete these inspections with little to no training.

**Cut Operating costs –** Implementing unified dispatching in concert with route optimization capabilities typically has been shown to reduce kilometers driven and fuel consumption anywhere from 15%, to as much as 40%. In reducing kilometers driven and the related travel time, additional work can be completed within a typical daily operating window. This when combined with the afore mentioned productivity gains will have the additional benefit of having less work needed off core shifts, and is expected to result in a 10% reduction in overtime costs.

**Exploit Unfulfilled Opportunity Costs –** Most every field services discipline is maintaining a backlog of work that they are expected to deal with, on top of the ongoing daily workload. Often these backlog items are important from the perspective of avoiding future outages and certainly can have a detrimental impact on SAIFI and SAIDI if gone unattended. In the case of collections, these back logged work orders could have a negative impact on bad debt expense. Utilizing a unified dispatch technology with intelligent dispatching will ensure that these back logged work orders are scheduled and dispatched to appropriate resources based on priority, severity and resource availability. The new system will make it easier to take advantage of available time at the beginning of a shift and in between customer appointments for completing backlog items, testing, inspection, or maintenance activities to ensure they are completed in a more timely fashion.

**Increase performance against service levels and enhance customer satisfaction –** MWM tools have the capability to tailor dispatching rules to prioritize work based on a variety of factors including those represented by proximity to missing a customer appointment or service level agreement target. Meeting customer commitments and service level agreements will lead to enhanced customer satisfaction.

**Execute better decisions with Performance Management –** Even as we exploit what MWM tools have to offer there is a continuing need to analyze business trends, costs per job, and a variety of other key metrics to stay in control of the complex business of field service delivery. Several of the MWM tools provide sophisticated performance management capabilities needed to assist decision makers, while reducing the need for time spent aggregating date. These modules will also assist with the tracking and monitoring of the metrics and key performance indicators contained in the OEB's performance based Renewed Regulatory Framework.

## 7.3 Project/Program Justification

### 7.3.1 Alternatives Evaluation

#### 7.3.1.1 *Alternatives Considered*

An analysis was done to understand our current system and the requirements of any possible replacement. A significant amount of research was done to both identify and complete a high level evaluation of the wide array of solutions and systems that are available on the market. We focussed our initial efforts on a review of the capabilities of solutions offered by the following vendors: IFS360, ClickSoft, Viryanet, and Oracle. This initial assessment included product demos and discussions with other utilities across the industry to better understand the capabilities and benefits associated with implementing these types of tools.

The status quo was considered as an option. Although we do have some electronic dispatching of work orders, we do not have an "intelligent" schedule with supporting algorithms to optimize dispatching, trip routing, etc. Because the tasks and work orders reside in several different systems, it can be difficult for supervisors and dispatchers to make the "best" decisions on resource utilization, or to provide additional work to crews on short notice should unexpected capacity be made available. Furthermore, we currently do not provide Supervisors or Managers with timely, accurate data that they can use to measure, monitor and manage the performance of their staff.

Based on the evaluation of the options and review of the quantitative and qualitative benefits, the decision was made to move ahead with the initiative.

#### 7.3.1.2 *Evaluation Criteria*

After our initial assessment, Hydro Ottawa reduced the list of potential solutions to two vendors, ClickSoft and Oracle, based on their consistent ranking in the top, right quadrant of Gartner's system assessments. Hydro Ottawa then developed a set of business and technical requirements to assist in the evaluation and selection of the options. The business requirements looked specifically at the actual functionality and options of the systems to ensure that it would meet the majority of our documented needs. The technical requirements were focussed on the nuts and bolts of the systems including how they would fit into our current architecture and hardware arrays. Overall cost of the solution was also a key consideration in the decision making process.

#### 7.3.1.3 *Preferred Alternative*

Based on the evaluation, both of the systems met the vast majority of the business requirements. The Oracle solution scored better in the technical requirements section largely due to the fact that we have many Oracle products and databases already installed which should make integration into our current systems more straight forward. The overall cost for the Oracle solution also benefited from our existing architecture.

Based on the results of the evaluation the decision was made to select the Oracle Mobile Workforce Management system.

### 7.3.2 Project/Program Timing & Expenditure

The capital cost for implementation of this project is $1,950k. There will be incremental operating costs that include an additional resource in IT to support the new application as well as an annual maintenance agreement for the vendor that covers system patches, updates and ongoing technical support. The costs of an IT resource is approximately $120k and the annual maintenance cost is approximately $150k.

| Historical ($M) | | | | | | Future ($M) | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 |
| - | - | - | - | - | 1.95 | - | - | - | - | - |

**Table 129 - Project Expenditures**

### 7.3.3 Benefits

A summary of the financial benefits is included below:

- As a result of increased productivity we anticipate reducing headcount through attrition by two resources over the next two years, a savings of approximately $180k annually.
- We also anticipate a 15% increase in productivity from resources on the service trucks by better utilizing their idle time. This amounts to a benefit of approximately $140k annually.
- We also anticipate a 10% savings in OT due to increased productivity. This translates into approximately $55k annually
- We will reduce our reliance on external parties to assist with collections activities and anticipate annual savings of approximately $50k
- We will reduce our reliance on external parties to assist with certain asset inspections as well by better leveraging the capacity of our skilled resources on a daily basis. By using internal staff to complete infrared scans, manhole inspections and other asset testing we anticipate avoided costs of approximately $300k annually.
- We anticipate a 15% savings in fuel costs as a result of optimized routing or $42k annually

The combination of increased productivity, reduced operating costs, and exploiting opportunity costs offset by increased operating costs for maintenance agreements and IT resources results in approximately $2,920k in savings over 6 years with a payback period of 48 months.

The project will also drive many qualitative or unquantified benefits:

- Enhanced performance in meeting customer appointments and service level agreements
- Greater access for Call Centre resources to book customer appointments at the time the accept the customer call
- Real time information regarding field work status available to Call Centre resources for responding to customer inquiries
- Potential positive impact on bad debt expense with improvements in collection field activities
- Increased capacity to complete additional asset inspections required to populate the new Asset Investment Tool being implemented

## 7.4 Prioritization

### 7.4.1 Consequence of Deferral

A decision to defer the project would lead to a delay in achieving the quantitative and qualitative benefits defined in the business case.

### 7.4.2 Priority

This project has a high priority due to the quantitative and qualitative benefits. The solution will have a positive impact on business operations efficiency, customer satisfaction and system reliability.

## 7.5 Execution Path

### 7.5.1 Implementation Plan

The project will be implemented in phases as follows:

**Phase 1**

- Initial installation and configuration
- Integration with CC&B
- Groups: Residential Connections, Damage Prevention and Collections
- Users/Work Orders: 13 staff; 80,000 work orders in 2014

**Phase 2**

- Integration with Service Manager
- Groups: Metering, Service Layout, Plant Inspections, Forestry
- Users/Work Orders: 34 staff; 18,976 work orders in 2014

**Phase 3**

- Integration with OMS
- Groups: 24x7, Reliability, Service Truck, Construction
- Users/Work Orders: 125 staff; 10,762 work orders in 2014

### 7.5.2 Risks to Completion and Risk Mitigation Strategies

The major risks that will be closely monitored during the project are:

| Risk Description | Impact Statement (Budget, Schedule, Scope, Quality) | Mitigation Strategy |
|---|---|---|
| There is a risk that there will be resistance to the adoption of a "drip feed" method of dispatch | If significant resistance is encountered there could be a delay realizing the benefits expected from the new system. | Consult Field Technicians throughout the design and development of the application to ensure solution meets basic user needs.<br><br>Proactively communicate to Field Technicians via Managers and Supervisors.<br><br>Provide Supervisors sufficient reporting |

| | | |
|---|---|---|
| | | capabilities to speak to staff concerns. |
| Internal HOL staff may not have the correct skill set to configure and test the new tool without support from the supplier. | An over reliance on internal staff may result in delays to the completion of the project. | Ensure the professional services contract includes sufficient assistance from the supplier to ensure a successful implementation.<br><br>Add contingency to the project budget to cover an extension of Oracle Professional Service time. |
| CC&B resource constraint | The CC&B team who will be participating in the workshops and configuring the system will not have any resources available until the beginning of April | Delay configuration workshops until this resource can join. |

**Table 130 - Risks and Mitigation Strategy**

### 7.5.3 Timing Factors

We do not anticipate many constraints from a timing perspective. We are sensitive to limiting the amount of configuration and testing completed during the busy construction season due to availability of resources.

### 7.5.4 Cost Factors

No material variances are expected in the execution of the project.

## 7.6 Project Details and Justification

| | |
|---|---|
| **Project Name:** | Mobile Workforce Management Software |
| **Capital Cost:** | 1,950,000 |
| **O&M:** | $150,000 (annual maintenance agreement) |
| **Start Date:** | February 2015 |
| **In-Service Date:** | November 2015 |
| **Investment Category:** | General Plant |
| **Main Driver:** | Business Operations Efficiency |
| **Secondary Driver(s):** | Customer Satisfaction<br>System Reliability |
| **Customer/Load Attachment** | N/A |
| **Project Scope** | |
| The scope of this project is to select and implement a mobile workforce management system for short and long cycle work. | |

| **Customer Impact** | |
| • Enhanced customer satisfaction by meeting service levels and appointments<br>• Enhanced reliability by eliminating backlog of work orders and ensuring priority work is completed in a timely fashion<br>• Real time view into field work status by call centre staff should lead to increased first call resolution for related customer inquiries | |

# 2014 Annual Planning Report

Executive Summary

# Contents

# The Plan

The Asset Management Plan covers a period of twenty years from the fiscal year beginning January 2014 until the year ending December 2033.

The objectives of the plan are to report on the performance of the distribution system and to identify the risks and challenges that will adversely affect the ability to deliver on Hydro Ottawa Limited's (HOL) strategic objectives; Financial Strength, Customer Value, Organizational Effectiveness, and Corporate Citizenship.

Addressed in the plan are the financial, technical, and management elements needed for making sound innovative or best practice asset management decisions.

A fundamental requirement for the successful development and management of a distribution system is effective system planning. The plan is the documented output of HOL distribution system planning and provides short and long range planning direction for distribution system development, reliability improvements, asset inspection and replacement programs, as well as increases to overall system capacity.

The Plan has been broken down into four major categories of study: Capacity, Reliability, Assets and Maintenance.

HOL's system capacity is lagging behind the load growth – currently 15% of substations are above their specified planning rating. Over the next 20 years an investment of approximately $230 Million will be necessary to ensure that sufficient and reliable supply is maintained throughout the city to support the 1050 MVA of forecasted load growth over this period.

Hydro Ottawa's reliability performance in 2013 did not meet our expected targets. Interruption categories such as defective equipment and adverse weather, or storm related have been progressively trending worse and have exceeded the previous 3-year averages. Improvement will be needed in asset management processes in order to prioritize end of life asset replacements. Maintenance, inspection and testing of existing assets will continue to be essential to ensure equipment operates as expected and identify failures before they occur. In addition, consideration of new ways of operating to reduce system susceptibility to storm damage and foreign interference is vital.

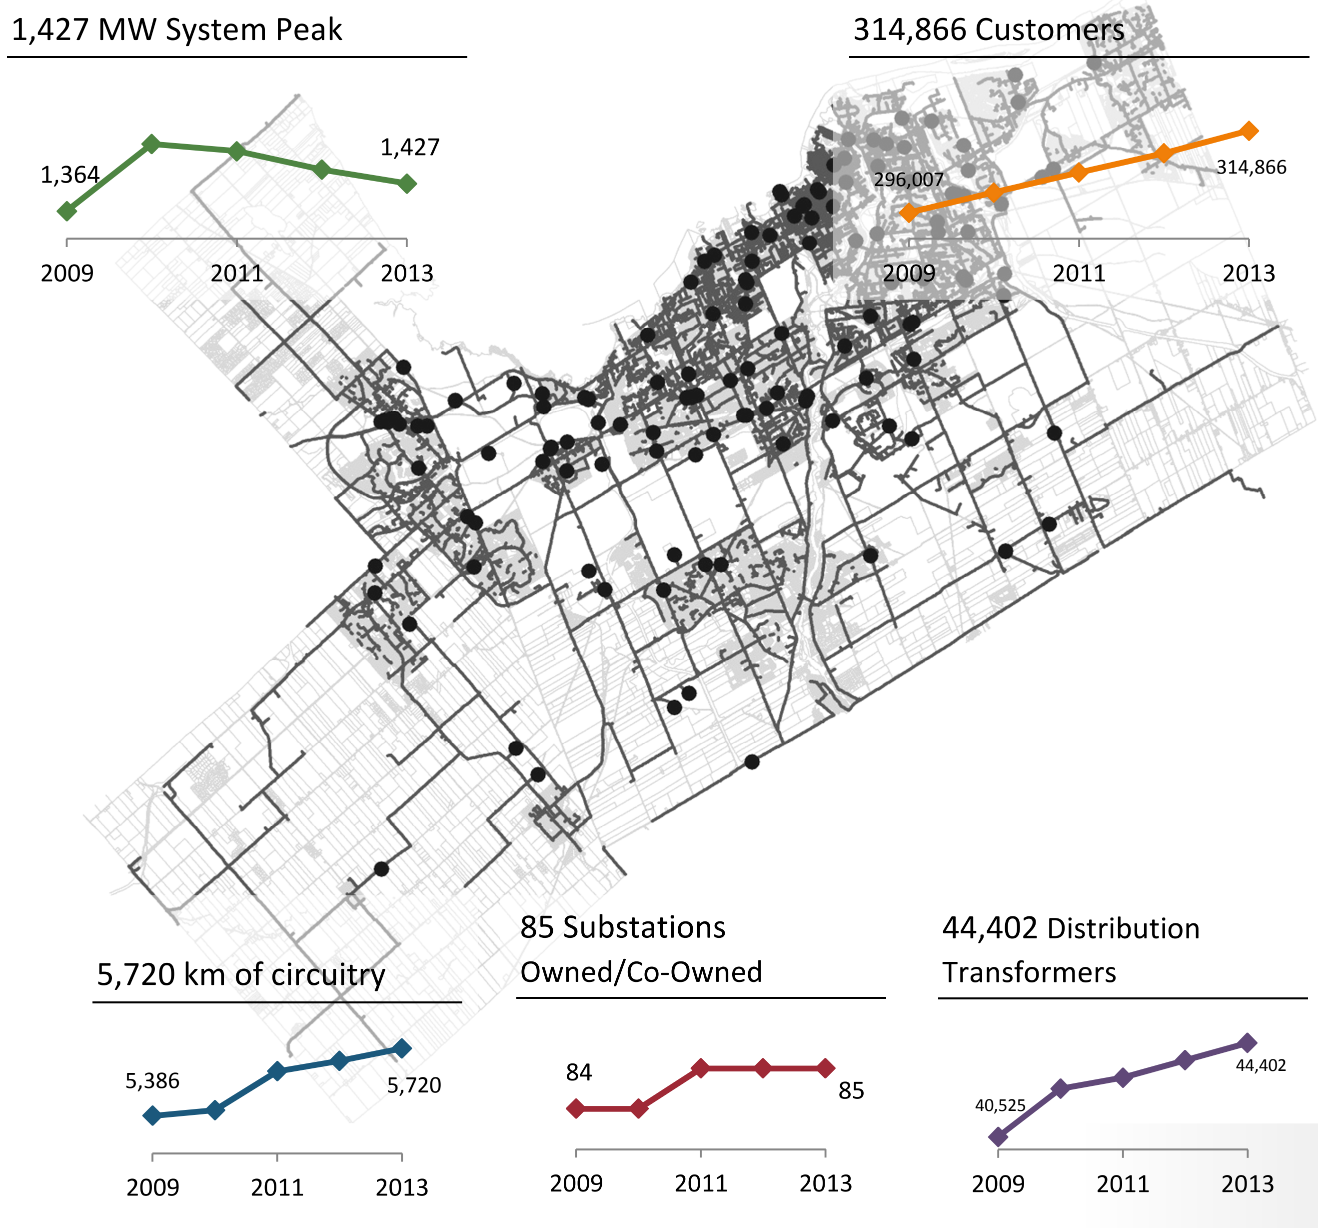
Large segments of the system were constructed in the 1960s, 70s and 80s – as most assets have a lifespan on the order of 50 years, a considerable proportion of the system is approaching or has exceeded the anticipated end-of-life. System wide forecasts indicate that at the current investment levels, asset failure rates will continue to rise having a direct impact on service reliability and labour resources. At current investment levels it is anticipated that labour associated with distribution system plant failure alone will increase to 296% of current levels by 2033, equivalent to 39% of the current labour resources.

The plan identifies projects and resource requirements to allow HOL to keep pace with the City's growth and aging infrastructure while maintaining high standards of system reliability and operability.

HydroOttawa

# Performance & Statistics

# The System at a Glance…



Although Hydro Ottawa's service area has remained constant, the distribution system continues to expand and evolve. In 2013, Kilborn UP was decommissioned after completing a system voltage conversion in the area. As well, a new substation in the south end of Kanata, Terry Fox MTS, was energized.

System Load has remained relatively constant over the last 5 years. The system wide actual summer peak has grown at an average rate of 1.2% annually since 2009, while winter actual peak has increased at an average annual rate of 0.3% over the same period.

### TABLE 1 - SYSTEM SUPPLY STATISTICS

| | 2009 | 2010 | 2011 | 2012 | 2013 |
|---|---|---|---|---|---|
| Service Area ($km^2$) | 1,104 | 1,104 | 1,104 | 1,104 | 1,104 |
| Total Metered Customers | 296,007 | 300,664 | 305,059 | 309,543 | 314,866 |
| Total Un-Metered Supply Points | 55,791 | 57,619 | 58,281 | 59,019 | 58,973 |
| Total # of Substations Used by HOL | 92 | 92 | 93 | 93 | 93 |
| HOL Owned/Co-owned | 84[1] | 84 | 85[2] | 85[3] | 85[4] |
| Used & not owned/co-owned | 8 | 8 | 8 | 8 | 8 |

Notes:

[1, 5] Cyrville MTS Energized (2 transmission transformers)

[2,6] Janet King DS 28kV Energized (1 sub-transmission transformer)

[3, 7] Ellwood MTS Energized (2 transmission transformers) & Uplands DS Decommissioned (1 transmission transformer)

[4,8,9] Kilborn UP Decommissioned (2 sub-transmission transformers) & Terry Fox MTS Energized (2 transmission transformers)

### TABLE 2 - SYSTEM ASSET STATISTICS

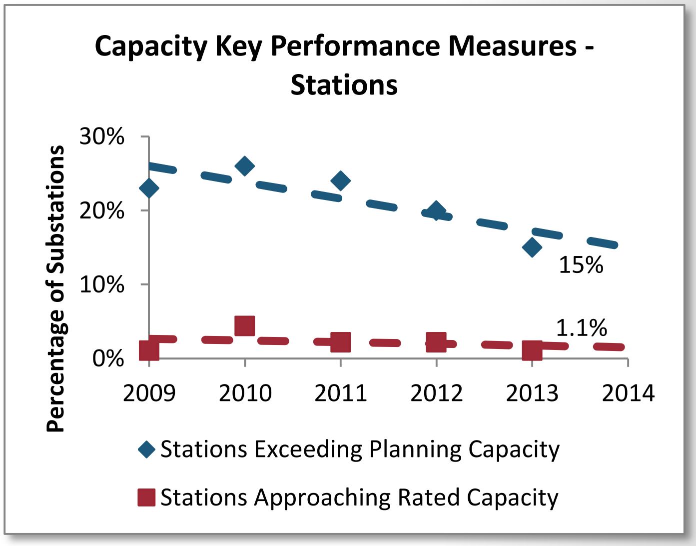
| | 2009 | 2010 | 2011 | 2012 | 2013 |
|---|---|---|---|---|---|
| Total Circuit Length (km) | 5,386 | 5,414 | 5,606 | 5,658 | 5,720 |
| O/H Circuit | 2,709 | 2,693 | 2,916 | 2,923 | 2,926 |
| U/G Circuit | 2,677 | 2,721 | 2,690 | 2,735 | 2,794 |
| Total Number of Poles | 48,699 | 48,574 | 48,380 | 48,298 | 47,978 |
| Distribution Transformers | 40,525 | 42,516 | 42,970 | 43,689 | 44,402 |
| O/H | 17,393 | 17,228 | 16,801 | 16,617 | 16,424 |
| U/G & Vaults | 17,475 | 17,228 | 18,376 | 18,785 | 19,189 |
| Stores + Missing Serial Number | 5,657 | 7,470 | 7,793 | 8,287 | 8,789 |
| Substation Transformers | 166 | 170 | 170 | 167 | 169 |
| Transmission | 25 | 27 | 27 | 26 | 28 |
| Sub-Transmission | 141 | 143 | 143 | 141 | 141 |
| Total Number of U/G chambers | 3,006 | 3,082 | 3,268 | 3,167 | 3,399 |

# System Capacity

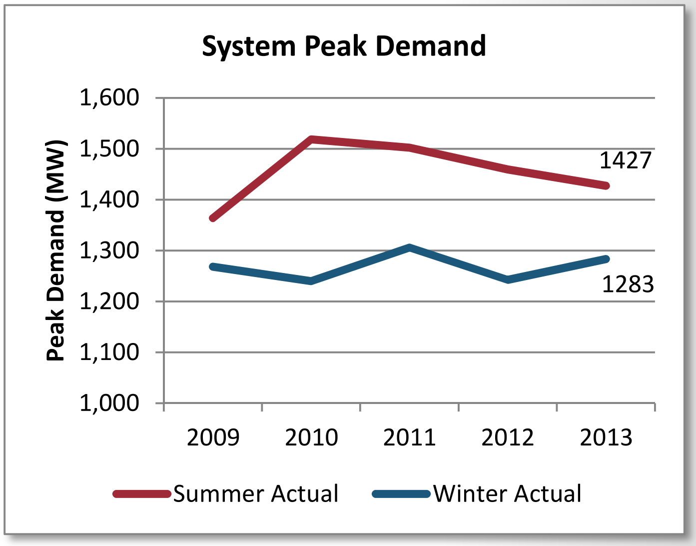
System capacity is currently trailing load growth in the city; this has resulted in 15% of the stations which HOL owns operating above their planning rating. This planning rating is set to ensure adequate capacity is reserved for reliable operation during system contingency.

In 2013, only one station was loaded above it's equipment ratings at system peak: Richmond North DS.

*Fifteen Percent of the stations which HOL owns are operating above their planning rating.*



Work to increase capacity at Richmond South DS is scheduled to begin in 2015 and will allow for better load balancing between Richmond North and South to alleviate the overload condition. There is a positive trend being shown in the data: as capacity projects progress the system is seeing less stress since 2009.



Losses remained within the acceptable range of between 2% to 4%. Hydro Ottawa continues to work to reduce system losses through the updating and replacement of equipment, as well as system planning.

Feeders exceeding their planning ratings are within target, but careful review and planning is being undertaken to ensure adequate backup is maintained to allow for secure and reliable power for Hydro Ottawa Limited's Customers.

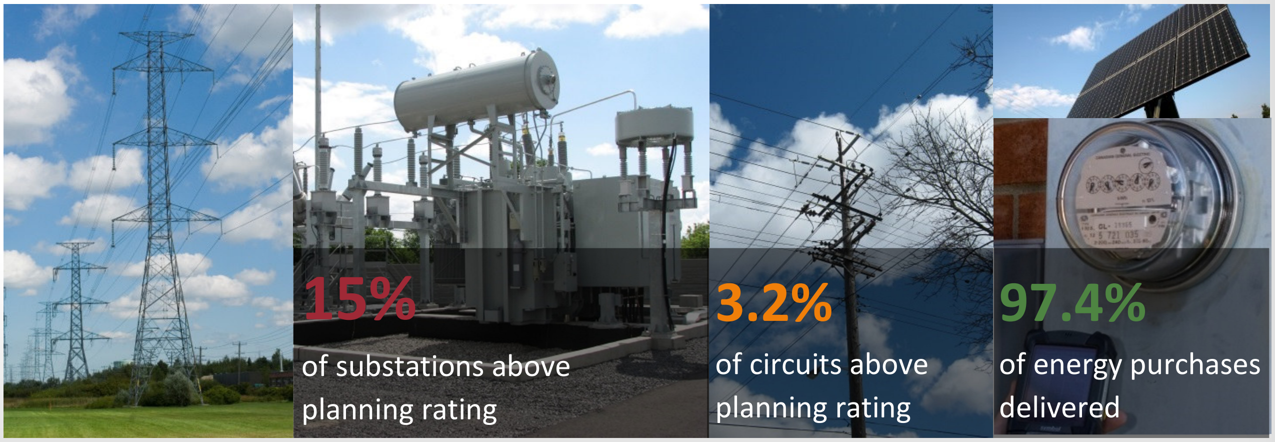


**TABLE 3 - CAPACITY KEY PERFORMANCE MEASURES**

| Measure | Target | 2009 | 2010 | 2011 | 2012 | 2013 |
|---|---|---|---|---|---|---|
| **Stations Exceeding Planning Capacity** | ≤ 5% | 23% (21) | 26% (23) | 24% (22) | 20% (18) | 15% (14) |
| **Feeders Exceeding Planning Capacity** | ≤ 10% | - | 3.5% (28) | 3.4% (27) | 3.3% (26) | 3.2% (23) |
| **Stations Approaching Rated Capacity** | zero | 1.1% (1) | 4.4% (4) | 2.2% (2) | 2.2% (2) | 1.1% (1) |
| **Feeders Approaching Rated Capacity** | zero | - | 0.4% (3) | 0.5% (4) | 0.5% (4) | 0.3% (2) |
| **System losses** | ≤ 4% | 2.88% | 3.12% | 3.13% | 3.60% | 2.63% |

**TABLE 4 - SYSTEM DEMAND & ENERGY STATISTICS**

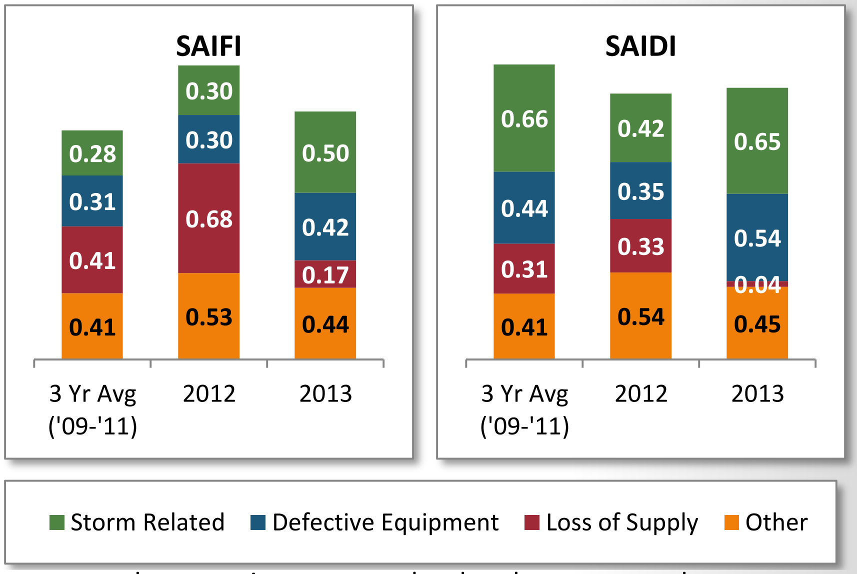
| | 2009 | 2010 | 2011 | 2012 | 2013 |
|---|---|---|---|---|---|
| **Peak Load-Summer (MW)** | 1,364 | 1,518 | 1,502 | 1,459 | 1,427 |
| **Peak Load-Winter (MW)** | 1,268 | 1,239 | 1,306 | 1,242 | 1,283 |
| **Total Energy Supplied to HOL Customers (Sold, GWh)** | 7,560 | 7,595 | 7,608 | 7,570 | 7,519 |
| **Total Energy Purchased from Bulk System (Purchased, GWh)** | 7,785 | 7,840 | 7,851 | 7,856 | 7,722 |
| **Capacity Utilization** | 70% | 76% | 75% | 73% | 69% |
| **Load Factor** | 63% | 57% | 58% | 59% | 60% |
| **Total Distributed Generation Connected (MW)** | 29 | 30 | 31 | 55 | 58 |

# System Reliability

Hydro Ottawa's reliability performance in 2013 did not meet our expected targets. Interruption categories such as defective equipment and adverse weather, or storm related have been progressively trending worse and have exceeded the previous 3-year averages.

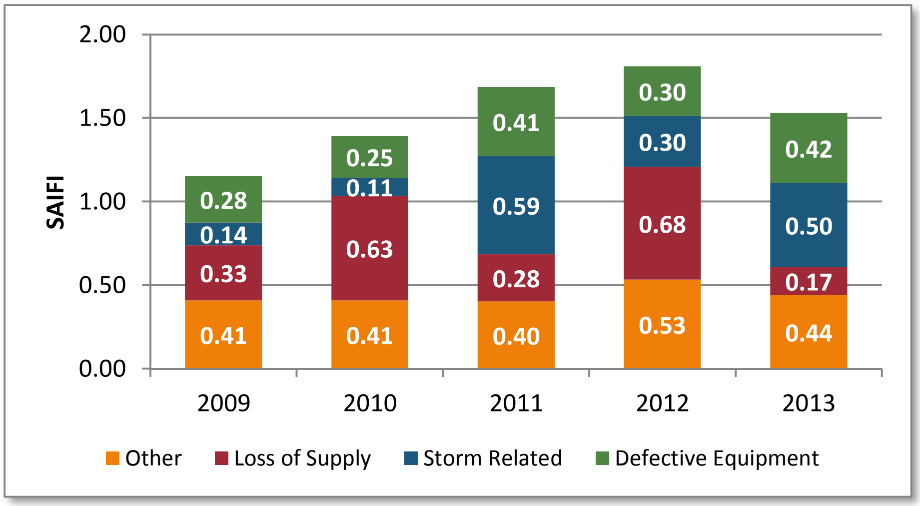
*In 2013, on average, a customer experienced 1.5 interruptions with an average duration of 1.7 hours.*

Overall, since 2009 system SAIFI has been steadily increasing, due to the increase of storms with severe wind and rain as well as an increase in equipment failures. Moving forward, it is critical that investment levels for equipment replacement increase in order to storm harden the system and to get ahead of the curve of aging equipment.



While the two primary causes of system interruption in 2012, Adverse Weather and Loss of Supply, are outside of direct HOL control, the ability to respond to such challenges is not. As a result of the experiences in 2011 and 2012 Hydro Ottawa is planning and has undertaken initiatives to improve future performance. These include updates to the emergency response organization and procedures, review of vegetation management planning, as well as ongoing commitment to asset replacement and automation; to storm harden the system, reduce restoration time and customer impact.

**HISTORICAL SAIFI BY PRIMARY CAUSE**



**HISTORICAL SAIDI BY PRIMARY CAUSE**

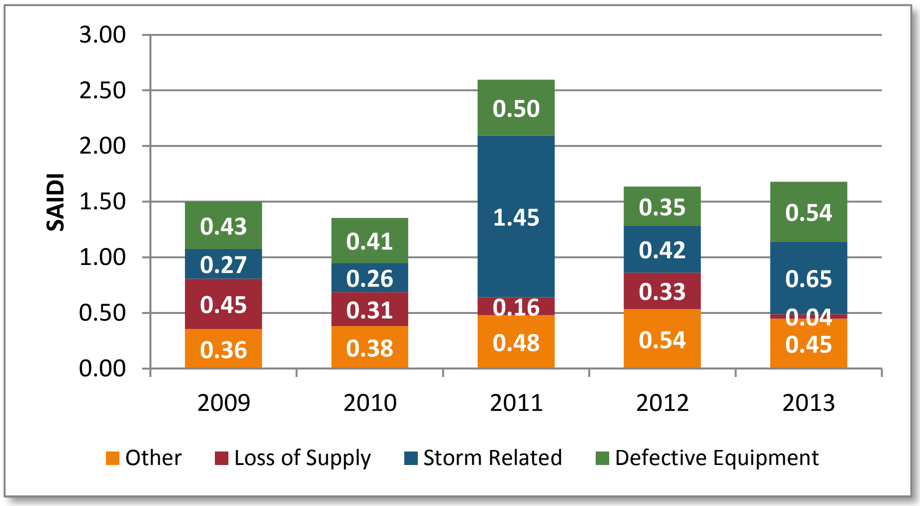


**TABLE 5 - SYSTEM RELIABILITY PERFORMANCE**

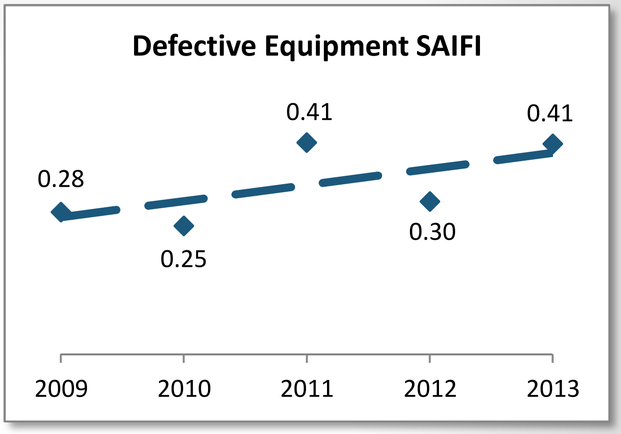
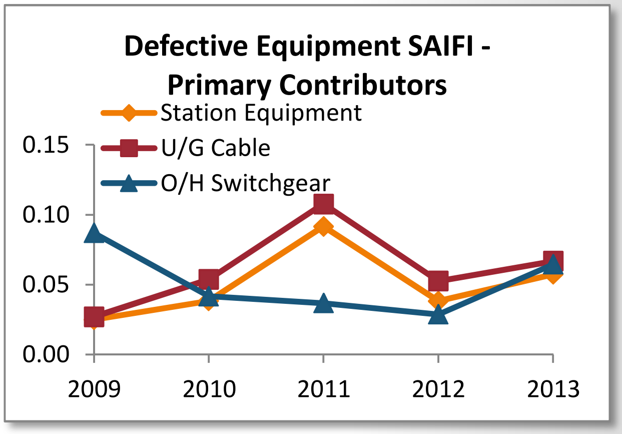
| | ERM Target | 2009 | 2010 | 2011 | 2012 | 2013 |
|---|---|---|---|---|---|---|
| 3 Yr Avg. SAIFI including LoS | < 1 | 1.13 | 1.19 | 1.41 | 1.63 | 1.67 |
| 3 Yr Avg. SAIFI excluding LoS | N/A | 0.72 | 0.78 | 1 | 1.10 | 1.30 |
| 3 Yr Avg. SAIDI including LoS | < 1.5 | 1.29 | 1.28 | 1.82 | 1.86 | 1.96 |
| 3 Yr Avg. SAIDI excluding LoS | N/A | 0.98 | 1.01 | 1.52 | 1.60 | 1.79 |
| 3 Yr Avg. CAIDI | < 1.5 | 1.15 | 1.08 | 1.29 | 1.14 | 1.17 |
| $FEMI_{10}$ excluding LoS & Unplanned Outages | ≤ 12 | 9 | 7 | 12 | 13 | 13 |

# System Assets

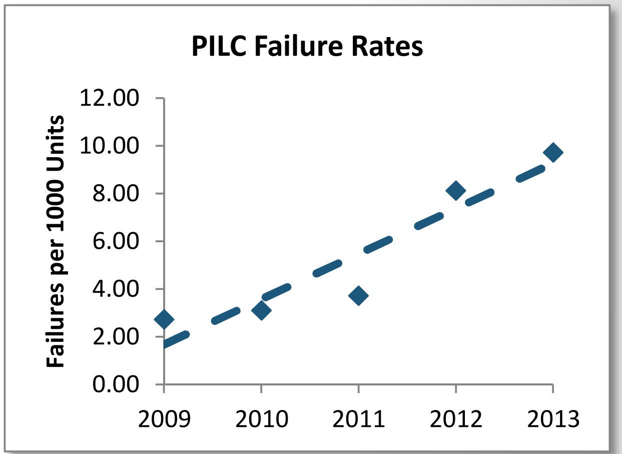
Hydro Ottawa's Assets are the physical objects which transform, monitor and ultimately transfer electricity to the customer. This equipment not only fulfills the essential role of distributing electricity, but also acts as the barrier and protection that allows this potentially hazardous product to be transported through public spaces safely and reliably.

*The frequency of customer interruptions due to defective equipment has increased by 48% since 2009.*





Over the last 5 years, there has been an increasing trend in customer interruptions due to defective equipment. The main contributors to this trend in 2013 were O/H Switchgear, U/G Cable and Station Equipment. Increased or more targeted asset replacement is required to manage these assets such that they do not adversely impact the system. At the current investment rate, defective equipment SAIFI is projected to maintain an upward trend.



Asset failure rates provide indication of the adequacy of proactive replacement programs to manage asset failures. Failures to distribution Poles, PILC cable and both U/G and O/H transformers are indicating an increasing trend, with PILC cable showing the steepest increase. These increases signify the need to ramp-up replacement rates.

#### Table 6 – Asset Failures

| | 2009 | 2010 | 2011 | 2012 | 2013 |
|---|---|---|---|---|---|
| **Poles** | 46 | 29 | 74 | 41 | 76 |
| **Distribution Transformers (UG)** | 63 | 51 | 80 | 116 | 96 |
| **Distribution Transformers (OH)** | 49 | 52 | 71 | 84 | 61 |
| **U/G Cable – PILC** | 975 | 1110 | 1332 | 2912 | 3487 |
| **U/G Cable – XLPE** | 485 | 408 | 373 | 97 | 191 |
| **Station Transformers** | 5 | 0 | 2 | 0 | 6 |

*Note that a failed PILC cable requires repair from device to device accounting for the large number of meters replaced.

#### Table 7 - Defective Equipment Contribution to System SAIFI

#### (customer interruptions per 100 customers served)

| | Target | 2009 | 2010 | 2011 | 2012 | 2013 |
|---|---|---|---|---|---|---|
| **U/G Cable - Polymer** | TBD | 2 | 5 | 10 | 4 | 2 |
| **Insulator** | TBD | 3 | 2 | 7 | 0.3 | 0.1 |

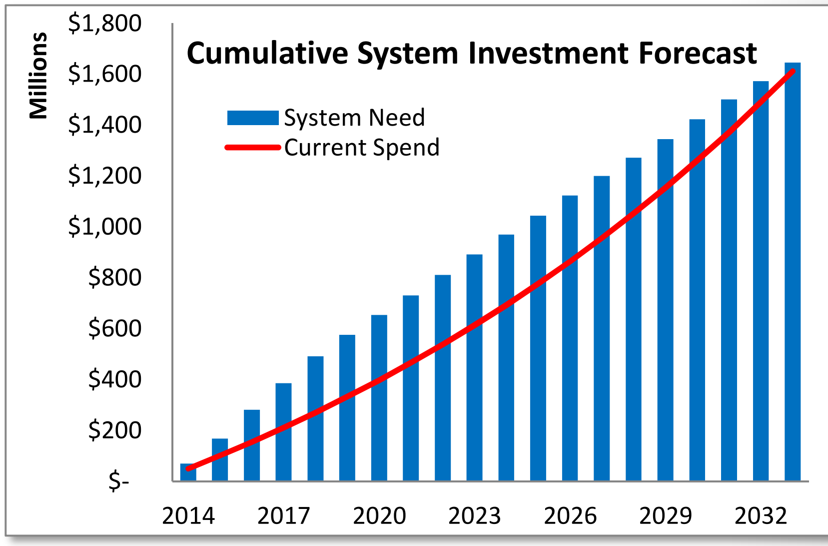
| **Total** | **TBD** | **28** | **25** | **41** | **30** | **32** |

# Outlook

# System Outlook

The goal of the Annual Planning Report is to identify the system needs. System needs are based on the work required to manage asset failures, system capacity and system operability – in a manner which will maintain and improve worker and public safety and system reliability over the next 20 years and beyond.



System forecasts indicate that the annual system investment is currently lagging the need. This is reflected in system performance measures – 15% of substations are above their planning rating and defective equipment customer interruption has risen steadily over the last 5 years.

Annual system investments increases of 5% are needed until 2033 to meet the cumulative system needs. Without increased investment, it is expected that asset failures will continue to rise – not only impacting system reliability, but also having a significant impact on labour resources. It is estimated that at the current rate by 2033, 39% of available labour hours will be spent on distribution asset failure repairs.

*Annual system investments increases of 5% are needed until 2033 to meet the cumulative system needs.*

Currently, system capacity is lagging load growth in the city, the plan has identified the need to upgrade 13 existing substations, build 2 new substations and invest in 3 transmission upgrades over the next 10 years. If current investment levels are maintained, these required capacity investments may have to be deferred beyond the need date affecting system operability and ultimately system reliability. Furthermore, these required investments may necessitate further deferral of asset replacements.

While the identified increase in funding may not be immediately achievable, progress towards this goal is essential in maintaining system performance.

# Capacity

Hydro Ottawa's system capacity is lagging behind the load growth – currently 15% of substations are above their specified planning rating. Over the next 20 years ongoing and significant investment will be necessary to ensure that sufficient and reliable supply is maintained throughout the city to support the MVA of forecasted load growth over this period.

Overall, the city of Ottawa is seeing continued growth, primarily focused in four regions: the downtown core, Nepean & Riverside South, South Kanata & Stittsville and Orleans. This growth is being seen through the development of new mixed retail/residential communities as well as intensification of existing communities and the Light Rail Transit developments. Moving forward, significant investment in capacity for the system, at both the station and distribution level, will be required to catch up to and maintain pace with the demand. The sidebar indicates the required station capacity investments over the next 20 years. In addition, there are a number of required distribution expansions which will be required to bring power from the substations to the customer site.

*1050 MVA of load growth is forecasted over the next 20 years – 66% of the current summer peak demand.*

There are several upgrades of transmission interties within the city which will be necessary over the next 20 years to maintain adequate and reliable supply from the bulk system. Hydro Ottawa is currently involved in a joint planning study with Hydro One Networks Inc. (HONI), the Independent Electricity System Operator (IESO) and the Ontario Power Authority (OPA) evaluating the transmission capacity and infrastructure requirements in the Ottawa region. Preliminary findings indicate required upgrades to the transmission system in all four regions of the city: west to Terry Fox MTS, south to Fallowfield DS or a new station, east to supply a new HONI station, Orleans TS, and to the downtown core to support load growth across the central 13kV substations.

**2014**
- Hinchey TH - 57 MVA
- Limebank MS - 40 MVA
- Startop MS - 5 MVA
- Terry Fox MTS - 100 MVA
- Borden Farm DS - 8 MVA
- Orleans TS (HONI) - 16 MVA

**2016**
- Lisgar- 53 MVA
- Leitrim MS - 5 MVA
- Richmond South DS - 67 MVA
- Overbrook TO - 55.6 MVA

**2017**
- Merivale MS - 12 MVA

**2018**
- Uplands DS - 40 MVA
- Bayshore T1- 5 MVA

**2019**
- King Edward TK - 56 MVA
- Bridlewood MS - 50 MVA
- New South 28 kV - 100 MVA

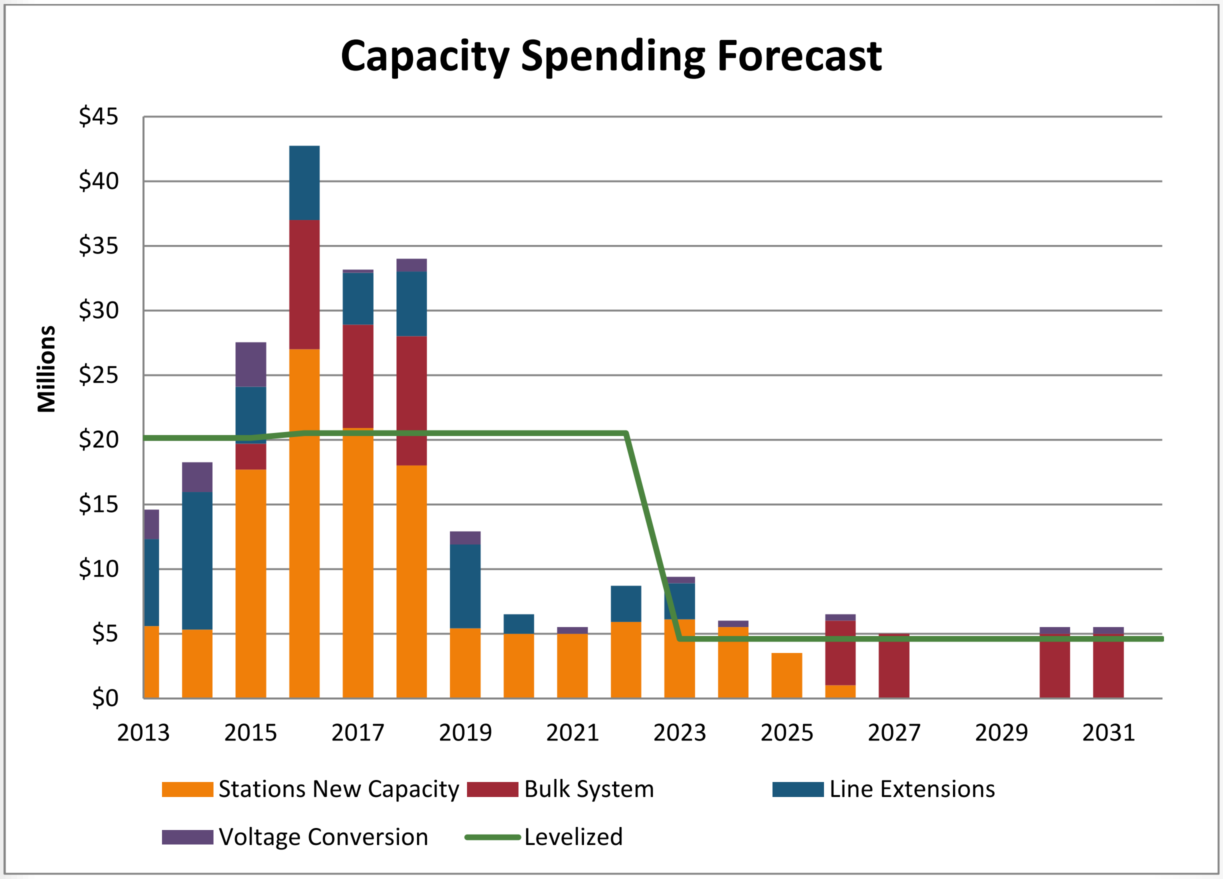
**2021**
- Limebank MS - 46 MVA
- Bells Corners DS - 4 MVA

**2022**
- Marchwood MS - 33 MVA

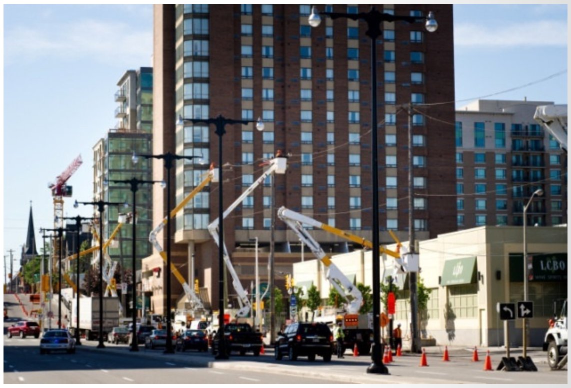
**2024**
- Russell TB - 67 MVA

**2026**
- QCH DS - 4 MVA

Failure to meet the capacity milestones has the potential to result in increased outage duration as a result of the operational challenges created by inadequate supply and operability. In addition, such capacity deficits may cause accelerated equipment deterioration due to overloading at system peak.



# Assets



Large segments of Hydro Ottawa's system were constructed in the 1960s, 70s and 80s – as most assets have a lifespan on the order of 50 years, a considerable proportion of the system is approaching or has exceeded the anticipated end-of-life. The increased potential of failure posed by these aging assets will, without intervention, impact the organization's ability to guard worker and public safety, maintain system reliability and protect organizational strength in the future.

The current recommendation for the annual sustainment budget to replace equipment and manage failures is to be increased to $72 million in the next 10 years – roughly 4 times the current investment level.

*Distribution plant failure will account for 36% of available labour-hours, by 2032, if the current annual replacement levels are not increased.*

The financial impacts of the proposed investment increases are significant, yet, so too are the risks of simply maintaining the status quo. System wide forecasts indicate that at the current investment levels, asset failure rates will continue to rise having a direct impact on service reliability and labour resources. At current investment levels it is anticipated that Plant Failure labour associated with the distribution system alone will increase to 296% of current levels by 2033, equivalent to 39% of the current labour resources. This increase in labour will impact the ability to complete planned work. The increase in failed equipment will also result in a 54% increase in Defective Equipment SAIFI by 2032. Furthermore, the elevated density of assets in poor condition will increase the potential for unrecoverable events in the case of high climatic stress (i.e. heat waves or severe storms), significantly impacting system reliability and corporate image. The deferral of these increases will lead to a growing annual burden while achieving the same result.

While the identified increase in funding may not be immediately achievable, progress towards this goal is essential in maintaining system performance.

# Reliability

Hydro Ottawa's reliability performance in 2013 did not meet our expected targets.  Interruption categories such as defective equipment and adverse weather, or storm related have been progressively trending worse and have exceeded the previous 3-year averages. Improvement will be needed in asset management processes in order to prioritize end of life asset replacements.  Maintenance, inspection and testing of existing assets will continue to be essential to ensure equipment operates as expected and identify failures before they occur.  In addition, consideration of new ways of operating to reduce system susceptibility to storm damage and foreign interference is vital.

Fundamental in Hydro Ottawa's approach to system reliability is the implementation of grid technologies. Ongoing targeted installation of automated devices is planned for the foreseeable future to improve system reliability and operation. Currently, targeted programs are the East 44kV automation, which will deploy automatic restoration to this sub-transmission loop that supplies 3% of Hydro Ottawa's customers. In addition, automation plans are being deployed in the quickly growing South Nepean/Barrhaven area, as well as targeted annual installation to address the Worst Performing Feeders. Continued investment in the communication infrastructure will be essential to support current automation plans while maintaining the flexibility to integrate the technologies of tomorrow.

Ottawa

# INFORMATION TECHNOLOGY STRATEGY

Hydro Ottawa Limited's Information Technology Strategy can be found in Attachment B-1(E).

# 2015-2020 IM&IT Strategy

## TABLE OF CONTENTS

# EXECUTIVE SUMMARY

The Hydro Ottawa IM&IT Strategy for the period 2015-2020 is a foundational component and key enabler of the corporate Strategic Direction. Hydro Ottawa's continuing IM&IT vision is that information is accessible, when and where it is needed; is managed as a corporate asset; is reliable, accurate, and secure. "Accessing Anything, Anytime, Anywhere" remains the core mission of the IM&IT Strategy.

To position HO for "Accessing Anything, Anytime, Anywhere", key change strategies are proposed in the IM&IT domains of Business Solutions, Enterprise Architecture, Information Management, IT Security, and Infrastructure.

Consultations with HO's Divisions provide business requirements for new applications and for upgrades and additional functionality for existing applications. The effectiveness of the current Enterprise Resource Plan (ERP) solution in meeting HO's evolving business needs will be considered with a view to potential upgrade or replacement. The Customer Care & Billing (CC&B) system will be augmented with additional functionality. Legacy applications will be rationalized to simplify ongoing support and maintenance requirements. Contracts review will apply continued diligence on maintenance and support services in seeking most cost-effective maintenance programs as well as to identify areas where consolidation of licenses and services will reduce technology overhead.

The accelerating rate of technological change means that the speed of delivery must increase. The IT organization must become agile in its ability to respond and service the business constituent. Business Intelligence tools will be investigated where they can leverage existing data points to increase customer understanding, utilization rates and potential energy savings. The proposed Services Oriented Architecture (SOA) is one strategy that could enhance HO's agility to respond and adapt to the changing business requirements. Investigating and leveraging Software as a Solution (SaaS), Infrastructure as a Service (IaaS) and Platform as a Service (PaaS) will, under the right conditions, successfully offset multiple infrastructure management and provisioning burdens, both one-time and reoccurring. Processes for delivery need to be revamped and where possible, map to a more agile, waterfall methodology.

The facility relocation will need to be considered as a requirement for a new LEED Certified[1] Data Centre emerges. As fit-up is required, it will need to take advantage of new generation of technologies, including network and database appliances, wireless communications, etc. Overall the technology footprint will be reduced and the support model simplified with fewer devices installed, and more advanced composite technologies requiring less configuration effort. Mobile computing capabilities will be leveraged.

IT Security will continue to be proactive in protecting HO's IM and IT assets and environments against attack from the ever-changing threat landscape.

In summary, the following IM&IT strategies will help to position HO to fulfil its corporate strategic objectives and deliver value across the entire customer experience, and the enterprise IM&IT vision of "Accessing Anything, Anytime, Anywhere":

- Cloud computing: Software as a Service[2] (SaaS)
- Security enhancement tools: continuous diagnostic monitoring, digital forensics
- Mobile workforce technologies and solutions
- Enterprise Resource Planning (ERP)
- Virtualization: servers, desktop, storage, applications, data centre
- Legacy applications modernization / renovation
- Business Intelligence (BI), Business Analytics (BA) applications, Big Data
- Disaster Recovery / Business Continuity
- Identity and access management,
- Networking: unified voice and data communications,
- Enhanced customer portals that deliver critical the information needed, and
- Multi-channel customer-service experience (through voice, data, email, chat and social media avenues).

[1] **LEED**, or Leadership in Energy & Environmental Design, is a green building **certification** program that recognizes best-in-class building strategies and practices.
[2] Software as a Service (SaaS) is a software distribution model in which applications are hosted by a vendor or service provider and made available to customers remotely as a Web-based service. SaaS is an increasingly prevalent delivery model as underlying technologies that support Web services and service-oriented architecture (SOA) mature. SaaS allows organizations to access business functionality at a cost typically less than the total cost of ownership of licensed applications. SaaS removes the need for organizations to handle the installation, set-up and often daily upkeep and maintenance.

# INTRODUCTION

The over-arching theme of the IM&IT Strategy is “Accessing Anything, Anytime, Anywhere”, which encapsulates HO’s IM&IT vision of information that is accessible, when and where it is needed to support decision-making, ongoing business operations, customer interactions, regulatory compliance, and business sustainability.

This IM&IT Strategy for the period 2015-2020 has been prepared in anticipation of the 2016 Rate Application; its purpose is to provide functional direction and support to Hydro Ottawa (HO), its business planning and associated IM&IT opportunities and requirements while respecting and adapting to the ever changing landscape for technology.

“Accessing Anything, Anytime, Anywhere” remains the core direction of the IM&IT Strategy Update with added focus on enabling customer experience, efficiency and productivity. Prudent IT investment choices drawn from well-defined business cases will support financial and IT decisions. Where it makes sense, consideration should be given to leveraging untapped functionality from existing investment. The need for a more agile and flexible technical infrastructure will draw upon all available options both within the existing investment as well as through cloud computing options. Significant savings and increased efficiencies can be achieved through more these more agile computing capabilities.

The key principles that will guide the acquisition, development and use of IM&IT resources are as follows.

- HO’s business strategies and corporate priorities are the primary drivers for IM&IT initiatives.
- An enterprise architectural perspective will inform network and operational technology decision-making to reduce point-to-point interfaces, establish authoritative data sources, and to provide real-time data availability.
- Where feasible, HO will leverage existing systems and services before investing in new technology solutions.
- HO will leverage its significant investment in Oracle, Intergraph, and Microsoft by adhering to a “Best of Brand” strategy, where feasible and cost-effective to do so.
- Commercial-Off-the-Shelf (COTS) solutions will be implemented with limited customization in preference to custom-developed business applications, to reduce risks and costs, and to facilitate software supportability and upgrade paths.

- Cloud applications providing software, infrastructure and platform as services (Saas, IaaS, PaaS) will be considered where business, cost, resource and support considerations warrant.
- IM&IT solutions will be implemented as part of a process to redesign business models and processes to improve outcomes, productivity and efficiency.
- Upfront, rigorous and cyclical IT investment planning will serve as the cornerstone to all IT initiatives and will include strong business case rationale which identifies Total-Cost-of-Ownership, including business requirements, technology & integration considerations, support and ongoing management requirements, identified prior to the approval of IM&IT investments by any part of the organization and integrated into the overall Hydro Ottawa IMIT technology plan.
- Alignment with IT Security program is essential for all proposed IM&IT solutions, including code development, solution acquisition and integration into HO's environment.

The IM&IT Division will maintain the stewardship responsibility to ensure that HO's information and technology assets are managed efficiently, securely and cost-effectively throughout their lifecycle.

## HYDRO OTTAWA BUSINESS CONTEXT

As the Local Distribution Company (LDC) for the Nation's Capital, HO is an essential service provider committed to the delivery of reliable, quality power in a secure and cost-efficient manner. The fundamental change in the behaviour of the electricity supply system, from a one-way flow of power from LDC to consumer, to two-way power flows necessitates much greater situational awareness and capability throughout the power system.

During December of 2013, Hydro Ottawa began the journey of looking at the current communications infrastructure, as well as current and future communications requirements centered on building a self-healing Smart Grid network infrastructure to better support operations and customers utilizing more
secure, reliable, and company-owned telecommunications infrastructure.

The resulting Telecommunications Strategy will introduce a company owned fibre optic based telecommunications system (ring) for the majority of Hydro Ottawa's substations and all of its corporate locations with microwave radio to outlying substations where fibre builds may be cost

prohibitive, particularly to those located in far reaching service areas. By having real-time information on conditions
at the edges of the distribution system, HO can ensure that the voltage is within mandated service standards while optimizing distribution system efficiency and identifying undersized or failing distribution equipment.

Advancing Smart Grid network infrastructure and telecommunications capabilities will in turn introduce associated infrastructure and communications needs from wide-area and field LAN sites as well as advance metering and SCADA systems. Beyond advancing communication protocols, tools to aggregate and analyze data and present information (e.g. Distribution Management System (DMS), Outage Management Systems (OMS), etc.) will be required and will need to be considered in the context of data management, authoritative sourcing and business intelligence.

HO continues to place primary focus on the customer, moving from a transactional service to a personal experience through better understanding of and response to growing customer demands and expectations with customer-enabled service offerings, personalized services, 24/7 accessibility, and a choice of channels for communication and interaction, including social media, and online self-service functionality. Multi-media, live/web-chat, pre-pay experiences and on-line surveys are only a few of the capabilities which must be enabled to appropriately engage and serve. Community partnerships, reputation and response to critical outages will require creative, capable internet and mobile solutions to enhance existing communication needs.

HO must be prepared to diversify and grow in all facets of its business, including generation, utility services, energy services, and distribution. HO is committed to environmental leadership in terms of renewable energy generation, energy consumption management, and the greening of its operations. This must occur within its IM&IT infrastructure and architectural framework, through server virtualization, outsourced managed services (printers) and ongoing reduction of technology “footprint” as can be achieved as well through the reduction of extensive customized applications and integrations to a more agile, plug-and-play capability.

HO must ensure that it has the organizational capacity and robust infrastructure to fulfill its business objectives and to meet the many challenges of a changing operational environment.

Efficient, lean operating capability, standardization and automation, formalized knowledge capture and transfer, and the ongoing preparation and support of the workforce with appropriate tools and technologies will be essential. Managing the Hydro Ottawa employee base with effective communication and self-serve solutions is crucial to effective and efficient performance. Hydro Ottawa must begin preparation for a more mobile workforce with technologies and solutions which enable needed information and business tools anywhere, anytime.

## IM&IT SITUATIONAL ANALYSIS

The transformation and connectivity to large stores of information (big data) as well as social, mobile, cloud and analytics evolutions are changing the way we will live, work and interact. The industry will see a number of significant changes in the coming years. Smart Meters and Network Sensor information will become part of the way utilities will need to share and manage consumption and energy management. Traditional networks will be transformed to interact with a variety of systems and services in offering flexible, transparent, situation-aware services. With this, a significant increase in data sources, information flows and uses.

In 2010 Hydro Ottawa began putting in place foundational frameworks and establishing programs related to: IM&IT Governance, IT Security, Information Management, IM&IT Planning, and IM&IT Project Management. Substantial progress has been made.

In 2014, a formal Enterprise Architecture position was introduced to facilitate the move to a more homogenous alignment of technologies, to standardize on integration and middle-ware and link, as appropriate, needed shared services and information. An architectural framework and standard operating architecture (SOA) have been established and will now, through an Enterprise Service Bus (ESB) approach, facilitate ease of integration, reduce the proliferation of point-to-point and enable the orchestration of new services.

Existing Enterprise Resource Plan (ERP) COTS solutions have been heavily customized to meet HO’s specific business needs, thereby adding further to the cost for point-to-point interfaces as well as the complexity of maintenance and support. There is considerable duplication of data through replicated databases. The absence of automated workflow processes coupled with hundreds of independent data sources results in data re-entry with its inherent error risks and productivity impacts. The ESB initiative will play a role in the reduction of legacy solutions and point-to-point integrations, but more importantly in availing true, authoritative sources of information to be shared throughout the enterprise thereby reducing unnecessary duplication significantly. Net new solutions are being designed with the expectation that they will be "plugged into" an environment which is SOA enabled with an Enterprise Service Bus infrastructure in place. In the case of OMS and GMS, there is existing functionality which will be enabled to support metering services (Last Gasp, Meter Ping). The proposed Field Service Management workforce application houses automated processes which can be easily leveraged (out of the box capability) once the ESB infrastructure in place. New product releases expect this level of sophistication and the IT infrastructure must be positioned accordingly. Investment in the infrastructure will be needed to facilitate, where it makes sense, wireless, mobile, desktop productivity and personal computing /Bring-Your-Own- Device (BYOD) strategies.

The coming years will be significant for IT, specifically in preparing and adjusting to existing and future technology needs. The infrastructure will be strengthened, MPLS and Dark Fibre will extend communication capabilities, "green" data centers will lighten the cost/footprint of doing business; cloud or hybrid cloud solutions will be leveraged for flexibility and capability. Business Intelligence tools will support decisions. Back office systems will be replaced and upgraded to ensure we optimize process, execute effectively, standardize the model, reduce risk and improve business system capabilities.

## IM&IT STRATEGIES 2014-2020

### Business Solutions

HO operates and maintains a number of critical enterprise applications, including the JD Edwards Enterprise Resource Plan (ERP), Customer Care & Billing (CC&B) system, Outage Management System (OMS), Geographic Information System (GIS), SharePoint, MS-Exchange, and the HydroOttawa.com internet site. These critical applications must be treated as vital corporate assets and managed accordingly.

In addition to these widely used enterprise applications, there is a portfolio of over 40 business applications of varying age and technology platforms that are used by groups and individuals throughout the organization. Hydro Ottawa's direction for improving services and productivity, and reducing costs is through greater integration of applications and a focus on process automation, which will be enabled by the deployment of an enterprise-wide service bus and alignment to Services Oriented Architecture services. HO currently has a mixed environment of on premise applications, outsourced application hosting and management, and cloud-based (SaaS) applications which is challenging for application integration and process automation. To leverage HO's extensive data assets, the introduction of Business Intelligence (BI) capabilities is desirable to support more effective strategic and tactical planning, operational insights and decision-making.

An Intranet Multi-Year Strategy was established in late fall to allow Hydro Ottawa to progress towards its corporate objective of Organizational Effectiveness and re-enforce the many positive aspects of its corporate Culture by embracing the strategic possibilities of Engagement, Collaboration, and Leadership on a new intranet.

The intranet strategic purpose is to improve organizational participation, contribute to the organizational effectiveness through cost savings and productivity gains by maximizing the use of intranet, promote cross-divisional collaboration/communication, celebrate and reinforce Hydro Ottawa's culture, and enact leadership through exemplary behaviors on the intranet.

Internal consultations at Hydro Ottawa indicate extensive business requirements for new applications and for upgrades and additional functionality for existing applications over the next six years. The Customer Care & Billing (CC&B) system will be upgraded with major new releases and new functionality for Customer Self-Serve (CSS). Legacy applications supporting the metering processes (i.e. Lodestar) will require rationalization. Upgrades and enhancements are anticipated to the Outage Management System (OMS), Outage Communications system, and to MyHydroLink; a replacement SCADA system is projected coincident with the relocation to new HO facilities. Within the business, Human Resources may require a number of new applications, potentially SaaS-based or outsourced, to provide functionality for Learning Management, Performance Management, Succession Planning, e-Recruitment / Talent Management, Workforce Analytics, Job Description Management, Contractor Management, Business Continuity and Emergency Preparedness, and e-Appraisal. Customer Service and Communications will look to the IM&IT vision and strategy for customer communications capability that provides a fully integrated, robust, multi-channel infrastructure that supports a broad mix of communications media including internet, voice, email, twitter, SMS text, instant messaging, web chat, fax and social media. This infrastructure will allow Hydro Ottawa customers to communicate with the company how and when they_want to communicate. Additionally, there is a growing need to examine and draw upon the many data sources available with a view to leveraging business intelligence on energy usage, consumption, and customer experience and service value.

In the near term, efforts will be devoted to stabilizing the existing ERP environments. Longer term consideration of the ERP strategy will be essential and should take into account essential data needed from these enterprise applications to supply many emerging solutions and services.

*Gartner predicted that mobile phones would overtake PCs as the most common web access device worldwide by 2013. With a large mobile workforce, and the growing prevalence of mobile devices, HO's business solutions must be web-based, designed to run on a myriad of devices, and be accessible anytime, anywhere.*

A corporate strategy for future business application planning and acquisition / development is needed to ensure that these investments can be efficiently and cost-effectively implemented and maintained in HO's technology environment. Longer term IM&IT planning must consider the timing and coordination of major IM&IT projects to ensure that the required business resources are available and that the organization is not unduly stressed.

## IM&IT Planning

All business sectors, groups and stakeholders must ensure advance, upfront identification of potential IT requirements, changes or additions to existing, new program needs or the potential retirement of existing function. This early notification step is paramount to the ongoing evolution of technology planning, tracking and management of IT investment as well as ensuring preparedness of the infrastructure in terms of enabling and supporting the business.

Interest in specific technologies or solutions will include thorough business case detail covering business need, potential solution considerations, customer/end user impact, one-time and reoccurring costs as well as infrastructure needs (be this hardware, licensing, maintenance, install, integration and support). The richness of planning detail is crucial and directly proportional to the results drawn from the IMIT organization.

## Information Management

IM provides the framework for how corporate information is to be captured, stored, shared, transmitted and disposed of or securely retained across HO. Sound IM practices throughout the organization are the foundation on which to build the capability to “Access Anything, Anytime, Anywhere”.

The March 2014 KPMG Audit of Information and Records Management rated the overall maturity of HO’s IM Program as bordering between Phase 2 “Reactive” and Phase 3 “Proactive” on the Gartner six-stage Electronic Information Management (EIM) maturity scale. This represents good progress from the previous KPMG Audit of HO’s Records Management practices in 2009 and serves now as the foundation from which to operate.

Attention will be needed on the classification, appropriate retention / storage and disposition of HO information and data, regardless of media (electronic or physical). The corporate move to new facilities in 2018 provides a significant opportunity to reduce the physical records footprint, working in accordance with records retention and disposition schedules to manage existing hardcopy and electronic transitory records.

Enterprise-wide SharePoint deployment will underpin enterprise search capabilities. More data than ever is collected in order to conduct business. Effective retention and disposition strategies for electronic information and data are required, as retention forever is not an option.

## IT Security

The IT security program will continue to align HO practices with industry standards through the progressive rollout of capabilities and methods, ongoing effort to detect and protect against possible intrusion, replacement of legacy controls, and support for the migration to a mobile-centric infrastructure.

Mobile and remote computing practices will require associated security and management controls to allow authorized devices to connect and work seamlessly within Hydro Ottawa trusted environments. The protection and management of the mobile worker’s access to enterprise information sources will be achieved through the use of standard mobile device management capabilities.

With the increasing use of Cloud Computing, the potential tracking and responsiveness of the organization against infiltration and compromise due to malicious activity will be paramount. The development of a Security Information & Event Management (SIEM) monitoring, interpretation and response strategy will need to be defined and draw on the good work already leveraged in the collection and aggregation of log file data. This needs to include SCADA and operating environments, particularly those leveraging analytical, historic physical security or asset management solutions.

The constant pressure to monitor external threats will remain the paramount security objective for all technology acquisitions, solutions, integrations, updates and access points.

Critical Infrastructure Protection will continue as a fundamental role of the Hydro Ottawa cyber program through the participation in industry and government programs for the energy sector and in the management of a corporate Cyber Security Incident Management plan as prescribed by Public Safety Canada and in the event response and mitigation measures be required.

## Infrastructure

The technical infrastructure is the foundation on which the rest of the IT and OT environments operate. Built up over time, HO's technology infrastructure encompasses a mix of hardware, systems software, cabling, communications technologies, protocols, practices and disciplines. As the construction of a new HO Operations Centre and an Administration Building advance, infrastructure technologies upgrades and shared common structures will be leveraged in establishing a new Data Centre.

The relocation offers an opportunity to review and potentially "leapfrog" a technology generation, while positioning HO with a technology infrastructure that is less costly to operate and support. There will be a smaller Data Centre technology footprint with reduced energy consumption, fewer devices to support and maintain, and reduced depreciation expenses. The move to technology appliances – already fully integrated and configured – will reduce labour costs to configure and stand up new hardware and software. The new Data Centre will have the potential to host more systems in-house, reducing costs for outsourced hosting / facilities management services.

By carefully managing significant technology life cycle replacement initiatives in the 18-24 months prior to relocation to the new HO Administration Building, and a similar period post-relocation, an increased funding envelope will be needed for the procurement and implementation of new technologies for the new facilities.

The way in which individuals work has increasingly become mobile. Streamlined use of telecommunications devices (i.e. Smart Phones and Notebooks) will alter the way IT infrastructure will provision and handle voice and data services. There will be efficiency and cost savings benefits to moving to individual tele-computing capabilities with greater emphasis on mobile device management within a virtualized (secured) work session which is available remotely. This mobility factor will create opportunities to collapse a variety of individual technologies as well as associated maintenance functions, allowing a greater range of computing freedom for the mobile worker (inside the office, at home, in the field, while travelling) while at the same time, bringing greater economy of support effort. BYOD, improved laptop, tablet and other mobile computing devices will be introduced. Collaboration tools to support remote/different location meetings and identify management solutions to manage access and permissions become standard methods by which the infrastructure will transform anywhere, anytime.

Legacy applications will be rationalized to simplify ongoing support and maintenance requirements. Contracts review will apply continued diligence on maintenance and support services in seeking most cost-effective maintenance programs as well as identify areas where consolidation of licenses and services will reduce technology overhead.

Infrastructure Management will continue to work closely with Distribution Operations and support the Smart Grid initiatives, including the multi-year plan to build a new communications network.

## MAKING IT HAPPEN

Considerable effort will be essential in terms of what needs to be done to transform HO's IM&IT environment to one in which "Accessing Anything, Anytime, Anywhere".

Recognizing that HO's business performance is dependent on complex technology systems, HO has demonstrated its commitment to invest in technology through the provision of Capital funding for major IM&IT and OT initiatives. While pressure continues to grow, the OM&A funding envelope will be maintained to operate within existing budgets. The implication of Total Cost of Ownership on all new IM&IT or OT initiatives will be evaluated in view of this budget pressure.

The accelerating rate of technological change means that the speed of delivery of solutions must increase. The IT organization must become agile in its ability to respond and service the business constituent. The proposed Services Oriented Architecture (SOA) is one strategy that could enhance HO's agility to respond and adapt to the changing business requirements. Investigating and leveraging Software as a Solution (Saas), Infrastructure as a Service (IaaS) and Platform as a Service (PaaS) will, under the right conditions successfully offset multiple infrastructure management and provisioning burdens, both one-time and reoccurring. Processes for delivery need to be revamped and where possible, map to a more agile, waterfall methodology.

"Getting it right because we can't afford to get it wrong ..." continues to be the watchword for HO as the Local Distribution Company for the Nation's Capital. HO needs to remain proactive when securing the IT infrastructure and assets, SCADA systems, and protecting sensitive information. HO must layer security and privacy into all systems, new and old, housed, hosted or in the cloud, to protect HO's technology assets, and HO's and its customers' information.

Investment in emerging wireless capabilities, tablet and laptop technologies as well as smart-phone and personal computing devices will be critical in facilitating mobility and productivity. The changing demographic of Hydro Ottawa employee must be considered and integrated.

## CRITICAL SUCCESS FACTORS

The following factors are regarded as critical for the successful implementation of the IM&IT Strategy Update 2014-2020:

1. An IM&IT funding model that considers the Total Cost of Ownership (TCO) of business solutions and technology investments, providing Capital funding for project implementation and working within commensurate OM&A for the ongoing operation, support and maintenance of the solution throughout its lifecycle.
2. An architecture-driven enterprise model of technologies, inter-connectivity, data flows, security and access to guide the evolution of HO's information and technology environments.
3. An effective enterprise technology planning and change management process including effective communications across the organization so that all HO employees are aware of the

technology direction of the company, project priorities, supporting policies and practices, and respective roles and responsibilities.

4. The availability of skilled IM&IT resources, including adequate bench strength to support and maintain as well as implement new IM&IT initiatives.

## EXPECTED OUTCOMES

Implementation of the IM&IT Strategy Update 2014-2020 should result in the following outcomes:

1. HO will have more agility to respond to changes in its business environment and corporate priorities as a result of the adoption of a Services Oriented Architecture.
2. Productivity improvements across HO will result from increased workflow processing, mobile applications, real-time data, and enterprise search capabilities.
3. HO's business continuity and the reliability of distribution operations will be strengthened. Leveraging new technologies in conjunction with the relocation to new HO facilities will reduce the computing footprint and facilitate the move to a paperless environment.

A summary of the potential benefits of the proposed IM&IT initiatives follows:

| IM&IT Strategies / Potential Benefits | Productivity | Efficiency | Cost Savings | "Greening" | Security | Customer Experience | Compliance |
|---|---|---|---|---|---|---|---|
| Service Oriented Architecture | ✓ | ✓ | ✓ | | ✓ | ✓ | ✓ |
| Enterprise Service Bus | ✓ | ✓ | ✓ | | ✓ | ✓ | ✓ |
| Reduction of Point-to-Point Interfaces | ✓ | ✓ | ✓ | | | | |
| Process Re-engineering | ✓ | ✓ | ✓ | | | ✓ | |
| Paper Records Reduction (new facility) | | ✓ | ✓ | ✓ | | | ✓ |
| Electronic Information Management | ✓ | ✓ | ✓ | ✓ | ✓ | | ✓ |
| Enterprise Search | ✓ | ✓ | | | | | |
| Master Data Management | | ✓ | | | | | ✓ |
| Information Security Classification | | ✓ | | | ✓ | ✓ | ✓ |
| Information Classification & Retention | | ✓ | ✓ | | | | ✓ |
| Attack Surface Reduction | | | | | ✓ | | |
| Security Information & Event Monitoring | | | | | ✓ | | |
| Data Loss Prevention | | ✓ | | | ✓ | ✓ | ✓ |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Virtualization | ✓ | ✓ | ✓ | ✓ | | | |
| Mobile Device Management | ✓ | ✓ | ✓ | | | | |
| Disaster Recovery | ✓ | | | | ✓ | | |
| Asset Management | ✓ | | ✓ | | | | |
| Next Generation Technology | ✓ | | ✓ | | | | |
| ERP Strategy | | ✓ | ✓ | | | | |
| Legacy Applications Rationalization | ✓ | ✓ | ✓ | | | | |
| Mobile / Cloud Computing | | ✓ | | ✓ | ✓ | | |
| Business Intelligence | ✓ | ✓ | | | | ✓ | |
| Business Solutions | ✓ | ✓ | ✓ | | | | |

# CIS TRANSITION PROJECT

## 1.0 INTRODUCTION

On 6 March, 2014, Hydro Ottawa seamlessly replaced its legacy Customer Information System (PeopleSoft® Customer Information System version 8.8) with Oracle's Customer Care and Billing (CC&B) version 2.3.1 system – a project which had been in the making since 2009, when Oracle announced CC&B was its flagship product and that PS CIS would be sunset. Hydro Ottawa achieved this objective well within industry standards and less than the benchmark of $85 US per customer; according to Gartner benchmark data on CIS implementations (refer to figure 1).

**Figure 1 – Gartner Benchmark Data for CIS & Billing System Implementations[1]**

| Company Size* | Number of Customers | Total Cost Per Customer^ |
|---|---|---|
| Small | < 500,000 | $85 |
| Medium | 500,000 - 1.5 million | $65 |
| Large | > 1.5 million | $42 |
| **High/low values (all)** | | **$27.50 / $174** |

*Based on market research of 100 CIS and billing system implementations in the US for energy utilities
^US dollar amounts were not converted as during the Hydro Ottawa CIS Transition Project CDN $ was at par with US $

One year post go-live, Hydro Ottawa is extremely satisfied with the CC&B system as it continues to produce timely and accurate monthly bills for our customers in an efficient manner, positions Hydro Ottawa very well to maintain compliance with emerging OEB regulations, to deploy new customer self-serve options and to implement other initiatives to help customers reduce their electricity usage as indicated in Exhibit D-1-06 Customer Service Strategy. It should be noted that with the implementation of the CC&B system,

[1] Information from 13 March 2015 interview with Zarko Sumic, VP Distinguished Analyst of Gartner

Hydro Ottawa transitioned all its residential and small commercial customer from bi-monthly to monthly billing, a year in advance of the OEB amendment to the Distribution System code on the 15 April 2015 mandating monthly billing for all customer classes by the 31 December 2016.

The following sections describe why a new CIS was required, explain the sensible approach taken for the replacement, describe the fair and equitable vendor selection process and provide a high level over-view of the efficient and effective execution of the project.

**Why Was a New CIS Required?**

The Customer Information System (CIS) is a critical business system for Hydro Ottawa as this comprehensive system provides the capability required to meet the core business mandate of producing timely and accurate bills for more than 320,000 customers in our service area. In addition, various functional areas rely on the CIS to achieve their operational mandates in an expedient, cost-effective manner. Hydro Ottawa's existing CIS, PeopleSoft® CIS version 8.8 (PS CIS) was successfully implemented on the 7 September 2004. A change to the risk profile occurred in June 2009 pertaining to available support for this mission-critical business application. Oracle, the product vendor, no longer offered premier support for this particular product version and would only assist in maintaining the current version through sustaining support (refer to Figure 2 for the key features of each level of support) . Having a mission-critical business application which produces bills for our customers on sustaining support provides an increased risk of failure as time progresses and is not aligned with Hydro Ottawa's practice of remaining in premier support. In addition, Oracle announced the Customer Care & Billing (CC&B) would be its flagship product and that it was phasing out the PS CIS.

**Figure 2 – Oracle Lifetime Support[2]**

LIFETIME SUPPORT EXCLUSIVE BENEFITS

| Key Feature | Premier Support | Extended Support | Sustaining Support |
|---|---|---|---|
| Major Product and Technology Releases | ● | ● | ● |
| Technical Support | ● | ● | ● |
| Access to Support Portal | ● | ● | ● |
| Updates and Fixes | ● | ● | Pre-existing |
| Security Alerts | ● | ● | Pre-existing |
| Critical Patch Updates | ● | ● | |
| Tax, Legal, and Regulatory Updates | ● | ● | |
| Upgrade Scripts | ● | ● | Pre-existing |
| Certification with Existing third-party Products/versions | ● | ● | |
| Certification with most new third-party products/versions | ● | | |
| Certification with most new Oracle products | ● | ● | |

Between 2007 and 2012 Hydro Ottawa modified its existing CIS to implement billing using data from smart meters, time of use billing and integration with the MDM/R as well as the Ontario Energy Board's new rules regarding customer service practices. However, in 2010 Hydro Ottawa recognized that delaying the replacement of the existing CIS could not wait any longer – as the ability of the current system to accommodate all these changes had been maximized and the risk of PS CIS failing was increasing with every year of being on sustaining support. In addition, through the preliminary work done by the CIS transition project – which was struck in October 2010 with the appointment of executive project sponsors, a project manager and the assignment of people to the project – it became apparent that the implementation of a new CIS would take approximately 18 to 36 months to execute[3].

[2] Information obtained from Oracle's website, www.oralce.com
[3] Information gathered during the draft of the request for proposal process conducted by Hydro Ottawa in July 2011.

**Approach Taken for the Replacement**

As described in the Hydro Ottawa's 2011 EDR application, from 2008 to 2011 Hydro Ottawa conducted a due diligence review of available options to consider and found that the industry standard anticipated the cost of a replacement to the PS CIS sister product CC&B to be less than the cost of implementing another CIS product such as SAP, Harris or Customer/1. The cost-effective and prudent decision was taken to replace Oracle's PeopleSoft CIS version 8.8 with Oracle's current product, CC&B version 2.3.1, in order to minimize product licensing costs as well as overall CIS transition project costs including data migration, enhancement and integration, reports development and training costs.

In 2011 Hydro Ottawa acquired Oracle's CC&B application software and in order to reduce development costs related to the implementation of CC&B at Hydro Ottawa, secured Oracle to upgrade to CC&B v2.3.1 the Custom Components for the Ontario Marketplace (CCOM). The custom components, which implemented the OEB regulations in effect as of December 2013, were created originally for two other Ontario local distribution companies (i.e., Toronto Hydro and Enersource). Even though the custom components were specifically developed within the context of the other systems in operation at those LDCs and those LDCs specific business processes, using these components as a starting point allowed Hydro Ottawa to focus on implementing new regulations, adopting our business processes to the base CC&B product and ensuring that the business efficiencies gained in the Hydro Ottawa's existing PS CIS were met by CC&B v2.3.1.

With the CC&B v2.3.1 software and the Custom Components for the Ontario Marketplace acquired, Hydro Ottawa turned to the task of finding a company to implement our new CIS via system integration services and to have the same company provide hosting services and managed services to run our new CC&B system once the CIS transition project was complete. It was determined that this was the most prudent approach to take to ensure that the vendor had a vested interest in performing the system integration services to the highest quality as the vendor would continue to be accountable for the operation of CC&B post go-live.

**Request for Proposal for System Integrator and 10 year Hosting & Application Managed Services**

Hydro Ottawa used a request for proposal (RFP) process to obtain the best market price for the system integration services (services required to implement the new CC&B) and the ongoing hosting services and managed services (services which provide the computing environment on which CC&B runs, technical, functional and operational support, completion of nightly batch operations, defect fixes and new functionality development) of Hydro Ottawa's new CIS. In addition, Hydro Ottawa decided that the proposal would request a 10 year, long term partnership with the vendor – as this would enable Hydro Ottawa to get a better price rather than a short duration partnership, as the upfront cost of setting up a hosted environment as per Hydro Ottawa's specifications and training support staff to provide managed services would be deferred over a longer period resulting in lower yearly maintenance costs.

During the request for proposal stage of the CIS transition project, Hydro Ottawa was actively involved in discussions with several other large Ontario LDCs to look for ways to work together on our respective CIS implementations in an effort to find cost savings for all LDC's involved. Taking into consideration the fact that some LDCs were on a different version of CC&B and the fact that the various LDCs CIS transition projects were not aligned, Hydro Ottawa determined that a joint request for proposal process with another Ontario LDC, was not attainable.

Hydro Ottawa hired a procurement advisory firm, PPI Consulting, an expert in the procurement of large IT systems, to ensure a comprehensive request for proposal was created, a fair process for procurement was followed and that an unbiased evaluation process was used to evaluate the proposals and determine the successful bidder.

As part of the process Hydro Ottawa sent out a draft of the request for proposal in July 2011 to four vendors, HP, IBM, CGI and Capgemini, to gain vendor insight into the quality of the request for proposal documentation. Specifically, Hydro Ottawa was interested to determine if the scope of work was clearly defined and if there was sufficient information for the vendors to provide a fixed price. The vendors provided valuable insight in responding the questions and during the subsequent interview sessions. The vendors indicated that an 18 to 36 month implementation was a more typical timeframe for a CIS implementation, when asked if a 12 month implementation timeframe was reasonable and achievable.

In October 2011 Hydro Ottawa sent out the complete request for proposal to four vendors, HP, IBM, CGI and Capgemini, who were invited to submit a proposal. After the responses to the RFP were received, a dedicated Hydro Ottawa team of managers and supervisors, assisted by PPI Consulting, carried out an evaluation of each of the proposals in early 2012. The proposals were evaluated using a weighted decision model on the written proposal, the vendor interview and the financial proposal.

To maintain complete objectivity, the financial proposals were held confidential from the Hydro Ottawa proposal evaluation team until the evaluation of the written proposal and the vendor interviews were complete. The financial proposal once evaluated showed that the cost of the system integration services, including all Hydro Ottawa costs, was in the range of $23M to $25M.

The exploration of all the available options up to the vendor selection process including contraction negotiation with the successful bidder IBM Canada took 19 months and had a capital expenditure of $1.5M.

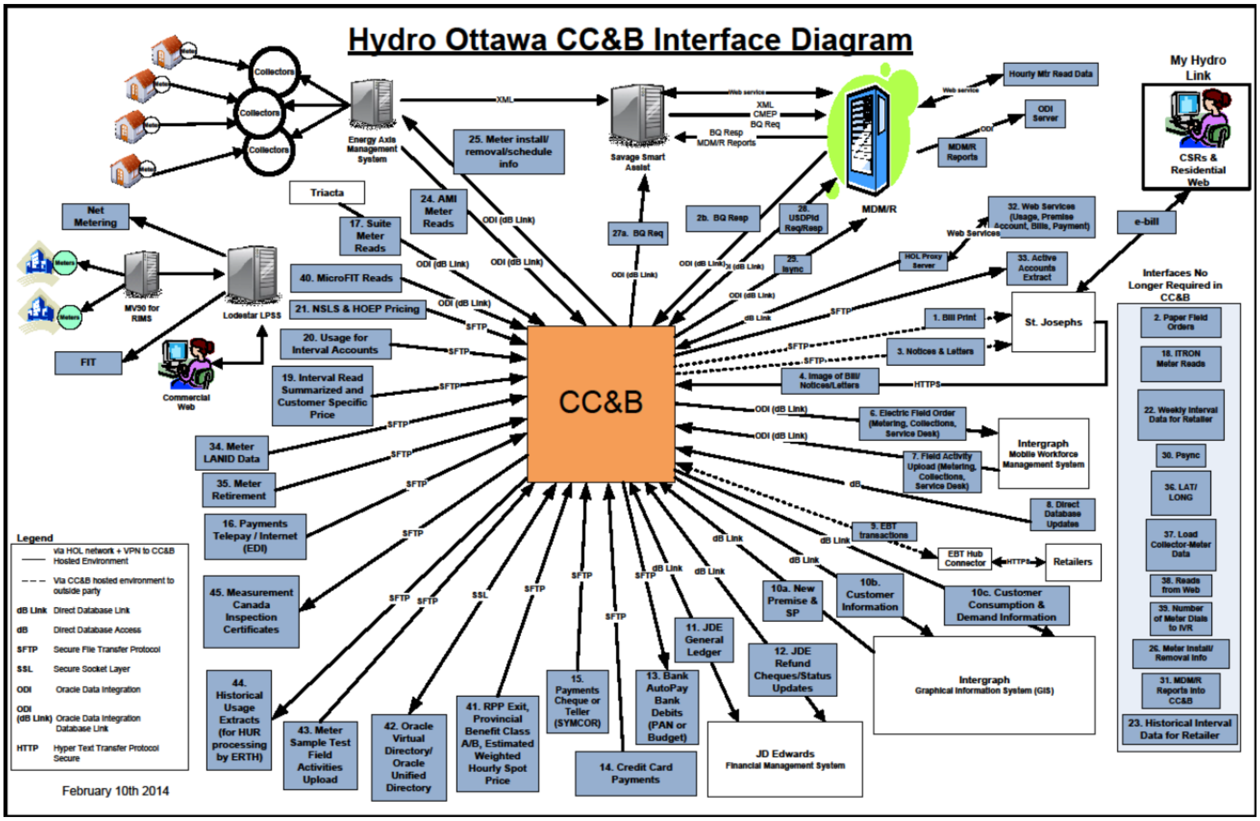
**Execution of CIS Transition Project**

The CIS transition project began on May 1st, 2012, once the contract with IBM Canada had been signed. The highly successful, 22 month project, involved a dedicated project team of key Hydro Ottawa and IBM Canada people (an average of 50 people and at the peak of the project more than 80 people) and many other technical and business contributors on an adhoc basis. The CIS transition project was delivered on time and according to a budget with a capital expenditure of $25.2M.

The CC&B solution delivered consisted of:

- 320,000 converted customer master records
- 2 years' worth of converted bills
- 100 custom reports
- 57 enhancements to CC&B
- A configured CC&B application, which integrated Custom Components for the Ontario Market place
- 35+ interfaces integrating with 10+ legacy systems (refer to Figure 3)
- computer based training for CC&B for Hydro Ottawa's 100+ staff
- disaster recovery, testing and reporting CC&B environments

**Figure 3 – Hydro Ottawa CC&B Interface Diagram**



The following items are of specific note, because they demonstrate Hydro Ottawa's ability to innovate, always keeping our customer in mind:

1. We did not change the customer account numbers with the new CC&B

Hydro Ottawa made the decision early on in the project to retain our customer's existing account numbers, service point numbers and premise numbers, even though Hydro Ottawa was initially told this was impossible and was rarely, if ever, achieved in other projects of a similar size and scope. We were able to achieve this feat through several careful adjustments to our data migration strategy and due to the fact we were transitioning to a sister product.  This decision served to minimize the impact of the new system on the systems of external parties such as our retail customers and the provincial MDM/R. Most importantly, it made the transition to our new system virtually invisible to our customers.

2. We transitioned customers from bi-monthly to monthly billing

Hydro Ottawa decided to transition all of our customer's accounts to monthly billing with the go-live of CC&B. In PS CIS, residential and small commercial customers were billed bi-monthly and our larger commercial customers were billed monthly. Through survey and focus group research, we knew our residential and small commercial customers preferred monthly billing because their electricity bills would then align with most of their other bills. This decision also saved in enhancement costs, because the new CC&B system is standardized for monthly billing.

3. We developed innovative self-serve training

Instead of in-class training, we developed computer-based training leveraging Oracle's User Productivity Kit (UPK). This was especially useful since our Call Centre operations are located in Saint John, New Brunswick, which is 1,100 kilometers from Ottawa, Ontario where Hydro Ottawa is headquartered and this decision minimized our travel costs for training. We deployed the training modules four months in advance of the go-live date so that our employees could be trained gradually, enabling them to learn and retain their new knowledge and skills more easily. This online training system also provided managers and supervisors with regular reports on the completion of the modules by each employee and their test training scores. In this way, targeted coaching could be provided to those requiring it.

4. We adapted our business processes to the base CC&B product instead of creating enhancements to make CC&B work to Hydro Ottawa's existing business processes. For example, we:

- Changed our equal payment plan amount review cycle to be twice yearly instead of daily to reflect the new system.
- Automated our account confirmation process when a new account holder is not known, eliminating multiple manual steps. Now, the account is setup automatically in the name "The Occupant", a notification is sent to the premise to have them contact us to let us know who is now responsible, and if no

responsibility for the account is accepted, then the account proceeds to suspension of service.

- Automated our payment plan (a.k.a., budget billing) reconciliation process, which used to be a manual daily process. Now, the CC&B schedules quarterly reviews and a semi-annual reconciliation.

Together, Hydro Ottawa and IBM Canada delivered an innovative CC&B solution which our key stakeholders are very satisfied with and which meets the objectives of:

- Delivering timely and accurate customer bills;
- Modernizing an aging and unsupported Customer Information System;
- Transforming billing cycle and processes from once every two months to monthly billing to meet customer expectations;
- Providing better functionality to more efficiently implement evolving business and regulatory requirements;
- Providing a platform for deploying new customer self-service options.

**Conclusion**

On 6 March 2014, Hydro Ottawa went live with Oracle's Customer Care and Billing (CC&B) version 2.3.1 system, the mission-critical business application which produces timely and accurate bills for Hydro Ottawa's customers. It was the result of a very successful 22 month CIS transition project lead by Hydro Ottawa and executed with our chosen vendor, IBM Canada. The CIS transition project was delivered on time, on budget and within industry standards. Most importantly, CC&B was seamlessly deployed to our customers.

With its' new Customer Information System Hydro Ottawa is well poised to maintain compliance with emerging OEB regulations, to more to more efficiently implement evolving business requirements to help customers further reduce their electricity usage, and to deploy new customer self-service options with a modern and fully supported system. As indicated in in Exhibit B-1-03 IT Strategy 2015-2020 Hydro Ottawa will continue to invest in a prudent manner in CC&B.

There was a great deal of information and experience sharing between Hydro Ottawa and other local distribution companies in Ontario before, during and after this project. Hydro Ottawa gained valuable insights through these discussions and the lessons Hydro Ottawa learned through this project are being shared with other LDCs who are transitioning to CC&B. This has strengthened Hydro Ottawa's cross-LDC relationships and we fully expect that our collaboration with other large Ontario LDCs who are using CC&B to grow in the future. We will continue to looking for ways to reduce overall costs of modifying CC&B in the future by leveraging these collaborations.

# ASSETS – PROPERTY PLANT AND EQUIPMENT CONTINUITY SCHEDULE

The tables in this exhibit provides Gross Assets continuity schedules by function for years from 2012 (last rebasing year) through to 2020 as presented in Hydro Ottawa Limited's ("Hydro Ottawa") Electricity Distribution Rate Application for 2016 (EB-2015-0004) based the Ontario Energy Boards minimum reporting groups. Exhibit D-3-1 provides continuity schedules for amortization and Appendix 2-B, Fixed Asset Continuity Schedules by Uniform System of Account ("USofA") for 2012 to 2013 Actuals and 2014 Forecast together with budgets for 2015 to 2020.

Hydro Ottawa's 2012 rate application was submitted under Modified International Financial Reporting Standards ("MIFRS") with a transition date of January 1, 2011 as directed by Ontario Energy Board (the "Board"). International Financial Reporting Standards ("IFRS") at that time did not contain standard governing rate-regulated activities. In May 2012, the International Accounting Standards Board ("IASB") decided to develop a project on Rate-regulated Activities. With this pending, the Canadian Accounting Standards Board allowed qualifying Rate Regulated entities to defer the adoption of IFRS to January 1, 2015. Hydro Ottawa Limited elected to take this deferral for financial reporting purposes while continuing to maintain MIFRS for regulatory purposes. The IASB has since issued interim standard *IFRS 14 - Regulatory Deferred Accounts* ("IFRS 14") which permits rate-regulated entities that have not yet transitioned to IFRS to use its existing RRA practices.

Due to the divergence of financial accounting standards for regulatory reporting and financial reporting purposes, Hydro Ottawa was required to maintain two sets of records for a period of time. Hydro Ottawa has made a one-time adjustment to the 2014 opening Gross Asset Net book value reported under MIFRS to align the two sets of records to avoid future administrative burden of maintaining two sets as well as enhance operational efficiency and reduce the burden on Hydro Ottawa's IT systems. This results in a Net Book Value increase of $502k under MIFRS to be depreciated over the applicable remaining useful lives as well as $195k increase under MIFRS to the cost of

Construction in progress. For fiscal year 2011, Hydro Ottawa had recorded different amount of overheads applied to capital projects and different depreciation amount under MIFRS and CGAAP. The one-time adjustment for rate-making purposes will result in a minor increase to rate base. Hydro Ottawa expects that any rate impact arising from the rate base increase will be offset by savings realized from eliminating duplicate sets of records. The other adjustment was to clear the accumulated depreciation and contributed capital balances to nil as seen in Table 3, column B below. The adjustment can be seen in detail in 2015 Filing Requirements Chapter 2 Appendices (tab: App.2-BA_FA Cont 2014). With the adoption of IFRS and early adoption of IFRS 14 as the accounting basis for financial reporting purposes on January 1, 2015, Hydro Ottawa's regulatory and financial reporting records are now aligned from an accounting standards basis. All table figures in this exhibit are presented in dollars.

## VARIANCE ANALYSIS ON GROSS ASSETS

Table 10 below shows Hydro Ottawa's gross asset additions. Refer to Appendix 2-BA Fixed Asset Continuity Schedule, gross assets additions are the sum of additions and disposals before depreciation and capital contributions. Table 11 below shows the Gross Asset year-over-year variance. The variance analysis is provided below the tables.

**Table 10: Gross Asset Additions**

| $000s | 2012 Approved | 2012 Actual | 2013 Actual | 2014 Forecast | 2015 Bridge | 2016 Test | 2017 Test | 2018 Test | 2019 Test | 2020 Test |
|---|---|---|---|---|---|---|---|---|---|---|
| Land and Buildings | 9,460 | 1,065 | 27,826 | 1,470 | 1,872 | 1,980 | 2,196 | 2,955 | 747 | 7,205 |

**2012 Actual vs. 2012 Board Approved Budget:**

In comparing the 2012 Actuals with 2012 Board Approved budget, the decrease in gross assets of $11.2 is primarily due to the following programs:

- The purchase of land for the Facilities Implementation Plan was included in the 2012 Board Approved additions. The acquisition started in 2012, but was only completed in 2013.
- The project to construct a new 230kV to 27kV Terry Fox Substation, located in south Kanata, was started in 2009. The building costs were included in the 2012 Board Approved additions; however the actual costs incurred were in 2013.
- Demand capital especially services related were lower than approved in 2012. They are customer demand driven.

**2013 Actual vs. 2012 Actual:**

The total gross assets additions in 2013 of $125M are an increase of $48M compared with 2012 actuals. This is primarily due to the following programs:

- The purchase of land for two new facilities was started in 2012, but transaction closed in 2013 for a total of $19M.
- The Terry Fox substation was completed in 2013, for a total of $22M including building cost and station equipment.
- Poles and Wires increased from 2012 by $12M, half of it was in Demand capital (residential and new commercial). The other half is in Sustainment, mainly the Cable Replacement Program and the Woodroffe UW 4kV System Voltage Conversion project.

**2014 Forecast vs. 2013 Actual:**

The total gross assets additions forecasted in 2014 of $132M are an increase of $7M compared with 2013 actuals. This is primarily an increase in IT assets offset by a decrease in land and buildings:

- IT assets increased by $34M, the most notable one was CC&B (Customer Care and Billing) system upgrade. The project started in late 2010, went live in Q1 2014, for a total cost of $26M.
- Land and Buildings decreased due to the completion of Terry Fox substation and the land purchase for the Facilities Implementation Plan in 2013.

**Forecast 2015 Bridge Year vs. 2014 Forecast:**

Total forecast gross assets additions in 2015 of $130M are a decrease of $1.8M compared with 2014 Forecast. This is primarily due to the timing of project completion.

- IT assets decreased from 2014 due to CC&B completed.
- Increase in Distribution Stations including Stations Transformer Replacement

**Forecast 2016 Test Year vs. 2015 Bridge Year:**

Total forecast gross assets additions in 2016 of $112M are a decrease of $18M compared with 2015 Bridge Year. This is primarily due to a decrease in the following programs:

- Other distribution assets decreased by $12M primarily explained by the HONI CCRA (Hydro One Connection and Cost Recovery Agreement) payments in 2015 for the Hawthorne and Cyrville stations.
- TS Primary Above 50 decreased by $9M due to the timing of the stations completion. 2015 projected a few large stations completion while the 2016 plan is to focus on the Poles and Wires.

**Forecast 2017 Test Year vs. 2016 Test Year:**

Total forecast gross assets additions in 2017 of $110M are a decrease of $2M compared with 2016. This is primarily due to the changes in the following programs:

- DS (Station Equipment) decreased by $7M and Poles and Wires decreased by $5M
- IT Assets increased by $6M primarily the JDE application upgrade to be completed in 2017.

**Forecast 2018 Test Year vs. 2017 Test Year:**

Total forecast gross assets additions in 2018 of $117M are an increase of $7M compared with 2017. This is primarily due to the changes in the following programs:

- DS (Station Equipment) increased by $14M largely explained by an increase in transformer replacement
- IT Assets decreased by $10M due to the completion of JDE upgrade and SCADA replacement in 2017.

**Forecast 2019 Test Year vs. 2018 Test Year:**

Total forecast gross assets additions in 2019 of $92M are a decrease of $25M compared with 2018. The capital spending is steady, but the completion of some major projects forecasted in 2020, including the following:

- Large multi-year station projects are expected to be ongoing and are planned to be complete in 2020

**Forecast 2020 Test Year vs. 2019 Test Year:**

Total forecast gross assets additions in 2020 of $138M are an increase of $45M compared with 2019. Several major projects started in previous years to be completed in 2020.

- A number of large multi-year station projects are to be completed in 2020.
- CC&B enhancement of $6M

# WORKING CAPITAL REQUIREMENT

## 1.0 INTRODUCTION

This Exhibit provides a schedule of the Working Capital Requirement for the bridge year (2015) and the test years (2016 - 2020). For comparison purposes, the approved and actual Working Capital Requirement for the base year (2012) is also shown.

**Table 1 – Allowance for Working Capital[1]**

| | 2012 Approved $000 | 2012 Actual $000 | 2013 Actual $000 | 2014 Forecast $000 | 2015 Budget $000 |
|---|---|---|---|---|---|
| Power Supply Expenses | 685,303 | 709,935 | 768,079 | 763,312 | 851,135 |
| OM&A Expenses | 73,090 | 73,076 | 75,757 | 80,767 | 83,656 |
| Total Expenses for Working Capital | 758,393 | 783,011 | 843,836 | 844,079 | 934,791 |
| Working Capital % | 14.2 | 14.2 | 14.2 | 14.2 | 14.2 |
| | 107,692 | 111,188 | 119,825 | 119,859 | 132,740 |

| | 2016 Test $000 | 2017 Test $000 | 2018 Test $000 | 2019 Test $000 | 2020 Test $000 |
|---|---|---|---|---|---|
| Power Supply Expenses | 894,285 | 911,714 | 947,559 | 928,734 | 945,199 |
| OM&A Expenses | 87,106 | 89,932 | 92,850 | 95,863 | 98,974 |
| Total Expenses for Working Capital | 981,391 | 1,001,647 | 1,040,409 | 1,024,597 | 1,044,173 |
| Working Capital % | 14.2 | 14.2 | 14.2 | 14.2 | 14.2 |
| | 139,358 | 142,234 | 147,738 | 145,493 | 148,273 |

As part of Hydro Ottawa Limited's ("Hydro Ottawa") 2012 rate application, the Ontario Energy Board ("Board") approved a Working Capital Allowance percentage of 14.2. Hydro Ottawa submitted that it would implement monthly billing for all its customers in

[1] Totals may not match due to rounding

2013. As part of the decision and order the Board directed Hydro Ottawa to prepare a new lead-lag study for its next cost of service application.
In the first quarter of 2014 Hydro Ottawa implemented a new billing system. As part of this implementation Hydro Ottawa implemented monthly billing. Hydro Ottawa believes 12 months of stable monthly billing data is required to perform a new lead lag study. Hydro Ottawa is proposing to use data from July 2014 to June 2015 to complete its updated lead lag study. The new lead lag study will be submitted in September 2015 to be incorporated into final rates. Until the lead lag study is complete, Hydro Ottawa is using its 2012 Board approved rate of 14.2.

The Power Supply Expenses for 2016 to 2020 are calculated in the following manner:

The forecasted monthly purchased kWh and peak kW produced by the load forecasting model described in Exhibit C-1-1 were adjusted for the impact of Conservation and Demand Management activities. The monthly forecasted kWh purchases were multiplied by the monthly forecasted commodity price.

The commodity price for Regulated Price Plan customers (“RPP”) was calculated by using the Regulated Price Plan Price Report[2]. The RPP rate of $94.96/MWh was multiplied by a yearly residential factor derived from Ontario’s Long-Term Energy Plan[3] (“LTAP”) to arrive at a yearly RPP commodity rate for 2016 through 2020. Please see table 2.

**Table 2 - Estimated RPP Price 2016 to 2020 (kWh)**

| 2015 | 2016 | 2017 | 2018 | 2019 | 2020 |
|---|---|---|---|---|---|

[2] Regulated Price Plan: Price Report November 1, 2014 to October 31, 2015, Ontario Energy Board, October 16, 2014
[3] Achieving Balance Ontario’s Long-Term Energy Plan, December 3013

The commodity price for non-Regulated Price Plan customers ("non-RPP") was calculated using the Ontario Wholesale Electricity Market Price Forecast[4]. The quarterly rates provided in 'Table ES-1: HOEP Forecast' were used to calculate a 2015 calendar average rate of $20.84/MWh. This rate was multiplied by a commercial factor derived from LTAP to arrive at a yearly rate for 2016 through 2020. Please see table 3.

**Table 3 - Estimated HOEP 2016 to 2020 (kWh)**

| 2015 | 2016 | 2017 | 2018 | 2019 | 2020 |
|---:|---:|---:|---:|---:|---:|
| 0.02084 | 0.02174 | 0.02265 | 0.02378 | 0.02310 | 0.02355 |

The Wholesale Market Charge is determined from the total kWh purchased multiply by the average rate from 2015 of $0.0057 for all years.

The forecasted kW monthly coincident peak is multiplied by historic percentages for each transmission charge to establish the kWs for those charges. The results are then multiplied by the 2015 rates for all years.

The Global Adjustment is calculated using the Regulated Price Plan Price Report[5]. The Global Adjustment rate of $74.88/MWh was multiplied it by the commercial factor derived from LTAP to arrive at a yearly Global Adjustment rate for 2016 through 2020. Please see table 4. This forecasted rate is multiplied by the Non Regulated Purchase Plan loss adjusted kWh.

**Table 4 - Estimated Global Adjustment 2016 to 2020 (kWh)**

| 2015 | 2016 | 2017 | 2018 | 2019 | 2020 |
|---:|---:|---:|---:|---:|---:|
| 0.07488 | 0.07814 | 0.08139 | 0.08546 | 0.08302 | 0.08465 |

[4] Ontario Wholesale Electricity Market Price Forecast For the Period November 1, 2014 through April 30, 2016, Navigant Consulting Ltd., October 8, 2014
[5] Regulated Price Plan: Price Report November 1, 2014 to October 31, 2015, Ontario Energy Board, October 16, 2014

From January 1, 2016 to October 31, 2018, the Smart Metering Entity charge of $0.788/ Residential and General Service <50kW customer is included in the calculation of the Cost of Power.

Power Supply Expenses was adjusted to reflect the Low Voltage Switchgear credit which Hydro Ottawa receives as a result of owning the low voltage switchgear at certain stations.

Spreadsheets showing the calculation of the Power Supply Expenses for 2016 through 2020 are provided as attachment B-3(A) COP 2016-2020.

## PROPOSED TREATMENT FOR RECOVERY OF STRANDED METERS

As part of Hydro Ottawa Limited's ("Hydro Ottawa") 2012 rate application it proposed to include the remaining balance of its stranded meters in its 2012 rate base, amortizing the balance over the period ending December 31, 2013. As part of the settlement agreement this approach to dispose of the balance of Stranded Meters was accepted. The remaining balance to be recovered was $5,974k, $2,987k for each year 2012 and 2013.

Hydro Ottawa's forecasted amount of residual net Stranded Meters, to the end of 2011, was not materially different from the actuals recorded ($72k forecasted, $68k actual). Hydro Ottawa is not seeking to true-up the difference. Therefore, Hydro Ottawa has not completed Appendix 2-S as these amounts were already dealt with in its 2012 rate application. For financial purposes, by the end of 2011, the net stranded meters costs were recorded in Uniform System of Accounts ("USofA") 1555 sub account stranded meters.

The approach taken to include the remaining balance of stranded meters in depreciation resulted in the continuation of the stranded meter recovery in 2014 and 2015, $2,987k per year. As a result, by the end of 2015 Hydro Ottawa will recover an additional $5,974k.

Hydro Ottawa proposes to return the over collection related to Stranded Meters to rate payers. Please see section I-8-1, Disposition of deferral and variance accounts, for Hydro Ottawa's proposed treatment to return the balance sitting in USofA account 1555 sub account stranded meters.

# CAPITAL EXPENDITURES OVERVIEW

In accordance with the OEB's Chapter 2 and Chapter 5 Filing Requirements, Hydro Ottawa Limited ("HOL") has filed a consolidated Distribution System Plan ("DSP") as Appendix B, Tab 1, Schedule 2. The Capital Expenditure plan in Section 3 of the DSP as well as the Material Investments Plan (Attachment B-1(A)) both detail the system investment decisions which are made through the asset management and capital expenditure planning process. The DSP (B-1-2) further details investments by investment categories, HOL Capital Program and Budget Program for the historic years of 2011 through 2015 and the forecast years of 2016 through 2020.

See Appendices 2-AA and 2-AB for an overview of HOL's Capital Projects and Capital Expenditures Summary. For comprehensive explanatory notes and variance analyses of HOL's capital expenditures, refer to section 3.4 of the DSP (B-1-2).

**Notes to the Table:**

1. Historical "previous plan" data is not required unless a plan has previously been filed
2. Indicate the number of months of 'actual' data included in the last year of the Historical Period (normally a 'bridge' year):

### Explanatory Notes on Variances (complete only if applicable)

**Notes on shifts in forecast vs. historical budgets by category**

See section 3.4 of the DSP (B-1-2)

**Notes on year over year Plan vs. Actual variances for Total Expenditures**

See section 3.4 of the DSP (B-1-2)

**Notes on Plan vs. Actual variance trends for individual expenditure categories**

See section 3.4 of the DSP (B-1-2)

# CAPITALIZATION POLICY

Hydro Ottawa Limited's Capitalization Policy can be found in Attachment B-5(A) and more details are noted in Exhibit B-5-3.

**HYDRO OTTAWA CORPORATE POLICY**

| **Subject**: Capitalization | | |
|---|---|---|
| **Category**: Finance | | **Policy Number**: POL-Fi-013.00 |
| **Administrator:** Director, Finance | **Owner:** Chief Finance Officer | **Approver:** President and CEO |

1. **PURPOSE**
   The purpose of this policy is to define the criteria used with respect to the capitalization of Hydro Ottawa assets.

2. **SCOPE**
   This policy applies to Hydro Ottawa.

3. **DEFINITIONS**
   **Capital assets** include tangible and intangible assets, exclusive of goodwill
   **Commissioned,** in the context of this policy, is when a capital asset is placed into service or when the enhancement or betterment to an existing capital asset is complete
   **Directly Attributable Costs** are costs that bring the asset to the location and condition intended for use and include direct labour, inventory, outside services, non-stock materials and specific burdens
   **Enhancement or Betterment** is an expenditure that contributes towards improving an asset's productivity or output or useful life
   **Goodwill,** as defined by IAS 38, is the difference between the purchase price of an asset and the net amount of the acquired asset and assumed liability
   **Grouped Assets** are asset purchases that are pooled into a single capital asset category as, by their nature, it would be impractical to identify individual units. These grouped assets are managed as a single entity for the purposes of depreciation
   **Hydro Ottawa** refers to Hydro Ottawa Holding Inc. and its affiliates
   **IAS** refers to International Accounting Standards
   **IAS 16** refers to the International Accounting Standard titled Property, Plant and Equipment
   **IAS 23** refers to the International Accounting Standard titled Borrowing Costs
   **IAS 38** refers to the International Accounting Standard titled Intangible Assets
   **IASB** refers to the International Accounting Standards Board
   **IFRS** refers to International Financial Reporting Standards
   **Intangible Assets,** as defined by IAS 38, are rights or non-physical resources, which provide a benefit or advantage to a business entity
   **OM&A** refers to operating, maintenance and administrative expenses
   **PP&E** refers to Property, Plant and Equipment or Tangible Assets
   **Readily Identifiable Assets** are discrete capital assets that are easily identifiable, so the asset can be individually recorded and depreciated
   **Tangible Assets,** as defined by IAS 16, include PP&E that are used on a continuing basis in the production or supply of goods and services and are not intended for sale in the ordinary course of business

4. **POLICY DIRECTIVES**
   a) Hydro Ottawa will capitalize assets based on the standards established by the IASB under IAS 16 and IAS 38.
   b) Capitalized assets are expected to provide future economic benefits for more than one year.

c) The amount capitalized is comprised of:
   i. The amount of consideration provided to acquire, construct or develop an asset;
   ii. Directly attributable costs necessary to commission the new asset; and
   iii. Borrowing costs, in accordance with IAS 23, to finance PP&E projects with a duration greater than six months and accumulated cost is in excess of $100,000.

d) The following cost allocation rates included in directly attributable costs are based on management's best estimates of the applicable cost allocation determinants:
   i. Direct Labour – The hourly rate recovers direct labour and benefits costs. It will be applied to all direct labour hours through timesheet reporting.
   ii. Vehicle and Equipment - Vehicle and equipment hourly rates capture the directly attributable costs associated with fleet usage. Individual rates will be developed for major vehicle classifications based on expected utilization. Charges will be accomplished through vehicles timesheet reporting.
   iii. Supervision Burden – The supervision burden rate recovers the directly attributable costs associated with the supervision of internal labour and outside services.
   iv. Engineering Burden – The engineering burden rate recovers the directly attributable engineering costs. It will be applied to Distribution Capital projects where applicable.
   v. Supply Chain Burden – The supply chain burden rate recovers the directly attributable procurement and warehouse costs.
   vi. These rates are reviewed and monitored on an annual basis. Material adjustments for over or under recoveries will also be recorded at the end of the fiscal year.

e) Subsequent enhancement or betterment costs which are incurred after the original asset is commissioned will be capitalized based on the same criteria as the initial capital investment.

f) The materiality value for capitalizing newly acquired readily identifiable assets or additions to existing assets will be $500.

g) The materiality value for capitalizing grouped assets will be $1,000.

h) Capital spares such as spare switchgear, transformers and meters, once commissioned will be accounted for as capital assets, prior to commissioning, these assets will be accounted for as inventory.

i) Depreciation of capital assets is based on the straight-line method in accordance with IAS 16 and 38. The useful lives of assets are reviewed annually.

j) Costs that are incurred to maintain the existing service potential of capital assets are considered repairs and will be expensed in the period in which they occur.

k) Customer contributions associated with PP&E projects will be treated as deferred revenue and amortized to income over the life of the assets to which they relate.

l) When assets are retired from service, the capital cost and accumulated depreciation will be removed from Hydro Ottawa's financial statements with any gain or loss (after salvage proceeds, if applicable) charged to OM&A in the period in which the decommissioning occurs.

## 10. POLICY EXCEPTIONS

Exceptions to the above directives and/or changes to this policy must receive written pre-authorization from the President and Chief Executive Officer. For clarification on any aspect of this policy contact the Director, Finance.

# CAPITALIZATION OF OVERHEAD

Prior to 2012, Hydro Ottawa capitalized costs including those that were administrative in nature (facilities, human resources, information technology, finance, regulatory and other corporate costs).

Effective January 1, 2012, Hydro Ottawa revised its capitalization methodology used to apply overhead costs to property, plant and equipment and intangible assets in accordance with IFRS IAS 16 which prohibits the capitalization of administration and other general overhead costs. The majority of the administrative burden was deemed to be disallowable except for some costs pertaining to the supply chain function. The engineering and supervision allocations were also analyzed to determine which amounts could no longer be capitalized. The amount of allocated costs was significantly reduced due to the fact that many of the costs that were capitalized prior to the revision of the policy are considered administrative or other general overhead, which are specifically disallowed or which cannot be considered directly attributable to a specific asset. The policy remains the same in the forecast year.

Hydro Ottawa applies overhead costs to capital through three separate burden rates: Supervision burden, Engineering burden and Supply Chain burden. The use of multiple burden rates allows overhead costs to be applied more precisely to the particular projects that are associated with the various types of overhead costs. Refer to Attachment B-5(A) for a copy of the capitalization policy.

As shown in Appendix 2-D, the overhead costs capitalized from 2012 to 2016 are steady and in the range of 25% to 27% including labour and fleet costs.

# Appendix 2-D
## Overhead Expense

Applicants are to provide a breakdown of OM&A before capitalization in the below table. OM&A before capitalization may be broken down by cost center, program, drivers or another format best suited to focus on capitalized vs. uncapitalized OM&A.

| OM&A Before Capitalization | 2012 Historical Year | 2013 Historical Year | 2014 Q2 Forecast Historical Year | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|---|
| Collections, Acct & Activities | $ 2,937,418 | $ 4,070,580 | $ 3,649,114 | $ 3,543,341 | $ 4,059,282 |
| Corporate Costs | $ 6,056,030 | $ 6,575,378 | $ 5,420,096 | $ 5,015,524 | $ 4,993,415 |
| Customer & Community Relations | $ 7,716,112 | $ 7,605,947 | $ 8,220,736 | $ 8,785,231 | $ 9,084,617 |
| Customer Billing | $ 9,176,802 | $ 9,736,344 | $ 10,664,787 | $ 10,432,583 | $ 10,511,497 |
| Distribution Operations | $ 33,380,038 | $ 34,860,050 | $ 37,834,129 | $ 39,785,778 | $ 40,824,588 |
| Engineering & Design | $ 10,863,198 | $ 11,693,463 | $ 12,451,538 | $ 12,975,442 | $ 13,677,111 |
| Facilities | $ 5,518,926 | $ 5,656,285 | $ 5,794,592 | $ 6,027,819 | $ 6,108,573 |
| Finance | $ 4,074,222 | $ 3,988,437 | $ 4,368,115 | $ 4,517,544 | $ 4,759,915 |
| Human Resources & Training | $ 3,395,830 | $ 3,675,121 | $ 4,010,176 | $ 4,051,662 | $ 4,180,257 |
| Information Mgt & Technology | $ 6,343,145 | $ 6,717,794 | $ 7,521,460 | $ 7,500,528 | $ 7,862,963 |
| Metering | $ 2,712,295 | $ 2,807,318 | $ 2,846,087 | $ 2,842,465 | $ 2,956,322 |
| Regulatory Affairs | $ 1,930,844 | $ 1,967,875 | $ 2,340,940 | $ 2,505,096 | $ 2,580,684 |
| Safety, Environment & Bus Cont | $ 1,853,905 | $ 2,334,564 | $ 2,116,845 | $ 1,952,732 | $ 2,006,305 |
| Supply Chain | $ 2,233,136 | $ 1,985,925 | $ 2,491,808 | $ 2,498,434 | $ 2,744,524 |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| **Total OM&A Before Capitalization (B)** | $ 98,191,900 | $ 103,675,081 | $ 109,730,424 | $ 112,434,180 | $ 116,350,054 |

Applicants are to provide a breakdown of capitalized OM&A in the below table. Capitalized OM&A may be broken down using the categories listed in the table below if possible. Otherwise, applicants are to provide its own break down of capitalized OM&A.

| Capitalized OM&A | 2012 Historical Year | 2013 Historical Year | 2014 Q2 Forecast Historical Year | 2015 Bridge Year | 2016 Test Year | Directly Attributable? (Y/N) | Explanation for Change in Overhead Capitalized |
|---|---|---|---|---|---|---|---|
| Supply Chain | $ 1,127,115 | $ 1,305,256 | $ 1,301,156 | $ 1,244,923 | $ 1,452,331 | | |
| Supervision | $ 1,831,800 | $ 2,157,288 | $ 1,826,399 | $ 2,034,276 | $ 2,077,315 | | |
| Engineering | $ 1,996,465 | $ 2,815,805 | $ 2,843,934 | $ 2,904,091 | $ 2,997,522 | | |

# SERVICE QUALITY AND RELIABILITY PERFORMANCE

## 1.0 SERVICE QUALITY INDICATORS

Hydro Ottawa reports service quality indicators, which consist of service quality and service reliability metrics, to the Board on an annual basis. As shown in Appendix 2-G, Hydro Ottawa's Service Quality Requirements remain steadily above the OEB Minimum Standard for the years 2009 – 2013.

## 2.0 SERVICE RELIABILITY INDICATORS

Hydro Ottawa continuously assesses the distribution system's service reliability. Where gaps are found, the appropriate actions are identified to address these issues. Service reliability is integral to all work undertaken as part of system planning and asset management. The Reliability Plan does not supersede the importance of good Asset Management and System Capacity planning in the management of system reliability. Rather, it provides a platform for thorough review of system reliability and identifies planned works which are designed to directly impact system reliability.

Overall, since 2009, Hydro Ottawa's system SAIDI and SAIFI has been steadily increasing, due to the increase of storms with severe wind and rain as well as an increase in equipment failures. Moving forward, it is critical that investment levels for equipment replacement increase in order to storm harden the system and to get ahead of the curve of aging equipment.

Fundamental in Hydro Ottawa's approach to system reliability is the implementation of grid technologies. Ongoing targeted installation of automated devices is planned for the foreseeable future to improve system reliability and operation. Currently, targeted programs are the East 44kV automation, which will deploy automatic restoration to this sub-transmission loop that supplies 3% (or over 9,000) of Hydro Ottawa's customers. In addition, automation plans are being deployed in the quickly growing South Nepean/Barrhaven area, as well as targeted annual installation to address the Worst

Performing Feeders. Continued investment in the communication infrastructure will be essential to support current automation plans while maintaining the flexibility to integrate the technologies of tomorrow.

Overall, from 2009 through 2013, the three primary contributors to SAIFI and SAIDI were: Loss of Supply, Defective Equipment and Adverse Weather. These three contributors account for 60% of the overall SAIFI score and 62% of the overall SAIDI score.

### 2.1 Loss of Supply

The reliability and redundancy of system supply is continuously evaluated as part of the Capacity Planning exercise. The system operators are aware of plans for these circumstances and are able to expedite restoration and reduce the impact of the loss of any one supply. As well, the installation of remotely operable devices are considered when evaluating restoration and isolation scenarios to reduce the number of customers affected by a loss of supply and to quickly be able to resupply the affected region. Other work has been completed in order to reduce the reliance on any one transmission circuit: a second supply was connected to Marchwood MS in 2014, providing added redundancy to the West region, Terry Fox MTS was energized in 2013, connected to the 230kV M32S adding additional support to an area previously solely supplied by the 115kV circuit S7M. Hydro Ottawa is also currently working with the Ontario Power Authority, the Independent Electricity System Operator and Hydro One in an Integrated Regional Planning Process which began in 2011 and is tasked with reviewing the supply adequacy in the Ottawa area.

### 2.2 Defective Equipment

Annually, the secondary cause of Defective Equipment related outages are analyzed as part of the Annual Planning Report. Hydro Ottawa's asset replacement and refurbishment strategies are described annually as part of the Annual Planning Report (see Attachment B-1(B)), as well as in the Distribution System Plan (exhibit B-1-2). The Asset Management Plan (included within Attachment B-1(B)) was created to provide strategic guidance on the replacement and investment forecasts, manage priorities and identify process gaps. The plan focuses on optimizing the lifecycle costs for each network asset group (including creation, operation, maintenance, renewal and disposal) to meet reliability service targets and future demand. Each year, the aim is to improve the plan by taking advantage of new information and changing technology. These innovations help to maintain the ranking as one of the most reliable and efficient electricity networks in the province of Ontario.

Large segments of Hydro Ottawa's system were constructed in the 1960s, 70s and 80s. As most assets have a lifespan on the order of 50 years, a considerable proportion of the system is approaching or has exceeded the anticipated end-of-life. The increased potential of failure poised by these aging assets will, without intervention, impact the organization's ability to guard worker and public safety, maintain system reliability and protect organizational strength in the future.

### 2.3 Adverse Weather

Continued enhancements are being made to the system to improve the withstand capabilities during storms and to reduce the impact of individual outages. There are three initiatives/programs which address this need:

- *Pole Replacement* – The conditions of poles is evaluated on an ongoing basis. From the condition assessment, a review is conducted to determine the areas which are in the poorest condition so they can be targeted for planned replacement. By eliminating poles in poor condition and upgrading the attached hardware, the ability of the system to operate through adverse weather without interruption is improved.
- *Vegetation Management* – Updates to the vegetation management program currently underway are anticipated to reduce tree contacts during wind storms. Changes to the program which are being implemented include targeted tree trimming cycle and clearance distance from lines based on tree species and their rate of growth. These changes have been determined based on an extensive system review which

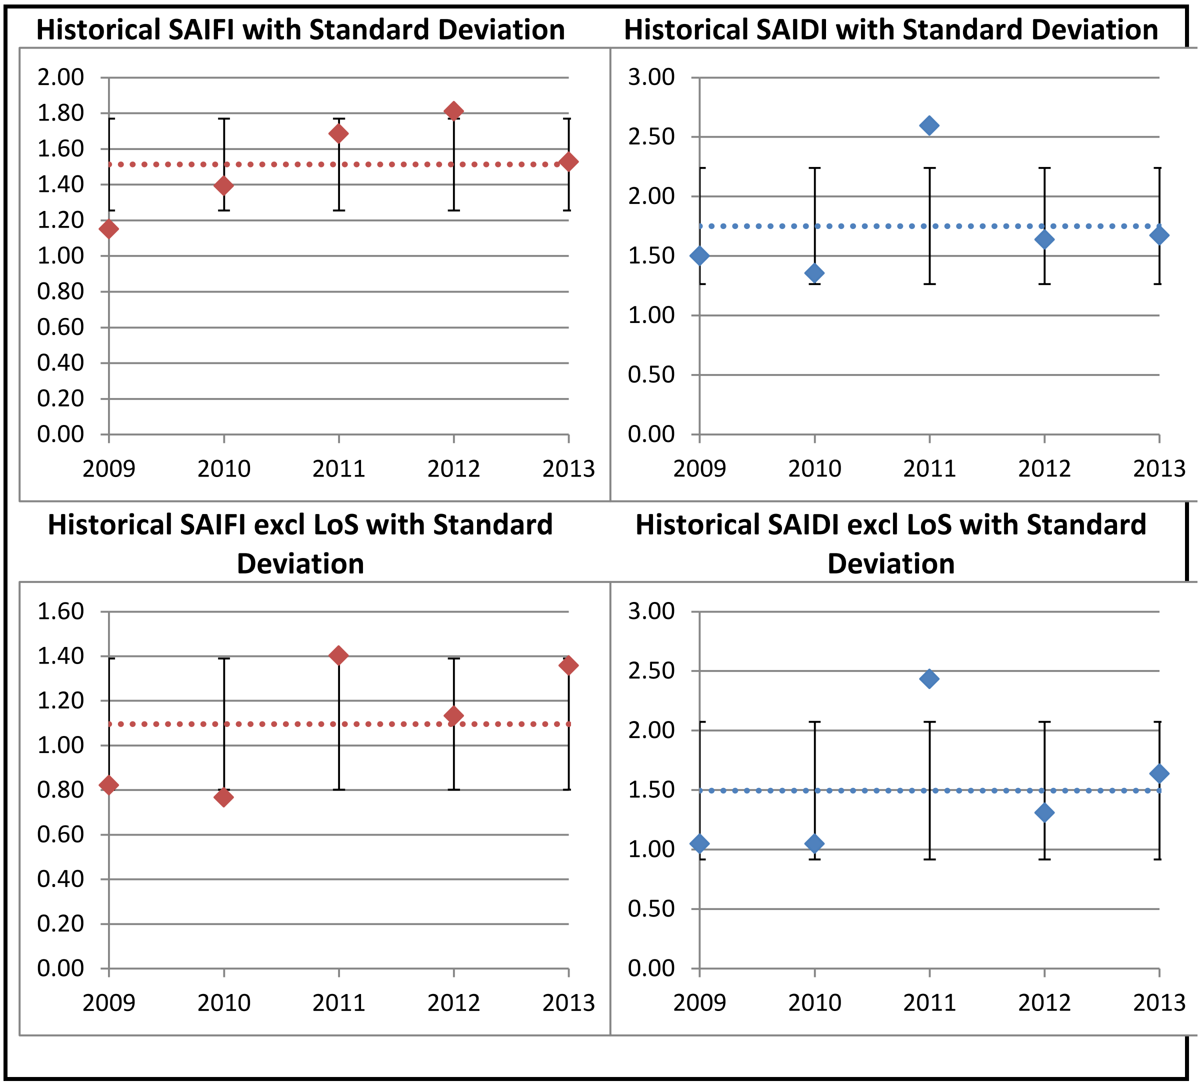
captured data on trees within proximity to all overhead spans within the service territory. Data collected included species so that growth rates could be considered for trim cycles and planned removal of Emerald Ash trees can be coordinated, as well as any locations with overhang. In addition, 'smart' tree removals are being considered. 'Smart' removals would target trees near overhead lines that either are near end of life and at risk of falling into the line or would require excess trimming (i.e. trimming would be required too frequently or would negatively impact the health of the tree) to maintain an appropriate clearance. Starting in 2014 and ending early 2015, HOL has hired contractors to remove all overhang across the system to eliminate the potential for branches falling onto the lines in the case of high winds or ice and snow loading.

- *System Protection* – Where appropriate, distribution reclosers are installed on the system. While these reclosers will not completely eliminate outages, they do sectionalize the distribution circuit, minimalizing the number of customer interruptions for a given fault. As well, where appropriate, a coordinate review is undertaken to ensure the appropriate size of fusing is in place and that the protection scheme operates as intended.

## 3.0 OUTLYING YEARS – SERVICE RELIABILITY INDICATORS

Comparing SAIFI and SAIDI performance by year to the 5-year averages, it can be seen that 2011 (SAIFI & SAIDI) and 2012 (SAIFI) show as outliers when you consider the standard deviation from the average:

**Table 1**



## 3.1 2011

System reliability in 2011 was defined by the storms experienced and HOL's response. Three major storms resulted in high levels of customer interruption and duration. Loss of service due to storms in 2011 was the equivalent to a 1.5 hour interruption to every Hydro Ottawa customer.

While the primary cause of system interruption in 2011, namely Adverse Weather, is outside the control of Hydro Ottawa, the ability to respond to such challenges is not. As a result of the experiences in 2011, in 2012 Hydro Ottawa undertook initiatives to improve future performance. These included updates to the emergency response organization and procedures, review of vegetation management planning, as well as ongoing commitment to asset replacement and automation; ultimately to storm harden the system and reduce restoration time. Further work is still being planned with the aim to storm harden the system, for example, the work planned to clear all tree overhang in 2014 and 2015 in described above.

The second leading cause of interruption in 2011 was Defective Equipment. Tree Contacts also had a measurable contribution to the SAIDI score in 2011. Collectively, Adverse Weather and Defective Equipment account for approximately 50% of the 2011 SAIFI and SAIDI scores.

**3.2 2012**

System reliability in 2012 continued to see degrading performance. Increasing interruption trends in Defective Equipment, Loss of Supply, Adverse Weather, and Foreign Interference were the main contributors to the performance of 2012.

Overall, since 2008 SAIDI has been steadily increasing, due to the increase of storms with severe wind and rain, but also due to the increase in scheduled work. Scheduled work causes SAIDI to increase due to outages planned in advance. Moving forward, it is anticipated that interruptions due to scheduled work will continue to grow based on the need described in the Annual Planning Report.

2012 fell outside the standard deviation for overall SAIFI due to the large contribution of Loss of Supply events. When looking at SAIFI excluding Loss of Supply, the 2012 performance falls within the standard deviation bands.

## 4.0 RELIABILITY COUNCIL AND SYSTEM ACTIVITY INVESTIGATION REPORTING CRITERIA

Hydro Ottawa works to continuously improve reliability measures. In response to reliability analysis and worst feeder performance reviews, in 2014 Hydro Ottawa initiated a cross-functional team known as the Reliability Council to discuss reliability concerns. The team is also tasked with identifying improvements and efficiencies that will improve overall reliability statistics. Issues and ideas related to storm response, system operability, circuit ties, tree trimming initiatives and intricacies of each voltage system in the service territory among other items are discussed and brought back to the team from all levels and areas of the organization.

The Asset Planning Group has also been engaged in producing System Activity Investigation Reports with the goal of providing clarity into issues with the configuration and operation of the distribution system. System Activity Investigation Reports provide insight into the root cause of an event, identifying issues with standard process and procedures, and provide recommendations to mitigate re-occurring events. The Asset Planning Group has developed a set of criteria to initiate System Activity Investigation Reports. These criteria will attempt to capture events that can lead to corrective actions to further better the system and operating procedures.

Any of the following criteria may initiate a System Activity Investigation Report:

- > 1000 Customers and > 1 Minute (unplanned)
- > 8 Hours and > 1 Customer
- Equipment/Protection mis-operation (HOL, HONI, or other)
- Incidents where equipment failure, protection mis-operation, or system operation have or are suspected to have caused or contributed to Health and Safety incidents (public or employee) or property damage
- Re-occurring incidents of supply quality falling outside tolerances for voltage, current, frequency and harmonic distortion as specified in ECG0008, that are suspected to have originated from the distribution system
- As circumstances require

These two initiatives, namely the Reliability Council and System Activity Investigation Reports, are but two of many internal initiatives which strive to complement Hydro Ottawa's already robust Distribution System planning, and ultimately optimize Hydro Ottawa's operational effectiveness and performance.

# LOAD FORECAST

Hydro Ottawa Limited ("Hydro Ottawa") engaged Itron to complete a 2015 to 2020 sales and energy forecast. Itron completed forecasts for total purchases sales and system demand and rate class sales, customers and connections, and billing demand. The forecast utilized actual data on sales, customer numbers and connections, and purchases until August 2014. Forecasts were provided both with and without the impact of future Conservation Demand Management ("CDM") targets.

A Purchases model was used with total sales allocated to the rate class sales forecast. For details regarding the forecast methodology, including CDM persistence and future targets, economic assumption, and data sources please see Itron's report as C-1(A).

Hydro Ottawa has completed Appendix 2-I, Load Forecast CDM Adjustment Workbook (2015) and Appendix 2-IA Summary and Variances of Actual and Forecast Data, and can be found as PDFs at the end of this exhibit.

While completing the Load Forecast, Hydro Ottawa was performing its analysis for its rate reclassification. Based on a detailed customer level analysis of the impact of the rate reclassification, Hydro Ottawa has adjusted the class level load forecast and customer numbers developed by Itron. The total kWh sales, kW demand, and customer and connection numbers equal that of Itron's, however the class level forecasts are different; the main reclassification being between General Service < 50 kW and General Service > 50 kW classifications. With new procedures implemented Hydro Ottawa is anticipating less movement between the General Service classes in the future.

Hydro Ottawa has also adjusted the forecast to include Sentinel Lights and Standby Demand as these were not forecasted separately by Itron.

Table 1 provides Hydro Ottawa's Sales forecast by MWh for 2016 through 2020.

**Table 1 – Hydro Ottawa 2016 through 2020 Forecasted Sales Forecast (MWh) by class[1]**

# Appendix 2-I
## Load Forecast CDM Adjustment Work Form (2015)

The 2014 bridge year is the last year of the current four year (2011-2014) CDM program, and 2015 is the first year of a new six year (2015-2020) CDM program, per the Ministirial directives of March 31, 2014. Thus, with 2015, there is a need to recognize the final year of the current 2011-2014 CDM program, as well as to estimate reasonable impacts each year for the new 2015-2020 CDM program. These are combined to estimate the adjustment for CDM program impacts on the 2015 load forecast.

Appendix 2-I was developed to help determine what would be the amount of CDM savings needed in each year to cumulatively achieve the four year 2011-2014 CDM target. This then determined the amount of kWh (and with translation, kW of demand) savings that were converted in dollars balances for the LRAMVA, and also to determine the related adjustment to the load forecast to account for OPA-reported savings. Beginning for the 2015 year, it has been adjusted because of the persistence of 2011-2014 CDM programs will be an adjustment to the load forecast in addition to the estimated savings for the first year (2015) for the new 2015-2020 CDM plan.

It is assumed that the new six year (2015-2020) CDM program will work similar to the existing 2011-2014 CDM program, meaning that distributors will offer programs each year that, cumulatively over the six years (from January 1, 2015 to December 31, 2020) will cumulatively achieve the new six year CDM target. This is the approach contemplated in the Ministerial directive letters of March 31, 2014 to the Board and to the OPA. Thus, distributors will be able to offer programs on a basis so that cumulatively over the period, the impacts, including persistence, of the CDM programs will accumulate towards achieving each distributor's 2015-2020 CDM target.

With this approach, it is necessary to account for estimated savings for the last year of the current program, particularly the estimated savings for new CDM programs offered in 2014, as well as the estimated savings for new CDM programs that the distributor will offer in 2015 towards achievement of the new six year (2015-2020) CDM program. This necessitates expansion of this Appendix 2-I to deal with both the 2011-2014 and 2015-2020 CDM plans. It is expected that this approach will be updated each year.

### 2011-2014 CDM Program - 2014, last year of the current CDM plan

Input the 2011-2014 CDM target in Cell B21.

Input the measured results for 2011 CDM programs for each of the years 2011 and persistence into 2012, 2013 and 2014 into cells B31 to E31. These results are taken from the final 2011 CDM Report issued by the OPA for that distributor in the fall of 2012.

Measured results for 2012 CDM programs for each of the years 2012 and persistence into 2013 and 2014 are input into cells C32 to E32. These results are taken from the final 2012 CDM Report issued by the OPA for that distributor in the fall of 2013.

Measured results for 2013 CDM programs for each of the years 2013 and persistence into 2014 are input into cells C33 to E33. These results are taken from the final 2013 CDM Report issued by the OPA for that distributor in the fall of 2014. Until that report is issued, the distributor should use the results from the preliminary 2013 CDM Report issued in the spring of 2014.

Based on these inputs, the residual kWh to achieve the 4 year CDM target icalculated for 2014 CDM under the assumption that the distributor will at least achieve the 2011-2014 CDM target that is currently a condition of the utility's Distribution Licence. If the distributor has met its cumulative kWh savings target by the end of 2013, the incremental savings for 2014 are assumed to be zero. Any further savings for 2014 CDM savings and any further compensation for meeting or exceeding the four-year (2011-2014) targets will be dealt with through the disposition of the 2011-2014 LRAMVA balance, which will occur in the next cost of service application filed after the final 2014 CDM Reports issued by the OPA in the fall of 2015.

## 2015-2020 CDM Program - 2015, first year of the current CDM plan

For the first year of the new 2015-2020 CDM plan, it is assumed that each year's program will achieve an equal amount of new CDM savings. The new targets for 2015-2020 do not take into account persistence beyond the first year, but the OPA will encourage distributors to promote and implement CDM plans that will have longer term persistence of savings. This results in each year's program being about 1/6 (18.67%) of the cumulative 2015-2020 CDM target for kWh savings. A distributor may propose an alternative approach but would be expected to document in its application why it believes that its proposal is more reasonable. In its proposal, the distributor should ensure that the sum of the results for each year's CDM program from 2015 to 2020 add up to its 2015-2020 CDM target as established by the OPA.

| 6 Year (2015-2020) kWh Target: | | | | | | | |

### *Determination of 2015 Load Forecast Adjustment*

The Board has determined that the "net" number should be used in its Decision and Order with respect to Centre Wellington Hydro Ltd.'s 2013 Cost of Service rates (EB-2012-0113). This approach has also been used in Settlement Agreements accepted by the Board in other 2013 and 2-14 applications. The distributor should select whether the adjustment is done on a "net" or "gross" basis, but must support a proposal for the adjustment being done on a "gross" basis. Sheet 2-I defaults to the adjustment being done on a "net" basis consistent with Board policy and practice.

From each of the 2006-2010 CDM Final Report, and the 2011, 2012 and 2013 CDM Final Reports, issued by the OPA for the distributor, the distributor should input the "gross" and "net" results of the cumulative CDM savings for 2014 into cells D31 to E33. The model will calculate the cumulative savings for all programs from 2006 to 2012 and determine the "net" to "gross" factor "g".

| Net-to-Gross Conversion | | | | |
|---|---|---|---|---|
| **Is CDM adjustment being done on a "net" or "gross" basis?** | | | | **net** |
| Persistence of Historical CDM programs to 2014 | **"Gross" kWh** | **"Net" kWh** | **Difference kWh** | **"Net-to-Gross" Conversion Factor ('g')** |
| 2006-2010 CDM programs | | | | |
| 2011 CDM program | **52,446,922** | **35,847,339** | | |
| 2012 CDM program | **48,896,698** | **35,093,510** | | |
| 2013 CDM program | **59,297,889** | **42,598,285** | | |
| **2006 to 2013 OPA CDM programs: Persistence to 2015** | 160,641,509 | 113,539,134 | 47,102,375 | 0.00% |

The default values represent the factor that each year's CDM program is factored into the manual CDM adjustment.  Distributors can choose alternative weights of "0", "0.5" or "1" from the drop-down menu for each cell, but must support its alternatives.

These factors do not mean that CDM programs are excluded, but also reflect the assumption that impacts of 2011 and 2012 programs are already implicitly reflected in the actual data for those years that are the basis for the load forecast prior to any manual CDM adjustment.

**Weight Factor for Inclusion in CDM Adjustment to 2014 Load Forecast**

| | 2011 | 2012 | 2013 | 2014 | 2015 | |
|---|---|---|---|---|---|---|
| **Weight Factor for each year's CDM program impact on 2014 load forecast** | **0** | **0** | **0** | **1** | **0.5** | Distributor can select "0", "0.5", or "1" from drop-down list |
| ***Default Value selection rationale.*** | *Full year persistence of 2011 CDM programs on 2015 load forecast.  Full impact assumed because of 50% impact in 2011 (first year) but full year persistence impact on 2012 and 2013, and thus reflected in base forecast before the CDM adjustment.* | *Full year persistence of 2012 CDM programs on 2015 load forecast.  Full impact assumed because of 50% impact in 2012 (first year) but full year persistence impact on 2013, and thus reflected in base forecast before the CDM adjustment.* | *Default is 0, but one option is for full year impact of persistence of 2013 CDM programs on 2015 load forecast, but 50% impact in base forecast (first year impact of 2013 CDM programs on 2013 load forecast, which is part of the data for the load forecast.* | *Full year impact of persistence of 2014 programs on 2015 load forecast.  2014 CDM programs not in base forecast.* | *Only 50% of 2015 CDM programs are assumed to impact the 2015 load forecast based on the "half-year" rule.* | |

## *2011-2014 and 2015-2020 LRAMVA and 2015 CDM adjustment to Load Forecast*

One manual adjustment for CDM impacts to the 2015 load forecast is made. However, the distributor will have two associated annualized CDM impacts, one for the 2011-2014 CDM program and the second for the 2015-2020 CDM plan. In addition, the distributor needs to reflect the CDM adjustment that was explicitly factored into its 2011 load forecast in its 2011 cost of service application (assuming that it rebased in that year). this amount, and equal persistence for 2012, 2013 and 2014 is used as an offset to determine what the net balance of the 2011-2014 LRAMVA balance should be for disposition.

The Amount used for the CDM threshold of the LRAMVA is the kWh that will be used to determine the base amount for the LRAMVA balance for 2014, for assessing performance against the four-year target. The base amount for 2011-2013 is 0 (zero) for 2014 Cost of Service applications, as the utility rebased prior to the 2011-2014 CDM programs, and there was no adjustment to reflect the impacts of the 2011-2014 programs on the load forecast used to determine their last cost of service-based rates.

The proposed loss factor should correspond with the loss factor calculated in Appendix 2-R

The Manual Adjustment for the 2015 Load Forecast is the amount manually subtracted from the load forecast derived from the base forecast from historical data, and is intended to reflect the further CDM savings that the distributor needs to achieve assuming that they meet 100% of the 2011-2014 CDM target that is a condition of their target.

If the distributor has developed their load forecast on a system purchased basis, then the manual adjustment should be on system purchased basis, including the adjustment for losses. If the load forecast has been developed on a billed basis, either on a system basis or on a class-specific basis, the manual adjustment should be on a billed basis, excluding losses.

The distributor should determine the allocation of the savings to all customer classes in a reasonable manner (e.g. taking into account what programs and what OPA-measured impacts were directed at specific customer classes), for both the LRAMVA and for the load forecast adjustment.

| | 2011 | 2012 | 2013 | 2014 | 2015 | Total for 2014 | Total for 2015 |
|---|---|---|---|---|---|---|---|
| | | | | kWh | | | |
| Amount used for CDM threshold for LRAMVA (2014) | 34,000.00 | 34,400.00 | 41,400.00 | 42,400.00 | | 152,200.00 | |
| 2012 CDM adjustment (per Board Decision in 2012 Cost of Service Application) (enter as negative) | - 8,000.00 | - 8,000.00 | - 8,000.00 | - 8,000.00 | | - 32,000.00 | |
| Amount used for CDM threshold for LRAMVA (2015) | | | | | 39,500.00 | | 39,500.00 |
| Manual Adjustment for 2015 Load Forecast (billed basis) | - | - | - | 42,400.00 | 19,750.00 | | 62,150.00 |
| Proposed Loss Factor (TLF) | 3.58% | Format: X.XX% | | | | | |
| Manual Adjustment for 2015 Load Forecast (system purchased basis) | - | - | - | 43,917.92 | 20,457.05 | | 64,374.97 |

*Manual adjustment uses "gross" versus "net" (i.e. numbers multiplied by (1 + g). The Weight factor is also used calculate the impact of each year's program on the CDM adjustment to the 2014 load forecast.*

# Contents

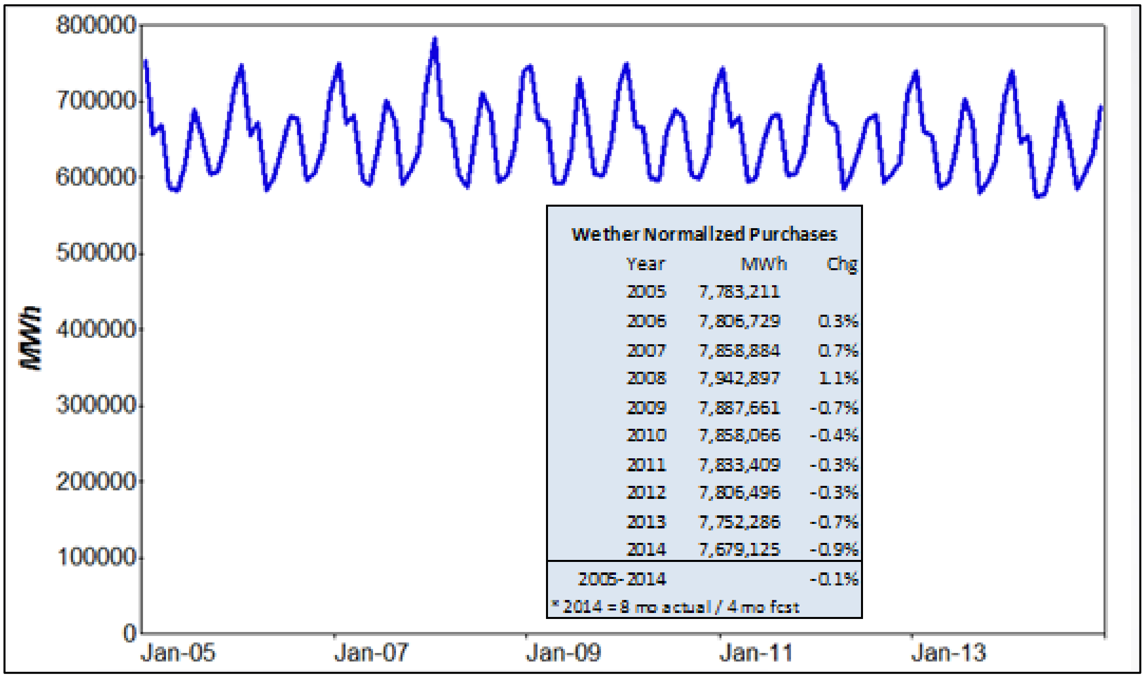
# 1 Overview

Itron, Inc. recently completed the 2015 to 2020 Hydro Ottawa sales and energy forecast. The forecast is based on actual sales, customer, and purchase data through August 2014. Forecasts are derived for total purchases, system demand and rate class sales, customer, and billing demand through 2020. This document presents an overview of the forecast methodology and results.

**Background**

Hydro Ottawa serves approximately 289,600 residential customers and 27,600 nonresidential customers. The residential customer class accounts for approximately 30% of system sales. In 2013, annual system purchases exceeded 7,722 GWh with a system peak demand of 1,427 MW. Over the last ten years, customer and economic growth has been relatively steady. Since 2005, regional population growth has averaged 1.4% while real GDP has averaged 1.5%; even during the recession GDP declined only 0.2% (2009). Since 2005, Hydro Ottawa has added over 40,000 new customers. While the population has been increasing and the economy expanding, system electricity purchases have been flat. Between 2005 and 2013, weather normalized purchases have actually declined from 7,783 GWh to an estimated 7,678 GWh by year-end 2014. Figure 1 shows annual weather normal purchases.

### Figure 1: Weather Normal System Purchases

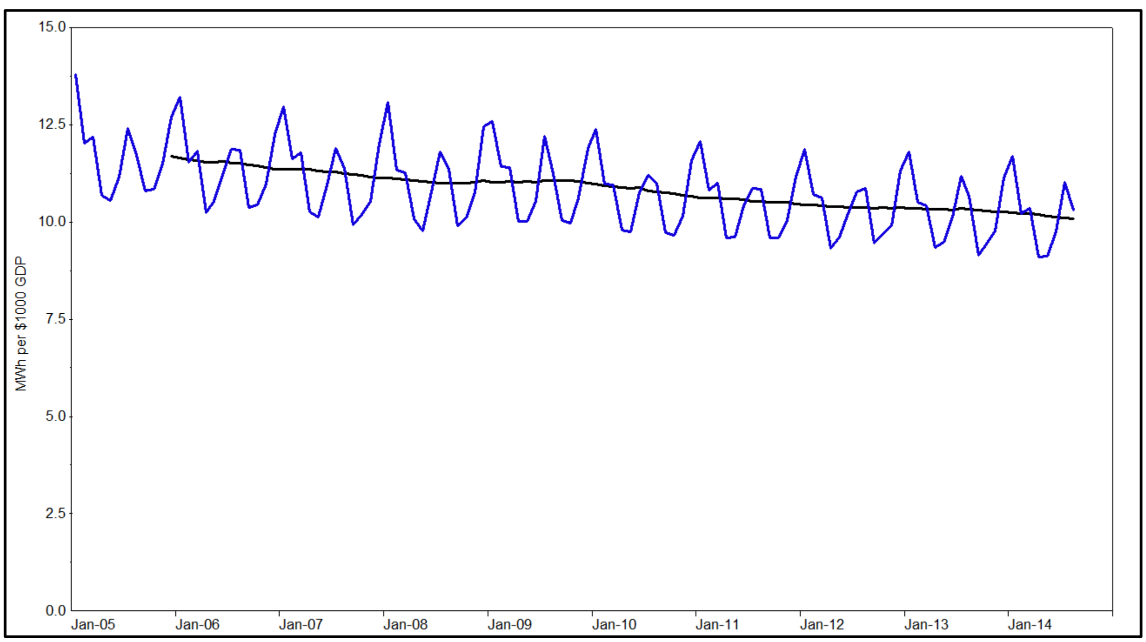


| Wether Normalized Purchases | | |
|---|---|---|
| Year | MWh | Chg |
| 2005 | 7,783,211 | |
| 2006 | 7,806,729 | 0.3% |
| 2007 | 7,858,884 | 0.7% |
| 2008 | 7,942,897 | 1.1% |
| 2009 | 7,887,661 | -0.7% |
| 2010 | 7,858,066 | -0.4% |
| 2011 | 7,833,409 | -0.3% |
| 2012 | 7,806,496 | -0.3% |
| 2013 | 7,752,286 | -0.7% |
| 2014 | 7,679,125 | -0.9% |
| 2005-2014 | | -0.1% |

* 2014 = 8 mo actual / 4 mo fcst

Flat energy purchases given relatively strong customer and economic growth implies strong electric efficiency improvements. This can be seen in Figure 2 which shows the ratio of Weather normal MWh to real GDP.

### Figure 2: MWh per Real GDP



The MWh input per dollar of output has been decreasing on average 1.9% per year. Another way of viewing this trend is to compare the energy consumption trend with GDP trend. This is depicted in Figure 3.

**Figure 3: Purchases vs. GDP (2000 = 1.0)**

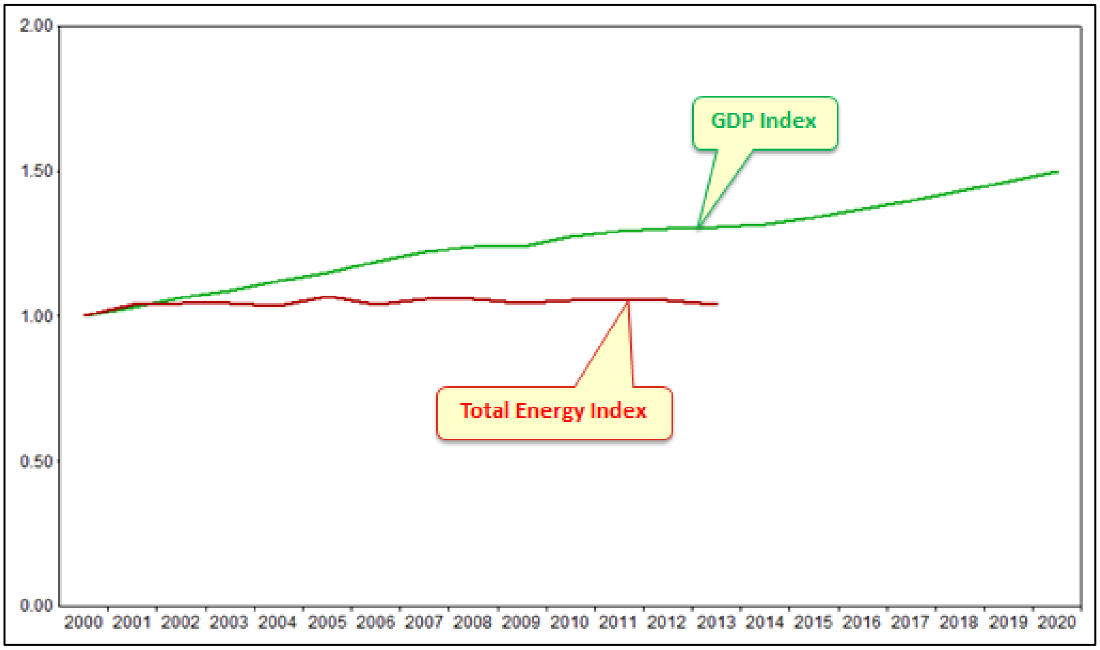


Figure 3 shows purchases and GDP indexed to 1.0 (2000). While GDP has been averaging 2.0% growth per year since 2000, purchases have effectively been flat. GDP is projected to continue to average 2.2% annual growth through 2020. As end-use energy efficiency is expected to continue to improve, we expect electricity required per dollar of GDP to continue to decline.

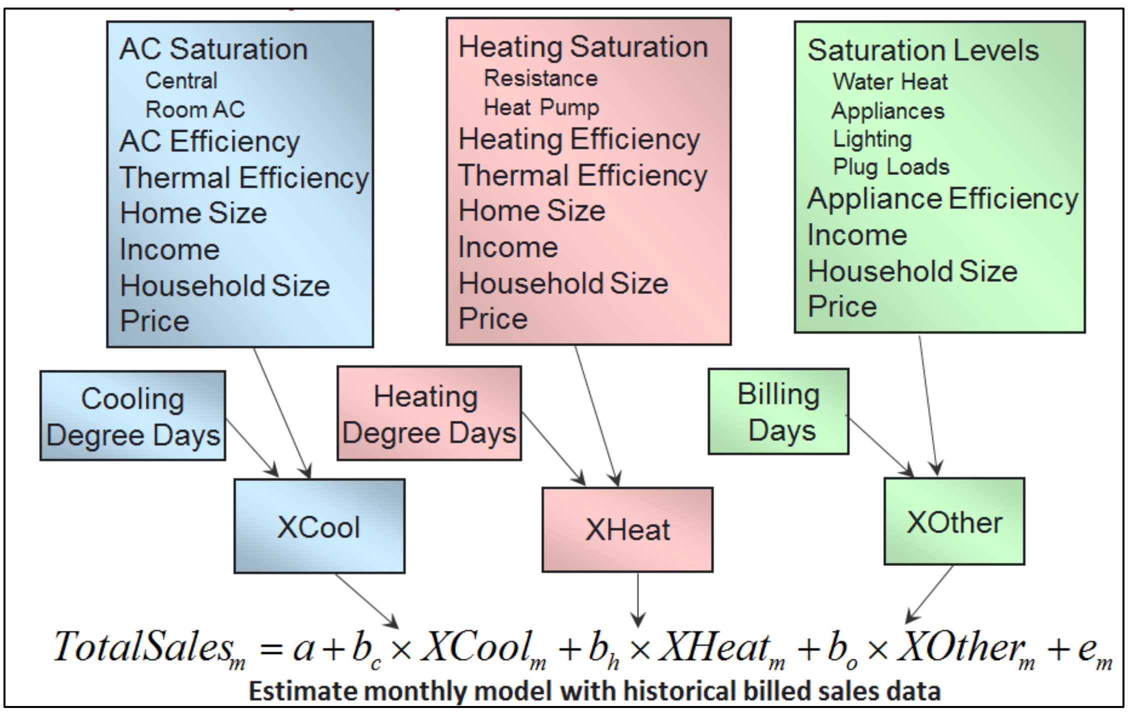
From the graph above, it's clear that that traditional energy forecast model that relates electric consumption to GDP or other economic driver will not work without accounting for efficiency improvements. A simple approach is to estimate a regression model that includes GDP and GDP interactive with a linear trend variable. The interactive variable allows the slope on GDP to change over time. While such a model will explain the historical purchase trend well, it assumes that the same trend observed over the last ten years will continue on through the next five years. The GDP/trend model ultimately results in too low of a forecast as we expect this trend to flatten out in the later years.

The objective then is to replace the trend variable with a more explicit variable of energy efficiency. This is done by using a Statistically Adjusted End-Use (SAE) modeling framework where end-use energy intensities are explicitly incorporated into the forecast model.

To capture the efficiency trend, forecasts for the residential and commercial rate classes are estimated using a Statistically Adjusted End-Use Models (SAE) modeling framework. This entails explicitly incorporating end-use intensity trends into the constructed monthly model variables that capture cooling requirements (XCool), heating requirements (XHeat), and all other uses (XOther). The variables are constructed as a combination of weather conditions, economic activity, price, and end-use intensity trends. End-use intensity trends are calculated on a kWh per household basis in the residential sector and a kWh per square foot in the commercial sector. Figure 4 shows the general residential modeling framework.

**Figure 4: SAE Model Framework**



The estimated model coefficients – $b_c$, $b_h$, and $b_o$ calibrate the estimated end-use loads (XCool, XHeat, and XOther) to actual billed customer usage. Projections of end-use intensity, economic conditions, price, and weather conditions executed through the estimated models drive projected monthly average use and sales. A similar specification is used for the commercial revenue classes where models for the largest revenue classes are estimated using total sales rather than average use.

For residential sector, end-use energy intensities are derived from historical and forecasted saturation and annual energy estimates or unit of energy consumption (UEC) from the recent Ontario Power Authority (OPA) end-use forecast for the province. End-use intensities for the commercial sector are based on the U.S. Energy Information Agency (EIA) forecast for the U.S. East North Central (ENC) Census Division. EIA develops end-use forecast for seven census regions in the U.S. each year as part of the Annual Energy Outlook (AEO).

Over the last ten years, end-use efficiency has been increasing faster than end-use saturation; as a result residential and commercial energy intensity has been declining. Improvements in end-use efficiency is the result of replacing existing appliances with more energy efficient appliances, new appliance efficiency standards, improving thermal shell efficiency, and CDM program activity. From a modeling perspective, it is impossible to explain historical sales trends and generate a reasonable long-term sales and energy forecast without explicitly capturing end-use efficiency improvements in the model structure. This is illustrated in Figure 3.

**Figure 5: Indexed System Energy and Model Drivers (2005 = 1.0)**

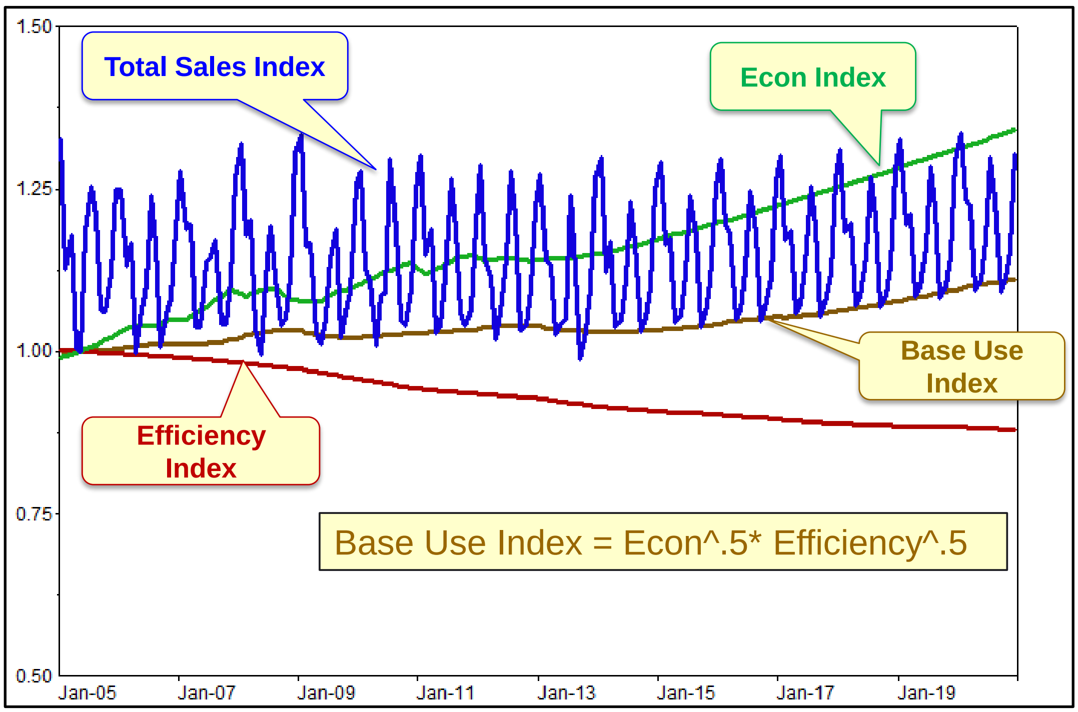


Figure 5 compares monthly system sales, against an economic index (weighted GDP and Population), an efficiency index (weighted residential and commercial energy intensity), and a combination of the economic and efficiency index (Base Use). The variables have been indexed to 1.0 in 2005. It is not until the economic variable is combined with energy intensity that we can adequately capture the historical energy trend and generate a plausible energy forecast.

When projected intensity improvements are combined with population and GDP, total sales are expected to average 0.7% annual growth before CDM adjustment and -0.1% with CDM adjustments. Table 1 shows historical and forecasted purchases; historical figures are weather normalized.

**Table 1: Hydro Ottawa 2015 Purchase Forecast**

| Year | Weather Normal Purchases (MWh) | Chg | CDM Adjusted | Chg |
|---|---|---|---|---|
| 2005 | 7,782,623 | | 7,782,623 | |
| 2006 | 7,806,222 | 0.3% | 7,806,222 | 0.3% |

| 2019 | 7,934,956 | 0.8% | 7,599,471 | 0.0% |
| 2020 | 8,003,412 | 0.9% | 7,599,868 | 0.0% |
| **2005 - 14** | | **-0.1%** | | **-0.2%** |
| **2014 - 20** | | **0.7%** | | **-0.2%** |

**Rate Class Build-Up vs. Total Purchase Forecast**

While the ideal approach is to build purchase requirements from the rate class sales level, in the end we allocated out the total sales forecast to the rate classes based on the rate class forecasts before CDM adjustments; CDM savings projections are then subtracted from the allocated rate class sales forecast. The rate class models were not strong enough statistically to totally rely on and generated too low of a sales forecast as the starting point for billed sales model is 2008 – right at the start of the recession. Billing data before 2008 was not usable for estimating statistically acceptable forecast models. Also, while the ideal approach is to estimate average use models for residential and small commercial revenue classes, we elected to develop total class sales forecast models as there was even more unexplained variation in the average use models.

The forecast is derived from monthly regression models estimated for both rate classes and total purchases. Rate class sales, and customer forecast models are estimated for the following rate classes.

- Residential
- GS (less than 50 kW)
- GS Non-Interval Metered (50kW to 1000 kW)
- GS Interval Metered (50 kW to 1000 kw)
- GS (1000 kW to 1500 kW)
- GS (1500 kW to 5000 kW)
- Large Users (5000 kW plus)
- Street Lighting
- MU
- DCL

SAE models are estimated for Residential, GS classes, and total purchases. While the rate class models adjusted R-squared are relatively low, the coefficients on the model variables heating (XHeat), cooling (XCool), and other use (XOther) have strong coefficients that are statistically significant. The end-use model variables which combine weather, economic and population growth, and improving end-use efficiency captures differences in sales growth across rate classes and generates a statistically strong forecast model at the total system level. Class sales model results are used to allocate total system sales forecast to rate classes allowing us to capture differences in class sales growth over time. Allocated class sales forecasts are then adjusted for CDM savings projections. Table 2 shows the unadjusted class sales forecast, while Table 3 shows the CDM adjusted forecast.

### Table 2: Unadjusted Class Sales Forecast (MWh)

| Year | Res | GS < 50kW | GS NI 50-1000kW | GS I 50-1000kW | GS 1000-1500kw | GS 1500-5000kw | Large Users | Street Lght | MU | DCL |
|---|---|---|---|---|---|---|---|---|---|---|
| 2014 | 2,209,986 | 706,581 | 1,489,888 | 1,135,002 | 338,244 | 860,536 | 615,653 | 44,419 | 16,392 | 3,387 |

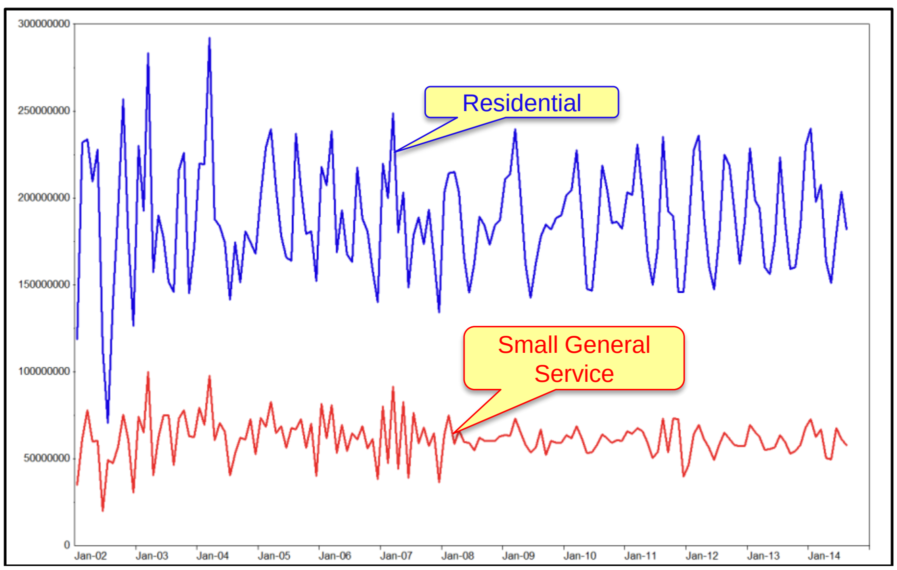
# 2 Forecast Data and Assumptions

## 2.1 Historical Class Sales and Energy Data

Unfortunately, historical billing data is extremely difficult to use in constructing class sales forecast. The primary reason is that reported monthly sales are not a measure of calendar month use but rather reflect consumption over the current and prior two months, and includes accounting adjustments for unbilled sales – an estimate of what has been delivered, but not yet billed. The end-result is a monthly data series that does not correlate well with current-month weather conditions (the primary short-term driver of sales), and includes large month-to-month accounting adjustments that can't be explained in a regression model. As an example, monthly sales data for residential and small general service is depicted in Figure 6.

**Figure 6: Residential and Small Commercial Billed Sales (kWh)**



As depicted in Figure 6 there are large swings in month to month usage that are not weather related – particularly before 2008. With little to explain some of this variation the models' adjusted R-squared are relatively low.

Model statistical fit can be improved by using the billing data beginning in 2008 and constructing monthly weather variables that are derived as a weighted average of the current and prior two-month weather conditions. The problem with this solution, however, is that the historical data set is then rather short (January 2008 to August 2014) and begins right at the start of the recession; the class sales models estimated with the shorter historical series have better model statistics, but result in forecasts that are likely too low. AMI data should eventually allow for much better rate class sales forecast models. While this will significantly improve forecast models in the future, a longer period of historical sales data is still needed to estimate the sales regression models.

## 2.2 Weather Data

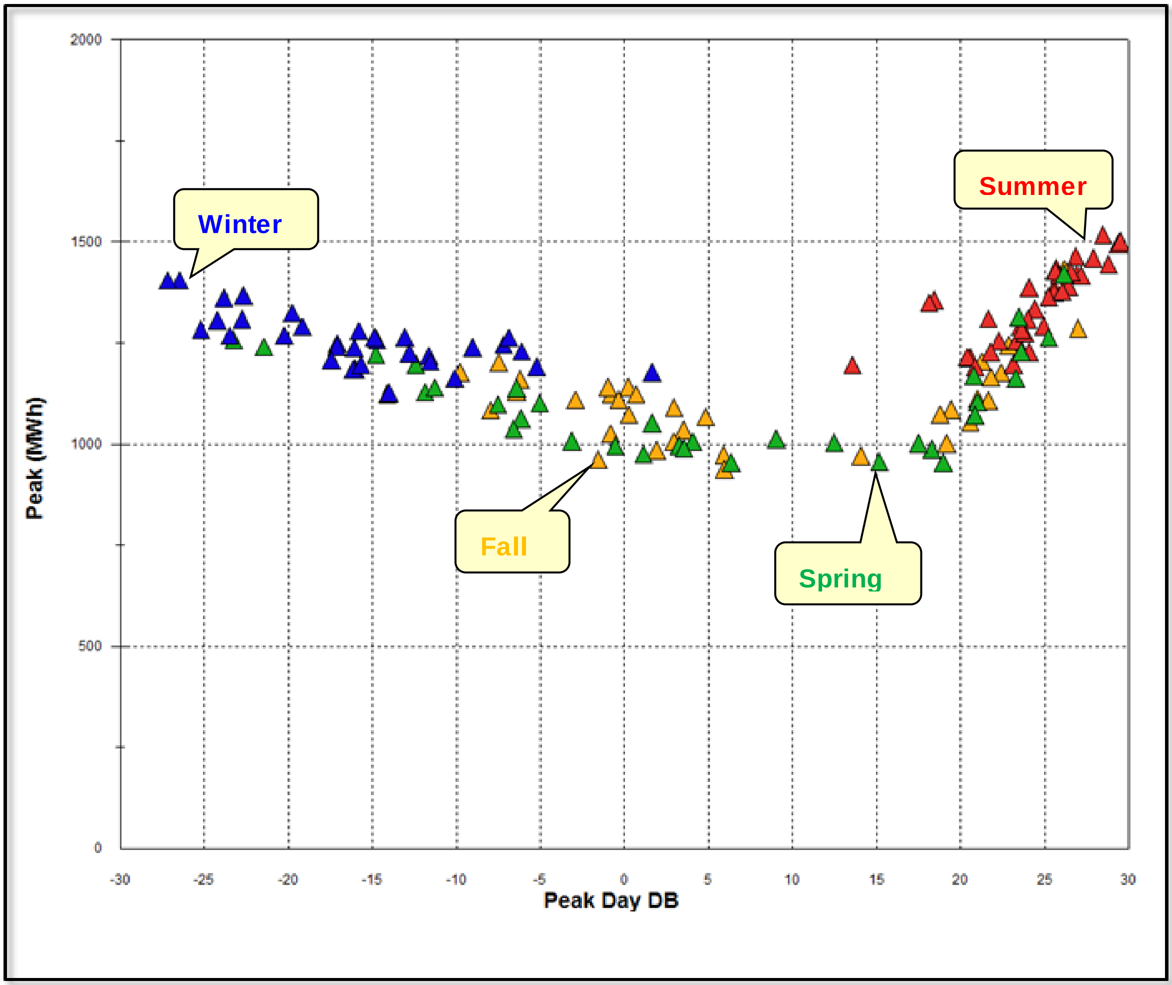
Actual and normal Heating Degree Days (HDD) and Cooling Degree Days (CDD) are calculated from daily average temperature and dew point data for Ottawa. Normal degree-days are calculated as an average of monthly degree-days over the past twenty years – 1994 through 2013. CDD and HDD are used in estimating and forecasting class sales and total purchases.

Given class billing data spans several calendar months, sales models are estimated using current as well as lag HDD and CDD variables. Residential sales are modeled using three-month weighted HDD and CDD as residential meters have historically been read every other month. Current and prior month HDD and CDD are used in constructing the weather variables for the nonresidential rate classes.

***Peak-Day Weather Variables***

Monthly peak-day HDD and TDD (temperature-humidity based degree-days) are used in forecasting peak demand. Peak-day degree-days are based on the average daily temperature and dew point that occurs on the day of the monthly peak. The appropriate breakpoints for the HDD and TDD variables are determined by evaluating the relationship between monthly peak and the peak-day average temperature as shown in Figure 7.

**Figure 7: Monthly Peak Demand /Temperature Relationship**



From the scatter plot (and initial regression models) the "best" fit TDD variable is where TDD is defined with a THI base of 13 degrees and the best breakpoint for calculating the peak-day HDD variable is 10 degrees.

Normal peak-day HDD and TDD are derived as a twenty-year average using a *rank and average* approach. This approach entails first finding the highest HDD and TDD that occurred in each month over the last twenty years, and within each year ranking the degree-days from the highest to the lowest value so that there are 12 monthly ranked HDD and TDD in each year. The ranking across the years are then averaged effectively generating peak-weather TDD and HDD duration curves with 12 average values. The ranked-average TDD and HDD are assigned to specific months based on that peak-month TDD or HDD is most likely to occur. So for example, the highest TDD value is assigned to July, the next highest

August, the third highest June, and so forth. The highest HDD value is assigned to January, the next highest to February, the third highest to December, and so forth.

## 2.3 Economic Data

Purchases and class sales forecasts are based on the Conference Board's September 2014 economic forecast for the Ottawa and Gatineau area. The primary economic drivers are population, GDP, and real personal income (RPI). Table 4 shows the historical and forecasted economic drivers.

### Table 4: Ottawa Regional Economic Forecast

| Year | Population (000's) | Chg | GDP (Millions $) | Chg | RPI (Millions $) | Chg |
|---|---|---|---|---|---|---|
| 2003 | 1,140 | | 52,444 | | 36,688 | |
| 2004 | 1,150 | 0.9% | 53,924 | 2.8% | 37,661 | 2.7% |
| 2005 | 1,160 | 0.9% | 55,468 | 2.9% | 38,649 | 2.6% |
| 2006 | 1,172 | 1.0% | 57,253 | 3.2% | 40,263 | 4.2% |
| 2007 | 1,188 | 1.4% | 58,853 | 2.8% | 42,102 | 4.6% |
| 2008 | 1,207 | 1.6% | 59,880 | 1.7% | 43,203 | 2.6% |
| 2009 | 1,229 | 1.8% | 59,789 | -0.2% | 44,898 | 3.9% |
| 2010 | 1,251 | 1.8% | 61,473 | 2.8% | 45,221 | 0.7% |
| 2011 | 1,270 | 1.6% | 62,390 | 1.5% | 45,745 | 1.2% |
| 2012 | 1,289 | 1.5% | 62,759 | 0.6% | 46,941 | 2.6% |
| 2013 | 1,305 | 1.3% | 63,032 | 0.4% | 47,724 | 1.7% |
| 2014 | 1,319 | 1.0% | 63,484 | 0.7% | 48,712 | 2.1% |
| 2015 | 1,330 | 0.9% | 64,611 | 1.8% | 49,413 | 1.4% |
| 2016 | 1,343 | 1.0% | 66,029 | 2.2% | 50,509 | 2.2% |
| 2017 | 1,358 | 1.1% | 67,485 | 2.2% | 51,615 | 2.2% |
| 2018 | 1,373 | 1.1% | 69,037 | 2.3% | 52,791 | 2.3% |
| 2019 | 1,388 | 1.1% | 70,602 | 2.3% | 53,946 | 2.2% |
| 2020 | 1,402 | 1.0% | 72,165 | 2.2% | 55,080 | 2.1% |
| 2003-14 | | 1.35% | | 1.75% | | 2.63% |
| 2015-20 | | 1.03% | | 2.17% | | 2.07% |

## 2.4 Appliance Saturation and Efficiency Trends

End-use intensities are calculated from end-use saturation estimates (the share of homes that own a specific appliance) and measure of equipment efficiency. As saturation increases, energy intensity increases. As efficiency improves end-use intensity decreases. Declining customer average use is largely attributable to efficiency gains that have been stronger then increases in end-use saturations. Residential end-use intensity estimates are based on historical and projected end-use saturation and UEC (unit of energy consumption) from the Ontario Power Authority (OPA) recent long-term forecast for Ontario. UECs are used as a proxy for end-use stock average efficiency as efficiency data was not readily available. Residential lighting intensity is based on Energy Information Agency's (EIA) projection for the East North Central (ENC) Census Region; we felt that the OPA lighting intensity decline is too strong in the near-term.

Figure 8 shows the resulting major end-use intensities; Heating, Cooling, and All Other end uses. Figure 9 shows a detailed breakdown of the end-uses that make up All Other category.

**Figure 8: Major Residential End-Use Intensities (kWh per HH)**

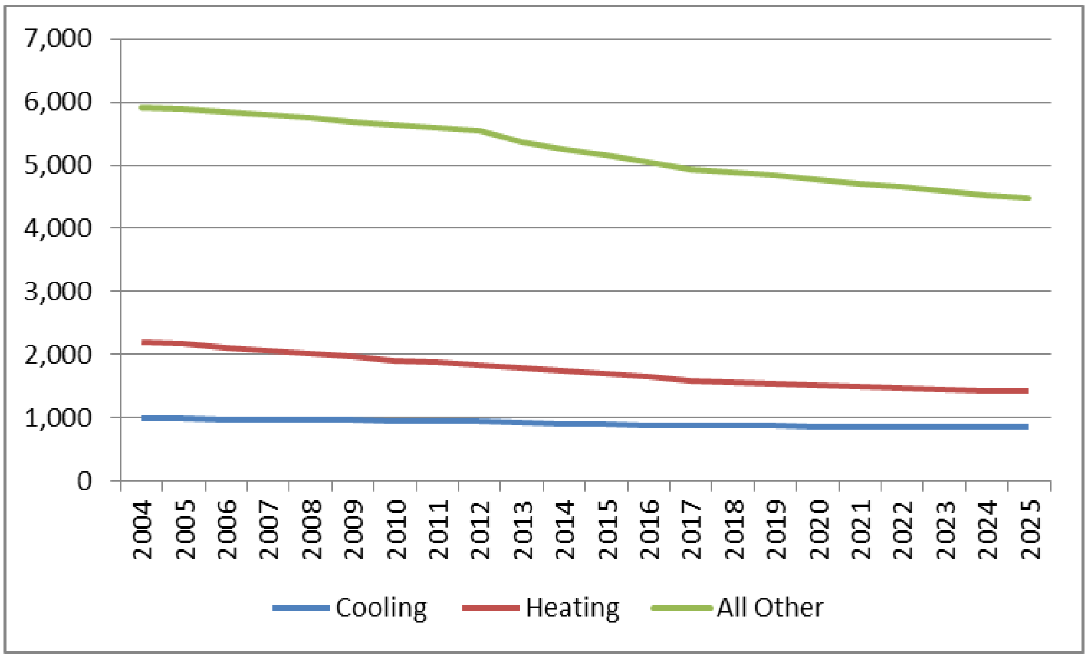


**Figure 9: Residential Non-Weather Sensitive End-Use Energy Intensities (kWh per HH)**

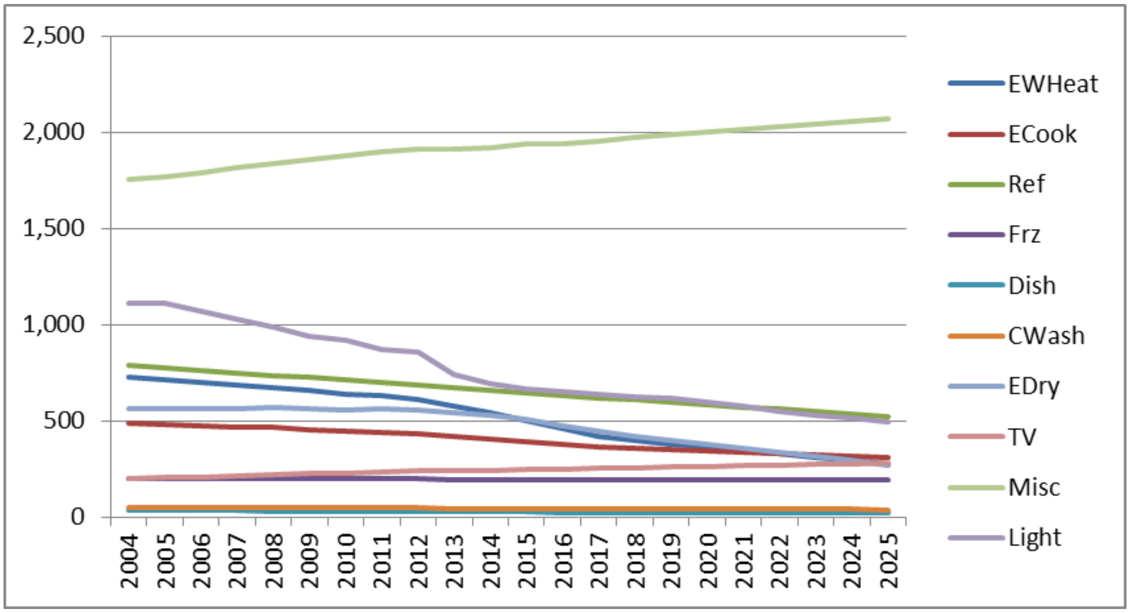
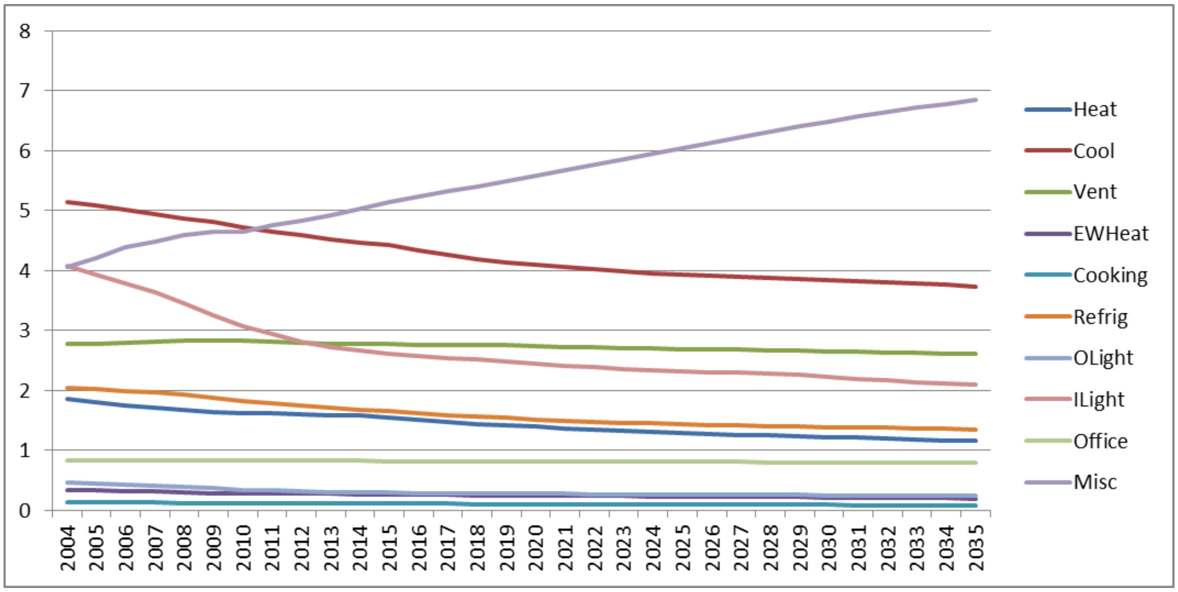


Electric heat is the largest residential end-use but has been declining and is expected to continue to decline as gas heat and more efficient heat pumps gain market share. Lighting intensity is expected to decline sharply over the next few years with the phase-in of new lighting standards; the new lighting standards effectively eliminate traditional incandescent light bulbs from the market with CFLs and LED lighting technologies gaining market share.

Commercial end-use intensities are derived from the Energy Information Agency (EIA) 2014 Annual Energy outlook for the East North Central Census Division. We assume that commercial end-use intensity trends in Ottawa are similar to that in the U.S. East-North Central Census Division. While Ottawa borders New York (in the Atlantic Census Division), the Atlantic Census Division is heavily influenced by New York City, New Jersey, and Pennsylvania. Figure 10 shows the commercial end-use intensity projections. Other than the miscellaneous end-use, commercial end-use energy intensities are either flat or declining. The strong growth in miscellaneous reflects increases in computer equipment, elevators, medical, and other equipment. Through 2020, commercial intensity is expected to decline 0.4% per year.

**Figure 10: Historical and Projected Commercial End-Use Intensities (kWh per square foot)**



# 3 Forecast Methodology

## 3.1 Class Sales Forecast

Changes in economic conditions, prices, weather conditions, and end-use energy intensity trends drives electricity use and demand through a set of monthly system and rate class sales forecast models. Models are estimated for the following rate classes:

- Residential
- GS50 (Less than 50 kW)
- GS1000NI (Non-Interval 50 kW – 1000 kW)
- GS1000I (Interval 50 kW – 1000 kW)
- GS1500 (1000 kW – 1500 kW)
- GS5000 (1500 KW – 5000 kW)
- Large Users (Over 5000 kW)
- Street Lighting
- MU
- DCL

.

### *3.1.1 Residential Model*

The residential monthly sales forecast captures economic growth as well improvements in energy efficiency through an SAE model specification. Residential sales are modeled as a function of heating requirements (XHeat), cooling requirements (XCool), and other use (XOther):

$$ResSales_m = B_0 + (B_1 \times XHeat_m) + (B_2 \times XCool_m) + (B_3 \times XOther_m) + e_m$$

Models are estimated using monthly billed sales data. As residential customer meters are read on a bi-monthly basis, usage in anyone month reflects not only current month weather conditions, but weather conditions in prior months. Both current and lag HDD and CDD are incorporated into the XHeat and XCool variables. For each rate class the optimal weighting of current and lagged month degree-days are determined by regressing usage on current and lagged HDD and CDD variables; the resulting coefficients are then used to construct weighted degree-day variables.

Model variables – *Xheat*, *XCool*, and *XOther* incorporate both economic activity and improvements in end-use efficiency. *XHeat* for month *m* is calculated as:

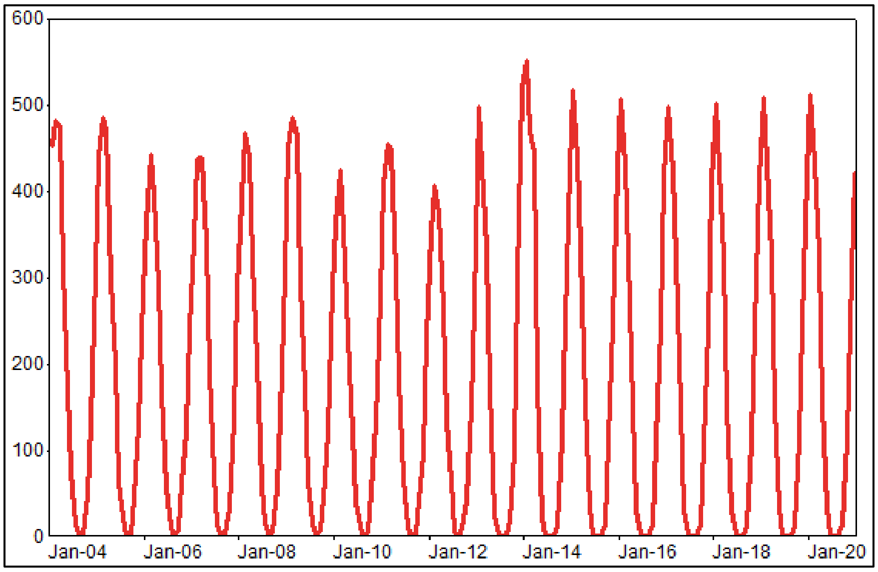
$$XHeat_m = HDD_m \text{ x } ResEcon_m \text{ x } HeatIntensity_a$$

Where

- $HDD_m$ = three-month weighted HDD (calendar-month HDD beginning in 2013)
- $ResEcon_m$ = weighted population and real personal income ($POP_m$^.5 x $RPI_m$^.5)
- $HeatIntensity_a$ = annual end-use heating intensity trend

Figure 11 shows the calculated XHeat variable

**Figure 11: Residential XHeat Variable**



*XCool* is derived in a similar manner:

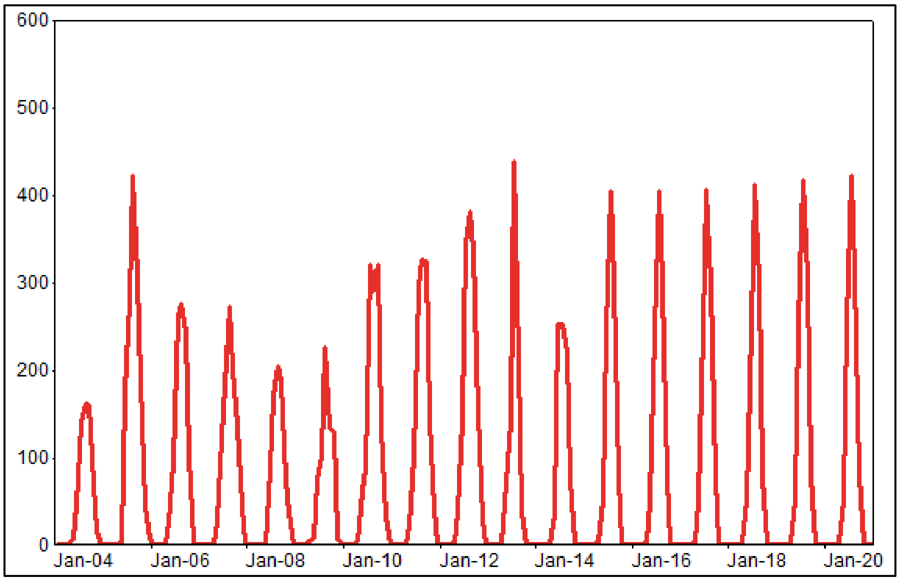
$XCool_m = CDD_m \times ResEcon_m \times CoolIntensity_a$

Where

- $CDD_m$ = three-month weighted CDD (calendar-month CDD beginning in 2013)
- $ResEcon_m$ = weighted population and real personal income ($POP_m$^.5 x $RPI_m$^.5)
- $CoolIntensity_a$ = annual end-use cooling intensity trend

Figure 12 shows the calculated XCool variable.

**Figure 12: Residential XCool Variable**



*XOther* captures non-weather sensitive end-use

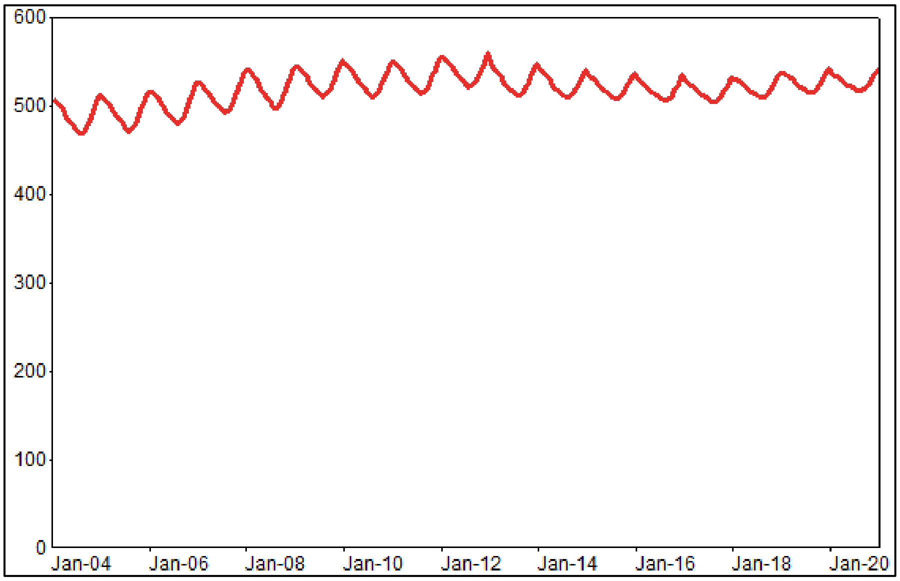
$$XOther_m = ResEcon_m \times OtherIntensity_a \times MonthlyMultiplier_m$$

Where

- $ResEcon_m$ = weighted population and real personal income ($POP_m$^.5 x $RPI_m$^.5)
- $OtherIntensity_a$ = annual non-weather sensitive end-use intensity trend
- $MoMultiply_m$ = monthly end-use usage fraction (fraction of annual usage)
-

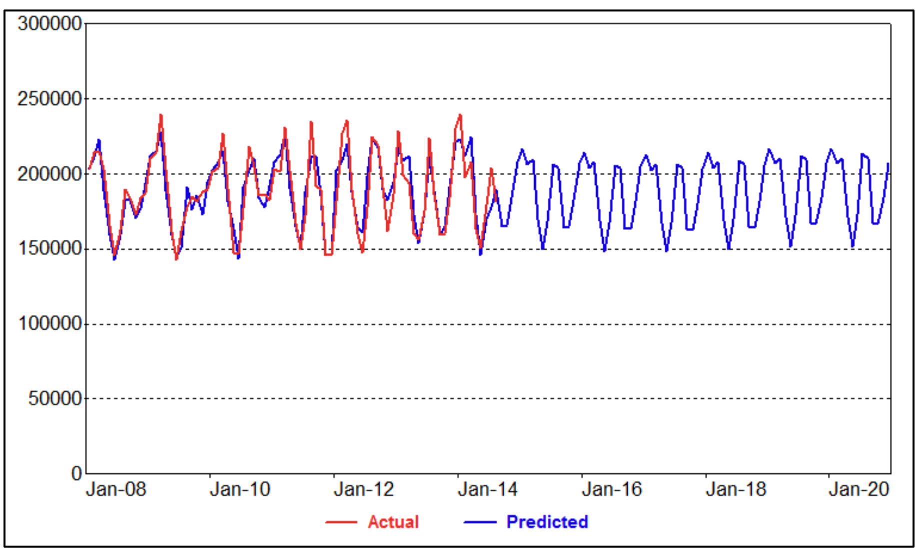
Figure 13 shows the calculated XOther variable.

## Figure 13: Residential XOther Variable



Cooling and Heating intensities are translated to a monthly variable through the interaction with monthly HDD and CDD. Annual intensities for the other end-uses are allocated to months based on estimated fraction of use in each calendar month. Figure 14 shows actual and predicted residential sales.

## Figure 14: Actual and Predicted Residential Sales



The residential sales model is estimated over the period January 2008 through August 2014. While the coefficients on XHeat, XCool, and XOther are all highly significant, the adjusted R-squared is only 0.81 and in-sample MAPE is 4.4%. This is relatively low for a residential SAE model and is a result of using the monthly billing data as a proxy for actual usage

***Customer Forecast***

The customer forecast is based on a monthly regression model that relates the number of customers to population projections. There is a strong correlation between the number of customers and reported population. The correlation between the number of customers and population is 0.997. Table 5 shows the residential customer forecast. Given population projections customers are expected to average 1.3% annual growth through 2020.

**Table 5: Residential Customer Forecast**

| Year | Residential Customers | chg |
|---|---|---|
| 2006 | 254,245 | |
| 2007 | 258,262 | 1.6% |
| 2008 | 262,786 | 1.8% |
| 2009 | 267,225 | 1.7% |
| 2010 | 271,603 | 1.6% |
| 2011 | 275,966 | 1.6% |
| 2012 | 280,254 | 1.6% |
| 2013 | 284,964 | 1.7% |
| 2014 | 289,258 | 1.5% |
| 2015 | 293,366 | 1.4% |
| 2016 | 297,343 | 1.4% |
| 2017 | 301,258 | 1.3% |
| 2018 | 305,144 | 1.3% |
| 2019 | 308,990 | 1.3% |
| 2020 | 312,786 | 1.2% |

### *3.1.2 Commercial Forecast Models*

Like the residential model, the commercial SAE sales models express monthly sales as a function of heating requirements (XHeat), cooling requirements (XCool), and other use (XOther). Hydro Ottawa has multiple commercial rate classes that are defined by customer demand requirements. While separate sales forecast models are estimated for each rate class, the model structure is basically the same:

$$ComSales_m = B_0 + B_1 XHeat_m + B_2 XCool_m + B_3 XOther_m + e_m$$

- $XHeat_m = \mathrm{EI_{heat}} \times \mathrm{EconVar_m} \times \mathrm{HDD_m}$

- $XCool_m = \mathrm{EI_{cool}} \times \mathrm{EconVar_m} \times \mathrm{CDD_m}$
- $XOther_m = \mathrm{EI_{other}} \times \mathrm{EconVar_m}$

EI is the end-use weighted energy intensity (kWh per square feet) and captures end-use saturation growth and improvements in end-use efficiency. The economic variable $\mathrm{EconVar_m}$ is equally weighted between population and GDP.

- $EconVar_m = Pop_m$^.5 x $GDP_m$^.5

Commercial sales models are estimated over the period January 2008 to August 2014. The adjusted R-squared vary from 0.70 for small commercial (GS50) to 0.91 for GS1000 non-interval rate class. While the Adjusted R-squared are not particularly strong, the end-use model variables are statistically significant and capture the rate class sales trend. Figure 15 to Figure 19 shows actual and predicted sales for the commercial rate classes. Estimated model coefficients and model statistics are included in Appendix A.

**Figure 15: Actual and Predicted GS < 50 Sales (MWh)**

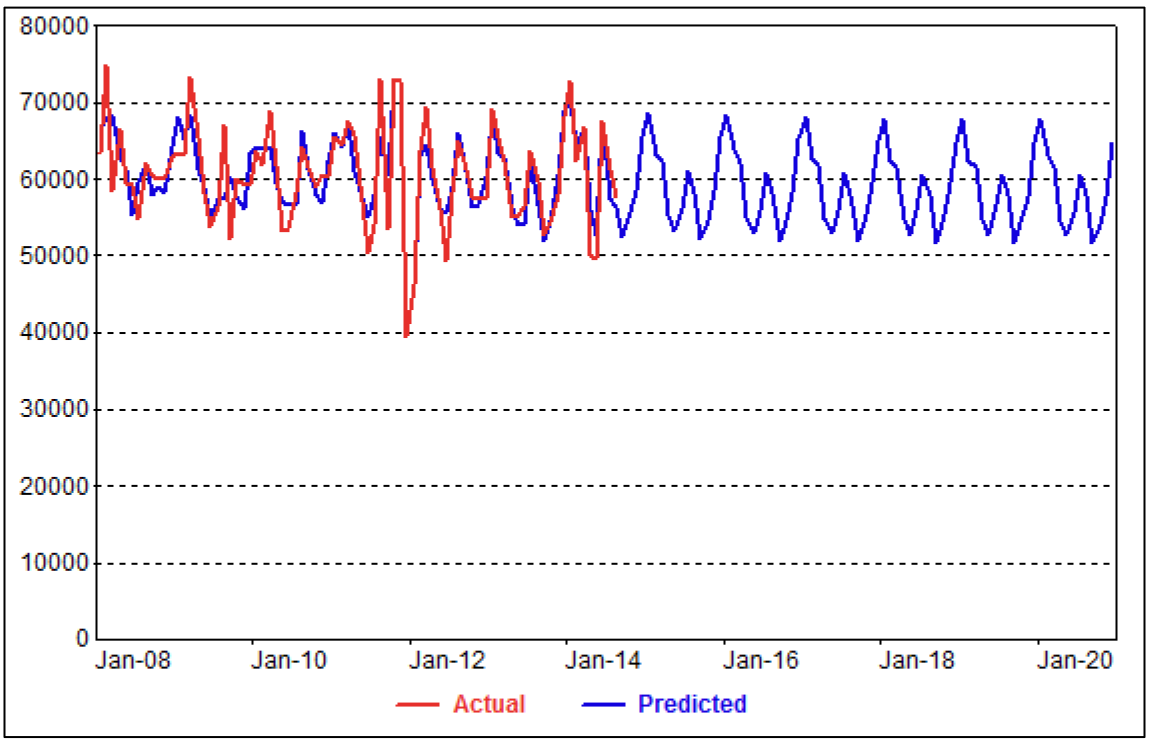


**Figure 16: Actual and Predicted GS NI 50-1000 Sales (MWh)**

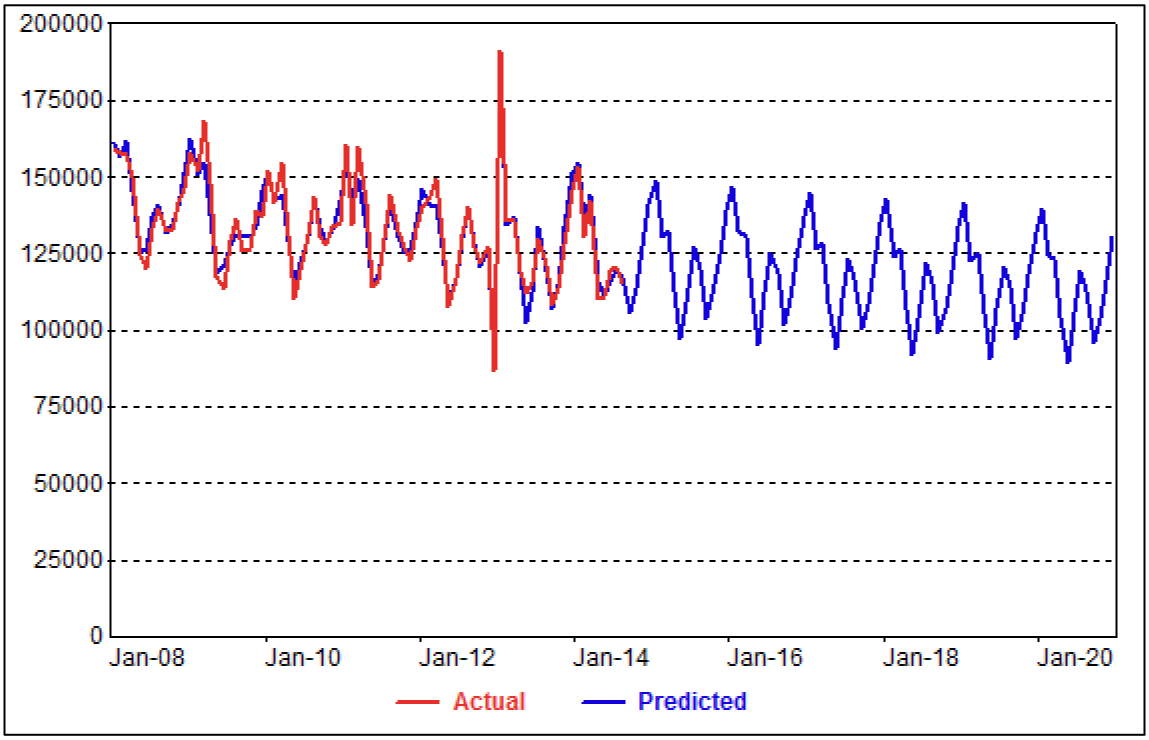

**Figure 17: Actual and Predicted GS I 50-1000 Sales (MWh)**

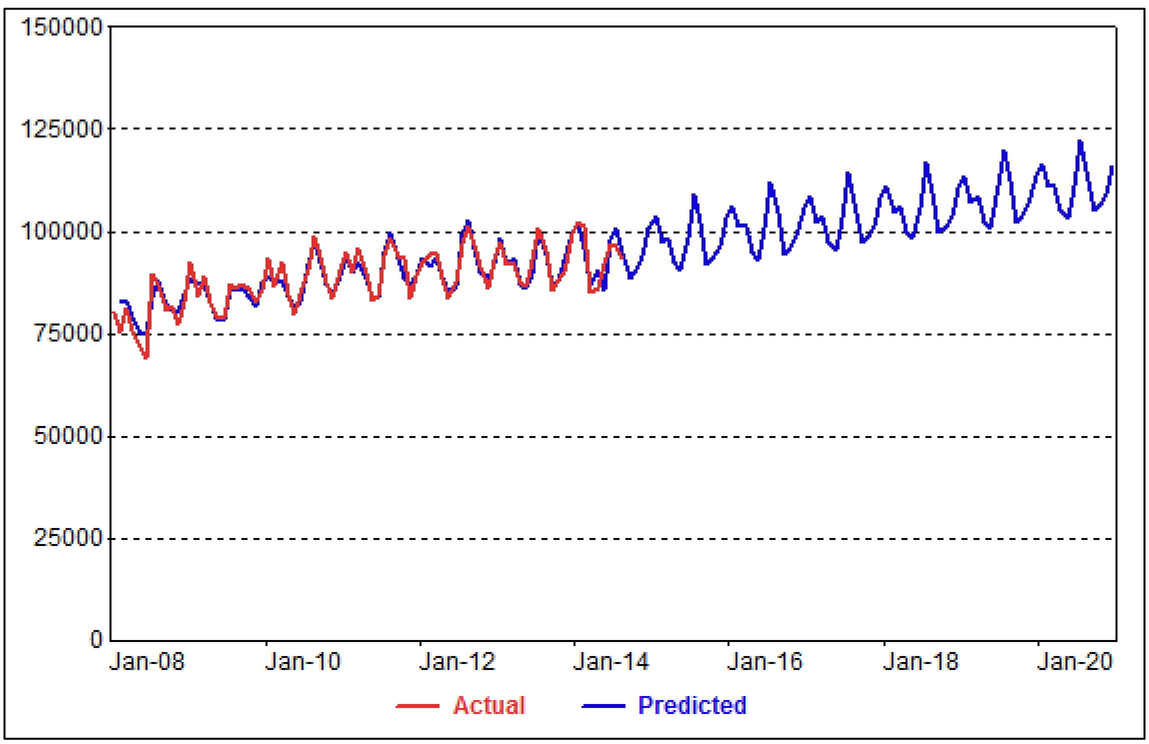

**Figure 18: Actual and Predicted GS 1000-1500 Sales (MWh)**

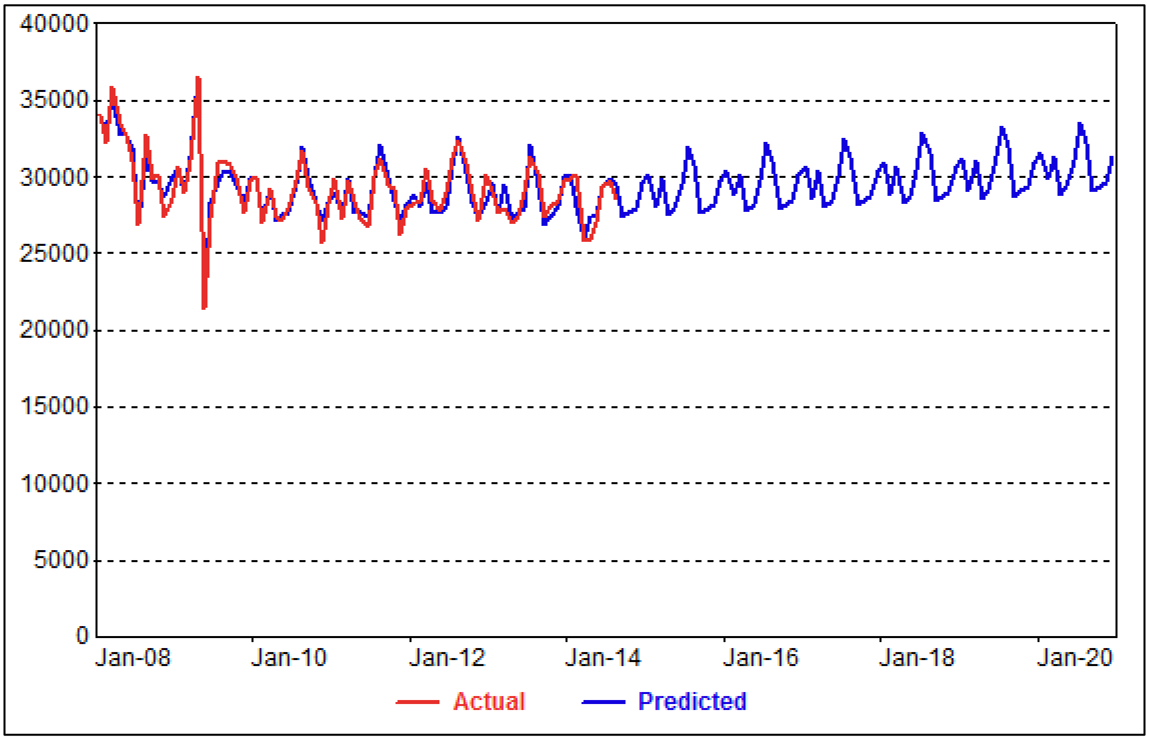

**Figure 19: Actual and Predicted GS 1500-5000 Sales (MWh)**

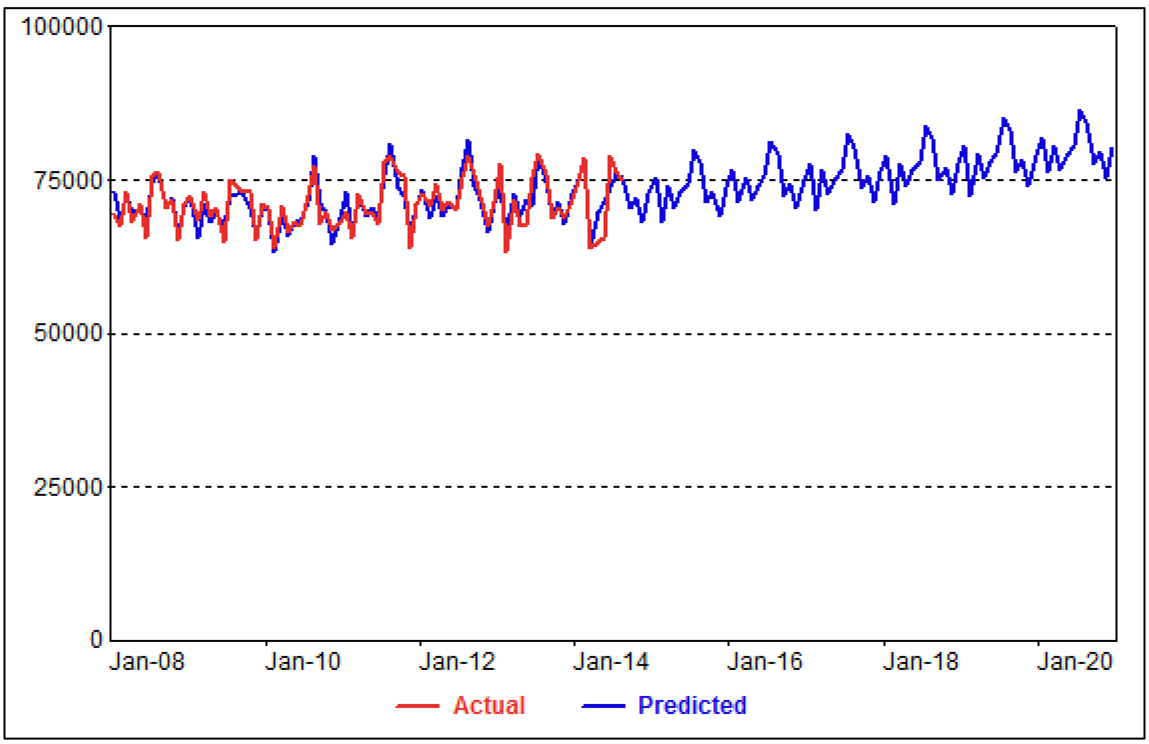

Separate models are estimated for commercial customers. GS50 customers are driven by the number of residential customers as the correlation between GS50 customers and residential customers is 0.97. A simple linear trend model is used to forecast customers for the GS1000 rate classes (non-interval and interval-meter classes) as customers have been migrating from non-interval rate class to the interval rate class; changes in customers could not be correlated with any economic driver. GS1500 and GS5000 customers are also estimated with simple trend models as there are very few customers in these rate classes making it difficult to estimate causal-related regression models. GS50 accounts for most of the commercial customers. GS50 customers are projected to increase 0.5% annually through the forecast period. Table 6 shows the commercial customer forecast.

**Table 6: Commercial Customer Forecast**

| Year | GS < 50 | Chg | GS NI 50-1000 | Chg | GS I 50-1000 | Chg | GS 1000-1500 | Chg | GS 1500-5000 | Chg |

### *3.1.3 Other Rate Classes: Large Users, Street Lighting, MU, DCL Sales Models*

Generalized econometric models are estimated for Large Users, as well as the Street Lighting, MU, and DCL. The Large Users class is a simple model specification that relates monthly sales to GDP, GDP interactive with a linear trend (*GDP x Trend*), and prior month CDD. The GDP interactive term allows the slope of the GDP variable to change over time. The resulting model has an adjusted R-squared of 0.74 and in-sample MAPE of 2.95%. Again the adjusted R-squared is not particularly strong as there is significant month-to-month sales variation that cannot be explained by macro-economic drivers. The Street Lighting class is modeled using monthly binaries and population projections. The resulting model produces a good fit with an adjusted $R^2$ of 0.93 and in-sample M.A.P.E of 5.87%. Figure 20 and Figure 21 show the actual and predicted values for the Large Users and Street Lighting classes.

**Figure 20: Actual and Predicted Large Users Sales (MWh)**

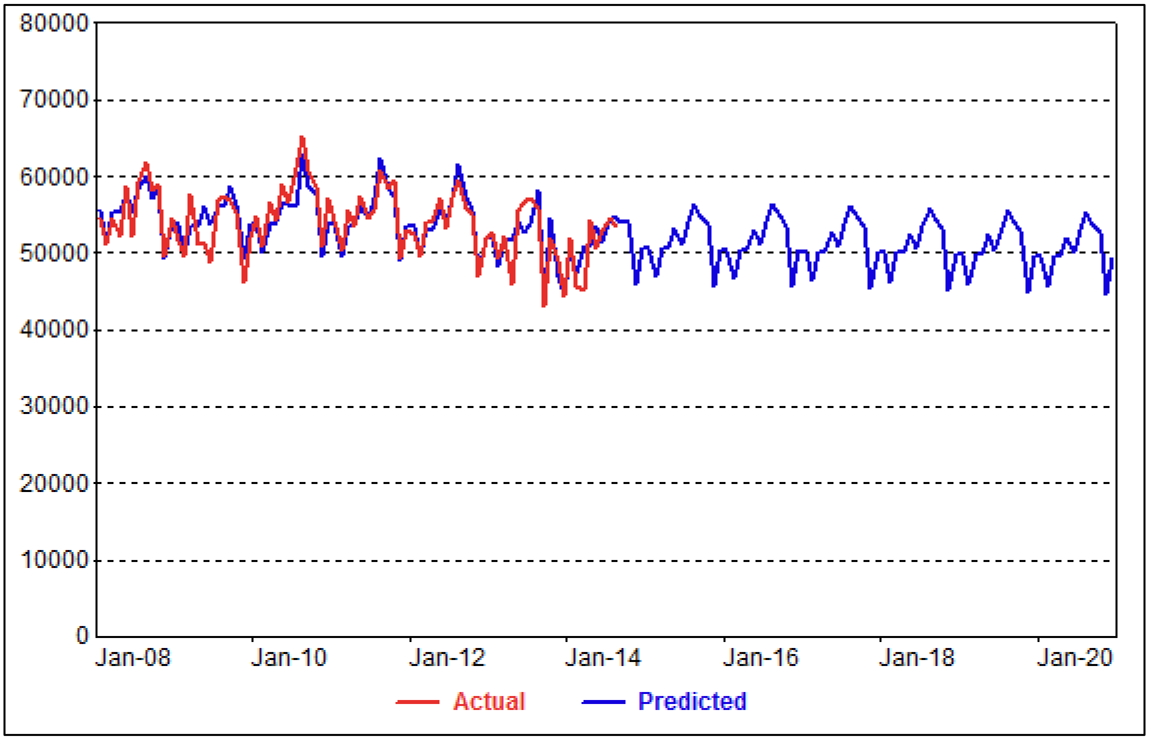

**Figure 21: Actual and Predicted Street Lighting Sales (MWh)**

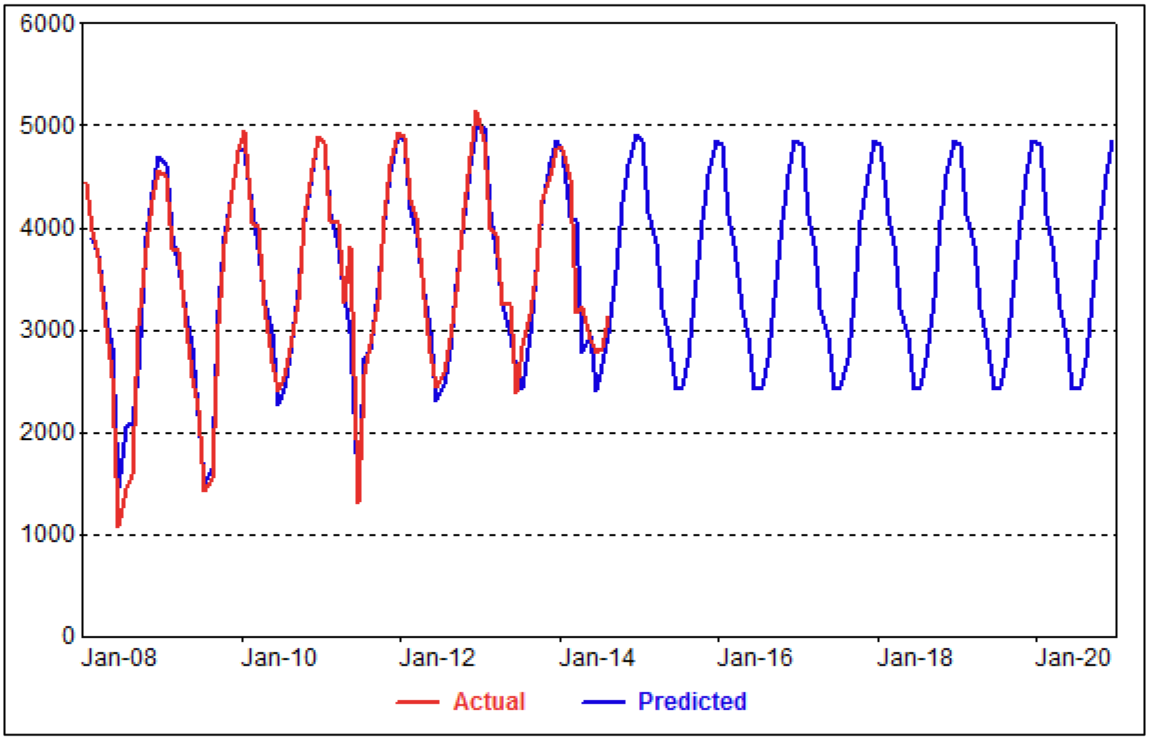


The MU and DCL classes are both extremely small rate classes with little sales. Given there is little information to explain sales trends, models are estimated with simple exponential smoothing models. The estimated model coefficients and model statistics are included in Appendix A.

## 3.2 System Purchase and Peak Demand Forecast

### *3.2.1 System Purchase Forecast*

Initially, a system purchase forecast model was estimated to validate the rate class based sales forecast; when estimated over the same period and using a similar SAE model specification, system purchase forecast is very close to the sum of the rate class forecast. Given the issues related to estimating rate class sales forecast models with billed sales data, we ultimately elected to allocate total sales forecast to the rate class sales forecasts. At the system level, we are able to use more months of historical data (the model is estimated beginning in 2005) and thus pick up stronger economic growth in the estimated model coefficients. The total purchase sales forecast model is also significantly stronger (in terms of statistical fit) than the rate class models.

Like the class sales forecast, the purchase model explicitly incorporates efficiency into the model specification. Heating, cooling, and other use intensity estimates are derived by combining the residential and commercial energy intensities. The best model fit at the purchase level is a 40% weighting on residential intensity and a 60% weighting on commercial intensity. The purchase sale model is estimated using a SAE specification. Purchases in month $m$ are defined as:

$$Purchase_m = B_0 + B_1 XHeat_m + B_2 XCool_m + B_3 XOther_m + e_m$$

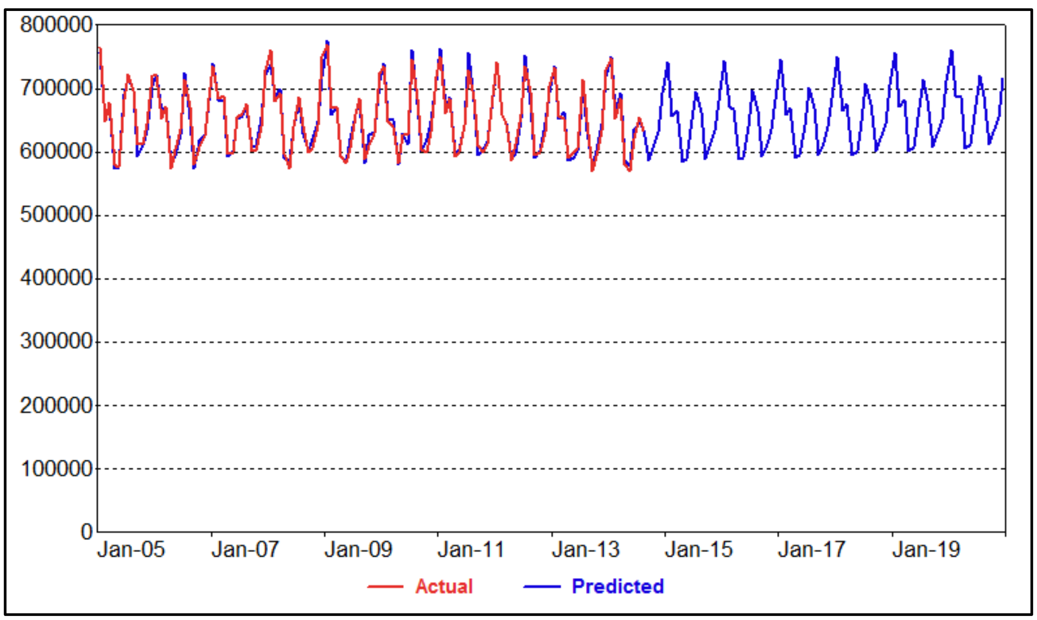
Where:

- $XHeat_m = \mathrm{SysEI_{heat}} \times \mathrm{EconVar_m} \times \mathrm{HDD_m}$
- $XCool_m = \mathrm{SysEI_{cool}} \times \mathrm{EconVar_m} \times \mathrm{CDD_m}$
- $XOther_m = \mathrm{SysEI_{other}} \times \mathrm{EconVar_m}$

*SysEI* is a weighted residential and commercial energy intensity index derived from the end-use intensity estimates. *EconVar* is an economic driver that is equally weighted between population and GDP; population captures underlying customer growth and GDP reflects regional economic activity. A weighted economic variable allows us to capture customer growth and economic activity through a single economic variable and thus avoid any modeling issues associated with multicolinearity.

The model is estimated with monthly purchase data from January 2005 to August 2014. The model explains historical sales well with an adjusted R-squared of 0.96 and MAPE of 1.2%. Figure 22 shows actual and predicted purchases.

**Figure 22: Actual and Predicted Purchases (MWh)**



The purchase model is significantly stronger in terms of statistical fit than the rate class models as purchases are measured monthly MWh and correlates with current month weather conditions. To test the purchase model performance, the last two years of actual data is held out of the estimation period. Forecast results for those two years are then compared with actual sales. The out of sample MAPE for the test period (September 2012 to August 2014) is 1.35% with an average forecast error of just -0.48%. Strong in-sample fit statistics and out-of-sample performance provides a high level of confidence in the model structure and resulting forecast. Model statistics are included in Appendix A.

### 3.2.2 Peak Forecast

The system peak forecast is derived through a monthly regression model that relates monthly peak demand to heating, cooling, and base load requirements:

$$Peak_m = B_0 + B_1 HeatVar_m + B_2 CoolVar_m + B_3 BaseVar_m + e_m$$

System peak is effectively driven by the purchase sales forecast. The model variables ($HeatVar_m$, $CoolVar_m$, and $BaseVar_m$) incorporate changes in heating, cooling, and base-use energy requirements derived from the purchase sales forecast model as well as peak-day weather conditions. Through the constructed model variables, efficiency impacts on total purchases are also captured in the peak demand model.

***<u>Heating and Cooling Model Variables</u>***

The variable *HeatVar*, is derived by combining peak-day HDD (*PkHDD*) with an estimate of monthly heating requirements (*HeatLoad*):

$$HeatVar_m = HeatLoad_m \times PkHDD_m$$

*Heatload* reflects the change in heating requirements from population and economic growth, and changes in heating intensity. *HeatLoad* is calculated from the purchase sales model by multiplying *XHeat* for normal weather conditions by the *XHeat* model coefficient $B_1$:

$$HeatLoad_m = B_1 \times NrmXHeat_m$$

The peak-day cooling variable is constructed in a similar manner. *CoolVar* is calculated as:

$$CoolVar_m = CoolLoad_m \times PkTDD_m$$

Where

$CoolLoad_m = B_2 \times NrmXCool_m$
*PkTDDm = Peak-day THI degree-day*

*NrmXCool* is equal to *XCool* variable constructed with normal monthly CDD times $B_2$ (the estimated coefficient for *XCool* in the purchase sales model). Figure 23 and Figure 24 show the peak model heating and cooling variables.

**Figure 23: Peak XHeat Variable**

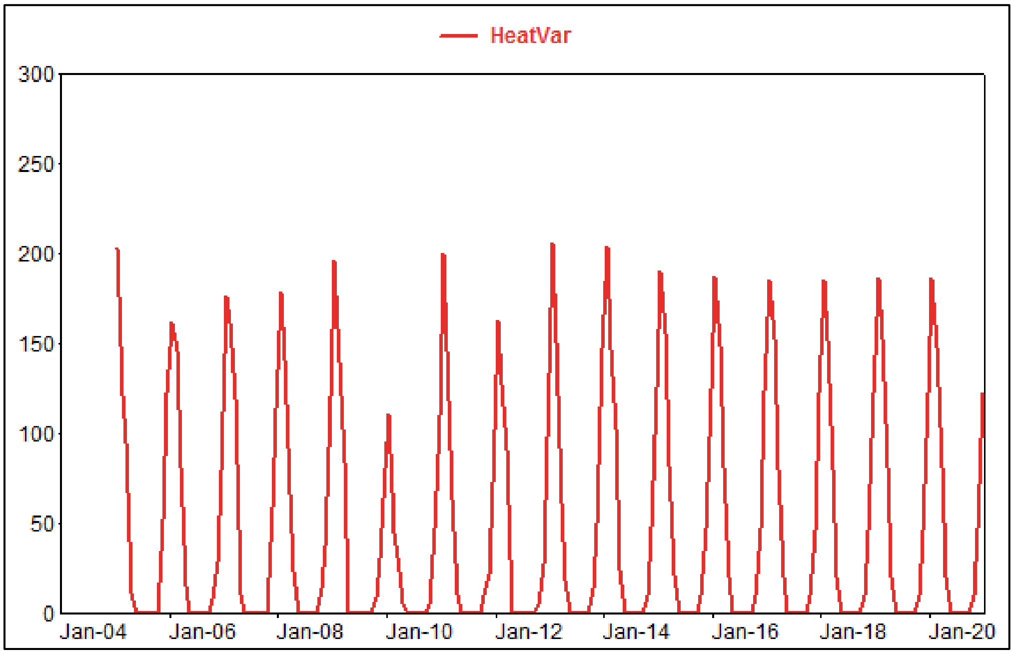


**Figure 24: Peak XCool Variable**

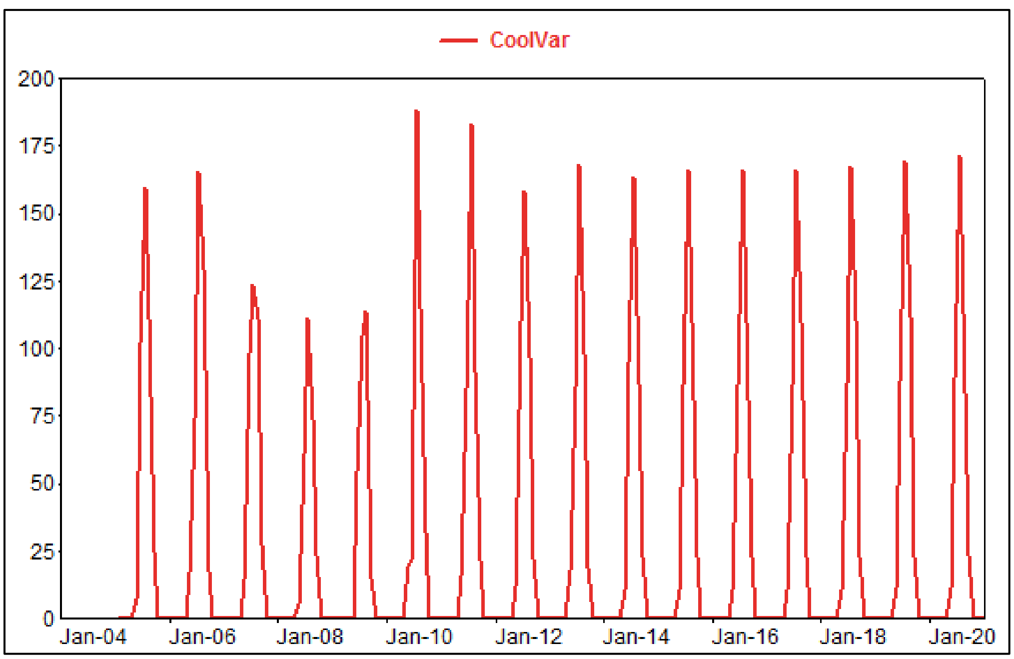

***BaseVar Model Variable***

BaseVar captures growth in non-weather sensitive usage at the time of the peak. It is again derived from the purchase forecast model. Basevar is calculated by subtracting weather-normal cooling and heating load requirements from weather normal total purchases and forecast.

$$BaseVar_m = WNPurchase_m – HeatVar_m - CoolVar_m$$

*BaseVar* is expressed on an average monthly MW basis by dividing *BaseVar* by the number of hours in the month. Figure 25 shows the derived model variable *BaseVar*.

**Figure 25: Peak Base Variable**

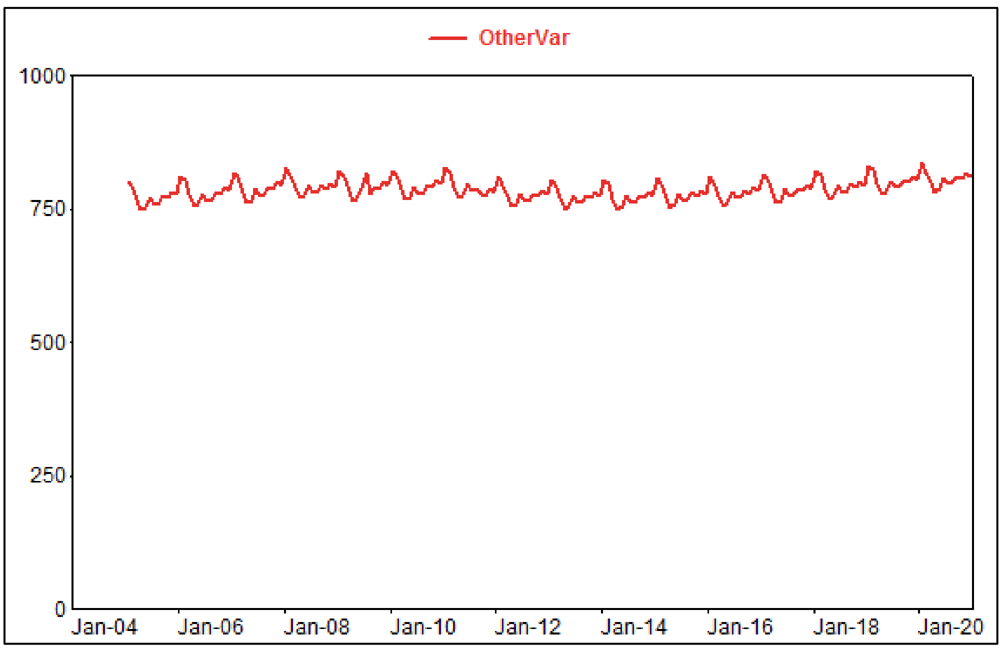

Figure 26 shows actual and predicted monthly system peak.

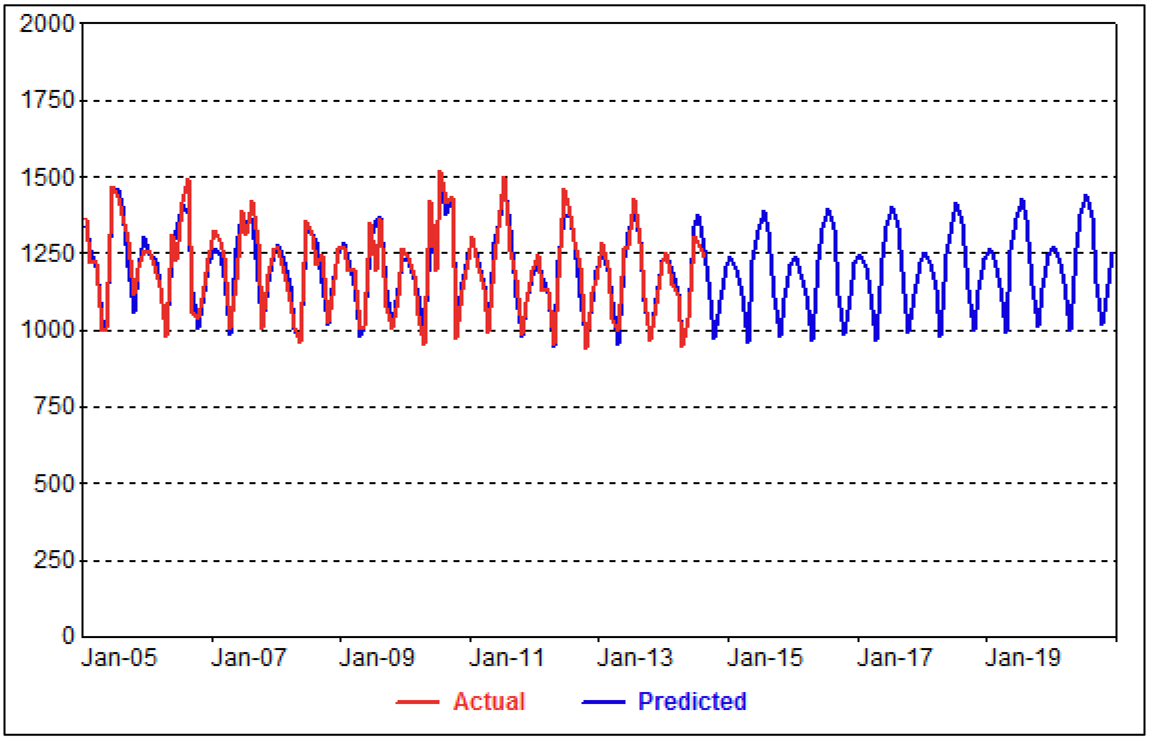
**Figure 26: Peak Model (MW)**



In addition to the end-use variables, the peak model includes monthly binaries for several months to account for non-weather seasonal changes in demand and a shift variable to account for a small drop in demand after September 2011. The model explains past variation relatively well with an adjusted R-squared is 0.88 with a MAPE of 2.85%. The model statistical fit is not as strong as monthly purchase model as peak demand represents just one hour in a month; any number of other factors from activity by a specific large customer, temperature pattern across the day, and the day of the peak itself will have an impact. Table 7 shows the system peak forecast with and without CDM adjustments.

**Table 7: System Peak Forecast (MW)**

| Year | Unadjusted Peak | Chg | CDM Unadjusted Peak | Chg |
|---|---|---|---|---|
| 2006 | 1,495 | 2.10% | 1,495 | |
| 2007 | 1,425 | -4.7% | 1,425 | -4.7% |

| 2020 | 1,436 | 0.8% | 1,368 | 0.0% |

## 3.3 Purchases to Total Sales

The purchase forecast must first be adjusted down to account for losses before it can be allocated to the rate classes based on the forecasted share. This is done prior to any adjustments are made for CDM. Traditionally one average system loss factor would be applied to the purchase forecast to arrive at total sales; Hydro Ottawa uses two separate loss factors, one for primary metered accounts and another for secondary metered accounts. This is done to account for the fact that primary metered accounts have much lower losses due to close or direct connection to higher capacity lines. The loss factor used for primary metered accounts is 1.0062, all other accounts are assumed to be secondary and use a loss factor of 1.0338. Of the residential, commercial, and industrial rate classes only the GS Large User rate class is assumed to be primary metered.

In order to use two different loss factors purchases must be split into two groups; one of which will use the primary loss factor and the other the secondary. To do this we first calculate implied primary and secondary purchases from the class level sales forecast. The GS Large User class sales is multiplied by the 1.0062 factor while all other classes sales are multiplied by the 1.0338 factor. With this implied purchase forecast we can calculate the share of total purchases that are primary and second. The calculated share is then used to split the actual purchase forecast into two groups. From there the appropriate loss factor is applied and the result is a sales forecast that accounts for different loss factors.

## 3.4 Adjustments for CDM

Rate class sales are adjusted for future CDM savings projections after class sales have been allocated from total purchase sales. Forecasts are adjusted for future conservation savings beginning in the first forecast month (September 2014). We assume that all historical CDM savings are embedded in the historical data and thus impacts carry through the forecast period. The underlying assumption is that any measure that was adopted as a result of CDM program activity persists over the forecast period – that is, when measures are replaced they are replaced with measures that are as least as efficient as what has been installed. Improving end-use efficiency and new end-use standards will make it exceedingly difficult to replace a more efficient end-use with something less efficient.

CDM projections are based on savings goals established by the government. Annualized savings estimates are provided for residential and nonresidential customer classes. Non-residential customer savings are allocated to the nonresidential rate classes base on the rate classes' proportion of total nonresidential sales. Table 8 shows the annualized savings projections.

**Table 8: CDM Savings Projections**

| Year | Residential | Small Commercial | Commercial |
|---|---|---|---|
| 2015 | 5,925 | 3,950 | 29,625 |
| 2016 | 11,850 | 7,900 | 59,250 |
| 2017 | 11,850 | 7,900 | 59,250 |
| 2018 | 9,875 | 6,583 | 49,375 |
| 2019 | 9,875 | 6,583 | 49,375 |
| 2020 | 9,875 | 6,583 | 49,375 |

Annualized estimates represent the savings if all the associated measures were in place for the entire year. For the forecast adjustment, we assume that the measures associated with annualized savings are installed equally across the 12 months. That is if a program involved the installation of 100,000 LED bulbs – 1/12 would be in place after the first month, 2/12 in the second month, 3/12 in the third month, and so forth until all the bulbs were installed by the end of the year. As measures are installed over the course of the year, roughly half the annualized savings are realized in the current year with the other half of the savings realized in the following year.

Monthly CDM adjustments are cumulated over the forecast period beginning in the first forecast month – September 2014. The savings in the third quarter of 2014 carries over into 2015. The savings in 2015 and 2014 carries over into 2016. By 2020, total CDM savings includes cumulative savings from September 2014 through 2020. Figure 27 shows cumulative residential and nonresidential savings adjustments.

**Figure 27: Cumulative CDM Savings (MWh)**

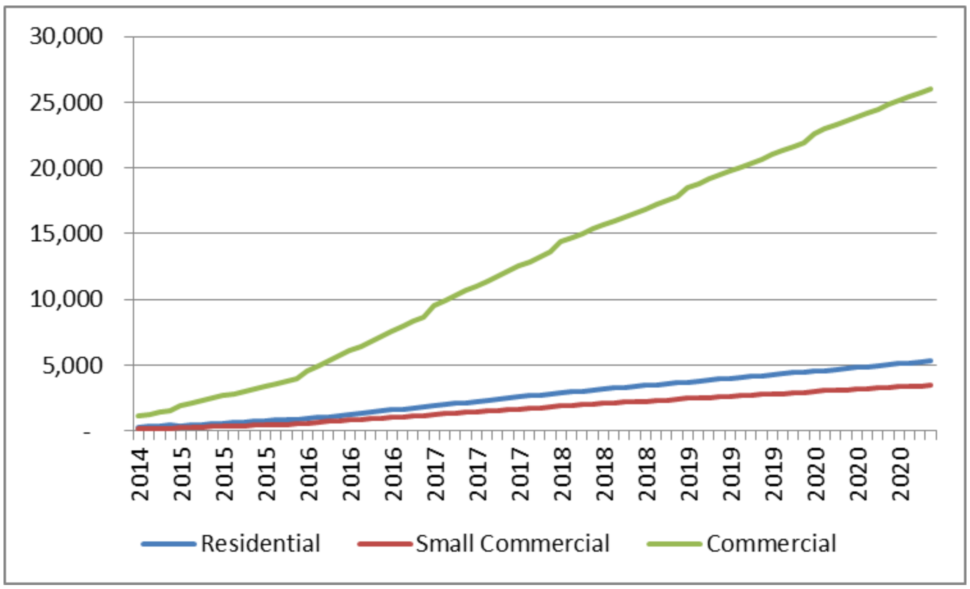

Figure 28 compares the forecast with and without CDM adjustments. Excluding additional CDM activity, sales are projected to average 0.7% annually between 2014 and 2020. CDM reduces annual sales growth by 0.8% over the next five years. The forecast with CDM sales adjustments is consistent with that over the prior five years. Normalized average sales growth is lower as it includes the economic slowdown.

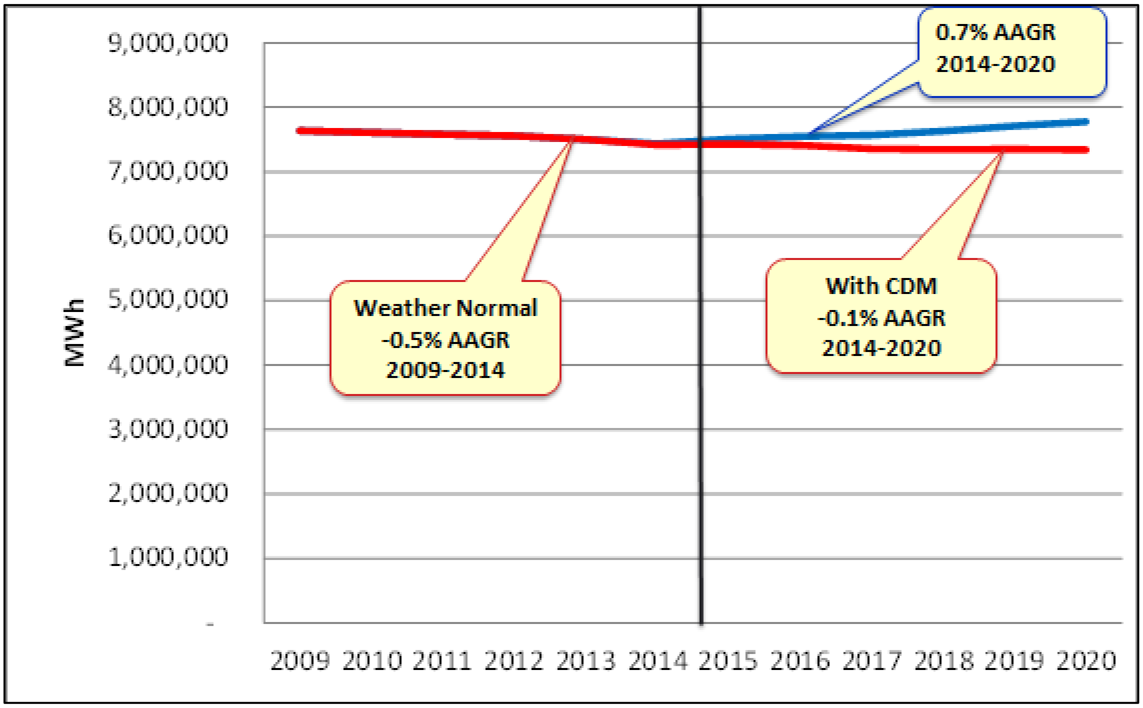
**Figure 28: CDM Forecast Comparison**



CDM reduces sales growth by .8%. This is fairly consistent with the OPA Ontario forecast which shows differences between gross sales growth (without CDM adjustments) and net sales growth over the same period of 1.0%.

The rate-class sales forecasts are adjusted for CDM after the class sales forecasts are allocated from the total system sales forecast.

**Billing Demand Forecast**

Several rate classes include a billing demand as well as sales and customer component. Billing demand is a measure of a customer's highest hourly demand over the billing period. An average monthly billing demand factor is calculated for each rate class that has a billing demand component. Billing demand factors are calculated from historical billing data and are derived as the average monthly ratio of billed demands to class sales. The billing demand forecast is then generated by multiplying the class monthly billing demand factor to class sales forecast adjusted for CDM impacts

## Table 9: Class Demand Forecast

| Year | GS NI 50-1000 | Chg | GS I 50-1000 | Chg | GS 1000-1500 | Chg | GS 1500-5000 | Chg | Large Users | Chg | St Light | Chg |

# 5 Appendix B: Residential SAE Modeling Framework

The traditional approach to forecasting monthly sales for a customer class is to develop an econometric model that relates monthly sales to weather, seasonal variables, and economic conditions. From a forecasting perspective, econometric models are well suited to identify historical trends and to project these trends into the future. In contrast, the strength of the end-use modeling approach is the ability to identify the end-use factors that are drive energy use. By incorporating end-use structure into an econometric model, the statistically adjusted end-use (SAE) modeling framework exploits the strengths of both approaches.

There are several advantages to this approach.

- The equipment efficiency and saturation trends, dwelling square footage, and thermal shell integrity changes embodied in the long-run end-use forecasts are introduced explicitly into the short-term monthly sales forecast. This provides a strong bridge between the two forecasts.
- By explicitly introducing trends in equipment saturations, equipment efficiency, dwelling square footage, and thermal integrity levels, it is easier to explain changes in usage levels and changes in weather-sensitivity over time.
- Data for short-term models are often not sufficiently robust to support estimation of a full set of price, economic, and demographic effects. By bundling these factors with equipment-oriented drivers, a rich set of elasticities can be incorporated into the final model.

This section describes the SAE approach, the associated supporting SAE spreadsheets, and the *MetrixND* project files that are used in the implementation. The source for the the SAE spreadsheets is the 2013 Annual Energy Outlook (AEO) database provided by the Energy Information Administration (EIA).

## 5.1 Statistically Adjusted End-Use Modeling Framework

The statistically adjusted end-use modeling framework begins by defining energy use ($USE_{y,m}$) in year (y) and month (m) as the sum of energy used by heating equipment ($Heat_{y,m}$), cooling equipment ($Cool_{y,m}$), and other equipment ($Other_{y,m}$). Formally,

$$\mathrm{USE}_{y,m} = \mathrm{Heat}_{y,m} + \mathrm{Cool}_{y,m} + \mathrm{Other}_{y,m} \tag{1}$$

Although monthly sales are measured for individual customers, the end-use components are not. Substituting estimates for the end-use elements gives the following econometric equation.

$$USE_m = a + b_1 \times XHeat_m + b_2 \times XCool_m + b_3 \times XOther_m + \varepsilon_m \quad (2)$$

$XHeat_m$, $XCool_m$, and $XOther_m$ are explanatory variables constructed from end-use information, dwelling data, weather data, and market data. As will be shown below, the equations used to construct these X-variables are simplified end-use models, and the X-variables are the estimated usage levels for each of the major end uses based on these models. The estimated model can then be thought of as a statistically adjusted end-use model, where the estimated slopes are the adjustment factors.

### 5.1.1 Constructing XHeat

As represented in the SAE spreadsheets, energy use by space heating systems depends on the following types of variables.

- Heating degree days
- Heating equipment saturation levels
- Heating equipment operating efficiencies
- Average number of days in the billing cycle for each month
- Thermal integrity and footage of homes
- Average household size, household income, and energy prices

The heating variable is represented as the product of an annual equipment index and a monthly usage multiplier. That is,

$$XHeat_{y,m} = HeatIndex_{y,m} \times HeatUse_{y,m} \quad (3)$$

Where:

- $XHeat_{y,m}$ is estimated heating energy use in year ($y$) and month ($m$)
- $HeatIndex_{y,m}$ is the monthly index of heating equipment
- $HeatUse_{y,m}$ is the monthly usage multiplier

The heating equipment index is defined as a weighted average across equipment types of equipment saturation levels normalized by operating efficiency levels. Given a set of fixed weights, the index will change over time with changes in equipment saturations (*Sat*), operating efficiencies (*Eff*), building structural index (*StructuralIndex*), and energy prices. Formally, the equipment index is defined as:

$$HeatIndex_y = StructuralIndex_y \times \sum_{Type} Weight^{Type} \times \frac{\left( Sat_y^{Type} \middle/ Eff_y^{Type} \right)}{\left( Sat_{05}^{Type} \middle/ Eff_{05}^{Type} \right)} \tag{4}$$

The *StructuralIndex* is constructed by combining the EIA's building shell efficiency index trends with surface area estimates, and then it is indexed to the 2005 value:

$$StructuralIndex_y = \frac{BuildingShellEfficiencyIndex_y \times SurfaceArea_y}{BuildingShellEfficiencyIndex_{05} \times SurfaceArea_{05}} \tag{5}$$

The *StructuralIndex* is defined on the *StructuralVars* tab of the SAE spreadsheets. Surface area is derived to account for roof and wall area of a standard dwelling based on the regional average square footage data obtained from EIA. The relationship between the square footage and surface area is constructed assuming an aspect ratio of 0.75 and an average of 25% two-story and 75% single-story. Given these assumptions, the approximate linear relationship for surface area is:

$$SurfaceArea_y = 892 + 1.44 \times Footage_y \tag{6}$$

In Equation 4, 2005 is used as a base year for normalizing the index. As a result, the ratio on the right is equal to 1.0 in 2005. In other years, it will be greater than 1.0 if equipment saturation levels are above their 2005 level. This will be counteracted by higher efficiency levels, which will drive the index downward. The weights are defined as follows.

$$Weight^{Type} = \frac{Energy_{05}^{Type}}{HH_{05}} \times HeatShare_{05}^{Type} \tag{7}$$

In the SAE spreadsheets, these weights are referred to as *Intensities* and are defined on the *EIAData* tab. With these weights, the *HeatIndex* value in 2005 will be equal to estimated annual heating intensity per household in that year. Variations from this value in other years will be proportional to saturation and efficiency variations around their base values.

For electric heating equipment, the SAE spreadsheets contain two equipment types: electric resistance furnaces/room units and electric space heating heat pumps. Examples of weights for these two equipment types for the U.S. are given in Table 5-1.

### Table 5-1: Electric Space Heating Equipment Weights

| Equipment Type | Weight (kWh) |
|---|---|
| Electric Resistance Furnace/Room units | 505 |
| Electric Space Heating Heat Pump | 190 |

Data for the equipment saturation and efficiency trends are presented on the *Shares* and *Efficiencies* tabs of the SAE spreadsheets. The efficiency for electric space heating heat pumps are given in terms of Heating Seasonal Performance Factor [BTU/Wh], and the efficiencies for electric furnaces and room units are estimated as 100%, which is equivalent to 3.41 BTU/Wh.

**Price Impacts**. In the 2007 version of the SAE models, the Heat Index has been extended to account for the long-run impact of electric and natural gas prices. Since the Heat Index represents changes in the stock of space heating equipment, the price impacts are modeled to play themselves out over a ten year horizon. To introduce price effects, the Heat Index as defined by Equation 4 above is multiplied by a 10 year moving average of electric and gas prices. The level of the price impact is guided by the long-term price elasticities. Formally,

$$HeatIndex_y = StructuralIndex_y \times \sum_{Type} Weight^{Type} \times \frac{\left( Sat_y^{Type} \big/ Eff_y^{Type} \right)}{\left( Sat_{05}^{Type} \big/ Eff_{05}^{Type} \right)} \times \left( TenYearMovingAverageElectricPrice_{y,m} \right)^{\phi} \times \left( TenYearMovingAverageGasPrice_{y,m} \right)^{\gamma} \quad (8)$$

Since the trends in the Structural index (the equipment saturations and efficiency levels) are provided exogenously by the EIA, the price impacts are introduced in a multiplicative form. As a result, the long-run change in the Heat Index represents a combination of adjustments to the structural integrity of new homes, saturations in equipment and efficiency levels relative to what was contained in the base EIA long-term forecast.

**Heating system usage** levels are impacted on a monthly basis by several factors, including weather, household size, income levels, prices, and billing days. The estimates for space heating equipment usage levels are computed as follows:

$$HeatUse_{y,m} = \left(\frac{BDays_{y,m}}{30.5}\right) \times \left(\frac{WgtHDD_{y,m}}{HDD_{05}}\right) \times \left(\frac{HHSize_{y}}{HHSize_{05}}\right)^{0.25} \times \left(\frac{Income_{y}}{Income_{05}}\right)^{0.20} \times \left(\frac{Elec\,Price_{y,m}}{Elec\,Price_{05,7}}\right)^{\lambda} \times \left(\frac{Gas\,Price_{y,m}}{Gas\,Price_{05,7}}\right)^{\kappa} \quad (9)$$

Where:

- *BDays* is the number of billing days in year (*y*) and month (*m*), these values are normalized by 30.5 which is the average number of billing days
- *WgtHDD* is the weighted number of heating degree days in year (*y*) and month (*m*). This is constructed as the weighted sum of the current month's HDD and the prior month's HDD. The weights are 75% on the current month and 25% on the prior month.
- *HDD* is the annual heating degree days for 2005
- *HHSize* is average household size in a year (*y*)
- *Income* is average real income per household in year (*y*)
- *ElecPrice* is the average real price of electricity in month (*m*) and year (*y*)
- *GasPrice* is the average real price of natural gas in month (*m*) and year (*y*)

By construction, the $HeatUse_{y,m}$ variable has an annual sum that is close to 1.0 in the base year (2005). The first two terms, which involve billing days and heating degree days, serve to allocate annual values to months of the year. The remaining terms average to 1.0 in the base year. In other years, the values will reflect changes in the economic drivers, as transformed through the end-use elasticity parameters. The price impacts captured by the Usage equation represent short-term price response.

### 5.1.2 Constructing XCool

The explanatory variable for cooling loads is constructed in a similar manner. The amount of energy used by cooling systems depends on the following types of variables.

- Cooling degree days
- Cooling equipment saturation levels
- Cooling equipment operating efficiencies
- Average number of days in the billing cycle for each month
- Thermal integrity and footage of homes
- Average household size, household income, and energy prices

The cooling variable is represented as the product of an equipment-based index and monthly usage multiplier. That is,

$$XCool_{y,m} = CoolIndex_y \times CoolUse_{y,m} \tag{10}$$

Where

- $XCool_{y,m}$ is estimated cooling energy use in year ($y$) and month ($m$)
- $CoolIndex_y$ is an index of cooling equipment
- $CoolUse_{y,m}$ is the monthly usage multiplier

As with heating, the cooling equipment index is defined as a weighted average across equipment types of equipment saturation levels normalized by operating efficiency levels. Formally, the cooling equipment index is defined as:

$$CoolIndex_y = StructuralIndex_y \times \sum_{Type} Weight^{Type} \times \frac{\left( Sat_y^{Type} \middle/ Eff_y^{Type} \right)}{\left( Sat_{05}^{Type} \middle/ Eff_{05}^{Type} \right)} \tag{11}$$

Data values in 2005 are used as a base year for normalizing the index, and the ratio on the right is equal to 1.0 in 2005. In other years, it will be greater than 1.0 if equipment saturation levels are above their 2005 level. This will be counteracted by higher efficiency levels, which will drive the index downward. The weights are defined as follows.

$$Weight^{Type} = \frac{Energy_{05}^{Type}}{HH_{05}} \times CoolShare_{05}^{Type} \tag{12}$$

In the SAE spreadsheets, these weights are referred to as *Intensities* and are defined on the *EIAData* tab. With these weights, the *CoolIndex* value in 2005 will be equal to estimated annual cooling intensity per household in that year. Variations from this value in other years will be proportional to saturation and efficiency variations around their base values.

For cooling equipment, the SAE spreadsheets contain three equipment types: central air conditioning, space cooling heat pump, and room air conditioning. Examples of weights for these three equipment types for the U.S. are given in Table 5-2.

### Table 5-2: Space Cooling Equipment Weights

| Equipment Type | Weight (kWh) |
|---|---|
| Central Air Conditioning | 1,661 |
| Space Cooling Heat Pump | 369 |
| Room Air Conditioning | 315 |

The equipment saturation and efficiency trends data are presented on the *Shares* and *Efficiencies* tabs of the SAE spreadsheets. The efficiency for space cooling heat pumps and central air conditioning (A/C) units are given in terms of Seasonal Energy Efficiency Ratio [BTU/Wh], and room A/C units efficiencies are given in terms of Energy Efficiency Ratio [BTU/Wh].

**Price Impacts.** In the 2007 SAE models, the Cool Index has been extended to account for changes in electric and natural gas prices. Since the Cool Index represents changes in the stock of space heating equipment, it is anticipated that the impact of prices will be long-term in nature. The Cool Index as defined Equation 11 above is then multiplied by a 10 year moving average of electric and gas prices. The level of the price impact is guided by the long-term price elasticities. Formally,

$$CoolIndex_y = StructuralIndex_y \times \sum_{Type} Weight^{Type} \times \frac{\left( Sat_y^{Type} \big/ Eff_y^{Type} \right)}{\left( Sat_{05}^{Type} \big/ Eff_{05}^{Type} \right)} \times \tag{13}$$
$$\left(TenYearMovingAverageElectric\Pr ice_{y,m}\right)^{\phi} \times \left(TenYearMovingAverageGas\Pr ice_{y,m}\right)^{\gamma}$$

Since the trends in the Structural index, equipment saturations and efficiency levels are provided exogenously by the EIA, price impacts are introduced in a multiplicative form. The long-run change in the Cool Index represents a combination of adjustments to the structural integrity of new homes, saturations in equipment and efficiency levels. Without a detailed end-use model, it is not possible to isolate the price impact on any one of these concepts.

**Cooling system usage** levels are impacted on a monthly basis by several factors, including weather, household size, income levels, and prices. The estimates of cooling equipment usage levels are computed as follows:

$$CoolUse_{y,m} = \left(\frac{BDays_{y,m}}{30.5}\right) \times \left(\frac{WgtCDD_{y,m}}{CDD_{05}}\right) \times \left(\frac{HHSize_{y}}{HHSize_{05}}\right)^{0.25} \times \left(\frac{Income_{y}}{Income_{05}}\right)^{0.20} \times \left(\frac{Elec\,Price_{y,m}}{Elec\,Price_{05}}\right)^{\lambda} \times \left(\frac{Gas\,Price_{y,m}}{Gas\,Price_{05}}\right)^{\kappa} \quad (14)$$

Where:

- *WgtCDD* is the weighted number of cooling degree days in year (*y*) and month (*m*). This is constructed as the weighted sum of the current month's CDD and the prior month's CDD. The weights are 75% on the current month and 25% on the prior month.
- *CDD* is the annual cooling degree days for 2005.

By construction, the *CoolUse* variable has an annual sum that is close to 1.0 in the base year (2005). The first two terms, which involve billing days and cooling degree days, serve to allocate annual values to months of the year. The remaining terms average to 1.0 in the base year. In other years, the values will change to reflect changes in the economic driver changes.

### *5.1.3 Constructing XOther*

Monthly estimates of non-weather sensitive sales can be derived in a similar fashion to space heating and cooling. Based on end-use concepts, other sales are driven by:

- Appliance and equipment saturation levels
- Appliance efficiency levels
- Average number of days in the billing cycle for each month
- Average household size, real income, and real prices

The explanatory variable for other uses is defined as follows:

$$XOther_{y,m} = OtherEqpIndex_{y,m} \times OtherUse_{y,m} \quad (15)$$

The first term on the right hand side of this expression ($OtherEqpIndex_y$) embodies information about appliance saturation and efficiency levels and monthly usage multipliers.

The second term (*OtherUse*) captures the impact of changes in prices, income, household size, and number of billing-days on appliance utilization.

End-use indices are constructed in the SAE models. A separate end-use index is constructed for each end-use equipment type using the following function form.

$$ApplianceIndex_{y,m} = Weight^{Type} \times \frac{\left( Sat_y^{Type} \Big/ \frac{1}{UEC_y^{Type}} \right)}{\left( Sat_{05}^{Type} \Big/ \frac{1}{UEC_{05}^{Type}} \right)} \times MoMult_m^{Type} \times \tag{16}$$
$$(TenYearMovingAverageElectric\,Price)^{\lambda} \times (TenYearMovingAverageGas\,Price)^{\kappa}$$

Where:

- *Weight* is the weight for each appliance type
- *Sat* represents the fraction of households, who own an appliance type
- $MoMult_m$ is a monthly multiplier for the appliance type in month ($m$)
- *Eff* is the average operating efficiency the appliance
- *UEC* is the unit energy consumption for appliances

This index combines information about trends in saturation levels and efficiency levels for the main appliance categories with monthly multipliers for lighting, water heating, and refrigeration.

The appliance saturation and efficiency trends data are presented on the *Shares* and *Efficiencies* tabs of the SAE spreadsheets.

Further monthly variation is introduced by multiplying by usage factors that cut across all end uses, constructed as follows:

$$ApplianceUse_{y,m} = \left(\frac{BDays_{y,m}}{30.5}\right) \times \left(\frac{HHSize_y}{HHSize_{05}}\right)^{0.46} \times \left(\frac{Income_y}{Income_{05}}\right)^{0.10} \times \tag{17}$$
$$\left(\frac{Elec\,Price_{y,m}}{Elec\,Price_{05}}\right)^{\phi} \times \left(\frac{Gas\,Price_{y,m}}{Gas\,Price_{05}}\right)^{\lambda}$$

The index for other uses is derived then by summing across the appliances:

$$OtherEqpIndex_{y,m} = \sum_{k} ApplianceIndex_{y,m} \times ApplianceUse_{y,m} \tag{18}$$

# 6 Appendix C: Commercial Statistically Adjusted End-Use Model

The traditional approach to forecasting monthly sales for a customer class is to develop an econometric model that relates monthly sales to weather, seasonal variables, and economic conditions. From a forecasting perspective, the strength of econometric models is that they are well suited to identifying historical trends and to projecting these trends into the future. In contrast, the strength of the end-use modeling approach is the ability to identify the end-use factors that are driving energy use. By incorporating end-use structure into an econometric model, the statistically adjusted end-use (SAE) modeling framework exploits the strengths of both approaches.

There are several advantages to this approach.

- The equipment efficiency trends and saturation changes embodied in the long-run end-use forecasts are introduced explicitly into the short-term monthly sales forecast. This provides a strong bridge between the two forecasts.
- By explicitly introducing trends in equipment saturations and equipment efficiency levels, it is easier to explain changes in usage levels and changes in weather-sensitivity over time.
- Data for short-term models are often not sufficiently robust to support estimation of a full set of price, economic, and demographic effects. By bundling these factors with equipment-oriented drivers, a rich set of elasticities can be built into the final model.

This document describes this approach, the associated supporting Commercial SAE spreadsheets, and *MetrixND* project files that are used in the implementation. The source for the commercial SAE spreadsheets is the 2010 Annual Energy Outlook (AEO) database provided by the Energy Information Administration (EIA).

## 6.1 Commercial Statistically Adjusted End-Use Model Framework

The commercial statistically adjusted end-use model framework begins by defining energy use ($USE_{y,m}$) in year (y) and month (m) as the sum of energy used by heating equipment ($Heat_{y,m}$), cooling equipment ($Cool_{y,m}$) and other equipment ($Other_{y,m}$). Formally,

$$\mathrm{USE}_{y,m} = \mathrm{Heat}_{y,m} + \mathrm{Cool}_{y,m} + \mathrm{Other}_{y,m} \qquad (1)$$

Although monthly sales are measured for individual customers, the end-use components are not. Substituting estimates for the end-use elements gives the following econometric equation.

$$\mathrm{USE}_m = a + b_1 \times \mathrm{XHeat}_m + b_2 \times \mathrm{XCool}_m + b_3 \times \mathrm{XOther}_m + \varepsilon_m \qquad (2)$$

Here, $XHeat_m$, $XCool_m$, and $XOther_m$ are explanatory variables constructed from end-use information, weather data, and market data. As will be shown below, the equations used to construct these X-variables are simplified end-use models, and the X-variables are the estimated usage levels for each of the major end uses based on these models. The estimated model can then be thought of as a statistically adjusted end-use model, where the estimated slopes are the adjustment factors.

### *6.1.1 Constructing XHeat*

As represented in the Commercial SAE spreadsheets, energy use by space heating systems depends on the following types of variables.

- Heating degree days,
- Heating equipment saturation levels,
- Heating equipment operating efficiencies,
- Average number of days in the billing cycle for each month, and
- Commercial output and energy price.

The heating variable is represented as the product of an annual equipment index and a monthly usage multiplier. That is,

$$\mathrm{XHeat}_{y,m} = \mathrm{HeatIndex}_y \times \mathrm{HeatUse}_{y,m} \qquad (3)$$

where, $XHeat_{y,m}$ is estimated heating energy use in year (y) and month (m),
$HeatIndex_y$ is the annual index of heating equipment, and
$HeatUse_{y,m}$ is the monthly usage multiplier.

The heating equipment index is composed of electric space heating equipment saturation levels normalized by operating efficiency levels. The index will change over time with changes in heating equipment saturations (*HeatShare*) and operating efficiencies (*Eff*). Formally, the equipment index is defined as:

$$HeatIndex_y = HeatSales_{04} \times \frac{\left( HeatShare_y \big/ Eff_y \right)}{\left( HeatShare_{04} \big/ Eff_{04} \right)} \tag{4}$$

In this expression, 2004 is used as a base year for normalizing the index. The ratio on the right is equal to 1.0 in 2004. In other years, it will be greater than one if equipment saturation levels are above their 2004 level. This will be counteracted by higher efficiency levels, which will drive the index downward. Base year space heating sales are defined as follows.

$$HeatSales_{04} = \left( \frac{kWh}{Sqft} \right)_{Heating} \times \left( \frac{CommercialSales_{04}}{\sum_e kWh \big/ Sqft_e} \right) \tag{5}$$

Here, base-year sales for space heating is the product of the average space heating intensity value and the ratio of total commercial sales in the base year over the sum of the end-use intensity values. In the Commercial SAE Spreadsheets, the space heating sales value is defined on the *BaseYrInput* tab. The resulting $HeatIndex_y$ value in 2004 will be equal to the estimated annual heating sales in that year. Variations from this value in other years will be proportional to saturation and efficiency variations around their base values.

Heating system usage levels are impacted on a monthly basis by several factors, including weather, commercial level economic activity, prices and billing days. Using the COMMEND default elasticity parameters, the estimates for space heating equipment usage levels are computed as follows:

$$HeatUse_{y,m} = \left( \frac{BDays_{y,m}}{30.5} \right) \times \left( \frac{WgtHDD_{y,m}}{HDD_{04}} \right) \times \left( \frac{Output_y}{Output_{04}} \right)^{0.20} \times \left( \frac{Price_{y,m}}{Price_{04}} \right)^{-0.18} \tag{6}$$

where, *BDays* is the number of billing days in year (y) and month (m), these values are normalized by 30.5 which is the average number of billing days

*WgtHDD* is the weighted number of heating degree days in year (y) and month (m). This is constructed as the weighted sum of the current month's HDD and the prior month's HDD. The weights are 75% on the current month and 25% on the prior month.

*HDD* is the annual heating degree days for 2004,

*Output* is a real commercial output driver in year (y), *Price* is the average real price of electricity in month (m) and year (y),

By construction, the $HeatUse_{y,m}$ variable has an annual sum that is close to one in the base year (2004). The first two terms, which involve billing days and heating degree days, serve to allocate annual values to months of the year. The remaining terms average to one in the base year. In other years, the values will reflect changes in commercial output and prices, as transformed through the end-use elasticity parameters. For example, if the real price of electricity goes up 10% relative to the base year value, the price term will contribute a multiplier of about .98 (computed as 1.10 to the -0.18 power).

### 6.1.2 Constructing XCool

The explanatory variable for cooling loads is constructed in a similar manner. The amount of energy used by cooling systems depends on the following types of variables.

- Cooling degree days,
- Cooling equipment saturation levels,
- Cooling equipment operating efficiencies,
- Average number of days in the billing cycle for each month, and
- Commercial output and energy price.

The cooling variable is represented as the product of an equipment-based index and monthly usage multiplier. That is,

$$\mathrm{XCool}_{y,m} = \mathrm{CoolIndex}_{y} \times \mathrm{CoolUse}_{y,m} \tag{7}$$

where, $XCool_{y,m}$ is estimated cooling energy use in year (y) and month (m),

$CoolIndex_y$ is an index of cooling equipment, and

$CoolUse_{y,m}$ is the monthly usage multiplier.

As with heating, the cooling equipment index depends on equipment saturation levels (*CoolShare*) normalized by operating efficiency levels (*Eff*). Formally, the cooling equipment index is defined as:

$$CoolIndex_{y} = CoolSales_{04} \times \frac{\left( CoolShare_{y} \big/ Eff_{y} \right)}{\left( CoolShare_{04} \big/ Eff_{04} \right)} \tag{8}$$

Data values in 2004 are used as a base year for normalizing the index, and the ratio on the right is equal to 1.0 in 2004. In other years, it will be greater than one if equipment saturation levels are above their 2004 level. This will be counteracted by higher efficiency levels, which will drive the index downward. Estimates of base year cooling sales are defined as follows.

$$CoolSales_{04} = \left(\frac{kWh}{Sqft}\right)_{Cooling} \times \left(\frac{CommercialSales_{04}}{\sum_{e} kWh/Sqft_{e}}\right) \qquad (9)$$

Here, base-year sales for space cooling is the product of the average space cooling intensity value and the ratio of total commercial sales in the base year over the sum of the end-use intensity values. In the Commercial SAE Spreadsheets, the space cooling sales value is defined on the *BaseYrInput* tab. The resulting *CoolIndex* value in 2004 will be equal to the estimated annual cooling sales in that year. Variations from this value in other years will be proportional to saturation and efficiency variations around their base values.

Cooling system usage levels are impacted on a monthly basis by several factors, including weather, economic activity levels and prices. Using the COMMEND default parameters, the estimates of cooling equipment usage levels are computed as follows:

$$CoolUse_{y,m} = \left(\frac{BDays_{y,m}}{30.5}\right) \times \left(\frac{WgtCDD_{y,m}}{CDD_{04}}\right) \times \left(\frac{Output_{y}}{Output_{04}}\right)^{0.20} \times \left(\frac{Price_{y,m}}{Price_{04}}\right)^{-0.18} \qquad (10)$$

where, *WgtCDD* is the weighted number of cooling degree days in year (y) and month (m). This is constructed as the weighted sum of the current month's CDD and the prior month's CDD. The weights are 75% on the current month and 25% on the prior month.

*CDD* is the annual cooling degree days for 2004.

By construction, the *CoolUse* variable has an annual sum that is close to one in the base year (2004). The first two terms, which involve billing days and cooling degree days, serve to allocate annual values to months of the year. The remaining terms average to one in the base year. In other years, the values will change to reflect changes in commercial output and prices.

### 6.1.3 Constructing XOther

Monthly estimates of non-weather sensitive sales can be derived in a similar fashion to space heating and cooling. Based on end-use concepts, other sales are driven by:

- Equipment saturation levels,
- Equipment efficiency levels,
- Average number of days in the billing cycle for each month, and
- Real commercial output and real prices.

The explanatory variable for other uses is defined as follows:

$$\mathrm{XOther}_{y,m} = \mathrm{OtherIndex}_{y,m} \times \mathrm{OtherUse}_{y,m} \tag{11}$$

The second term on the right hand side of this expression embodies information about equipment saturation levels and efficiency levels. The equipment index for other uses is defined as follows:

$$OtherIndex_{y,m} = \sum_{Type} Weight_{04}^{Type} \times \left( \frac{Share_y^{Type} / Eff_y^{Type}}{Share_{04}^{Type} / Eff_{04}^{Type}} \right) \tag{12}$$

where, *Weight* is the weight for each equipment type,

*Share* represents the fraction of floor stock with an equipment type, and

*Eff* is the average operating efficiency.

This index combines information about trends in saturation levels and efficiency levels for the main equipment categories. The weights are defined as follows.

$$Weight_{04}^{Type} = \left( \frac{kWh}{Sqft} \right)_{Type} \times \left( \frac{CommercialSales_{04}}{\sum_e kWh / Sqft_e} \right) \tag{13}$$

Further monthly variation is introduced by multiplying by usage factors that cut across all end uses, constructed as follows:

$$OtherUse_{y,m} = \left(\frac{BDays_{y,m}}{30.5}\right) \times \left(\frac{Output_y}{Output_{04}}\right)^{0.20} \times \left(\frac{\Pr ice_{y.m}}{\Pr ice_{04}}\right)^{-0.18} \quad (14)$$

In this expression, the elasticities on output and real price are computed from the COMMEND default values.

# ACCURACY OF LOAD FORECAST AND VARIANCE ANALYSES

## 1.0 INTRODUCTION

Hydro Ottawa Limited's ("Hydro Ottawa") last rebasing year was 2012. Hydro Ottawa has not completed a detailed load forecast since this rebasing given that Hydro Ottawa has increased rates based on an Incentive Regulation Model ("IRM") for the years 2013 to 2015. As such, Hydro Ottawa felt it was financially prudent not to invest in preparing a detailed load forecast for the years in which rates would not be set by the forecast.

## 2.0 HISTORICAL ACCURACY OF LOAD FORECAST

Given Hydro Ottawa has not completed a load forecast since 2012 it can only compare the 2012 Board Approved load forecast to the actual sales and demand results and customer count and connects for that year.

Hydro Ottawa has completed Appendix 2-IA, Summary and Variances of Actual and Forecast Data, which provides a schedule of volumes, customer count and connects by rate class including total system load. This also includes a comparison of historical board-approved versus historical actual. Appendix 2-IA is provided as an attachment to this exhibit. Per Appendix 2-IA:

- Actual 2012 kWhs were 1.36% less than the Board approved forecast;
- Actual 2012 kWs were 0.61% less than the Board approved forecasts;
- Customer count and connects was within 0.01% of Boards approved forecast, customer counts and connection as the average for that year.

Hydro Ottawa has added a total variance year over year comparison to the bottom of Appendix 2-IA. 2015 to 2020 data is weather normalized. For details regarding the class level assumptions and data sources, please refer to Itron's load forecast report available in Attachment C-1(A) to exhibit C-1-1, Hydro Ottawa has utilized the format of Appendix 2-IA, please see attachment C-1(B), to provide the following comparisons:

- Historical Board-approved vs. Historical Actual – weather normalized;
- Historical Actual – weather-normalized vs. preceding year's Historical Actual – weather-normalized (for the necessary number of years);
- Historical Actual – weather normalized vs. Bridge Year – weather-normalized; and
- Bridge Year – weather-normalized vs. Test Year.

Hydro Ottawa has confidence that the variances between the afore-mentioned analyses are within an acceptable tolerance.

Itron's 2016-2020 load forecast and data are available in excel format as attachment C-1(C) to C-1(L)

# OTHER REVENUE SUMMARY

## 1.0 INTRODUCTION

Other Revenue, also referred to as Revenue Offsets, relates to all utility revenues other than distribution and cost of power revenues. Hydro Ottawa Limited ("Hydro Ottawa") has classified these into the following categories: Specific Service Charges, Late Payment Charges, Other Operating Revenue and Other Income and Deductions. Table 1, below, provides a summary of Other Revenue from 2012 through 2016, along with the associated Uniform System of Accounts ("USofA"), rounded to the nearest $1,000.

**Table 1 - Other Revenue Summary**

| Other Revenue | 2012 Actual $000 | 2013 Actual $000 | 2014 Budget $000 | 2015 Forecast $000 | 2016 Forecast $000 |
|---|---|---|---|---|---|
| **Specific Service Charges** (4235) | 3,583 | 5,293 | 3,801 | 3,710 | 5,910 |
| **Late Payment Charges** (4225) | 872 | 907 | 956 | 899 | 899 |
| **Other Operating Revenue** (4082, 4084, 4086, 4090) | 1,197 | 1,004 | 1,064 | 925 | 1,411 |
| **Other Income & Deductions** (4315, 4320, 4325, 4330, 4355, 4360, 4362, 4375, 4405) | 2,303 | 1,777 | 3,163 | 3,313 | 3,480 |
| **Total Other Revenue** | **7,955** | **8,980** | **8,984** | **8,847** | **11,700** |

A detailed breakdown of Other Operating Revenue and Other Income and Deductions is provided in Appendix 2-H.

## 2.0 SPECIFIC SERVICE CHARGES

A specific service charge is applied for service requests or activities which primarily benefit or are attributed to the customer who requests or initiates the specific service or activity. Some specific service charges are applied as a result of a customer's inaction.

As noted in Exhibit H-7-1, Hydro Ottawa undertook a review of many routine service charges to ensure that the associated costs of providing such services were appropriately recovered.

With the exception of six (6) previously approved specific service charges, Hydro Ottawa is proposing to increase or introduce new specific service charges (“service charges”) for the years 2016 through 2020.

## 3.0 LATE PAYMENT CHARGES

An OEB-approved monthly interest rate of 1.5% (19.56 per annum) is applied to outstanding account balances that exceed sixteen calendar days from the date a bill is mailed.

## 4.0 OTHER OPERATING REVENUES

Other Operating Revenues include revenue associated from the provision of Standard Supply, Retailer and Generator services.

Generator service revenue was historically recorded under Other Income and Deductions (4325); however, as of 2016 the associated revenues shall be recorded in (4090), as part of Other Operating Revenues.

The service charges associated with these services are proposed to increase in 2016 through 2020.

## 5.0 OTHER INCOME AND DEDUCTIONS

Hydro Ottawa also earns revenue through the provision of services to customers and third parties, rental income from leased plant, gains (or losses) on the disposal or retirement of utility property, the provision of services to Hydro Ottawa's affiliates and the City of Ottawa, as well as, earning interest income on short-term investments.

## 5.1 Works for Others

### 5.1.1 Services to the City of Ottawa

In addition to the sale of electricity, Hydro Ottawa rents poles and ducts to the City of Ottawa, as well as, performs minor routine work. Revenue associated with pole attachments is recorded under Service Charge revenue. Duct rental revenue is part of Other Income & Deductions.

## 5.2 Service Affiliates

Hydro Ottawa provides services to its' affiliates Hydro Ottawa Holding Inc. and Energy Ottawa Inc. under the terms of Service Level Agreements, which are updated annually.

Hydro Ottawa provides Human Resources, Facilities, IT, Finance and Communications services to Hydro Ottawa Holding Inc. Energy Ottawa Inc. receives Human Resources, Facilities, IT, Finance, Metering/Meter Data and Mechanical services from Hydro Ottawa.

Details on the services Hydro Ottawa provides and receives from Affiliate transactions are provided in Exhibit D-2-1. For convenience, a summary of the associated revenue offsets are provided in Table 2, below.

**Table 2: Summary of Affiliate Services Revenue Earned by Hydro Ottawa**

| Services From | Services to | 2012 Actual | 2013 Actual | 2014 Budget Year | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|---|---|
| Hydro Ottawa Ltd. | Hydro Ottawa Holding Inc. | $743,921 | $771,477 | $785,029 | $818,932 | $835,388 |
| Hydro Ottawa Ltd. | Energy Ottawa Inc. | $532,668 | $983,140 | $989,715 | $1,043,155 | $1,061,482 |
| **Total** | | **$1,276,589** | **$1,754,617** | **$1,774,744** | **$1,862,087** | **$1,896,870** |

### 5.3 Services to Third Parties

These revenues, net of expenses, relate to services provided to customers or third parties such as installing and removing temporary services, isolating and re-energizing of services, transformer vault shutdown escort services, inspection services, generator services and a recently introduced bill reporting service. A small amount of revenue is also forecasted for providing ad hoc web portal services for viewing interval meter data in a web-based format.

Hydro Ottawa rents out its underground civil capacity to third parties, on a temporary basis, through a five-year Access Agreement ("duct rentals"). Duct rental agreements exist with the City of Ottawa and Rogers Cable. Hydro Ottawa has several third party pole attachments which pay an annual charge, per attachment (part of Specific Service Charges). These third parties include street light owners, telecoms and Hydro One. Pole attachment charges are proposed to increase, as part of this Application, as outlined in Exhibit H-7-1, Section 3.3 and calculated in Attachment H-7(A).

Water heater billing services are forecast to expire on December 31, 2015.

As noted in Section 4.0, generator service revenues will be recorded under Other Operating Revenue, as of 2016.

### 5.4 Property Rental

Property rental relates to fees paid by Hydro One Networks Inc. ("Hydro One") for land owned by Hydro Ottawa. In many locations in the City of Ottawa, Hydro Ottawa and Hydro One have joint facilities for transformer stations. For locations in which Hydro Ottawa owns the land on which Hydro One has facilities, a rental fee is paid. An additional source of income is from rent paid by the tenants of a small number of houses Hydro Ottawa purchased next to distribution stations many years ago to facilitate future station expansion.

## 5.5 Gains and Losses on Disposal of Property

Hydro Ottawa periodically disposes of assets that are no longer, necessary in serving the public (e.g. fully amortized vehicle, equipment, et cetera). Where the proceeds vary from the net book value of an asset, Hydro Ottawa treats the variances as a debit or credit to income.

Prior to 2014, the associated gains and losses were applied to USofA 4355 and 4360, respectively. As of 2014 forward, the net amount has been applied to USofA 4362.

## 5.6 Revenues from Non-Utility Operations

Non-utility income is not considered a "revenue offset" in that it does not reduce the distribution (base) revenue requirement. Hydro Ottawa has very little non-utility income with the exception of Conservation and Demand Management ("CDM") activities.

Between 2012 and 2014, Hydro Ottawa recorded a modest amount of revenue from the Ontario Power Authority micro-FIT program, from operating solar panels at two Hydro Ottawa properties, under USofA 4375. As of 2015, related revenues are not recorded under Other Revenue

## 5.7 Interest and Dividend Income

Interest income refers to interest earned on cash balances within the year. In the years 2012 to 2014 a modest amount of interest was recorded. Material cash balances are not anticipated between years 2015 and 2020.

## 6.0 OTHER REVENUE – VARIANCE ANALYSIS

Material financial and trending variance explanations are provided in the following year-to-year comparisons.

**2012 Actual to 2013 Actual**

2013 Other Revenue actuals of $8,980k were 12.9 percent higher than 2012 actuals.

Miscellaneous Service Revenues (4235) increased $1,709k, or, 47 percent in 2013 primarily due to the write-off of old outstanding account credit balances, in preparation for Hydro Ottawa's customer information system conversion to CC&B in 2014. Processes are now in place to monitor account credit balances in excess of one year, on a quarterly basis and clear such balances as appropriate.

Revenues from Merchandising and Jobbing (4325 Work for Others) were $4,652k, or, 97 percent higher primarily due to $946k associated with the commencement of the City of Ottawa Light Rail Transit ("LRT") project, which included abnormally high temporary power supply work and $1,556k resulting from a non-routine land trunk extension and major voltage conversion. $1,517k was the result of the recovery of damaged assets which were mistakenly applied to this revenue category, rather than Gain and Loss on Disposal of Property (4355 and 4360). Had this error not occurred, the 2013 Merchandising and Jobbing revenues (4325) would have been $7,897k.

Costs from Merchandising and Jobbing (4330 Work for Others) were 79 percent higher, primarily due to the City of Ottawa LRT project at $898k; the non-routine land trunk extension at $1,285k and the voltage conversion at $233k. An overall increase in construction and customer demand activity accounts for the balance of $656k.

In light of the aforementioned accounting treatment, Gain and Loss on disposal of Property (4355 and 4360)) is adjusted by $1,517k. Therefore, the actual Gain and Loss on disposal of Property for 2013 is $1,040k.

**2013 Actual to 2014 Forecast**

Overall, the 2014 Forecast is expected to trend closely to the 2013 actuals at $8,984k.

Miscellaneous Service Revenues (4235) are expected to be $1,491k lower than 2013 actuals, which were abnormally high due to non-routine credit balance write-off activity.

Revenues from Merchandising and Jobbing (4325) are anticipated to be $4,008 lower than 2013 actuals due to the anticipated return of more standard work program activities, including the LRT project.

For similar reasons, costs from Merchandising and Jobbing (4330) are expected to be $2,875 lower than 2013 actuals.

As of 2014, Gain and Loss on Disposal of Property (4355 and 4360) were consolidated under USofA 4362. A modest loss of $54k is forecast for 2014.

**2014 Forecast to 2015 Bridge Year**

Other Revenue in 2015 is forecasted to trend closely to 2014 forecast levels at $8,847k. Slight declines in Retail Service, Late Payment and Miscellaneous Service revenues are expected to be offset by modest increases in revenues associated with services to third parties and asset disposals.

**2015 Bridge Year to 2016 Test Year**

Other Revenue in 2015 is forecasted at $11,700k. The increase of $2,852k, or, 32 percent over 2015, is primarily due to proposed increases in Retail, Generation and Specific Service charges. Details on the proposed service charge changes are outlined in Exhibits H-7-1 and H-7-2. A summary of the Service Charge revenues between 2012 through 2020 is provided in Exhibit C-2-2.

**2016 Test Year to 2017 Test Year**

Other Revenue in 2016 is forecasted to trend closely to 2015 forecast levels, at $11,565k. A decline in Late Payment Charge revenue is forecasted in 2016, due to the active promotion of automated payment withdrawal services to major accounts, which have a large number of accounts. Initial trends indicate that this option is gaining momentum in the major accounts sector. For this reason, Late Payment Charge revenue is expected to decline from $75k per month to $60k per month in 2017.

The forecasted decline in Late Payment Charge revenue is partially offset by a 2.1 percent inflationary increase to new and revised service charges.

**2017 Test Year to 2018 Test Year**

Other Revenue is forecast to increase modestly in 2018 at $11,722k. A 2.1 percent inflationary increase applied to new and revised service charges is expected to be partially offset by negligible forecasted interest earnings, as no material cash balances are expected during this period.

**2018 Test Year to 2019 Test Year**

Other Revenue is forecast to increase modestly in 2019 at $11,802k. A 2.1 percent inflationary increase applied to new and revised service charges is expected to be partially offset by negligible forecasted interest earnings, as no material cash balances are expected during this period.

**2019 Test Year to 2020 Test Year**

Other Revenue is forecast to increase modestly in 2020 at $11,898k. A 2.1 percent inflationary increase applied to new and revised service charges is expected to be partially offset by negligible forecasted interest earnings, as no material cash balances are expected during this period.

**Notes:**

1 List and specify any other interest revenue.

2 In the transition year to IFRS, the applicant is to present information in both MIFRS and CGAAP. For the typical applicant that is adopting IFRS on January 1, 2015, 2014 must be presented in both a CGAAP and MIFRS basis.

# SERVICE CHARGE REVENUE

## 1.0 INTRODUCTION

As noted in Exhibit H-7-1, Hydro Ottawa Limited ("Hydro Ottawa") reviewed and revised a number of service charges as part of this application. This review included Specific Service, Generator Service and Retailer Service Charges ("Service Charges"). A complete listing of existing and proposed service charges from 2012 through 2020 is provided in Table 1, of Exhibit H-7-1.

In terms of Other Revenue impacts, the proposed Service Charges are forecasted to increase 2016 Service Charge revenues by 65.5 percent, or $2,520k, as compared to 2015 forecasted Service Charge revenues. The majority of this revenue increase is driven by proposed increases in Service Charges, as compared to volumetric increases.

Between the years of 2013 to 2015, Temporary Service revenues were recorded under Merchandising and Jobbing (4325 Work for Others). Simlarly, Generation Service revenues were recorded under (4325 Work for Others) during the years 2012 to 2015. As of 2016, the associated revenues shall be recorded under Miscellaneous Revenue (4235) and Other Operating Revenue (4090), respectively. For comparison, these amounts are shown under Service Charges, but, not included in the respective 2012 to 2015 Service Charge revenue totals.

A summary of the Service Charges and applicable revenues for the years 2012 through 2020 is provided in the following Table 1:

## Table 1 – Summary of Service Charge Revenue 2012 to 2020

| SPECIFIC SERVICE CHARGE REVENUE | 2012 Actual Revenue | 2013 Actual Revenue | 2014 Forecast Revenue | 2016 Forecast Revenue | 2017 Forecast Revenue | 2018 Forecast Revenue | 2019 Forecast Revenue | 2020 Forecast Revenue |

# OPERATING EXPENSES - SUMMARY

This Exhibit provides an overview of Hydro Ottawa's total operating costs. These costs include Operations, Maintenance and Administration ("OM&A") including property taxes, Depreciation and Amortization expenses; and Payments in Lieu of Taxes ("PILS"). Detailed information with respect to each of these operating costs is available in Exhibits D-1-2 and D-1-3, D-3-1 and D-4-1.

## 1.0 Summary of Operating Expenses 2012-2016

**Table 1**

| ($000s) | 2012 Actual | 2013 Actual | 2014 Q2 Forecast | 2015 Bridge | 2016 Test Year |
|---|---|---|---|---|---|
| OM&A (including Property Tax) | $73,076 | $75,757 | $80,767 | $83,656 | $87,106 |
| Depreciation/Amortization | $38,595 | $39,798 | $36,517 | $38,558 | $40,826 |
| PILS (income taxes) | $6,857 | $6,806 | $3,000 | NIL | $4,958 |
| **Total Operating Costs** | $118,528 | $122,361 | $120,284 | $122214 | $132,890 |

## 2.0 OM&A

Hydro Ottawa's OM&A expenses for the 2016 test year are forecasted to be $ 87.1. This represents a compound annual growth rate of 5.5% over the 2012-2016 timeframe.

The principle cost drivers underlying Hydro Ottawa's forecasted OM&A expenses include costs associated with compliance with legislative and regulatory compliance, compensation and labour costs, inflation and certain operational and maintenance costs that Hydro Ottawa must incur to continue to provide a safe and reliability electricity distribution system.

### 2.1 Inflation Rates and Financial Assumptions

Hydro Ottawa has assumed an inflation rate of 2.13% for 2015 and 2.01% for 2016 for all non-compensation related costs. For the 2017-2020 rate period, an escalation factor of 3.245% is applied to OM&A expenditures which is the result of the I-X formula.

Labour costs are adjusted to reflect market conditions for non-unionized employees and to align with the collective agreement annual rate adjustment for unionized employees.

### 2.2 Compensation Costs

Labour costs are adjusted to reflect market conditions for non-unionized employees and to align with the collective agreement annual rate adjustment for unionized employees. Hydro Ottawa's forecasted total compensation costs for the 2016 test year are $71,944K. This represents a compound annual growth rate of 4.3% over the 2012 to 2016 timeframe. For more information regarding Hydro Ottawa's compensation costs please refer to Exhibit D-1-8.

## 3.0 Depreciation and Amortization expenses

Hydro Ottawa adheres to the Modified International Financial Reporting Standards ("MIFRS") as its accounting standard which informs its rate making and regulatory reporting requirements. Hydro Ottawa uses the half-year rule for calculating depreciation/amortization in the year that capital additions are added into rate base. For more information regarding Hydro Ottawa's Depreciation/Amortization expense, please refer to Exhibit D-3-1.

## 4.0 Payments in Lieu of Taxes ("PILS") and Property Taxes.

Pursuant to its obligations under Section 93 of the Electricity Act 1998 (Ontario), as amended, Hydro Ottawa is liable for the payment of PILS to the City of Ottawa based on its taxable income. Hydro Ottawa expects to pay $0 in PILS in 2015 and $ $4,958K in

PILS in 2016. For more information regarding PILS, please refer to Exhibit D-4-1 1 for further details.

# OM&A OVERVIEW

This schedule provides a brief qualitative and quantitative summary of Hydro Ottawa Limited's ("Hydro Ottawa" or "the Company") Operations, Maintenance and Administration ("OM&A") expenditures including a brief overview of the composition of Hydro Ottawa's OM&A costs, the significant OM&A cost drivers and year over year variances, trends and business environment changes. This schedule further describes Hydro Ottawa's approach to OM&A planning and the top down and bottom up budget process used to arrive at Hydro Ottawa's OM&A expenditures. The information contained in this schedule is informed by the OEB's filing requirements set out on page 33 in Chapter 2 of the Ontario Energy Board's (OEB's) Filing requirements for Electricity Distribution Rate Applications, as updated on July 18, 2014.

## 1.0 OM&A SUMMARY

### 1.1 Hydro Ottawa's Approach to OM&A Planning and Budgeting

Hydro Ottawa's approach to OM&A planning and budgeting for the 2016-2020 period is guided by Hydro Ottawa's planning and performance management framework which aligns the Company's corporate strategies with planning, operations, performance and the drive for continuous improvement.

The framework maintains that spending correspond to business priorities, be directed to achieve performance targets and support Hydro Ottawa's four key focus areas as set out in its *2012-2016 Strategic Direction*. The four key focus areas for the Company are:

- Customer value;
- Financial strength;
- Organizational effectiveness; and
- Corporate citizenship.

Hydro Ottawa's 2016 OM&A budget was developed as a test year rebasing budget but was guided by the constraints enunciated in the February 2014 budget memo from Hydro Ottawa's Chief Financial Officer (Attachment D-1(A)) which, among other things, included constraints on headcount and compensation and OM&A. Hydro Ottawa's 2016 OM&A budget was further informed by substantive operational investments needed to maintain service reliability and safety as well as those necessary to remain in compliance with regulatory and legislative requirements. Finally, Hydro Ottawa's OM&A budget was informed by the need to maximize productivity and minimize bill impacts while ensuring the financial health and viability of the Company.

For the 2017-2020 test years, Hydro Ottawa will adjust OM&A using an I-X formula to align with the principles of incentive regulation as enunciated in the Renewed Regulatory Framework for Electricity (RRFE). Hydro Ottawa seeks approval for final rates for a three year period beginning 2016 and ending 2018. In 2017 Hydro Ottawa proposes to apply for revised rates that will be adjusted to incorporate a revised inflation factor and updated cost of capital parameters. Hydro Ottawa's approach to adjusting the OM&A component of rates by a I-X formula, results in the Company bearing the risk associated with any shortfall between revenues collected through rates and regularly incurred costs. This difference must be recovered through productivity initiatives and operational efficiencies. Hydro Ottawa further assumes the risk associated with not adjusting rates for the first three years to reflect changes to inflation or cost of capital.

### 1.2 OM&A Budget Process

Hydro Ottawa undertook both a top down and bottom up forecasting exercise to develop the 2016 test year budget. The 2016 budget forecast exercise began with the development of the Budget Memo from the office of the Chief Financial Officer that provided top down guidance on the areas of constraints which informed the individual divisions in the development of their bottom up budgets. Examples of top down constraints include constraints on hiring and on compensation, benefits, productivity, and cost control. Bottom up funding requests were then developed and evaluated and scrutinized based on priority and alignment with core company strategic directives as well as ratepayer impacts. Adjustments were subsequently made to the 2016 OM&A budget to reflect corporate priorities and customer rate impacts. The final 2016 OM&A budget was developed to accommodate Hydro Ottawa's operational requirement to provide a safe and reliable distribution system while respecting legislative and regulatory obligations and the conditions of its license.

As noted above, the OM&A budget for the 2017-2020 test years was subsequently calculated based on an I-X formula typical of incentive regulation models. Although the budget was assessed for rate impacts no further adjustments were made. Recognizing that Hydro Ottawa cannot accurately predict all potential OM&A funding requirements that may emerge during the 2017-2020 custom IR term, it may avail itself to the cost recovery mechanism available under a Z factor application. Hydro Ottawa will only resort to using the Z factor mechanism if costs incurred arise from unforeseen events, decisions or activities, the results of which cannot be reasonably anticipated or quantified at this juncture and where the costs exceed Hydro Ottawa's materiality threshold. . Examples include unforeseen weather events or changes to laws or regulations requiring significant implementation investment.

For more details on Hydro Ottawa's Custom IR model, see Exhibit A-2-1.

### 1.3 OM&A Composition

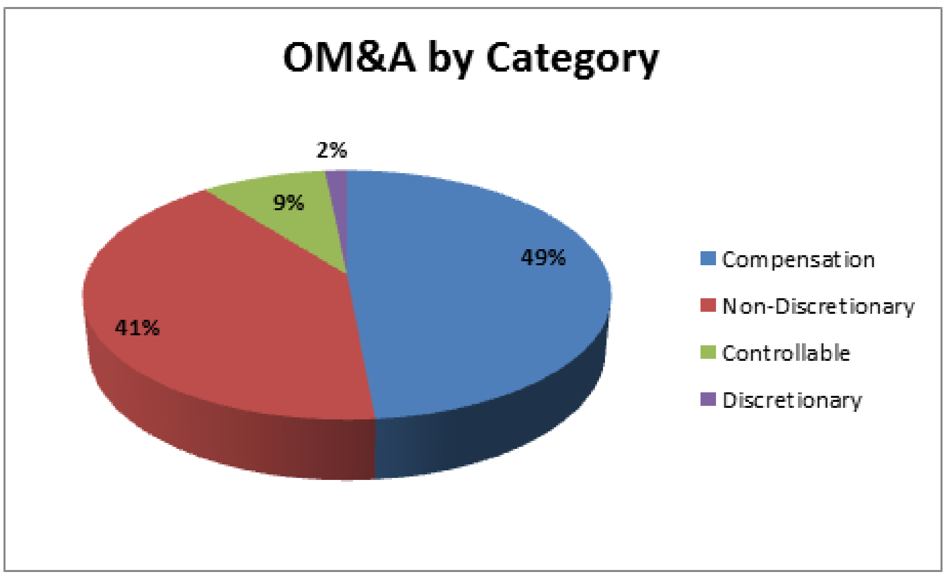
In support of the Company's cost control initiative, an OM&A review was conducted during the 2014 budget process. The review capture all the costs of the main business activities broken down into four distinct categories:

1) Compensation: Headcount costs including payroll and benefits;
2) Non-Discretionary OM&A: Statutory requirement costs that are fixed or dictated by external factors and/or minimum contracts. Examples include the OEB fees, property tax, audit fees, and insurance premium, and underground locates;
3) Controllable OM&A: Costs that must be incurred. Volumes and/or service levels are controlled by management and can be adjusted in the short term. Examples include bank charges, fuel, utilities, manhole cleaning; and

4) Costs that can be reallocated or eliminated without significant impact to current operations or customer relations. Examples include non-safety training, non-essential consulting, travel, and meals, community services.

As Figure 1 below denotes compensation costs represent 49% of Hydro Ottawa's OM&A costs while 41% are non-discretionary costs, 9% are controllable and only 2% are discretionary.

**Figure 1 – OM&A by Category**



Source: Hydro Ottawa 2014 Analysis

## 1.4 OM&A Test Year Levels

The proposed OM&A costs for the test years range from $87.1 million in the 2016 test year to $99.0 million in the 2020 test year.

2017 – 2020 test year OM&A costs are adjusted by Hydro Ottawa's Custom IR model which is based on the Conference Board of Canada's forecasted GDP IPI minus a negative productivity factor of -1.145% to provide an annual I-Xadjustment of 3.245%. The projected OM&A expenditures are necessary to maintain reasonable business continuity while managing the risks associated with the many labour, legislative and regulatory transformations taking place in the electricity industry.

## 1.5 Summary of Total OM&A Expenditures

Hydro Ottawa's OM&A costs are significantly influenced by its requirement to operate and maintain a safe and reliable distribution grid, provide service levels that are satisfactory to customers while ensuring its continued compliance with all legislative and regulatory obligations. Among other things, this entails that it strategically manages its workforce in a manner that allows it to replace retiring workers with new tradespeople and respond to the changing dynamics of the market and operating environment within which it is tasked with distributing electricity to customers.

Table 1 below provides a summary view of Hydro Ottawa's historical, bridge, test and forecast year OM&A expenditures.

**Table 1 – OM&A Variances (in thousands of dollars) and (%) by Year**

| Year | OM&A | Previous Year | Variance ($) | Variance (%) |
|---|---|---|---|---|
| **2012 Actual** | $73,076 | | | |
| **2013 Actual** | $75,757 | $73,076 | $2,681 | 3.7% |
| **2014 Q2 Forecast** | $80,767 | $75,757 | $5,010 | 6.6% |
| **2015 Bridge Year** | $83,656 | $80,767 | $2,889 | 3.6% |
| **2016 Test Year** | $87,106 | $83,656 | $3,450 | 4.1% |
| **2017 Forecast** | $89,932 | $87,106 | $2,826 | 3.2% |
| **2018 Forecast** | $92,850 | $89,932 | $2,918 | 3.2% |
| **2019 Forecast** | $95,863 | $92,850 | $3,013 | 3.2% |
| **2020 Forecast** | $98,974 | $95,863 | $3,111 | 3.2% |

## 1.6 Summary of OM&A Costs by Major Category

Appendix 2-JA provides a summary of the recoverable OM&A Expenses as summarized below in Table 2. See also Exhibit D-1-2 for a description of high level cost drivers and cost drivers by program.

**Table 2 – OM&A costs by major OM&A Category (in thousands of dollars)**

| OM&A Category | 2012 Actuals | 2013 Actuals | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year | CAGR |
|---|---|---|---|---|---|---|
| **Operations** | $14,994 | $15,607 | $17,497 | $18,467 | $20,491 | 8.1% |

| **Community Relations** | $5,550 | $5,352 | $5,705 | $5,960 | $6,162 | 2.6% |
| ***Subtotal*** | *$15,140* | *$15,487* | *$17,762* | *$18,357* | *$18,718* | *5.4%* |
| **Administrative and General** | $33,058 | $35,051 | $35,874 | $35,759 | $37,511 | 3.2% |
| ***Total OM&A Expenses*** | ***$73,076*** | ***$75,757*** | ***$80,767*** | ***$83,656*** | ***$87,106*** | ***4.5%*** |

### a) Operations and Maintenance Costs

Operations and Maintenance costs increased by a compound annual growth rate of 5.5% (2012 to 2016). The increase to operations and maintenance related costs is partly attributable to increased costs associated with labour and maintenance expenses associated with operating and maintaining overhead and underground distribution lines, feeders, transformers and distribution stations. Hydro Ottawa's operations and maintenance costs were further influenced by new programs designed to invest in proactive operational and maintenance measures to avoid long term OM&A and capital costs. Examples of such programs include vegetation management and asset maintenance to name a few. The principle cost drivers of the increases are:

- Compensation costs;
- Increased regulatory and legislative obligations compelling compliance. Examples include Bill 168 (Occupational Health & Safety, Bill 8 Underground Locates; various OEB codes changes, Green Energy Act, Smart Meters and meter data costs; and
- New technology costs such as SCADA, GIS and Asset Management software.

**b) Billing and Collections & Community Relations**

Billing and Collections and Community Relations costs increased by compound annual growth rate of 5.4% (2012 to 2016). Billing and collections expenses relate to costs associated with transitioning to monthly billing, enabling customer billing services and conducting collections activities. The principle cost drivers of the increases are:

- Compensation costs;
- Increase to technology costs to enable meter data post-AMI (Automated metering Infrastructure) deployment as well as technology costs to support the customer care and billing system; and
- Increase to postage costs to support monthly billing.

**c) Administrative and General**

Administrative and General costs increased by an compound annual growth rate of 3.2% (2012 to 2016). Administrative costs generally reflect salary expenses as well as costs associated with HR, IT, Finance, Regulatory, and others. The principle cost drivers of the increases are:

- Compensation and benefits costs.

## 1.7 Inflation Rates and Financial Assumptions

Hydro Ottawa has assumed an inflation rate of 2.13% for 2015 and 2.01% for 2016 for all non-compensation related costs. For the 2017-2020 rate period, an escalation factor of 3.245% is applied to OM&A expenditures which is the result of the I-X formula.

## 1.8 Business Environment Changes

Business environment changes that have occurred and that are expected to continue to occur in Hydro Ottawa's territory are changes arising from the proliferation of distributed generation and new technologies emerging within its serving territory all of which is impacting to Hydro Ottawa's current and prospective revenues. On the horizon, Hydro Ottawa anticipates further changes to be triggered by further implementation of the Ministry of Energy's Long Term Energy Plan as well as new initiatives introduced by the

Independent Electricity System Operator (IESO) such as changes to the MDM/R. Individually and collectively these changes will have an impact on the way in which Hydro Ottawa manages its business and the operational costs it must absorb.

### 1.9 Overview of OM&A Programs & Expenditures

A full quantitative description and variance of Hydro Ottawa's full program costs is available in Appendix 2-JC and a qualitative description of Hydro Ottawa's OM&A programs and an analysis of cost drivers can be found in Exhibit D-1-3.

## 2.0 OM&A COST PER CUSTOMER AND PER FTE

Table 3 summarizes Hydro Ottawa's historical, bridge and test year year over year OM&A expenditures expressed on a per customer and per Full Time Equivalent Employees ("FTE") basis. Table 3 illustrates relatively flat increases in the number of customers as well as a decreasing then flat FTE trend.

**Table 3 - OM&A Cost per Customer and FTE**

| | Last Rebasing Year – 2012 – Board Approved | Last Rebasing – 2012 – Actual | 2013 Actuals | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year |

**To**: Executive Management Team (EMT)

**Date**: February 20, 2014

**Subject**: 2015-2020 Business Plan and Budget Process Guidelines

---

**Background:**

The purpose of this memorandum is to set guidelines to be used in preparation of the Hydro Ottawa Limited (HOL) 2015 to 2020 Budgets and Financial Plans. HOL will file its 2016 rate case in February 2015, in order to have new distribution rates in place on January 1, 2016. This will be a Custom Incentive Regulation application covering rates for 2016-2020. The filing will include 2015 (referred to as the Bridge year) and budgeted data for the 2016 to 2020 period (referred to as the Test years).

The Budget for 2015 and 2016 will be at the detailed Business Unit (BU) level and entered into our financial system, while the outer years (2017 to 2020) will be formulated outside of the financial system. Throughout this memorandum, 2015 and 2016 will be referred to as Budgets while 2017 to 2020 as Financial Plan.

The new conversion date for International Financial Reporting Standards (IFRS) is January 1, 2015; therefore the Budgets and Financial Plan will be prepared using IFRS.

Finance and Regulatory staff will be conducting individual Divisional meetings with Chiefs and their Rate Applications leads to review Priorities, Budget estimates, and forward looking Financial Plans.

**Key Milestones[1]:**

- Divisional 2015 and 2016 Priorities and Budgets – due end of April 2014
- Divisional 2017 to 2020 Financial Plans – due end of June 2014
- Customer / Stakeholder engagement – Q3 2014
- Final Budget and Financial Plans – due end of September 2014
- EMT approval of Final Budget and Financial Plans – Q4 2014
- Filing of application – February 2015

[1] See Appendix 1 for detailed timeline

**Budget Guidelines:**

*Productivity and Cost Control*

Productivity is a key area of focus. Some productivity measures are noted below under *Headcount & Compensation* and OM&A however each division must continue to identify productivity improvements and cost control measures over the term of the Financial Plan period.

*Alignment to Priorities*

All spending must align to business plan priorities, help achieve approved performance targets, and support the four key areas of focus as outlined in our 2012 – 2016 Strategic Direction:

- Customer Value
- Financial Strength
- Organizational Effectiveness
- Corporate Citizenship

Strategic priorities will be funded in accordance with EMT approval.

*Headcount & Compensation*

Compensation and benefit estimates to be provided by HR and will be based on the renewed collective agreement [2]and anticipated increases beyond existing term.

Requests for growth in approved headcount must be supported by the Strategic Workforce Plans and approved by EMT prior to inclusion in the budget. Similar to the 2014 Budget, all new headcount requests in the Budget submission must be offset by identification of a corresponding headcount reduction, HR will schedule meetings with EMT members to review the most up-to-date workforce plans and discuss headcount requests, and will consolidate all requests from each division for EMT approval.

Half year budgeting will be employed for any new positions identified in the Financial Plan. Vacancy allowance will continue to be budgeted at the corporate level at a rate of 2.5% per annum[3].

---

[2] 2.7% effective April 1, 2015 and 2.8% effective April 1, 2016
[3] Placeholder, detailed analysis to come

*Inflation Rate*

Use the following inflation factors[4] for non-compensation spending:

2015 --- 2.13%
2016 --- 2.01%
2017 --- 2.01%
2018 --- 2.02%
2019 --- 2.02%
2020 --- 2.02%

*Technology*

EMT is responsible for liaising with IM/IT to communicate and coordinate technology requirements to ensure alignment with the corporate IM/IT strategy. IM/IT will consolidate all requests from each division for EMT approval.

*Non-Compensation OM&A*

Existing contract pricing will be updated with the latest agreements.

Total non-compensation OM&A should not exceed the annual inflationary factor noted above.

All new or expansion of existing funding must be supported by business case / rationale or existing business plan and approved by EMT. A standard format for business case preparation will be distributed separately.

*Capital*

Capital investment will provide for customer growth and the replacement of aging infrastructure to maintain plant reliability as per the needs analysis documented in the Asset Management Plan, and key capital initiatives such as Light Rail Transit and the Real Estate Strategy.

[4] Based upon Conference Board of Canada forecasts for Ontario CPI inflation increases as of February 2014

| Feb 2015 | Filing of application |

# OM&A COST DRIVERS, PROGRAM DELIVERY COSTS & VARIANCE ANALYSIS

## 1.0 INTRODUCTION

This Schedule describes Hydro Ottawa's Operating Maintenance and Administrative ("OM&A") costs by major program including variances as well as a major cost driver variance summary. The schedule further provides explanations for program costs with variances greater than $750K[1] based on historical trend. The information contained in this schedule is informed by the OEB's filing requirements set out on pages 33 and 34 in Chapter 2 of the Ontario Energy Board's ("OEB") Filing requirements for Electricity Distribution Rate Applications, as updated on July 18, 2014.

## 2.0 OM&A COST DRIVERS

Table 1 below sets out the year over year cost drivers impacting Hydro Ottawa's OM&A and the major cost driver variances are described below.

[1] Materiality Threshold as per Exhibit A-5-1.

**Table 1: Recoverable OM&A Cost Driver Table (Appendix 2-JB)**

| OM&A | Last Rebasing Year (2012 Actuals) | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|
| *Reporting Basis* | | | | |
| **Opening Balance** | $ 73.1 | $ 75.8 | $ 80.8 | $ 83.7 |
| Workforce Planning | | $ 0.2 | $ 0.3 | $ 0.4 |
| Collective Agreement/Annual progressions | | $ 1.2 | $ 1.3 | $ 1.4 |
| Vacancy and Vacancy Allowance | | $ (1.6) | $ (0.5) | $ (0.1) |
| Benefits & Pensions | | $ 1.7 | $ (0.3) | $ 1.0 |
| Vegetation Management | | $ 0.3 | $ 0.9 | $ (0.4) |
| Underground Locates | | $ 0.1 | $ 0.3 | $ 0.3 |
| Changes in Capital and Allocations | | $ 0.2 | $ 0.1 | $ (0.2) |
| Postage | | $ 0.7 | $ 0.2 | $ - |
| IT Maintenance | | $ 1.2 | $ 0.4 | $ 0.5 |
| Bad Debts | | $ (0.4) | $ (0.3) | $ 0.4 |
| Inventory Scrap recovery reclass out of OMA | | $ 0.8 | $ - | $ - |
| Inflation | | | $ 0.8 | $ 0.8 |
| Other Costs/(Cost reductions) | $ - | $ 0.6 | $ (0.3) | $ (0.7) |
| **Closing Balance** | $ 73.1 | $ 80.8 | $ 83.7 | $ 87.1 |

## 2.1 Labour Compensation Costs

This includes the workforce planning, collective agreement / annual progressions and vacancy allowance. Annual salary increases and new employee progressions are governed by Hydro Ottawa's collective agreement for unionized staff. Each year unionized employee salaries are adjusted based on a negotiated percentage. Hydro Ottawa's current collective agreement with the International Brotherhood of Electrical Workers ends March 31, 2017. Adjustments for 2016 are based on the agreement. Management staff compensation is forecasted based upon comparable annual adjustments to unionized staff adjustments. Hydro Ottawa has taken several proactive measures to constrain compensation costs including adopting a flat head count by constraining workforce hiring and replacement for the 2014-2020 period.

**Table 2: Summary of Salary and Wages (Appendix 2-K)**

| Salary and Wages (000s) | 2012 Actuals | 2013 Actuals | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year | CAGR |
|---|---|---|---|---|---|---|
| | $ 49,369 | $ 52,268 | $ 55,232 | $ 55,734 | $ 57,759 | 4.0% |

## 2.2 Benefits & Pensions

This category includes costs associated with all of Hydro Ottawa's staff benefits and pensions including current and post-retirement health benefits, employer payroll taxes and employer pension contributions. Hydro Ottawa has taken measures to constrain these costs, one of which was partnering with a new insurance provider for benefits allowing the Company to reduce its benefits premiums while ensuring the continuance and sustainability of the current level of benefits provided to employees. Savings from these measures were incorporated as offsets into the 2016-2020 budgets to the benefit of ratepayers. For further details on Hydro Ottawa's Compensation approach, see Exhibit D-1-8.

**Table 3: Summary of Benefits and Pension costs (Appendix 2-K)**

| Benefits & Pension ($000s) | 2012 Actuals | 2013 Actuals | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year | CAGR |
|---|---|---|---|---|---|---|
| | $11,536 | $12,748 | $12,856 | $13,354 | $14,185 | 5.3% |

## 2.3 Distribution Operations: Vegetation Management

The costs captured in the Vegetation Management cost driver represent the costs associated with Hydro Ottawa's tree trimming and storm hardening programs. Hydro Ottawa's tree trimming program operates on two and three year cycles for the core and suburban areas and trim more than 40,000 trees per year. Hydro Ottawa's storm hardening program is a new initiative that began in 2014 and is projected to extend until the end of 2015 and is an adjunct to its normal tree trimming efforts. Hydro Ottawa's storm hardening program was initiated to remove overhang branches over 2,650 spans that are not part of the regular trim cycle and to develop new standards to govern the current trim cycle. The focus on eliminating overhang branches is specifically intended to reduce the risk of outages and equipment damage resulting from weighted, blown or broken overhang branches coming in contact with distribution wires. Moving forward, the elimination of overhang will become part of HOL's tree trimming standards and will be monitored and maintained as a part of its trim cycles. The investments made by Hydro Ottawa in its vegetation management and storm hardening are expected to yield significant long term reliability and productivity benefits. For further details on Hydro Ottawa's storm hardening efforts refer to Exhibit B-1-2(A).

**Table 4: Summary of Vegetation Management costs**

| Vegetation Management ($000s) | 2012 Actuals | 2013 Actuals | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year | CAGR |
|---|---|---|---|---|---|---|
| | $2,516 | $3,074 | $3,331 | $4,311 | $3,507 | 8.7% |

### 2.4 Distribution Operations: Underground Locates

The costs captured in the underground locates category arise from Hydro Ottawa's compliance with the Ontario Underground Infrastructure Notification System Act ("OUINS Act"). Released in 2012 the OUINS Act requires that members, of whom Hydro Ottawa is one, to respond within five days of notification from the Ontario One Call Corporation to a request for an underground locate.

Hydro Ottawa contracts its underground system locating to a locate contractor.
The locate contractor is selected through a competitive bid process where potential contractors are evaluated on price, technical qualifications and performance. Contracts are typically three years in duration but can be extended. Throughout the contract Hydro Ottawa performs quality assurance audits to verify the number of locates, the locate accuracy and that locates are being performed to Hydro Ottawa's standards.

Costs associated with accommodating underground locate requests are customer demand driven and hence not a cost that is controllable by the company. The table below provides detail as to the historical and forecasted number of locate requests and the actual and estimated average cost per request.

**Table 5: Summary of Underground Locate costs**

| Year | # of Requests * | Total Costs ($000) | Average Cost per Locate ($) |
|---|---|---|---|
| 2012 Actual | 52,544 | $1,622 | $30.87 |
| 2013 Actual | 59,103 | $1,861 | $31.49 |
| 2014 Q2 Forecast | 66,847 | $2,010 | $30.07 |
| 2015 Bridge Year | 71,317 | $2,216 | $31.08 |
| 2016 Test Year | 79,198 | $2,523 | $31.86 |
| CAGR | | 11.7% | |

* Requests include office clearances

### 2.5 Postage Costs

Increased postage rates coupled with Hydro Ottawa's move to monthly billing are the underlying drivers causing an increase to postage costs. To mitigate the impact of the increased postage costs, Hydro Ottawa has initiated a program to encourage its customers to adopt electronic billing or "e-billing". As of December 2014, Hydro Ottawa has approximately 85,991 or 26.9% of its customers subscribed to its e-billing program. Hydro Ottawa estimates an annualized savings of approximately 860K resulting from its move to implement e-billing.

### 2.6 IT Maintenance

Information Technology maintenance expenses relate to software purchases and upgrades to maintain legacy applications and web interfaces. Examples include the Customer Care and Billing System, AMI/MT, JD Edwards, and data security updates. As noted in Hydro Ottawa's IT Strategy filed in Exhibit B-1-3 legacy applications will be rationalized to simplify ongoing support and maintenance requirements. Continued diligence will be applied to all contracts requiring maintenance and support and efforts will be undertaken to identify where license and service consolidation is possible. As reliance on technology continues to growth through all aspects of the business, the associated IT Maintenance costs also increase.

**Table 6: Summary of IT costs**

| IT Costs ($000s) | 2012 Actuals | 2013 Actuals | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year | CAGR |
|---|---|---|---|---|---|---|
| | $6,342 | $6,659 | $7,179 | $7,060 | $7,616 | 4.7% |

Source: Appendix 2-JC

### 2.7 Bad Debt

Bad debt results from unpaid account balances. Bad debt continues to be a cost driver because it is an expense that is incurred by Hydro Ottawa that is not entirely within its control. The table below illustrates that bad debt increased in 2013 but is projected to stay relatively flat out to 2016.

**Table 7: Summary of Bad Debt costs**

| Bad Debt ($000s) | 2012 Actuals | 2013 Actuals | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year | CAGR |
|---|---|---|---|---|---|---|
| | $1,433 | $2,182 | $1,804 | $1,541 | $1,979 | 8.4% |

## 3.0 OM&A PROGRAM COST & VARIANCE ANALYSIS

Pursuant with section 2.7.3 of the OEB's Chapter 2 Filing requirements, the following section provides a variance analysis of Hydro Ottawa's OM&A costs by major program. Table 8 provides historical, bridge and test year expenditures by the program categories and the four year cumulative annual growth rate for each program category. Table 9 provides a year over year analysis of variances per program as expressed both in dollar and percentage terms, the amounts that are highlighted in red denote the variances that exceed Hydro Ottawa's $750K materiality threshold and as such an explanation for the variance is provided. The total program groupings for OM&A are shown net of the allocations to capital programs. Refer to D-1-(F) Attachment F for a description of each program category.

### Table 8 - Summary of OM&A Program Costs

| Programs | Last Rebasing Year (2012 Board-Approved) | Last Rebasing Year (2012 Actuals) | 2013 Actuals | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year | CAGR (%) |
|---|---|---|---|---|---|---|---|
| *Reporting Basis* | | | | | | | |
| | | | | | | | |
| Collections, Acct & Activities | | $2,892,674 | $4,068,200 | $3,642,238 | $3,543,341 | $4,059,282 | 9% |
| Corporate Costs | | $6,056,030 | $6,575,378 | $5,420,096 | $5,015,524 | $4,993,415 | -5% |
| Customer & Community Relations | | $7,716,112 | $7,573,677 | $8,087,780 | $8,785,231 | $9,084,617 | 4% |
| Customer Billing | | $8,058,100 | $8,320,362 | $10,170,188 | $10,333,939 | $10,414,125 | 7% |
| Distribution Operations | | $15,768,787 | $16,091,210 | $17,449,018 | $18,705,565 | $19,404,972 | 5% |
| Engineering & Design | | $6,090,200 | $6,019,357 | $6,829,936 | $7,585,805 | $8,159,989 | 8% |
| Facilities | | $5,518,926 | $5,656,075 | $5,794,364 | $6,027,819 | $6,108,573 | 3% |
| Finance | | $4,074,222 | $3,983,782 | $4,332,691 | $4,517,544 | $4,759,915 | 4% |
| Human Resources & Training | | $3,283,630 | $3,500,016 | $3,857,908 | $3,945,646 | $4,093,085 | 6% |
| Information Mgt & Technology | | $6,342,125 | $6,658,679 | $7,179,256 | $7,060,152 | $7,616,378 | 5% |
| Metering | | $2,384,793 | $2,327,873 | $2,355,505 | $2,423,903 | $2,532,030 | 2% |
| Regulatory Affairs | | $1,930,844 | $1,967,875 | $2,340,940 | $2,505,096 | $2,580,684 | 8% |

| Supply Chain | | $1,105,987 | $680,108 | $1,190,652 | $1,253,511 | $1,292,193 | 4% |
| Miscellaneous | | | | | | | |
| **Total** | **$73,090,393** | **$73,076,334** | **$75,757,156** | **$80,767,417** | **$83,655,809** | **$87,105,564** | **4%** |

### Table 9 - Summary of OM&A Program Variances (in thousands of dollars)

| Programs ($000) | 2013 2012 | | 2014 – 2013 | | 2015 – 2014 | | 2016 – 2015 | |
|---|---|---|---|---|---|---|---|---|
| Collections, Acct & Activities | **$1,176** | 41% | -$426 | -12% | -$99 | -3% | $516 | 13% |
| Corporate Costs | $519 | 9% | **-$1,155** | -21% | -$405 | -8% | -$22 | 0% |
| Customer & Community Relations | -$142 | -2% | $514 | 6% | $697 | 8% | $299 | 3% |
| Customer Billing | $262 | 3% | **$1,850** | 18% | $164 | 2% | $80 | 1% |
| Distribution Operations | $322 | 2% | **$1,358** | 8% | **$1,257** | 7% | $699 | 4% |
| Engineering & Design | -$71 | -1% | **$811** | 12% | **$756** | 10% | $574 | 7% |
| Facilities | $137 | 2% | $138 | 2% | $233 | 4% | $81 | 1% |
| Finance | -$90 | -2% | $349 | 8% | $185 | 4% | $242 | 5% |
| Human Resources & Training | $216 | 7% | $358 | 9% | $88 | 2% | $147 | 4% |
| Information Mgt & Technology | $317 | 5% | $521 | 7% | -$119 | -2% | $556 | 7% |

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **Metering** | -$57 | -2% | $28 | 1% | $68 | 3% | $108 | 4% |
| **Regulatory Affairs** | $37 | 2% | $373 | 16% | $164 | 7% | $76 | 3% |
| **Safety, Environment & Bus Cont** | $481 | 26% | -$218 | -10% | -$164 | -8% | $54 | 3% |
| **Supply Chain** | -$426 | -39% | $511 | 43% | $63 | 5% | $39 | 3% |
| **Grand Total** | **$2,681** | **4%** | **$5,010** | **6%** | **$2,888** | **3%** | **$3,450** | **4%** |

### 3.1 Collections, Accounts and Activities

The Collections, Accounts and Activities program captures costs associated with Hydro Ottawa's collection activities and its bad debt expense. Half of the costs are attributable to compensation and benefits and the other half of costs captured in this category are primarily bad debt expense.

Headcount remains flat but compensation will be adjusted per Hydro Ottawa's collective agreement. Bad debt expenses went up in 2013 which resulted in a historical high. With several mitigation strategies, management was able to bring bad debt expense down in 2014 and back to the industry average going forward.

In 2012 bad debt as a percentage of electricity revenue was 0.16% with bad debt expense $1.4M, which is below industry average. In 2013 there was a spike that began in Q3 and resulted in a year end bad debt expense of $2.3M. The spike was explained by the economy downturn and other economic factors compounded by the OEB collections rules on residential and low income customers have added pressure on controlling our bad debt expense. This is not distinct to Hydro Ottawa; it is affecting other LDC's as well. Management reviewed the situation and came up with a number of recommendations to mitigate the impact including account set-up and collection process changes and technology changes (e.g. CC&B configuration changes and functional enhancements). In addition, the deployment of remote disconnected meters improved the collection process. In 2014, after the implementation of monthly billing, the bad debt decreased by $0.5M or 22%. Bad debt expense is projected to be in line with industry average.

### 3.2 Corporate Costs

Corporate costs category primarily captures management fees from the Holding Company (reference to Exhibit D-3-3), Insurance, Future Employee Benefits (post-retirement benefit), and vacancy allowance budget.

Corporate Costs is showing a decrease due to the vacancy allowance budgeted in 2014, 2015, and 2016. Actual vacancies are reflected in each of the program costs for 2012 and 2013, only the budgeted amounts are included in corporate costs The vacancy allowance budget is to reflect compensation savings resulting from employee turnover throughout the course of the year. The amount is estimated based on historical trend.

Excluding vacancy allowance, all the major cost components within corporate costs remain steady.

### 3.3 Customer and Community Relations

Customer and Community Relations program captures costs associated with the salaries and benefits as well as costs associated with the customer experience team, key accounts, customer contact, and communications. Half of the costs are headcount related, the other half includes the external call centre, media communications, and the OEB mandated LEAP Program.

During the reporting period, call volumes increased approximately 12% year over year and customer satisfaction increased to 89% up from 76% to 85%. Overall spending trend was steady with an annual growth rate of approximately 4%. The trend represents costs associated with the call centre volumes resulting from increased media coverage and customer outreach. Call volumes are expected to remain high due to increasing outreach and bill changes. As cost mitigation, Hydro Ottawa has committed to restrain call centre contract costs and will measure the call centre contract activity as part of quarterly productivity scorecard and monthly customer satisfaction performance scorecard.

## 3.4 Customer Billing

Customer billing includes costs associated with Billing, Meter to Cash, and Meter Data operations and staff. Compensation / headcount represents one third of the overall costs.

Compensation / headcount costs are projected to decrease by $0.4M from $3.7M in 2012 to $3.3M in 2016. The decrease is attributed to a forecasted reduction in labour costs with a corresponding increase in technology costs. Customer billing non-compensation costs (mainly technology costs and bill production including postages) are projected to increase at a 13% annual growth rate. The principle driver behind the cost increases are:

- Increase to IT costs to support meter data and a post-AMI (Automated Metering Infrastructure) deployment environment which relies on technology to ensure data and billing accuracy. IT support costs includes Savage data and CC&B to ensure Hydro Ottawa's customers are billed correctly; and
- Increase to postage costs due to postage rate increases combined with Hydro Ottawa's move to implement monthly billing. In 2013, the postage rate was $0.61. In 2014, Canada Post increased postage rate to $0.70. This represents 15% increase in postage rate. To mitigate these cost increases, Hydro Ottawa introduced "Go Paperless" and electronic Billing initiatives including MyHydroLink and Autopay. As of December 2014, Hydro Ottawa had approximately 85,991 e-bill accounts representing 26.9% of its customers. Overall OM&A annualized savings due to E-billing program now stand at approximately $860K. Despite the large increase in postage rate and the monthly billing, with its e-billing efforts Hydro Ottawa's postage expenses increased by $0.7M only or 12%.

## 3.5 Distribution Operations

Distribution Operations includes costs associated with the operations and maintenance of Hydro Ottawa's distribution assets. Programs include Vegetation Management, Underground Locates, Environmental Spills Cleanup, Load Dispatching, and other general maintenance.

Distribution Operations spending increased in 2014 and 2015. The major increases are largely attributable to the following distribution maintenance programs:

Vegetation Management – this is a prevention investment that is designed to produce a long term gain. Our SAIFI caused by tree contacts remain low at 0.05 to 0.12 while the industry average at the range of 0.18 and 0.47 (Source: 2012 CEA Service Continuity Reporting). Trees that contact power lines are one of the major causes of power failure. The increase in spending in 2014 and 2015 is mainly related to the storm hardening programs (reference D-2-1, 3.5), however 2016 is projecting a decrease, as the storm hardening work will be completed beginning of 2015. This program annual spending increased from 2.5M in 2012 to 3.5M in 2016 with an annual growth rate of 9%. Over 80% of the program costs are outside services.

Underground Locates – the costs captured in this program increased significantly following the introduction of Bill 8 (Ontario Underground Infrastructure Notification System Act) which became law in June 2012. The program costs increased from $2.0M in 2012 to $2.9M in 2016, which represents a 12% annual growth rate. Two third of the increases are volume related (customer demand), the remaining one third of the cost increase is due to inflationary cost increase in Hydro Ottawa's contractor with Promark (reference D-2-1, 3.6)

Despite the significant increases in these two programs, overall distribution operations remained within a 5% annual growth rate.

### 3.6 Engineering and Design

Engineering and Design program includes costs associated with Distribution Design, System Operations (SCADA), Asset Planning, Policies, Procedures, and Standards.

Over 80% of the costs are labour costs, remaining 20% are mainly technology costs related to the GIS system, SCADA, and the new asset management software.

Annual growth rate 8% with a spike in 2014. It is explained by the increased technology costs for GIS, SCADA, and Asset Management. In addition, the company has conducted a large review of our Conditions of service. This revision is the largest the company has seen, including substantial policy, tariffs and charges review. Furthermore, in keeping with Hydro Ottawa's commitment to provide excellent Customer Service, the document will be revamped to more navigable, understandable and user-friendly. The new version is expected to be published in 2015.

### 3.7 Other Programs

Other Programs including Facilities, Finance, Human Resources, Information Technology, Metering, Regulatory, Safety, Environmental & Business Continuity, and Supply Chain are all projected to experience minor growth. No major spending variances. Some programs have benefit from the productivity initiatives such as Metering. With the deployment of remote disconnected meters, field activities reduced, therefore annual growth rate at 2% only.

## 4.0 CAPITALIZATION OF OVERHEAD OM&A

Table 10 below sets out OM&A by program before capitalization as set out in Appendix 2-D. Hydro Ottawa's capitalized overhead costs are consistent with the OEB's policy on capitalization. Table 11 sets out OM&A that has been capitalized as set out in Appendix 2-D. For details of the Company capitalization policy, please see Exhibit B-5-3. The policy remains the same since 2012 with the percentage capitalized in a range of 25% and 27%.

## Table 10 – OM&A by Program before Capitalization

| OM&A Before Capitalization | 2012 Historical Year | 2013 Historical Year | 2014 Q2 Forecast Historical Year | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|---|
| Collections, Acct & Activities | $ 2,937,418 | $ 4,070,580 | $ 3,649,114 | $ 3,543,341 | $ 4,059,282 |
| Corporate Costs | $ 6,056,030 | $ 6,575,378 | $ 5,420,096 | $ 5,015,524 | $ 4,993,415 |
| Customer & Community Relations | $ 7,716,112 | $ 7,605,947 | $ 8,220,736 | $ 8,785,231 | $ 9,084,617 |
| Customer Billing | $ 9,176,802 | $ 9,736,344 | $ 10,664,787 | $ 10,432,583 | $ 10,511,497 |
| Distribution Operations | $ 33,380,038 | $ 34,860,050 | $ 37,834,129 | $ 39,785,778 | $ 40,824,588 |
| Engineering & Design | $ 10,863,198 | $ 11,693,463 | $ 12,451,538 | $ 12,975,442 | $ 13,677,111 |
| Facilities | $ 5,518,926 | $ 5,656,285 | $ 5,794,592 | $ 6,027,819 | $ 6,108,573 |
| Finance | $ 4,074,222 | $ 3,988,437 | $ 4,368,115 | $ 4,517,544 | $ 4,759,915 |
| Human Resources & Training | $ 3,395,830 | $ 3,675,121 | $ 4,010,176 | $ 4,051,662 | $ 4,180,257 |
| Information Mgt & Technology | $ 6,343,145 | $ 6,717,794 | $ 7,521,460 | $ 7,500,528 | $ 7,862,963 |
| Metering | $ 2,712,295 | $ 2,807,318 | $ 2,846,087 | $ 2,842,465 | $ 2,956,322 |
| Regulatory Affairs | $ 1,930,844 | $ 1,967,875 | $ 2,340,940 | $ 2,505,096 | $ 2,580,684 |

## Appendix 2-JB
## Recoverable OM&A Cost Driver Table

| OM&A | Last Rebasing Year (2012 Actuals) | 2013 Actuals | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year | 2017 | 2018 | 2019 | 2020 |
|---|---|---|---|---|---|---|---|---|---|
| *Reporting Basis* | | | | | | | | | |
| **Opening Balance** | $ 73.1 | $ 73.1 | $ 75.8 | $ 80.8 | $ 83.7 | | | | |
| Workforce Planning | | | $ 0.2 | $ 0.3 | $ 0.4 | | | | |
| Collective Agreement/Annual progressions | | $ 1.1 | $ 1.2 | $ 1.3 | $ 1.4 | | | | |
| Vacancy and Vacancy Allowance | | | $ (1.6) | $ (0.5) | $ (0.1) | | | | |
| Benefits & Pensions | | $ 0.1 | $ 1.7 | $ (0.3) | $ 1.0 | | | | |
| Vegetation Management | | $ 0.4 | $ 0.3 | $ 0.9 | $ (0.4) | | | | |
| Underground Locates | | $ 0.2 | $ 0.1 | $ 0.3 | $ 0.3 | | | | |
| Changes in Capital and Allocations | | $ (0.6) | $ 0.2 | $ 0.1 | $ (0.2) | | | | |
| Postage | | $ (0.1) | $ 0.7 | $ 0.2 | $ - | | | | |
| IT Maintenance | | $ 0.5 | $ 1.2 | $ 0.4 | $ 0.5 | | | | |
| Bad Debts | | $ 0.8 | $ (0.4) | $ (0.3) | $ 0.4 | | | | |
| Inventory Scrap recovery reclass out of OMA | | $ - | $ 0.8 | $ - | $ - | | | | |
| Inflation | | | | $ 0.8 | $ 0.8 | | | | |
| Other Costs/(Cost reductions) | $ - | $ 0.3 | $ 0.6 | $ (0.3) | $ (0.7) | | | | |
| **Closing Balance** | $ 73.1 | $ 75.8 | $ 80.8 | $ 83.7 | $ 87.1 | $ 89.9 | $ 92.8 | $ 95.9 | $ 99.0 |

**Notes:**

1 For each year, a detailed explanation for each cost driver and associated amount is requied in Exhibit 4.

2 For purposes of assessing incremental cost drivers, the closing balance for each year becomes the opening balance for the next year.

3 If it has been more than three years since the applicant last filed a cost of service application, additional years of historical actuals should be incorporated into the table, as necessary, to go back to the last cost of service application. If the applicant last filed a cost of service application less than three years ago, a minimum of three years of actual information is required.

4 Opening Balance for "Last Rebasing Year" (cell B15) should be equal to the Board-Approved amount.

***Notes:***

1 Please provide a breakdown of the major components of each OM&A Program undertaken in each year. Please ensure that all Programs below the materiality threshold are included in the miscellaneous line. Add more Programs as required.

2 The applicant should group projects appropriately and avoid presentations that result in classification of significant components of the OM&A budget in the miscellaneous category

# Operations, Maintenance & Administration Program Descriptions

This attachment provides a description of each program category

**Collections, Accounts and Activities**

This program group has the staff and costs for the collection of both active and inactive residential and commercial electricity accounts. This program also includes the bad debt costs for electricity customers and costs for external collection agencies. Collection agencies are used when staff have exhausted all other methods to collect overdue accounts.

**Corporate Costs**

This program summarizes costs for the General Counsel and Legal departments along with cost allocations from Hydro Ottawa Holding Inc., Employee future benefits, Vacancy provisions, Insurance, Interest and bank charges.

**Customer and Community Relations**

This program includes the staff and costs for the Customer Contact center and Community Relations & Public Affairs group.

The Customer Contact team is responsible for all customer account and relationship activities including the handling of customer telephone calls, correspondence, new customer account requests and changes to existing customer accounts. This group also handles paper based move requests, miscellaneous correspondence, return mail, lawyer's letters, Auto Pay and Budget Billing requests, escalations and reporting. Also in this program are expenses related to providing service to large customers referred to as "key accounts". These key accounts are the highest consumers of electricity within Hydro Ottawa's service area and merit ongoing and more complex service support.

The Community relations and Public Affairs team is responsible for the delivery of customer communication and community initiatives that promote customer and public awareness of the distribution business and industry activities. This function also maintains Hydro Ottawa's branding, website, social media presence and develops customer brochures, organizes community information sessions, interfaces with the media and local government representatives and manages the on-call and outage support procedures, schedules and training.

**Customer Billing**

This program includes the Billing department costs, Meter data Services and IT support personnel for the Customer Care and Billing System (CC&B) used to produce the residential and commercial electricity bills. Smart Meters and Time of Use billing has completely changed the way utilities provide customer billing. The complexity and speed of issuing bills has dramatically changed and continues to evolve with the investments in technology. Hydro Ottawa switched monthly billing in early 2014 to better align consumption with the billing dates. Refer to Exhibit B-1-12, for further details. Meter Data Services, the technical group in the Customer Billing program is responsible for remote meter reading, includes data management for all remote meters including residential and small commercial Smart Meters.

**Distribution Operations**

This group is comprised of operations and maintenance personnel and costs to properly operate and maintain Hydro Ottawa's distribution system and provide quality, reliable, cost effective service to customers. Operations is defined as work that encompasses actions of a detective, preventative, and/or monitoring nature. Maintenance is defined as the routine activity to ensure the equipment or device operates correctly (generally work performed in a reactionary manner based on the results of an Operation activity). Within this program the major functions are: Construction and Operations/Maintenance staff for Overhead and Underground lines, Stations, System Operations along with the costs for major programs such as: Underground locates, Graffiti abatement, Insulator washing, $CO_2$ Washing, Station Transformer Oil Analysis, Asbestos Removal and Arc-Proofing of Cables, Thermographic Scans, and Inspection Tree Trimming / Vegetation Management. The Stations section is made up of electrical and mechanical trades and technical staff. Its primary functions are installation, commissioning, testing and maintenance of substation equipment. System Operation's primary responsibility is to ensure the safety and reliability of the Hydro Ottawa Distribution System. This department includes the Control Room which monitors and controls the Distribution System, Field Crews that respond to electrical emergencies, and perform operations switching, and the Operations Planning section which plans all work to be performed on the System. All Hydro Ottawa planned capital and maintenance activities must interface through this department in order for all crews to carry out their work safely and ensure system reliability is maintained.

**Engineering and Design**

This program group is responsible for the safe, efficient and effective planning and execution of our reliability and demand (customer driven) capital programs as well as our planned maintenance programs using internal and external workforces. This program includes personnel and costs for such departments as: Asset Planning, Distribution Design, and Grid Technology. Asset Planning manages the annual asset reliability capital program. Design teams work with the Asset Planning group to develop designs for electrical system infrastructure, prepare cost estimates, and provide project management. The Grid Technology department is responsible for the day-to-day support of the utilities operational technologies such as SCADA, Outage Management Systems (OMS) and Geographic Information Systems (GIS). They provide user support, software upgrades, enhancements and monitoring services to ensure the System Operations team has the tools required to efficiently run Hydro Ottawa's distribution grid. Grid Technology is also responsible for Smart Grid pilot projects.

**Facilities**

Costs for the maintenance and upkeep of Hydro Ottawa's facilities are in this program. This includes the corporate administrative office, three additional operations centres across the city, a separate fleet/training facility and approximately 70 distribution stations. Costs for maintaining the general plant (i.e. office buildings) are part of

Facilities expenses whereas maintenance for facilities at transformer stations is part of Distribution Operations program costs.

**Finance**

Included within the Finance program group are personnel and costs for General accounting,
Accounts receivable, Accounts payable, Payment processing (including electricity bill payments), Retail settlements, Budgeting/business planning, Tax and Treasury services.

**Human Resources**

The Human Resources program grouping has the personnel and costs for payroll processing, labour relations, compensation management, internal communications, employee events and the development and oversight of human resources polices. In addition costs for employee training for safety and trades, professional and management leadership courses.

**Information Technology**

The Information Management & Technology program has personnel and costs for all core IT infrastructure, the corporate ERP application JD Edwards, voice services, network and data services and maintenance contracts for the associated hardware and software applications. Business specific systems such as: SCADA, Outage Management System, and Geographic Information System are included in the Design and Planning Group; costs for the support of the Customer Care & Billing system are included with the Customer Billing Program grouping.

**Metering**

This program contains the personnel and support costs for the revenue meter assets for residential, commercial, industrial and wholesale metering. Activities include; the management of approximately 316,000 installed meters in service and to support Operations projects including new growth in our service territory as well as maintenance programs for the established meter population. Metering operates a Measurement Canada meter accreditation program S-A-01 and the criteria for the accreditation to perform Inspections pursuant to the Electricity and Gas Inspection Act as well as ISO 9001-2008 quality assurance program.

**Regulatory**

Regulatory Affairs program contains personnel and costs the for filings with the Ontario Energy Board and the Independent Electricity System Operator ("IESO") including comments on consultations, rate and other applications, compliance reporting, licence applications and renewals and the reporting and record-keeping requirements. Major expenses for the Regulatory Affairs program grouping include the Board Annual Cost Assessment, Cost Awards paid to intervener's and annual fees to the Electrical Safety Authority.

**Safety, Environmental and Business Continuity**

Safety, Environment & Business Continuity includes personnel and expenses for the design, implementation and oversight of Hydro Ottawa's safety, environmental and business continuity programs and regulatory compliance. This group oversees Hydro Ottawa's Occupational Health, Safety and Environmental ("OHSE") Accountability Program that details the expectations for all employees on activities they are expected to do to maintain a safe and healthy workplace.

**Supply Chain**

This program has personnel and costs for the procurement and warehouse functions. This group sets and oversees procurement policies and procures all products and services for the company along with managing the inventory used by the operations group.

# HISTORICAL AND FORWARD LOOKING PRODUCTIVITY INTIATIVES

## 1.0 INTRODUCTION

This schedule sets out a summary of the evidence and initiatives that Hydro Ottawa relies on to illustrate its commitment to sustainable productivity and continuous improvement. This schedule responds to the OEB's expectations as it relates to outcomes based productivity and sustainable efficiency measures and is intended to compliment the initiatives discussed in Hydro Ottawa's Distribution System Plan (Exhibit B5). The information contained in this schedule is designed to facilitate the OEB's assessment of the adequacy of Hydro Ottawa's past and future productivity as required pursuant to the Renewed Regulatory Framework for Electricity ("RRFE").

The measures and initiatives described in this schedule pertain to efficiency savings in Operating, Maintenance and General (OM&A) expenditures as well as savings in capital expenditures through more efficient and effective execution of construction and maintenance programs. The productivity and efficiency measures described below have both tangible and non-tangible elements, the consequence of which is that they may not be adequately quantified with precise accuracy but nevertheless contribute to productivity savings that are factored in Hydro Ottawa's Custom IR rate-setting approach as described in detail in Exhibit A-2-1. Hydro Ottawa's outcome based capital planning is described in greater detail in Exhibit B, while Hydro Ottawa's measured performance is set out in its corporate scorecard results which are discussed further below.

In what follows, Hydro Ottawa provides a qualitative and quantitative description of the measures and initiatives that it has implemented and a qualitative description of those initiatives that it intends to implement as part of its commitment to continuous improvement.

## 2.0 HYDRO OTTAWA'S APPROACH TO PRODUCTIVITY

Hydro Ottawa's commitment to productivity is embodied in its four strategic objectives contained in the company's 2012-2016 Strategic Direction. These objectives are a) customer value; b) financial strength; c) organizational effectiveness; and d) corporate citizenship. These strategic objectives all underlie Hydro Ottawa's mission to create long term value for our shareholder, customers and the communities we serve. Indeed, putting the customer at the centre of everything we do is a key tenet of Hydro Ottawa's Strategic Direction. Hence creating value for Hydro Ottawa's customers and sharing the benefits of its productivity has and will continue to be at the heart of Hydro Ottawa's purpose and mission within the greater Ottawa community.

As discussed further below, Hydro Ottawa encourages a culture of innovation and productivity. Indeed since its amalgamation in 2000, Hydro Ottawa management has encouraged the adoption of productivity improvement measures that focus on maximizing the efficiency and effectiveness of its operations by reducing waste and optimizing sustainable productivity opportunities. Hydro Ottawa management and employees are encouraged to identify opportunities to streamline processes or leverage new technologies to improve business operations and services. Over the years several initiatives were introduced including the following:

### 2.1 Initiative # 1 – Lean Continuous Improvement

In 2009-2010 Hydro Ottawa introduced the concepts of the LEAN method of management. Lean is a continuous improvement program focused on eliminating waste from business processes or value streams. Waste is defined as any step or task in a process that adds time or cost to the product or service but adds no value from a customer's perspective. Lean has been used in many process reviews across the organization with positive results. Hydro Ottawa continue to apply these concepts and tools today as it reviews core business processes for opportunities to improve.

### 2.2 Initiative # 2 – Corporate Productivity Scorecard

In 2013 a cross-functional team was established to design a scorecard to measure productivity for Hydro Ottawa. The purpose was to develop a suite of metrics to measure and monitor productivity gains achieved across the organization beyond the industry standard measures used like OM&A per customer. The cross functional team identified the following expected outcomes:

- Identify the current corporate productivity measures and assess available baseline data from multiple industry sources;
- Identify best practices in productivity measures within the electricity sector and any other applicable sectors;
- Recommend additional productivity measures and targets;
- Recommend reporting periods for each measure; and
- Catalogue data sources for the measures, and recommend accountability for data collection and assessment.

The result of their efforts was a scorecard focussed in the following four key focus areas: People – Internal Workforce, Operating Maintenance & Administration Costs, Capital Asset Efficiency, and Profitability Metrics. See Attachment D-1(C) for a copy of the December 2014 Scorecard. This scorecard is produced on a quarterly basis, is provided to both the Executive Management team and the Board of Directors for review and discussion and is designed to encompass all of Hydro Ottawa's lines of business. The organization has yet to set targets for the metrics included in the scorecard. The approach has been to establish a scorecard that is aligned with the OEB's expectations and monitor progress throughout 2014. Once Hydro Ottawa has confirmed that it is measuring the right things and has enough data history to establish a baseline it will move ahead with setting annual targets. Hydro Ottawa anticipates being in a position to have targets in place by year end 2015.

### 2.3 Initiative # 3 – CEO Productivity and Innovation Award

Hydro Ottawa's employees respond and contribute to a culture that is reflective of organizational values they collectively defined. Core to our culture is the value of Excellence, which the company and its employees define in part as, "using our assets effectively to achieve the best possible outcomes" and as "embracing innovation and continuous improvement." To further entrench the importance of living this organizational value, in 2013, Hydro Ottawa introduced the CEO's Award for Productivity and Innovation, which recognizes teams and individuals who have driven a tangible or measureable productivity improvement or innovation. The creation of this award has spurred competition among employees and teams seeking to have their initiatives recognized for driving organizational effectiveness.

## 3.0 HYDRO OTTAWA'S CULTURE OF INNOVATION

Hydro Ottawa's culture of innovation is illustrated in the many division and corporate wide initiatives that are designed to drive change and increase operational efficiency. Below is a brief discussion of initiatives undertaken by some of the divisions within Hydro Ottawa to identify and initiate productivity enhancing opportunities. The section also describes additional initiatives that are planned or are underway to measure and improve its operating performance.[1]

### 3.1 Distribution Operations and Asset Management

Distributions Operations and Asset Management are groups responsible for the planning, design, construction, maintenance and operation of the distribution system within Hydro Ottawa's service territory.

#### *3.1.1 Capital Execution – Process Review*

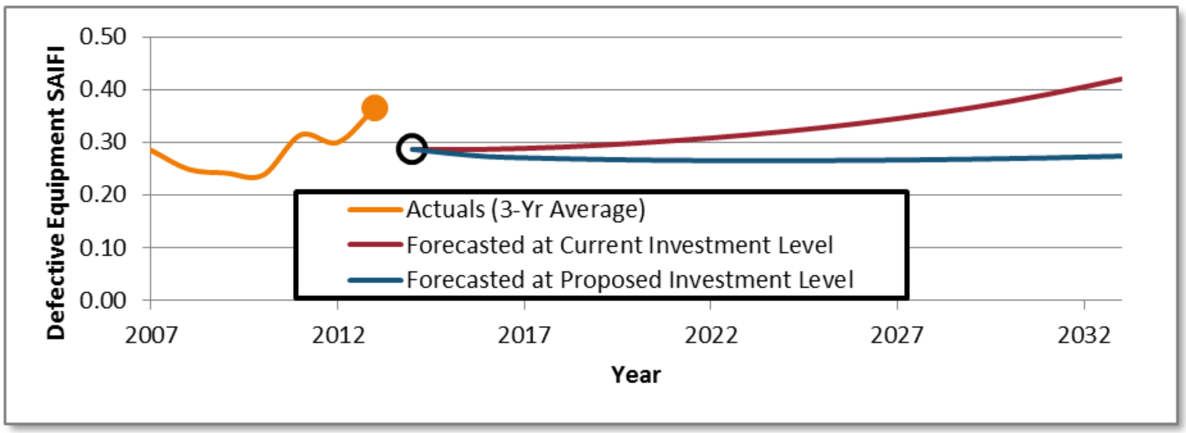
Hydro Ottawa's 2014 Annual Planning Report (see Attachment B-1(B)) shows a financial need much larger than the current spending levels to maintain Hydro Ottawa's current system performance.

If current spending levels remain consistent on a go forward basis, Hydro Ottawa expects plant failure capital to increase along with a corresponding increase in the

[1] Some of the information set out in this section is also provided in Hydro Ottawa's DSP found in Exhibit B-1-2.

percentage of internal labour spent on this reactive type of capital. Increases in equipment failures will result in a significant increase in Defective Equipment SAIFI by 2032.

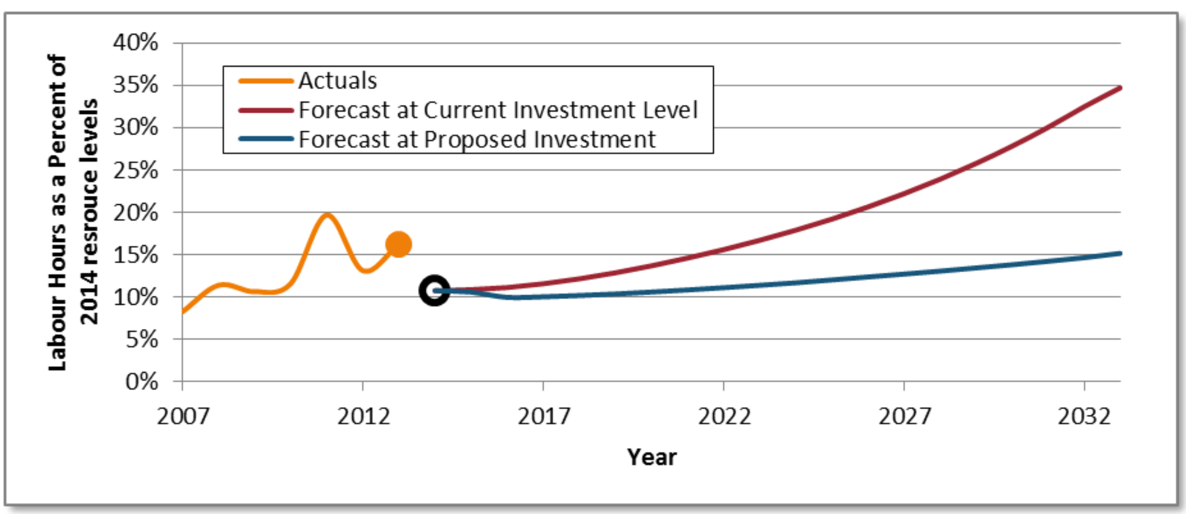
**Figure 1 – Defective Equipment Contribution to SAIFI**



Source: 2014 Annual Planning Report

In addition, distribution plant failure will account for 36% of available labour hours by 2032 if the current annual replacement levels are not increased.

**Figure 2 – Plant Failure Labour Hours as a Percentage of Available Hours**



Source: 2014 Annual Planning Report

Hydro Ottawa recognizes the situation and the primary focus within the operations group has been on enhancing the productivity and efficiency of Hydro Ottawa's processes and operations staff to help close this gap between need and actual spend. Hydro Ottawa's sustainment and demand capital spend has increased significantly over the last number of years, while overall head count in Distribution Operations and Asset Management has remained flat. In order to avoid hiring new staff to keep up with the increasing work, Hydro Ottawa had to find ways of working smarter and more efficiently.

In 2011 Hydro Ottawa completed a Lean review of its capital execution process from project initiation and design through to project closure. A cross functional team of employees involved in different aspects of projects was assembled to review the current state, identify issues and opportunities and make recommendations for implementation that would demonstrate improvements to how Hydro Ottawa does business.

An action plan was developed to address many of the key issues and findings including an inconsistent organizational structure, need for enhanced communications, inconsistent application of Hydro Ottawa's project management processes, and the need for better resource planning and scheduling. The following provides further details into the specific initiatives that have been undertaken and the results.

#### *3.1.1.1 Aligned Staff Geographically*

Hydro Ottawa's structure when the review was completed was a combination of functional and geographic. This inconsistent approach was making communication and collaboration more difficult. As a result Hydro Ottawa realigned its Asset Management and Design groups to match the geographic structure of the company's Construction and Maintenance field forces. The result is area specific teams consisting of planning and asset engineers, distribution designers, scheduling resources, and construction and maintenance staff that have resulted in better relationships and much stronger, timely communication. One of the added benefits of the team approach is the coaching and mentoring available by pairing more junior staff with seasoned veterans regardless of what area of the organization they reside.

In conjunction with the restructuring, Hydro Ottawa established Operational Briefing meetings in each of the areas with all key stakeholders in attendance. In addition to the area teams, Hydro Ottawa has representatives from Health and Safety, Procurement and System Operations. These meetings, held biweekly, are typically less than one hour in length, and are designed to communicate important information about safety, the schedule, reliability statistics, progress against capital plans and financial results. Hydro Ottawa also discusses and resolves or actions issues so that they are addressed in a timely fashion.

#### *3.1.1.2 Distribution Asset Planning and Projects (DAPP) Portal*

To improve internal communications of asset planning and projects, a web portal called DAPP was created in 2011. The DAPP is a centralized repository of asset and project information located on the HOL Intranet where internal stakeholders can find templates or reference data to utilize on an as needed basis. In the past, this information was physically and virtually stored in several different locations and was sometimes not accessible or difficult to find. The site is now a valuable collection of cradle to grave information on projects as well as other broader information and reporting including, but not limited to:

- Annual planning reports;
- Financial reports;
- Project lessons learned;
- Reliability statistics and graphs;
- The consolidated schedule;
- Technical standards; and
- Procurement and stores reports.

This saves staff time and effort searching for information and data that they need to perform their jobs.

#### *3.1.1.3 Streamlined Project Management Processes*

In 2003 Hydro Ottawa introduced a project management tool called "Project Coach". Project Coach was designed to better align and integrate the internal processes across Distributions Operations and Asset Management. The goal was to improve the planning, design and construction of approximately 600 projects completed annually. In 2012 Hydro Ottawa undertook a review of the Project Coach tool using a team of Hydro Ottawa System Designers and field staff that use the methodology every day. The review produced a number of important process modifications that were implemented.

- More frequent financial reporting on projects to ensure proper cost controls, timely change requests and accurate forecasting.
- Build in additional safety elements to minimize risk on projects. Pre-design, pre-construction, and pre-energizing meetings are now vital to ensure communication is clear, risks are managed and all team members are clear on their roles and responsibilities.
- Improved formal communication between project team members by adding critical steps to eliminate errors. The development and use of detailed checklists and guidelines assist new staff and staff who are working on new functional disciplines for the first time be able to process the work more efficiently.
- Streamlined front end design time, typically one draft drawing for circulation with comments results in only one trip to the GIS drawing team for final approved drawing.
- Reduced field changes after design completed. The Field Technician agrees with and signs off on design and material is ordered based on this design. This also reduces stranding material ordered for the approved project.
- Hydro Ottawa has created three years of rolling work plans. Current year projects are scheduled or in construction. Year two projects have detailed designs ready to be moved into the schedule if plans change due to project delays. Year three is high level estimates and preliminary project scoping so that we have inventory of projects ready well in advance of the planned year of execution. This approach provides additional flexibility to Hydro Ottawa's scheduling and construction staff. Hydro Ottawa now has a portfolio of projects

in the queue that allow for the dynamic reallocation of resources to reduce the frequency and duration of downtime.

The realignment of operations staff, enhancements to Hydro Ottawa's Project Coach Processes and tools, in combination with better access to information and templates on the DAPP and its central design repository, has resulted in productivity savings of approximately one hour per designer per day. This represents 5,500 hours or approximately $400,000 annually.

#### *3.1.1.4 Centralized Scheduling*

In 2010 Hydro Ottawa undertook a review of its scheduling systems for capital and maintenance programs and determined that greater efficiencies could be derived from implementing a centralized system. The objective of introducing a new centralized scheduling tool was to provide better visibility into work being scheduled so that those responsible for the design, material, permits, etc. were aware of the progress of each stage completed before construction. The centralized scheduling tool was also designed to better inform decision making regarding the need for use of external contractors for excess workload.

To give visibility into Hydro Ottawa's internal resource capacity, the schedule includes all resources in its overhead, underground and stations work groups. It includes details on all "paid time off" hours such as training, statutory holidays, vacation and sick time which is used to calculate the effective capacity to complete maintenance and capital work. Comparing this effective capacity to the actual volume of work from Hydro Ottawa Asset Management Plan, Demand Capital Forecasts and Maintenance plans provides good information to make better decisions about the need for external contractors.

Hydro Ottawa has been effectively using external contractors to assist in the completion of capital and maintenance work for a number of years. The contractors represent a good alternative to hiring full time staff or apprentices due to the flexibility of being able to increase or decrease the number of contractors on the ground based on the actual workload at the time. Access to qualified high voltage contractors in Eastern Ontario is limited compared to the Greater Toronto Area. To ensure a reliable supply, Hydro Ottawa signed three year standing offer agreements with two Toronto based contractors. Hydro Ottawa also has a third standing offer signed with a local contracting company that provides service including emergency response to Hydro Ottawa's customers in its Casselman service territory.

The schedule provides a consolidated plan to key stakeholders in Operations that allows them to be more effective in the completion of work in the annual plan. The schedule, in combination with the biweekly Operational Briefings has allowed us to be more flexible and adaptable when faced with unforeseen events or delays on any projects. Hydro Ottawa is able to more quickly redeploy Hydro Ottawa's construction forces to other sustainment or demand work with limited downtime.

The scheduling efforts are helping. In 2014 there was an increase in the average number of regular hours per chargeable employee of approximately 27 hours, translating to productivity of $450,000. There was also a decrease in overtime charged to work orders of over 2,700 hours, or approximately $400,000.

#### *3.1.2 Service Desk Enhancements*

The Service Desk is a group of staff that assist customers and contractors with new service connections, disconnect/reconnects, demolition permits, etc. In 2010, HOL completed a review of the processes and tools that were in place with a view to reducing the amount of paper produced and to streamlining the processes to enhance service efficiency to improve overall customer service.

As a result of this review HOL developed an electronic workflow management system called Service Manager that helps staff track the status of requests and work orders throughout their entire lifecycle. Hydro Ottawa also introduced an electronic service request form on its external website to make it easier for customers to initiate requests for service. Customers have the ability to complete and submit requests on-line at a time that is most convenient for them. The requests are received in the Service Manager and actioned by staff to begin the process of obtaining a quote for the service. HOL also introduced electronic service work orders for both internal and contract resources. These work orders are issued and closed off in the field electronically and automatically populate Hydro Ottawa's customer billing system with information like meter badge numbers and meter readings, improving overall timeliness and accuracy.

The more automated work flow resulted in a significant reduction in the amount of manual work related to these customer requests for Service Desk staff. As a result of these efficiencies Hydro Ottawa was able to reallocate two resources from the Service Desk to Hydro Ottawa's Scheduling Group to complete higher value work. Hydro Ottawa has established a back office function in scheduling to improve the hand off of construction packages from Design to Construction. This represents a productivity savings of two resources or approximately $160,000 annually.

#### *3.1.3 Consolidating Dispatch Systems - Metering*

Metering is an operational department within the Construction and Maintenance Group of Hydro Ottawa. The activities support the many operational functions required to support the revenue meter asset for residential, commercial, industrial and wholesale metering.

In 2013 the Metering department converted from the CGI Workforce Management tool to Intergraph In-Service. The In-Service product is the core system related to Hydro Ottawa's Outage Management System and was already being leveraged to dispatch a variety of other field activities including new service connections, collections, forestry inspections and excavation supervisions. By consolidating to one dispatch system Hydro Ottawa was able to save ongoing support costs and license fees for CGI of approximately $35,000 annually. In addition we avoided the $200,000 one-time cost of professional services and licenses associated with a required CGI upgrade. The upgrade savings were offset by a one-time cost of approximately $75,000 to convert to the In-Service product.

### *3.1.4 Annual Interval Metering Inspections*

Hydro Ottawa's 842 largest customers use complex interval meters that should be inspected annually to verify their configuration and validate that the service is electrically correct for risk management and due diligence purposes. Based on an average of three man hours per unit, a physical visit to each of these meters would consume approximately 2,500 man hours including travel time. In 2012, the Metering group began utilizing meter diagnostic software from Elster, Hydro Ottawa's meter supplier. This diagnostic software allowed Hydro Ottawa to complete their annual inspection from the Hydro Ottawa offices. This was carried out via phone lines and prevented a truck roll to the 842 customer sites resulting in a savings of approximately 2,400 man hours. This translates into productivity savings of approximately $177,000 annually.

### *3.1.5 Expansion of Meter Inspection and Sealing*

Hydro Ottawa has a Measurement Canada recognized Quality Assurance program that permits us to inspect and seal meters at its facilities instead of having this completed by a third party. Up until 2012 the scope of this program did not include Hydro Ottawa's most complex Schneider Ion meters. Annually there are approximately 80 of these meters that require inspection and sealing. In 2012 Hydro Ottawa completed the necessary training and expanded the scope of its testing and inspection program through its federal regulator Measurement Canada to include these meters. This has results in a savings of $270 per unit annually. The cost of having this inspection and sealing completed by a third party was $500 per unit, while Hydro Ottawa was able to complete the same work for $230 per unit using internal staff. The estimated operating savings is $21,600 annually.

### *3.1.6 Operations Process Liaison Committee*

In late 2014 a new cross functional committee was established within the Operations group consisting of staff and management from Design, Scheduling, Service Desk and Construction. The mandate of this cross functional group is to take a look at core business processes that cut across departmental lines to continue to look for opportunities to improve overall efficiency and effectiveness. The initial focus is on accurately documenting the as-is state one process at a time and ensuring a clear and common understanding of all of the steps from start to finish. After documenting these processes and taking advantage of obvious quick-wins, the cross-functional group is tasked with reviewing each process in more depth to identify and implement opportunities for improvement.

#### *3.1.7 Multi-Disciplined System Designer*

Hydro Ottawa's System Designers have been primarily functionally focussed. Each Designer is a specialist in one of four disciplines: overhead, underground, residential, or commercial. Another continuous improvement initiative Hydro Ottawa is pursuing is a move to a multi-disciplined Designer model. Instead of focussing on a specific discipline, the Designers will be learning all disciplines. This transition and development will take some time to mature; however, the increase in productivity by having only one Designer handle all aspects of a project are expected to be significant. An example would be a new customer connection with requirements to relocate a pole adjacent their property, provide temporary service for construction, and finally provide service to their new building. Instead of having three different design staff assigned to this site, one System Designer handles will handle all functions required to meet the customer's needs. This will result in better service for customers, better coordination of the construction activities to complete the work, and less Hydro Ottawa labour to complete the project.

#### *3.1.8 Unit Bills*

Distribution Design is responsible to create designs and estimates for both demand and sustainment projects. These designs are based on construction standards that have standard bill of materials. Every design is unique but has to be built to Hydro Ottawa's approved technical standards. In the old process, a Designer was required to input each unit of material and labour into JD Edwards (HOL Enterprise System) on a job by job basis. For material this meant individually adding each pole, nut, bolt, washer, bracket, etc. to the work order for a pole replacement project. This made the task of creating material lists for projects very labour intensive. To reduce this, in 2014 Distribution

Design began the task of assigning labour and trucking units to each overhead standard. To avoid the task of building material lists for each overhead job, each standard had a list or unit bill of material, labour and trucking created for it. So the standard for installing a pole, for example, will have the pole and all of the necessary hardware required to install and dress the pole included in a standard list of materials. When designs are created the Designer will be able to use these unit bills for repetitive activities in a single project, like setting poles, to complete the estimate and material list and easily transfers this into JDE in a shorter timeframe. In 2014, Hydro Ottawa was able to save approximately 10 minutes of design time per pole, or 90 hours for our pole replacement and voltage conversion programs. The Asset Management Plan is forecasting the number of poles being replaced to increase to 1,350 from 2015 – 2020. This process improvement will result in an estimated savings of 225 design hours, or over 5 weeks annually.

#### *3.1.9 Asset Investment Planning (AIP)*

Hydro Ottawa is in the process of implementing an Asset Investment Planning (AIP) software package that focuses on project optimization and analytics with a risk based approach in line with the PAS55 asset management model. The software package is CopperLeaf's C55 program. Quality Asset Planning is critical to Hydro Ottawa's ongoing corporate success, especially as it relates to Productivity and Reliability. It is a capital investment decision making and analytics tool that is used as the central repository for this information eliminating the need for countless Excel spreadsheets. By having all of this critical information in one place it reduces the time to organize the data and frees up staff to spend more time on analyses and decision making.

Currently Hydro Ottawa's Annual Planning Report (Attachment B-1(B)) shows a financial need much larger than the current spending levels to maintain its current system performance. The AIP software will help to close that gap by improving the efficiency of Hydro Ottawa's spending, essentially getting more results for the same spending levels Taking a conservative approach, indications are that improved forecasting at Hydro

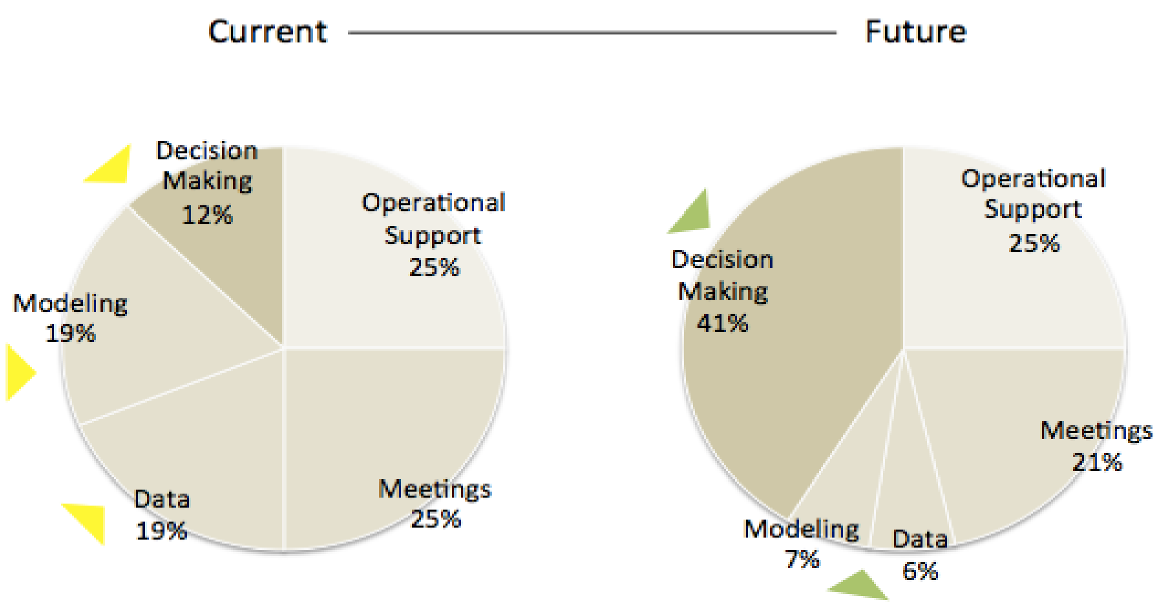
Ottawa can improve capital efficiency by between 1% - 5% or $3,000,000 - $15,000,000 cumulative benefit over five years.

**Table 1 – Capital Efficiency Gains from AIP Implementation**

| | 2015 | 2016 | 2017 | 2018 | 2019 | 5 Year Total |
|---|---|---|---|---|---|---|
| **Capital Deployed** | | | | | | |
| | 50 M | 55 M | 60.5 M | 66.5 M | 73.2 M | 305.2 M |
| **Gain** | | | | | | |
| 1 % | 500 K | 550 K | 605 K | 665 K | 732 K | 3.05 M |
| 2% | 1.5 M | 1.65 M | 1.8 M | 2 M | 2.2 M | 9.16 M |
| 3% | 2.5 M | 2.75 M | 3 M | 3.33 M | 3.66 M | 15.3 M |

Hydro Ottawa is anticipating an additional productivity gain in its Engineering group. The AIP tool will allow engineers to focus their time on better decision making, scenario modeling and optimization of work flow by reducing the amount of time spent organizing data and managing countless Excel spreadsheets. Based on a typical day, it is anticipated that this tool will increase the time spent on value add activities by almost three hours. This will not reduce the number of engineers needed, but rather avoid the need to increase the number of planning engineers to accomplish this level of detailed planning.

**Figure 3 – Engineer Productivity Gains**



#### *3.1.10 Mobile Workforce Management*

Hydro Ottawa has a large mobile workforce that is responsible for a wide range of work from simple disconnect, reconnects or meter changes to the more complex and longer duration pole changes and cable replacements. To date we have been using a combination of Excel spreadsheets, in-house developed databases, and our Intergraph In-Service system for scheduling and dispatching work. This is accomplished in a decentralized model with several different groups dispatching mainly to their own resources. Although this has been relatively effective, the organization needs to invest in a Mobile Workforce Management (MWM) tool to drive productivity to the next level. The objectives underlying the expected investment fall into the following Categories:

**Improve Productivity** – Less than optimal dispatching and routing of work using Hydro Ottawa's current systems and tools is leading to latent capacity in the field service teams, and presents a real opportunity to increase daily job completion rates. Another area of opportunity is that of administrative tasks, more specifically, time capture. Hydro Ottawa's review of new capabilities indicated the ability to automate time capture for field service staff. Savings in these two areas will increase capacity of field staff to complete more tasks per day.

**Reduce Operating costs** – Implementing unified dispatching tool with route optimization capabilities has been shown to reduce kilometers driven and fuel consumption. Given current fuel prices and the size of Hydro Ottawa's service territory, the potential is not insignificant. A reduction in travel time could also lead to additional work being completed within a regular business day and is expected to result in a reduction in overtime costs.

**Exploit Unfulfilled Opportunity Costs** – Most every field services discipline is maintaining a backlog of work that they are expected to deal with, on top of the ongoing daily workload. Often these backlog items are important from the perspective of avoiding future outages and can have a detrimental impact on SAIFI and SAIDI if gone unattended. The new system will allow the Company to begin taking advantage of available time at the start of the day and between customer appointments for completing these backlog items, testing, inspection, or maintenance activities that otherwise can see long delays in being completed. The system also has the ability to schedule these jobs and take advantage of a crew's sudden availability due to a canceled appointment or other unforeseen event.

**Increase performance against service levels, and enhance customer satisfaction** – MWM tools have the capability to tailor dispatching rules to prioritize work based on a variety of factors including those represented by proximity to missing a service level agreement target. This will ensure that higher priority work orders, like customer appointments, are completed on time leading to enhanced customer satisfaction.

**Execute better informed decisions with Performance Management** – Many of the tools Hydro Ottawa researched have strong performance management capabilities to provide Supervisors and Managers access to timely, relevant and accurate data. Daily the Supervisors will have access to reports that will summarize activity from the prior day while allowing them to drill down into specific areas of concern quickly and easily. MWM tools provide sophisticated performance management capabilities needed to assist decision makers, while reducing the need for time spent aggregating data.

**Meet the standards set by the OEB's performance-based Renewed Regulatory Framework** – The performance management and business intelligence modules of the MWM system will help ensure that HOL is tracking and monitoring performance against those metrics and key performance indicators that Hydro Ottawa's regulatory body expects regular reporting against.

A more detailed description of the initiative can be found in the DSP, Material Investments Attachment B-1(A).

### *3.1.11 Vegetation Management – Storm Hardening*

Hydro Ottawa's storm hardening program is a new initiative that began in 2014 and is projected to extend into 2015. It represents an adjunct to its normal tree trimming efforts that operate on two and three year cycles and was initiated to remove overhang branches from over 2,650 spans. A key aspect of the program is a change to Hydro Ottawa's standard on tree trimming that increases our clearance to a "wire to sky" approach. The focus on eliminating the overhang is specifically to reduce the risk of outages and equipment damage resulting from weighted, blown, or broken branches contacting distribution wires. The investments made are expected to yield significant long term reliability and productivity benefits.

### *3.1.12 Mobility and Damage Assessment Module*

In 2003 Hydro Ottawa introduced its first fully mobile computers for field staff. Those laptops were used to dispatch outages and provided field workers with information about distribution assets from Hydro Ottawa's Geographic Information System (GIS). Since 2003 the mobile deployment has grown to more than 75 units (a combination of laptops, tablets and handheld devices) providing staff with a multitude of tools and applications to help them do their jobs, faster and more efficient than ever before.

Some of the specific tools are described below.

**Mobile GIS:** Mobile GIS is the system where all assets are recorded and made available to staff, including field staff. Hydro Ottawa is proud to be one of the first utilities to produce all of its new construction drawing directly in GIS. This makes sure that staff has a complete picture of existing assets and what is proposed, helping them make better decisions and avoiding duplication and re-work.

**Mobile OMS:** Mobile OMS is the system that allows Hydro Ottawa workers to track all outage and major storm dispatching. Field workers not only receive all of their work electronically but are able to view system maps, get information on asset attributes; trace circuits back to the source and also create follow-up jobs if additional work is required such as pole replacements after traffic accidents.

**Electronic Service layouts:** Field staff can produce service layouts for new customer directly in the field and print a copy for the customer. This means less time is spent by office staff preparing and mailing new connection to customers. The customer is provided with better service by having all the information they need regarding the cost and details of the service they require in a more timely fashion.

**Electronic Asset Inspections:** Inspectors are now equipped with mobile inspection forms that are directly tied to the GIS system so they know exactly which asset they are inspecting. All of the assets are linked to the GIS and clearly identifiable increasing accuracy of inspection results.

One of Hydro Ottawa's key initiatives in 2014 was the implementation of the Outage Management System's Damage Assessment Module for mobile field workers. Using mobile resources minimizes customer impact, reduces restore times and keeps repair cost under control.

The Damage Assessment Module provides a simple electronic means to capture outage impacted information and make it available centrally to improve storm restoration, logistics management and follow-up processes using Hydro Ottawa's existing mobile systems. Hydro Ottawa anticipates that this technology and the information it provides will save approximately five hours of restoration time per crew in major events. Assuming Hydro Ottawa has 20 four person crews involved in one major event per year this translates into an operating savings of approximately $30,000 per year.

#### *3.1.13 Field Operators*

A Field Operator is a new position, working a rotational 24/7 shift, that was created in 2013 in part to respond to, assess and take the appropriate action during electrical emergency situations on Hydro Ottawa's high and low voltage power system and assist in the first response to emergencies calls as defined by OEB. The position was also designed to enhance the productivity of our day time construction crews by performing much of the ground level network switching required for large projects during off hours when there is less traffic congestion, especially in the downtown core. The position will also free up additional capacity of Hydro Ottawa's skilled lines trades resources currently working on the 24/7 shift so they can be redeployed to higher value construction work.

#### *3.1.14 Align Metering Staff Geographically*

A decision was made in 2014 to realign the metering group regionally versus functionally. The move to regional areas better aligns with operational demands and it ensures that Hydro Ottawa develops supervisors and field staff that have a broader knowledge of the various technical standards and diverse metering technologies. Hydro Ottawa's field staff will be better suited to handle all types of work as opposed to specializing in one or a few specific functions. It is anticipated that this initiative with result in productivity savings realized through reduced travel time and other delays beginning in 2015.

#### *3.1.15 Commercial Metering Cost Recovery*

During 2013 – 2014, a decision was made to begin charging new commercial customers the capital costs of meters. This decision emanated from a review the metering staff undertook to revise their existing standards documentation to consolidate it into a single source of information on the broad array of metering designs and installations. It is estimated this recovery will free up $135,000 of capital annually based on an average of 300 commercial meter installations with a capital cost of approximately $450 per unit.

### 3.2 Customer Service

Productivity in the Customer Service group has been focussed on identifying and implementing process improvements, automation, and incrementally offering new self-serve features for customers. The objectives are to enhance customer service, to respond to identified customer preferences, and to increase Hydro Ottawa's operational efficiency and effectiveness.

#### *3.2.1 E-Billing Enhancements*

Hydro Ottawa introduced E-billing in 2008. The objective of providing an e-billing service is to reduce paper, postage and people costs of creating a paper bill. By the end of December 2014, approximately 86,000customers had signed up for the E-billing service. This represents 26% of the Hydro Ottawa customer base and makes us one of the industry leaders in this regard. The total cost of a paper bill including paper, envelope and postage is $0.83 compared to only $0.02 for an e-bill. Hydro Ottawa estimates the annual savings from e-billing to be $836,000.

#### *3.2.2 Move-In-Move-Out (MIMO) improvements*

MIMO is an online self-serve functionality that converts fax submissions to an electronic format allowing them to be managed more efficiently. A key benefit of MIMO is its ability to search for completed moves, store data electronically, and streamline the processing of all move requests. Productivity is increased for Customer Service Representatives by eliminating the need to manage paper requests and filing. This is particularly important given the large population of university and colleges students in Ottawa that drive a significant number of MIMO transactions annually. This automation has enabled Customer Contact agents to take on new, incremental activities which they would not have otherwise been able to do, particularly during peak move season, an estimated productivity savings of approximately 0.5 FTE or $40,000 annually. That employee effort is now directed towards higher customer value tasks, in alignment with our Customer Experience focus.

#### *3.2.3 Outage Alerts and Communications*

Hydro Ottawa's outage alerts program is a web-based program that provides e-mails or text messages to Hydro Ottawa employees when outages occur. The speed of dissemination as well as the completeness and consistency of messaging facilitates power outage restoration and communication efforts internally. In 2009, Hydro Ottawa expanded the service by automating the communication of power outage information to the media, City Councillors and Key Account clients. By sharing this information promptly and proactively, customers can access outage reports and updates immediately via email and consequently they no longer initiate direct contact with HOL resources or our On Call Management Call Centre. The alerts provide customers with timely, accurate information on the outage duration to help them determine the impact on their plans and make alternate arrangements if necessary.

#### *3.2.4 Power Outage Reporting Line*

In 2010 Hydro Ottawa partnered with Nortel/Avaya to develop an intelligent Interactive Voice Response (IVR) application that provides customers with an efficient and effective way to report an outage and/or to get information about an existing outage. This ability to solicit this first-hand insight into an outage incident allowed Hydro Ottawa to streamline its power outage business process and further leverage the diagnostic capabilities of its Outage Management System. In addition to the benefits of automated report generation, this service has reduced the average outage call duration by up to 90% (from three minutes per call to 30 seconds for most calls). These enhancements have reduced the number of blocked calls (busy signal) to 0.45% (2010) and reduced the number of customers who experienced a dropped call to less than .01% (2011). These customers were able to easily access the outage information they were looking for without speaking to an On Call Management agent.

### *3.2.5 Introduced Power Outage Maps*

Hydro Ottawa's website includes a Power Outage map that provides details of confirmed and unconfirmed outages including area affected, estimated time of restoration (ETR), status of crews and the number of customers affected. This feature enhances the timeliness of delivering Outage information and the progress of the restoration process, and has proven to be very popular with customers, City Councillors, and the media. The power outage map is a North American Chartwell Award winning system that continues to add value to Hydro Ottawa customers' experience through automation that has freed up resources within the Customer Contact, Communications and Operations departments. This allows employees to focus on value-added tasks to increase customer value.

### *3.2.6 Credit Card Payments*

Hydro Ottawa's Interactive Voice Response (IVR) was updated with the addition of a credit card payment option. Customers can now call and make a credit card payment over the phone, at their convenience. The Hydro Ottawa web site introduced a direct credit card payment link for customer ease that can be accessed through the HO Mobile application as well. This direct link provided customers with a quick and easy way to make a payment towards their account. This service is offered 24/7 and supports the organizations focus on providing 24/7 accessible services that are driven by the customer; putting them in control. Since introduction of these options in mid-2013, credit card payments, totalling over $5.5 million have been made through the IVR, HO Website and HO Mobile credit card payment channels. The customer ability to make the credit card payment without call centre assistance translates into cost savings and efficiencies.

### *3.2.7 My Hydro Link (MHL)*

MHL is Hydro Ottawa's customer self-serve web portal that allows Hydro Ottawa's customers to track their consumption, submit a move request, and make payments on their account. MHL has a proven track record as the tool of choice for customers who have embraced the self-serve model with over 122,000 accounts or approximately 38% of customers having registered for the service as of the end of 2014. Offering these customers access to accurate, timely and reliable data and information about their consumption, billing and account information and resulted in a reduction in the total number of call to Hydro Ottawa's call centre with a corresponding reduction in the call centre costs. Some of the features available are detailed below.

**MHL Bill Comparison:** This MHL feature provides customers with the ability to compare bills year over year at their convenience. Billing period comparisons assist the customer with understanding increased or even decreased energy costs. Functionality was developed in MHL that allows customer to view billing information in a side by side format with the added benefit that highlights differences between bills, i.e. number of days, rate changes and even the weather. Prior to this being developed, customers interested in doing this analysis would call Hydro Ottawa to request that copies of bills be mailed to them.

**MHL Summary Pages:** New features added in the spring of 2012 provide MHL registrants the opportunity to customize their view of account information and details on a single page view. This service was further extended to customers with multiple accounts allowing them to have a high level view of all of their accounts while still maintaining a customized view at the individual account level.

**MHL Alerts:** Allows customers to determine their own thresholds to receive notices for their electricity usage, money spent and to monitor on peak usage, this services puts the customer in control of their electricity consumption and the amount of money they are spending in a billing period or if they have missed the payment due date for their bill. Alerts are delivered by e-mail to customers detailing their predicted bill amount during the current billing period, at intervals of their choosing, daily, weekly or monthly. The model uses forecasting tools in conjunction with actual usage details.

**MHL Predict My Bill:** The Predict My Bill section is designed to help My Hydro Link registrants manage their electricity by predicting the bill amount for usage consumed during the current billing period and also offers a Predicted Bill Comparison feature to compare the current bill period with previous ones. The cost is updated daily and becomes increasingly accurate as the bill period progresses. Users have the option to register for Prediction emails at the frequency of their choice, daily, weekly or monthly.

**MHL Agent assisted registrations:** Formerly a customer driven activity, a secondary registration process was developed to allow agents to enrol customers over the phone, new scripting for Concentrix Call Centre and Customer Care agents encourages the discussion with customers to up sell the MHL Self-Serve option.

**MHL Single Sign On:** Single sign on seamlessly integrated MHL with the HOL website for an improved customer experience.

**MHL Mobile Applications:** A mobile version of MHL was introduced in 2012 for a variety of smart phone platforms. In the first five months of 2013, unique visits to the mobile site surpassed the 2012 results by 63%. The Hydro Ottawa mobile site has experienced an average of 3,750 unique visits monthly since May 2013 which contributes to reducing overall call volumes.

The various customer self-serve options are having a significant financial impact. Hydro Ottawa estimates savings of approximately $400,000 annually as a result of reduced call volumes due to the fact that customers are able to access the information they require whenever they want from wherever they happen to be. These estimated savings were partially offset in 2014 due to a spike in call volumes specifically related to the introduction of monthly billing and the abnormally cold winter.

### 3.3 Human Resources & Workforce Planning

Hydro Ottawa's Talent Management Framework is critical to effectively fulfilling the company's core mandate to provide a safe, reliable, affordable and sustainable supply of electricity to customers. The company's aim is to sustain a high performance workforce and operations that deliver ever-improving value to our customers and stakeholders, and to ensure our company's success and sustainability. Hydro Ottawa's 2012-2016 Strategic Direction articulates that this will be achieved by cultivating a culture of innovation and continuous improvement focusing on three outcomes in particular: a safe and healthy work environment; an engaged, aligned and prepared workforce; and efficient and effective operations that enhance the customer experience.

Hydro Ottawa's comprehensive and integrated approach to Human Resources emphasizes that strategic talent management is essential in building the right workforce necessary for business execution. The following initiatives demonstrate an emphasis on generating talent outcomes that drive productivity at Hydro Ottawa.

### *3.3.1 Workforce Planning Strategy*

As outlined in Exhibit D1, Hydro Ottawa's Workforce Planning Strategy not only anticipates and adopts proactive strategies to bridge talent supply gaps that are crucial to maintaining organizational effectiveness; it also plays a critical role in containing costs, improving organizational productivity, and generating customer value.

### *3.3.2 Labour Efficiencies*

In 2013, Hydro Ottawa and the IBEW, Local 636 reached a renewed 4-year collective agreement that resulted in several labour efficiencies which included: longer periods of employment for temporary employees, improved distribution of overtime during emergencies, parameters with respect to the payment of responsibility pay, the pro-rating of leaves for new employees, the ability to designate specific vacation periods, a simplified process for the relocation of employees for accommodations, rationalization of flame resistant clothing, and an improved process for the replacement of tools and equipment.

### *3.3.3 Designated Vacation Periods*

In 2014, Hydro Ottawa introduced a formal a company-wide designated vacation period from December 24 to January 1, inclusive. This approach has enabled Hydro Ottawa to redirect typically lower-productivity working days in this timeframe to ensure optimal staffing during peak periods at other times of the year.

### *3.3.4 Insured Benefits*

In 2014, Hydro Ottawa transitioned to a new insured benefits provider following a competitive marketing process. The transition has resulted in cost savings which is associated with the reduced costs of benefits premiums, streamlined administrative processes and enhanced self-serve options.

### *3.3.5 Attendance Management*

Hydro Ottawa's Attendance Management Program monitors employee attendance, recognizes positive attendance and provides a framework for addressing excessive absenteeism. The company has decreased its average number of sick days per employee from 7.4 in 2007 to 5.9 in 2014.

### *3.3.6 Training Delivery*

Hydro Ottawa is implementing a new approach to delivering training commencing in 2015. This new approach aims to improve productivity through better scheduling and the delivery of training at employee work centres, as well as leveraging e-learning and classroom technology to gain efficiencies. In particular, training will focus on maximizing productive time by leveraging inclement weather days for the delivery of fast-deploy refresher training modules – ensuring that employees remain in the field during optimal work periods to focus on service delivery.

### *3.3.7 Leveraging Technology in the Delivery of Human Resources Services*

In 2012, Hydro Ottawa introduced an Intranet that resulted in more efficient and robust communications within the organization, and which eliminated the cost, maintenance and inefficiency of over 42 individual micro-sites within the company. Building on this success, Hydro Ottawa is focused on driving productivity and innovation in the delivery of human resources services through the streamlining and automation of processes. This includes increased self-serve capability for employees and people leaders, and the deployment of mobile tools and technology to enable more flexible and efficient completion, recording and reporting of health and safety related planning and monitoring activities in the field.

## 3.4 Information Technology

From the Information Management, Information Technology portfolio, productivity gains will be actualized through a number of core initiatives.

### *3.4.1 Mobile Device Management*

A Mobile Device Management strategy will reduce the number of cell phones (blackberry devices) and personal computers replaced through the provision of agile mobile computing devices. This will facilitate enhanced technologies, services and increased productivity to the field where otherwise, computing and communications capabilities had been limited. More information will be available or presented on location, processed in real-time and consumed as needed. In parallel, costs to administer devices and telecommunication subscriptions will be reduced. Centralized management of all accounts, information stores, and permissions will ensure broader security and administrative controls throughout.

### *3.4.2 Improving Communications*

Facilitating the IM/IT network with virtual “Go-To-Meeting” visual/audio conferencing capabilities will improve communications and information sharing while significantly reducing costs (time and materials) of a disparate geographic placement of employees, services and partners. Virtual meeting, information sharing and spontaneous connection/communication capabilities further enhances productivity regardless of location. The Operations group has been successfully using this technology for over a year for the bi-weekly Operational Briefing meetings as a means of saving time and fuel associate with travel to various work depots.

### *3.4.3 Printing Services*

Printing services will be moved to an external managed-service provider to reduce hardware footprint and administrative overhead. SecurePrint and follow-me features will expand available functionality while reducing the footprint within the business.

Continued diligence in reducing the "server footprint" through a virtualization exercise begun in 2014, has retired 65 servers within the infrastructure with many more targeted through the coming years. Information Technology will adopt an Infrastructure as a Service (IaaS) approach to further reduce procurement activity while increasing time-to-market responsiveness to business needs.

### *3.4.4 Configuration Management*

Configuration Management Database (CMDB) will be investigated with a view to centralizing the management of all configurations, releases, change for all infrastructure assets deployed within the business. While the value will increase security and efficiency of the practice, centralized controls generate productivity gains, particularly where response to urgent patching/upgrades may be warranted.

### *3.4.5 Enterprise Resource Planning System*

From an enterprise solutions perspective, a recent tools upgrade ensured a stable, reliable ERP capability to meet current business needs. There is a desire to move to a commercial off-the-shelf (COTS) solution with minimal customization to reduce support overhead as well as continue to provide the level of functionality needed. A decision will be needed in terms of how to meet enterprise resource planning needs while driving productivity within the operation.

### *3.4.6 Enterprise Service Bus*

The Enterprise Service Bus (ESB) provides a longer term strategy for standardized technology growth and integration but provides shorter term efficiency gains as well. Continued development of point-to-point integrations of individual applications into the organizational pool of services was assessed as growing to unsustainable numbers, increasing the burden of support and multiplicity of tasks as changes were introduced. The ESB provides a middle-ware capability to present and allow “one-time” integrated solutions the ability to consume target data without complex integration consideration and significantly reduced cost. As part of the preparedness/evolution strategy, new and emerging technologies are being produced SOA-enabled, thereby integration-ready. The development of a high-availability environment further enhances the reliability of the network infrastructure and facilitates the evolution of all existing and future integration needs.

### *3.4.7 Database Management*

Productivity and efficiencies will be improved in terms of ongoing management of databases with the establishment of Oracle Database Appliance (ODA) to house Oracle applications, middleware and databases together within a virtual context. Rapid deployment, expansion of services is possible through the use of virtual templates, reducing processes and management time. Centralized management of data and device can be achieved through a reduced footprint and at significantly less time and impact to the organization.

### *3.4.8 SharePoint*

The SharePoint application will be more aggressively mined across the business to produce greater collaboration and information sharing, reduction in file-shares/stores, reduction in duplication of information and very significant strides in the identification and management of true data (authoritative) source. This will constitute a shift for many Hydro Ottawa groups but will nonetheless produce immediate results in terms of information collaboration and real-time access to key data.

### *3.4.9 Customer Care and Billing*

The PeopleSoft CIS (Customer Information System) reached end-of-life and was replaced in 2014 with the Oracle Customer Care and Billing (CC&B) application in a like-for-like rollout strategy. The CC&B application supports all critical meter-to-cash functions through an automated billing and revenue data stream. Along with the implementation of CC&B, monthly billing was introduced for Hydro Ottawa's residential and small commercial rate classes to meet its customer expectations. There were efficiencies gained with the implementation of the CC&B application which have improved internal business processes, audit requirements as well as help provide better service to Hydro Ottawa customers. Some examples of this is the automation of generation billing/payment in CC&B, the adjustment approval process using the application rather than queries, streamlined collection and write off processes by leveraging monthly billing, just to name a few. There will be continuous enhancements planned for CC&B in the forthcoming years to help support changes for innovative customer service solutions such as landlord reversion and the ability to provide unilingual bills to Hydro Ottawa customers. CC&B will also serve as a platform to implement a Customer Self Service solution that would allow automation of customer web initiated move ins/outs and account set-up through CC&B without the need to rekey data resulting in productivity improvements. Several key upgrades to CC&B are planned for 2016-2020 where, as applied, will further contribute to efficient and effective internal process.

## Balanced Productivity Metrics

HydroOttawa

| | Measures | Description | 2011 | 2012 | 2013 | Unaudited 2014 Q1 | Q2 | Q3 | Q4 |
|---|---|---|---|---|---|---|---|---|---|
| Labour Utilization | Productive Time | % of Billable Hours / Total Regular Hours | 70% | 71% | 69% | 71% | 70% | 69% | 71% |
| | Labour Allocation to CAPEX | % of Labour Time on Capital Activities / Total Productive Time | 61% | 55% | 56% | 60% | 59% | 60% | 60% |
| | Average Sick Days per FTE | Total Sick Days / Total Employees | 5.3 Days | 5.9 Days | 6.0 Days | 8.0 Days | 7.2 Days | 6.6 Days | 5.9 Days |
| OM&A Measures | Cost per Underground Locate | Total Underground Locate costs / Total Locate Requests | $27.6 | $29.1 | $30.0 | $36.1 | $27.8 | $28.0 | $28.7 |
| | Vegetation Management Cost Value Metric | Total Vegetation Management Costs / (1 - Tree Contacts SAIFI) | $36K | $24K | $29K | $37K | $34K | $32K | $42K |
| | Customer Service Cost Value Metric | External Call Centre Costs / Customer Satisfaction % | $28K | $27K | $25K | $26K | $30K | $29K | $28K |
| | Bad Debt as a % of Total Electricity Revenue | Bad Debt / Total Electricity Revenue | 0.18% | 0.16% | 0.25% | 0.28% | 0.27% | 0.19% | 0.19% |
| Asset Efficiency | Sustainment Asset Reliability Cost Value Metric | Asset Replacement and Plant Failure Costs / (1 - Defective Equipment SAIFI) | $433K | $413K | $504K | $217K | $331K | $429K | $524K |
| | Cost per Pole replaced | Planned Pole Replacement Program Costs / # of Poles Replaced | $15K | $20K | $23K | $21K | $21K | $27K | $33K |
| | Cost per metre Cable replaced | Cable Replacement Program Costs / metres of Cables Replaced | $363 | $186 | $328 | $375 | $229 | $290 | $437 |
| | Cost per metre Conductors extended | Line Extension Program Costs / metres of Conductors Extended | $67 | $61 | $136 | $60 | $94 | $97 | $128 |
| | Technology Infrastructure Cost per Employee | (External IT support costs + computer hardware & software depn) / # of FTE | $21.8K | $21.9K | $22.2K | $16.6K | $19.7K | $20.2K | $21.5K |
| | Normalized Derecognized Assets net of Proceeds | $ Derecognized Assets net of Proceeds (all companies) | N/A | $0.7M | $2.1M | $0.4M | $0.5M | $0.7M | $0.9M |
| | Generation Plant Availability | Sum individual plant availabilities / number of generation stations | 95.5% | 94.5% | 95.3% | 93.5% | 99.1% | 88.0% | 89.0% |
| Profitability Metrics | EBITDA as a % Revenue | EBITDA $ / Total Revenue - Generation | 70% | 59% | 64% | 68% | 69% | 68% | 67% |
| | | EBITDA $ / Total Revenue - Hydro Ottawa Limited | 55% | 48% | 46% | 48% | 44% | 46% | 44% |
| | Cost per kWh Generated | Total Costs (excluding BD, depn, interest, and taxes) / kWh generated | 0.0250 | 0.0175 | 0.0247 | 0.0198 | 0.0231 | 0.0233 | 0.0238 |
| | Inventory Turnover Ratio | Cost of Materials Used / Average Inventory | 1.70 | 2.25 | 2.12 | 2.13 | 2.10 | 2.07 | 1.83 |

### Narratives

| Q4 | Q3 | |
|---|---|---|
| | | **Labour Utilization** |
| ● | ▲ | Productive Time was up from 2013. Total regular labour hours charged to jobs were up, overtime was down. Field Operators increased chargeable hours from prior year. |
| ● | ● | Labour Allocation to CAPEX exceeded budget and prior year. Higher Capex activities offset by lower Work for Others, the most notable shift was at Service Desk. |
| ● | ● | Average Sick Days per FTE was down to 5.9 Days. Q4 has improved due to several employees returning to work after a long term absence. The 2014 full-year result has improved slightly from 2013. |
| | | **OM&A Measures** |
| ● | ▲ | Cost per Underground Locate was lower than the past two years. However total program costs exceeded budget and prior year actual due to 13% or 8000 more locate requests. |
| ▲ | ▲ | Vegetation Management cost value was up, indicating costs increased larger than SAIFI improvement. 57% increased costs from 2013, partially explained by Storm Hardening. SAIFI 0.049 below 2013 and 10-yr avg. |
| ▲ | ▲ | Customer Service value did well in Q4 - lower costs and higher satisfaction, the full year result was skewed by the negative Q2 result. Overall 88% satisfaction with higher costs than budget and prior year. |
| ● | ▲ | Bad Debt as a % of Total Electricity Revenue has improved from prior year and first half year, slightly better than the 2013 industry average 0.20%. Bad debt expense exceeded budget by $0.7M. |
| | | **Asset Efficiency** |
| ▲ | ▲ | Sustainment Asset cost value was up, indicating costs increased larger than SAIFI improvement. 29% increased costs. SAIFI 0.279 below 2013 and 10-yr average (CCRA not considered asset replacement, therefore excluded) |
| x | ▲ | Capital program costs were up while the units completed in 2014 were down. The increased costs were explained by increased downtown projects which required additional costs for crane and labour. |
| ● | ● | Technology Infrastructure cost per employee was lower than prior years because 2014 did not have a full year of CC&B depreciation included. IT maintenance was up by $1.2M or 22% from prior year. |
| ● | ▲ | Total Derecognized Fixed Assets $1.7M, offset by $0.8M proceeds. The derecognized fixed assets include $0.5M cables and $0.3M meters. Asset Impairments excluded from this measures. |
| ● | ● | Generation Plant Availability 89% due to generation station 2 and grinder shut down for the planned Bronson Bulkhead construction, completed in November. |
| | | **Profitability** |
| ● | ● | Generation EBITDA as a % of Revenue was down due to the planned production shutdown for Bronson Bulkhead construction. EBITDA well exceeded budget and prior year result. |
| x | ● | HOL EBITDA as a % of Revenue was down. The expenses were up by 4% while revenue increased by 2%. The HOL EBITDA below budget and prior year result. |
| ● | ● | Cost per kWh Generated lower than prior year. Production was 1% lower than prior year, costs were 8% lower. |
| ▲ | ● | Inventory Turnover Ratio was down due to increased inventory, mainly cables increased in Q4. Total inventory was up, $9M reported in 2012, $10M in 2013, currently $11M. |

# PRODUCTIVITY & BENCHMARKING OVERVIEW

This schedule provides an overview of the evidence filed by Hydro Ottawa to facilitate the Ontario Energy Board's (OEB)'s review and evaluation of Hydro Ottawa's continued commitment to sustainable efficiency and productivity.

## 1.0 Introduction

The OEB's Renewed Regulatory Framework for Electricity ("RRFE") report sets out that Custom Incentive Regulation ("Custom IR" or "CIR") applications should facilitate the OEB's "assessment of the adequacy of past and future productivity levels"[1] …. and the reasonableness of the distributor's forecasts."[2]

The OEB's focus on productivity is one of the centerpieces of its outcomes-based approach to regulation that is designed to ensure "Ontario's electricity system provides value for money for customers" and a sharing of benefits by emphasizing "results rather than activities".[3] In defining the outcome expectations, the OEB concluded that the following four categories of outcomes would be appropriate, namely a) customer focus; b) operational efficiency; c) public policy responsiveness; d) financial performance. The OEB's focus on benchmarking is intended to provide an appropriate gauge for assessing the reasonableness of the utility's forecasts against its own past performance and the performance of other distributors, as appropriate.

To facilitate the achievement of the four afore-mentioned outcomes, the OEB established three policies, namely a) rate setting policies that ensure continued productivity improvements; b) capital planning to ensure paced and prioritized capital spending including in smart grid investments; and c) measured performance.

## 2.0 Hydro Ottawa's fulfillment of the OEB's Productivity Expectations

Evidence illustrating Hydro Ottawa's commitment to efficiency and continuous improvement is woven throughout each Exhibit filed as part of its Custom IR application. For the purposes of facilitating the OEB's assessment of the reasonableness of Hydro Ottawa past and future productivity levels, Exhibit D-1-4 provides a detailed discussion of its historical and forward looking productivity initiatives that were, are, or will be implemented as illustration of Hydro Ottawa's continuing commitment to efficiency and long run net efficiency savings for the company's customers. Other examples of evidence that speaks to Hydro Ottawa's commitment to productivity and continuous improvement:

a) Exhibit B-1 Hydro Ottawa's Distribution System Plan for continuous improvement metrics and Annual Planning Report;
b) Exhibit D-1-2 Hydro Ottawa's Operating, Maintenance and Administrative ("OM&A") evidence;
c) Exhibit D-1-6 Hydro Ottawa's Customer Service Strategy;
d) Exhibit D-1-7 Hydro Ottawa's Workforce Planning Strategy
e) Exhibit A-3-1 Hydro Ottawa's Customer Engagement Plan

### 2.1 RRFE – Rate Setting Policy - Productivity (X) Factor

The key feature of every incentive regulation framework is the inclusion of a productivity offset or X factor which is designed to share the benefits of productivity and efficiency gains of a company with its consumers. The productivity factor is a built in sharing mechanism that provides a year over year obligation on a company to find efficiency savings the results of which is a guaranteed consumer benefit. The Board described the components of an X-factor in its July 14, 2008 EB-2007-0673 Report of the Board on 3rd Generation Incentive Regulation for Ontario's Electricity Distributors as follows:

> The productivity component of the X-factor is intended to be the external benchmark which all distributors are expected to achieve. It should be derived from objective, data-based analysis that is transparent and replicable. Productivity factors are typically measured using estimates of the long-run trend in TFP growth for the regulated industry.
>
> The stretch factor component of the X-factor is intended to reflect the incremental productivity gains that distributors are expected to achieve under IR and is a common feature of IR plans. These expected productivity gains can vary by distributor and depend on the efficiency of a given distributor at the outset of the IR plan. Stretch factors are generally lower for distributors that are relatively more efficient.[4]

In the design of its Custom IR formula Hydro Ottawa has incorporated two separate and distinct sharing mechanisms, namely a) the productivity factor and b) an earnings sharing mechanism. A full discussion of Hydro Ottawa's proposal for defining the productivity factor and the earning sharing mechanism is set out in Exhibit A-2-1. In addition to these benefits sharing mechanisms, Hydro Ottawa believes that there are productivity and efficiency benefits that can be derived from long term budget forecasting that are not easily quantified. Similarly, Hydro Ottawa believes that some productivity initiatives that produce an intangible benefit at best and consequently may not be fully quantified monetarily.

### 2.2 RRFE – Capital Planning

Another feature of the RRFE and expected productivity and performance outcomes relates to the capital planning process. The OEB's specific expectations related to efficient capital planning are set out in Section 5.2.3 of Chapter 5 of the Filing Requirements. Chapter 5 requires that utilities identify qualitative and quantitative measures and metrics to assess the performance of their capital planning and

[4] Page 12 July 14, 2008 EB-2007-0673, Report of the Board on 3rd Generation Incentive Regulation for Ontario's Electricity Distributors

implementation practices as a part of their Distribution Service Plan filing. The Chapter 5 Filing Requirements specifically break down the measures that the utilities are expected to provide into three categories, which are:

- Customer-Oriented Performance;
- Cost Efficiency of Planning Quality and Implementation; and
- Asset / System Operation Performance.

Hydro Ottawa uses performance metrics to promote improvement in asset management planning, capital investment planning and in customer oriented performances. These metrics include quantitative measures used to monitor the utility's planning processes, efficiencies to carry out those plans, as well as identify shortfalls and areas for improvement. Hydro Ottawa's performance metrics are captured in its Corporate Scorecard and are measured and reported internally on a quarterly basis. Below is a summary of what is measured for each of the three categories specified in the Chapter 5 Filing Requirements.

### 2.2.1 Customer-Oriented Performance

The reliability of Hydro Ottawa's system is tracked using the following metrics:[5]

- System Average Interruption Frequency (SAIFI);
- System Average Interruption Duration Index (SAIDI);
- Customer Average Interruption Duration Index (CAIDI); and
- Feeders Experiencing Multiple Sustained Interruptions (FEMI).

SAIFI and SAIDI are currently captured in the OEB's Scorecard while CAIDI and FEMI are not Chapter 5 requirements but are captured in Hydro Ottawa's corporate scorecard.

Hydro Ottawa's fulfillment of the OEB's focus on customer-oriented performance can also be found in the numerous customer engagement initiatives designed to cater to our

[5] These metrics are discussed in more detail in Hydro Ottawa's Distribution System Plan

customer's preferences and respond to their concerns. For more details on Hydro Ottawa's customer engagement initiatives, please refer to Exhibit A-3-1.

#### 2.2.2 Cost Efficiency of Planning Quality and Implementation

Hydro Ottawa uses a cost efficiency metric to report on the progress and efficiency of planned projects for each fiscal year. The cost efficiency metric captured in Hydro Ottawa's Corporate Scorecard as "Distribution Sustainment Capital Program Completion" is a ratio of the amount of actual capital activities completed throughout the year as compared to the planned capital activities. It is strictly a measure of the planned capital system renewal projects and does not include system access investments. The target of the metric is to achieve 100% completion of the annual planned work.

In addition, Hydro Ottawa tracks labour utilization performance using Productive Time and Labour Allocation indicators. Productive time represents the total regular hours charged to work orders as a ratio to total regular hours worked. The objective is to maximize the time charged to work orders by identifying and improving efficiencies across the organization.

The labour allocation index represents the amount of labour spent on capital activities as a ratio to the total productive time. This measure is monitored to ensure that the appropriate amount of time is spent on capital activities versus operating and maintenance activities as per the annual work plans.

#### 2.2.3 Asset / System Operation Performance.

In order to track asset performance and efficiency, Hydro Ottawa uses a variety of metrics including:

- The contribution of defective equipment outages by asset class to overall system SAIFI per 100 customers; and
- Health, Safety and Environment metric that tracks public safety concerns and the amount of oil spilled into the environment.

Additional measures to track system operation performance include:

- Stations exceeding planning capacity;
- Feeders exceeding planning capacity; and
- System Losses

Further details on the definitions and historical performance against these metrics are included in Section 1.3 of Exhibit B-1-2(A).

Hydro Ottawa`s corporate objectives and targets outline the framework for the distribution system plan. Reliability, cost efficiency, Testing, Inspection and Maintenance programs, asset performance and system operation performance have been the main contributors to the company`s overall performance metrics. Tracking of the performance indices will allow Hydro Ottawa to set benchmarks and milestones to ensure that the company objectives of continuous improvement are achieved across all areas.

A full discussion of all of the metrics, a summary of Hydro Ottawa's performance and the effect these performance metrics have had on the Distribution System Plan is included in Section 1.3 of Exhibit B-1-2(A). Also, refer to Exhibit A-2-2 for further discussion on how Hydro Ottawa's Custom IR application aligns with the Board's expectations set out in the RRFE.

**RRFE – Measured Performance**

Finally another feature of the OEB's RRFE framework and its productivity and performance outcome expectations relates to the Board's focus on measured performance. Hydro Ottawa fulfills this requirement in three ways.

First, Hydro Ottawa completes the OEB's scorecard. The OEB scorecard allows distributors to measure their performance outcomes against their previous performance and against the industry average. The OEB scorecard was introduced in 2013 by the Board in the RRFE and is a compilation of twenty performance measures within nine performance categories and four performance outcomes. Many of the measures captured in the OEB scorecard were formally reported in the annual Reporting & Record

Keeping Requirements (RRR). Measures are added to the OEB scorecard or refined as deemed appropriate by the OEB in consultation with the industry. Like other distributors, Hydro Ottawa reports annually.

Second and as noted above, Hydro Ottawa has set out a number of new performance measurement metrics in section 1.3 of Exhibit B-1-2(A). These metrics principally relate to asset performance and system operation performance, testing inspection and maintenance that have downstream impacts on reliability and cost efficiency. Tracking of the performance indices allows Hydro Ottawa to set benchmarks and milestones to ensure that the company objectives of continuous improvement are achieved across all areas.

Third, Hydro Ottawa has developed its own Corporate Productivity Scorecard wherein it has established corporately relevant key performance indicators ("KPIs") that it monitors for the purpose of measuring continuous improvement in areas that are of internal or strategic concern to the company. A copy of Hydro Ottawa's Corporate Productivity Scorecard is available as Attachment 1 to Exhibit D-1-4.

## 3.0 Hydro Ottawa's fulfillment of the OEB's Benchmarking Expectations

According to Table 1 on page 13 of the RRFE, the role of benchmarking in a Custom IR application is to assess the reasonableness of the distributor's forecasts. In a fourth generation IR application it would be utilized to assess reasonableness of forecasts "and" assign a stretch factor.

On November 21, 2013 the Board issued its Report of the Board entitled "Rate Setting Parameters and Benchmarking under the Renewed Regulatory Framework for Ontario's Electricity Distributors" (EB-2010-0379). In that report, the Board determined that distributors will be assigned to one of five groups with stretch factors based on their efficiency as determined through an econometric total cost benchmarking model.

Furthermore, the Board determined that the approach would be based on a distributor's actual costs relative to its predicted costs as estimated by the benchmarking model.

To fulfill the OEB's expectations related to benchmarking Hydro Ottawa engaged Power System Engineering ("PSE") to conduct an econometric benchmarking study of Hydro Ottawa's past and projected total cost performance and its historical reliability performance. The benchmarking study provided by PSE analyzes Hydro Ottawa's historical cost and reliability data against a data set of comparable U.S. distributors. PSE concludes that Hydro Ottawa was a statistically superior utility from a cost performance during the 2011-2013 period and that the projected cost levels for the Custom IR period remain below the benchmark prediction allowing it to remain a statistically superior cost performer. A copy of the PSE study is available in Exhibit D-1-5, Attachment A.

## Contents

# 1 Executive Summary

On October 18, 2012 the Ontario Energy Board ("the Board") released a report entitled "Renewed Regulatory Framework for Electricity Distributors: A Performance-Based Approach" ("RRFE"). In the RRFE, three rate-setting methods were discussed. One of those methods was labeled "custom incentive regulation," or "Custom IR."

On page 18 of the RRFE, the Board states that "[i]n the Custom IR method, rates are set based on a five year forecast of a distributor's revenue requirement and sales volumes." The RRFE also lays out the use of benchmarking as a key element used to inform the Board of the reasonableness of the revenue forecasts.[1]

In a November 21, 2013 report from the Board, titled "Rate Setting Parameters and Benchmarking under the Renewed Regulatory Framework for Ontario's Electricity Distributors" ("November 2013 Board Report"),[2] the Board indicates its preference for econometric benchmarking over peer group benchmarking. Furthermore, the Board indicates its preference for total cost benchmarking over partial cost benchmarking.[3]

Power System Engineering, Inc. ("PSE") was asked by Hydro Ottawa Limited ("Hydro Ottawa") to conduct an econometric benchmarking study of: (1) Hydro Ottawa's past and projected total cost performance, and (2) its historical reliability performance, in reference to the utility's 2016-2020 Custom IR application. Hydro Ottawa asked PSE to conduct this research using similar methods to those used in PSE's benchmarking research conducted within the recent Toronto Hydro Custom IR application.[4] [5]

We started our study for Hydro Ottawa by using PSE's latest total cost benchmarking research within the Toronto Hydro proceeding (as found in the "PSE Reply" report in Case EB-2014-0116). For the Hydro Ottawa total cost study, PSE followed the Toronto Hydro total cost benchmarking analysis, with the following three changes:

- Added high voltage expenses into Hydro Ottawa's total cost definition,
- Updated the forecasted input prices for the projected years of the sample, and
- Expanded the data to include 2013.

[1] Found in "Table 1: Rate-Setting Overview – Elements of Three Methods," on page 13 of the RRFE.

[2] Case EB-2010-0379.

[3] See page 19 of the November 2013 Board Report.

[4] EB-2014-0116

[5] On April 27, 2015 PSE was requested by the client, Hydro Ottawa, to undertake an empirical analysis of the productivity influence of a high prevalence of extreme temperatures. PSE will undertake the analysis and update the benchmarking study, if appropriate, at a later date.

For Hydro Ottawa's reliability benchmark analysis, PSE used U.S. and Hydro Ottawa reliability indexes that exclude major event days. Excluding major event days eliminates extreme weather events that can distort data. This exclusion meant that the models used for Hydro Ottawa's reliability benchmarking differed from those used for the Toronto Hydro reliability benchmarking.

## 1.1 Overview of PSE's Benchmarking Process

The purpose of PSE's benchmarking analysis is to evaluate the reasonableness of Hydro Ottawa's historical and projected total cost amounts and the historical system reliability metrics of the company. This is done by comparing Hydro Ottawa's actual or projected values with the benchmarking model's predicted values.[6]

The benchmarking analysis uses historical cost and reliability data from a U.S. dataset comprised of multiple utilities to create a model; this model relates cost and reliability to certain variables. The model is then used to predict Hydro Ottawa's "expected" (benchmarked) cost and reliability. A dataset which includes U.S. observations is required for an accurate benchmark assessment of Hydro Ottawa's performance. This is due to Hydro Ottawa's large number of customers relative to an Ontario-only dataset joined with its unique combination of serving both developed and rural areas. The general approach of our benchmarking analysis is as follows:

1. PSE assembled the historical costs of all utilities in the dataset, along with the variables that affect cost, such as customer levels, weather, wage levels, etc.
2. Using the historical data, PSE estimated an econometric model that expresses the relationship between the variables and cost or reliability.
3. For each utility in the sample, we can then produce "benchmark" values. In Hydro Ottawa's case, the benchmarks represent the costs or reliability we would expect for an average-performing utility with the number of customers, weather, wage levels, etc. faced by Hydro Ottawa.
4. We then compare the costs or reliability that are expected (predicted) by the model to Hydro Ottawa's historical and projected costs or historical reliability, which allows us to: (1) evaluate the historical cost and reliability performance, and (2) determine whether forecasted costs are reasonable.

## 1.2 Total Cost Benchmark Findings

As stated earlier, the RRFE requests that distributors include benchmarking research of revenue forecasts in their Custom IR applications. In the November 2013 Board Report, the Board cites total cost econometric benchmarking as its preferred method for setting stretch factors.

PSE believes the Board's preference for total cost econometric benchmarking is the correct

[6] In this paper we will use "forecasted" or "projected" costs to refer to Hydro Ottawa's estimates of those values in the future, and "predicted" or "expected" or "benchmark" costs and reliability to refer to the econometric model's outputs for those metrics.

approach when benchmarking cost levels. Total costs are defined as the sum of (1) OM&A expenses, and (2) the depreciation and opportunity costs of capital. This is quite similar to how revenue requirements are calculated, and so total costs are somewhat analogous to the distribution portion of revenue requirements.[7] Partial cost benchmarking approaches, such as OM&A benchmarking, exclude large swaths of cost, which can skew performance evaluations.

PSE also endorses econometric benchmarking because of its increased accuracy relative to peer group approaches. The econometric benchmarking method contains the ability to statistically test included variables and results, includes a relatively large number of variables that enter the analysis, and does not require the researcher to choose a peer group or exclude large portions of the available data.

For the present study PSE used a total cost econometric benchmarking model to benchmark Hydro Ottawa's historical costs and its projected total costs throughout the Custom IR period (2016 to 2020). PSE first derived an econometric model from the historical dataset. Using that model and its parameter values, we then calculated total cost benchmarks. For past years, we used historical variables to calculate the benchmarks. For 2014 to 2020 benchmarks, we used Hydro Ottawa projections for the variables that enter the model.

Our total cost econometric benchmarking results indicate the following findings.

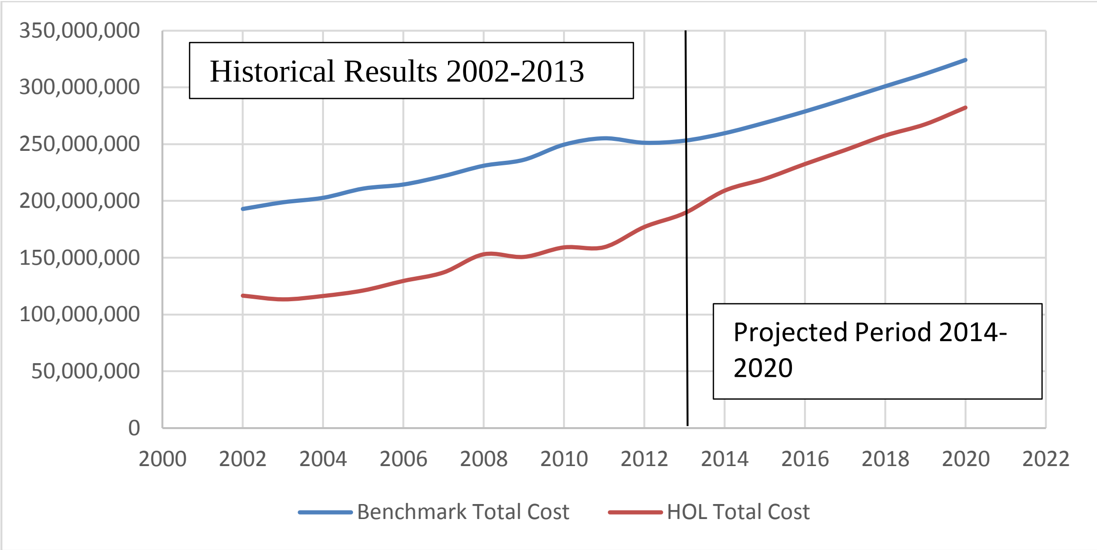
1. The historical 2011-2013 average total cost levels of Hydro Ottawa are below benchmark expectations by 37%, indicating statistically superior cost performance at a 90% confidence level.

2. The projected total cost levels during the Custom IR period remain below the benchmark predictions and continue to indicate statistically superior cost performance at a 90% confidence level.

The following graph illustrates the historical and projected benchmarked costs and company costs for Hydro Ottawa. Hydro Ottawa's historical costs are below what the model predicts for them, and its projected costs remain below what the model predicts.

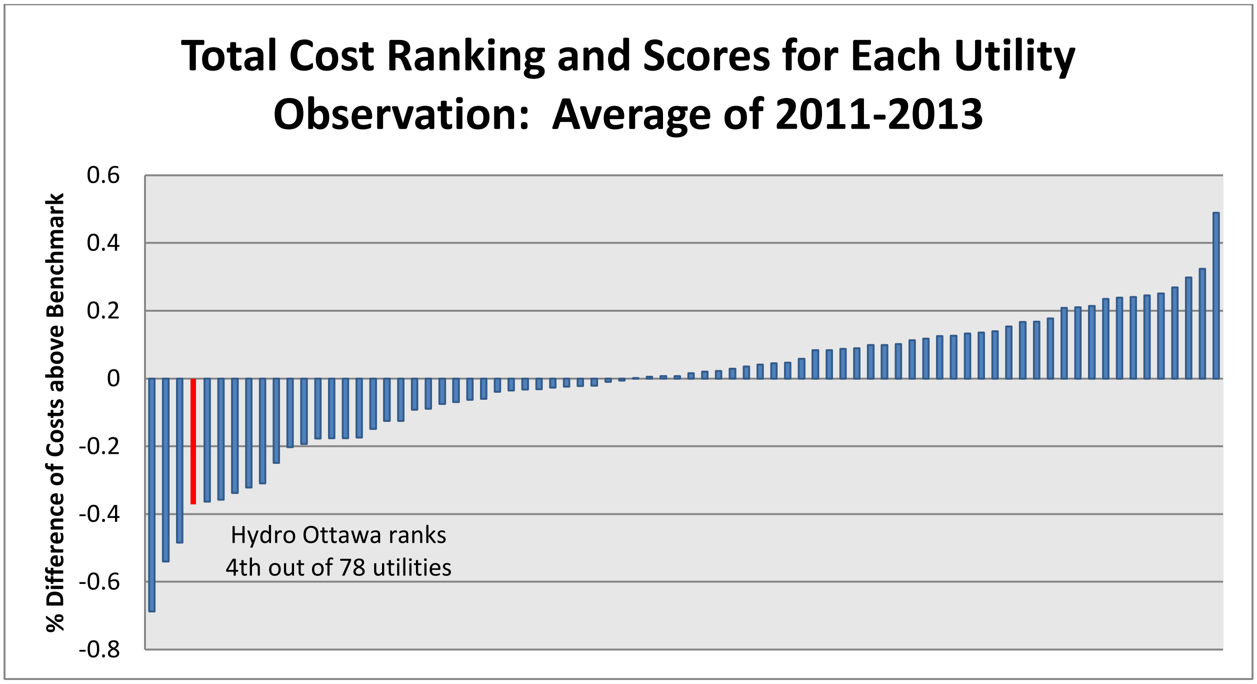
[7] Total costs are not <u>exactly</u> analogous to revenue requirements because of the generalizations needed to offer a fair analysis between utilities with varying depreciation rates, rate of returns, capital addition patterns, and cost definitions.

**Figure 1-1 Historical and Projected Total Costs vs. Benchmarked Costs**



Over the last three historical years (2011-2013), Hydro Ottawa's total cost performance score ranks 4th out of the 78 utilities in the sample. The performance scores are ranked on the figure below, with Hydro Ottawa's score colored in red.

**Figure 1-2 Total Cost Ranking for Sample Utilities**



## 1.3 Reliability Benchmark Findings

In addition to total cost benchmarking, PSE conducted econometric reliability benchmarking of Hydro Ottawa's system average interruption frequency index ("SAIFI") and system average interruption duration index ("SAIDI"). The reliability study benchmarks Hydro Ottawa's historical

(2005-2014) data after major event day ("MED") exclusions are made. The reliability benchmarking used a U.S. data set comprised of 57 utilities, who are also included in the total cost benchmarking data.

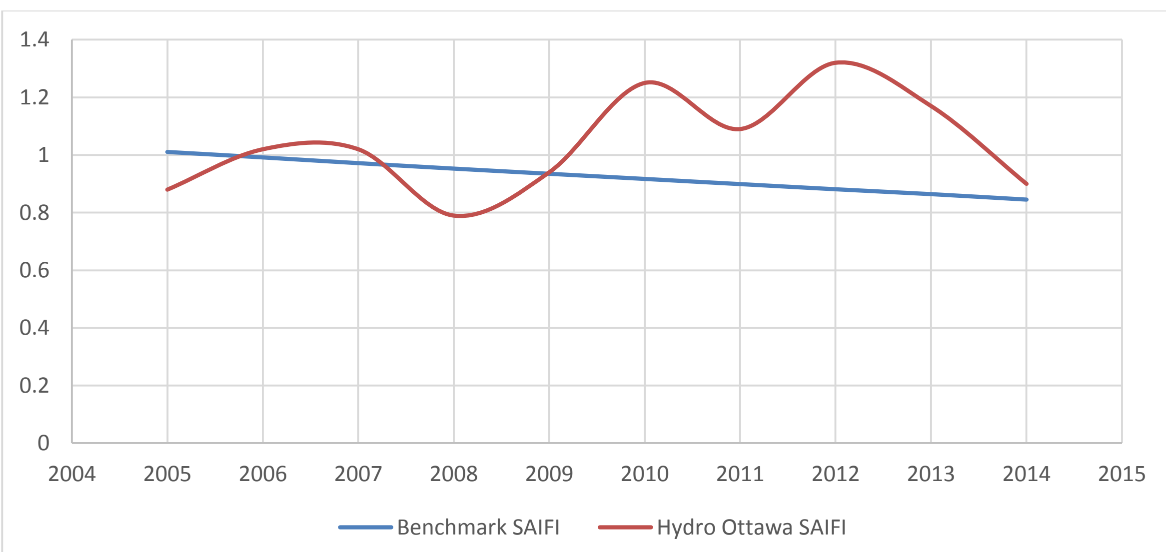
When Ontario distributors report SAIFI and SAIDI to the Board, they include all outages regardless of the cause and concentration of interruptions. In many jurisdictions throughout North America, on the other hand, utilities report SAIFI and SAIDI on a weather-normalized basis. They do this by excluding MEDs from the calculation of the metrics, which permits them to gauge reliability performance during more normal operating conditions. In order to compare reliability performance on an equal footing absent the influence of large storm events, PSE used data from U.S. utilities that excluded MED outages in their reliability metrics and requested this same data from Hydro Ottawa.[8]

PSE gathered U.S. data on utilities' normalized reliability indexes and their MED definitions from publicly-available regulatory filings. The collected data has been verified and can be sourced. PSE's reliability benchmarking analysis indicates the following findings.

1. 2012-2014 SAIFI metrics for Hydro Ottawa are higher than the benchmark values by 25.7%. This is not statistically significant at a 90% confidence level, although the finding is right on the border of statistical significance (p value = 0.103).
2. 2012-2014 SAIDI metrics for Hydro Ottawa are higher than benchmark values by 7.2%. This finding is not statistically significant at a 90% confidence level.

The following graph illustrates the historical SAIFI values for Hydro Ottawa (red line) against the benchmarked values (blue line).

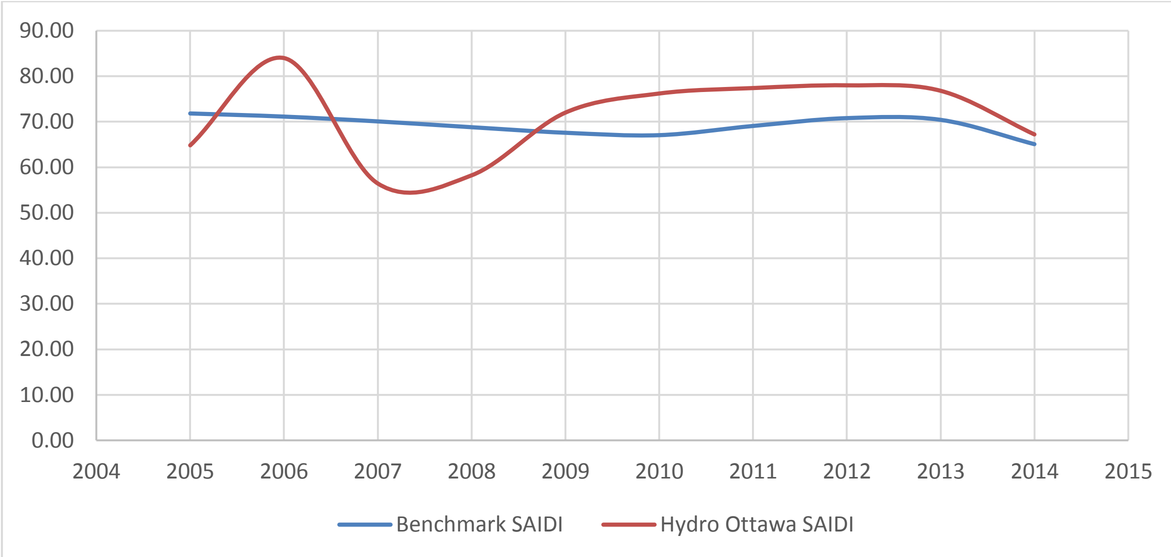
**Figure 1-3 Historical SAIFI vs. Benchmarked SAIFI**



The following graph illustrates the historical SAIDI values for Hydro Ottawa (red line) relative to the benchmark SAIDI values (blue line).

[8] PSE requested Hydro Ottawa provide PSE with reliability indexes that use the IEEE MED and 5-minute sustained outage definition. These data were calculated by Hydro Ottawa and provided to PSE.

**Figure 1-4  Historical SAIDI vs. Benchmarked SAIDI**



# 1.4 Evaluation of Hydro Ottawa's Custom IR Application

The graphs below illustrate how Hydro Ottawa's historical total cost and reliability performances relate.  Our results indicate that the company is missing its reliability benchmarks but beating the total cost benchmarks.

Figure 1-5 illustrates Hydro Ottawa's current position in regards to the balance between costs and reliability.

**Figure 1-5 Hydro Ottawa Total Cost and SAIFI Performance Position**

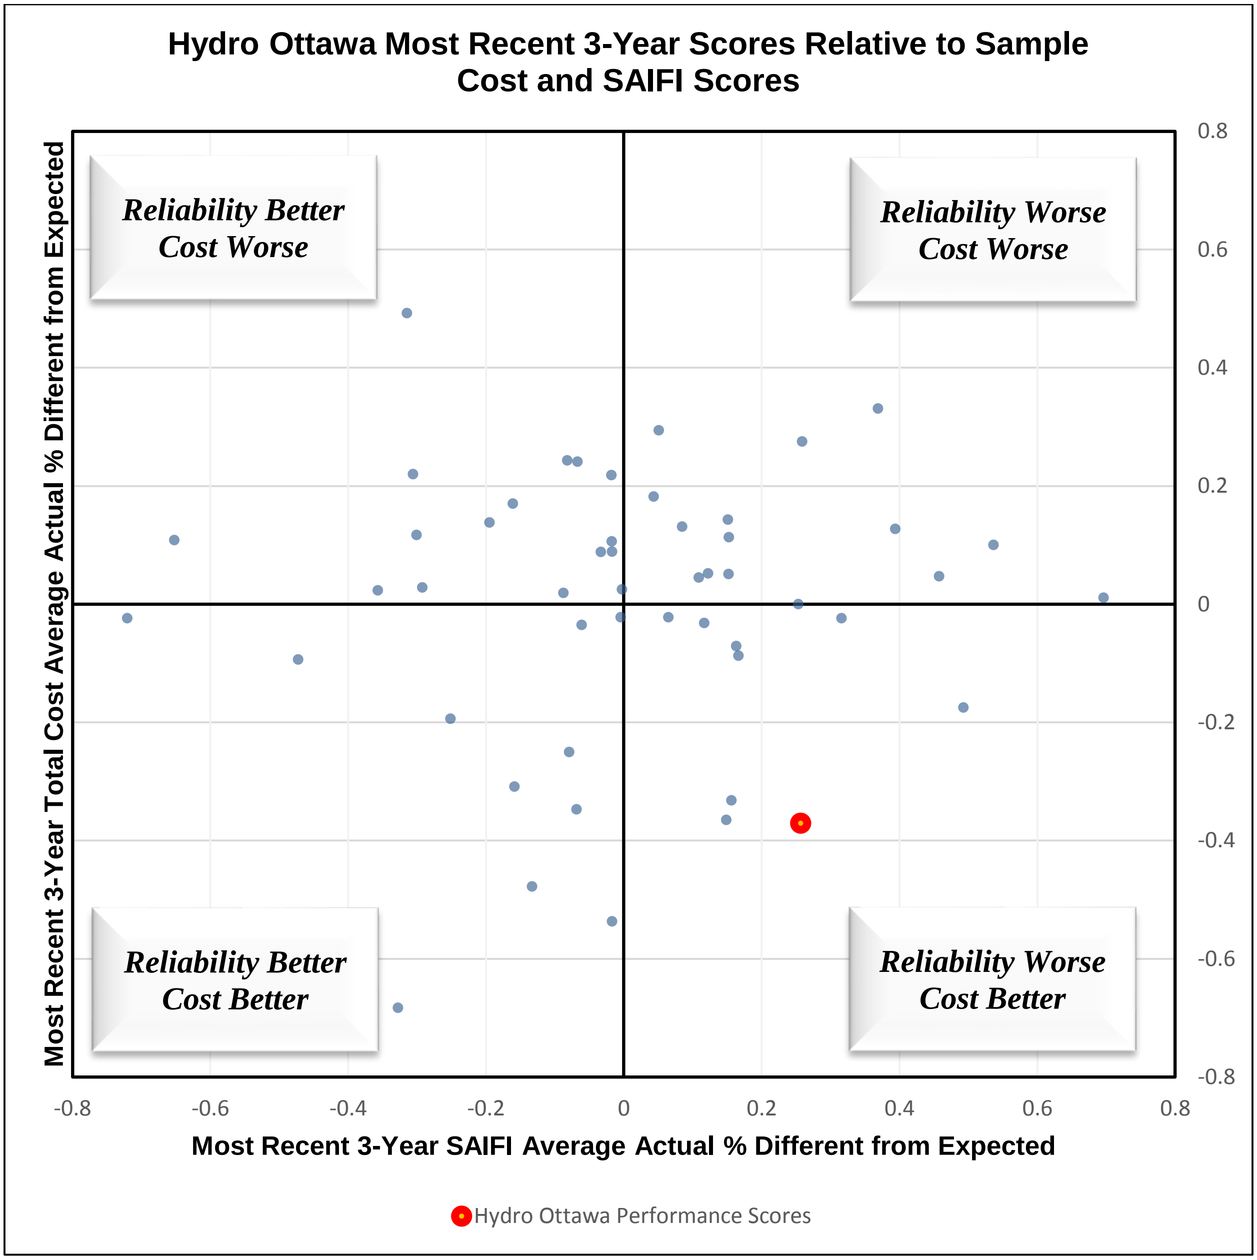


Figure 1-6 illustrates the current position of the company's SAIDI and total cost performance scores relative to the rest of the sample.

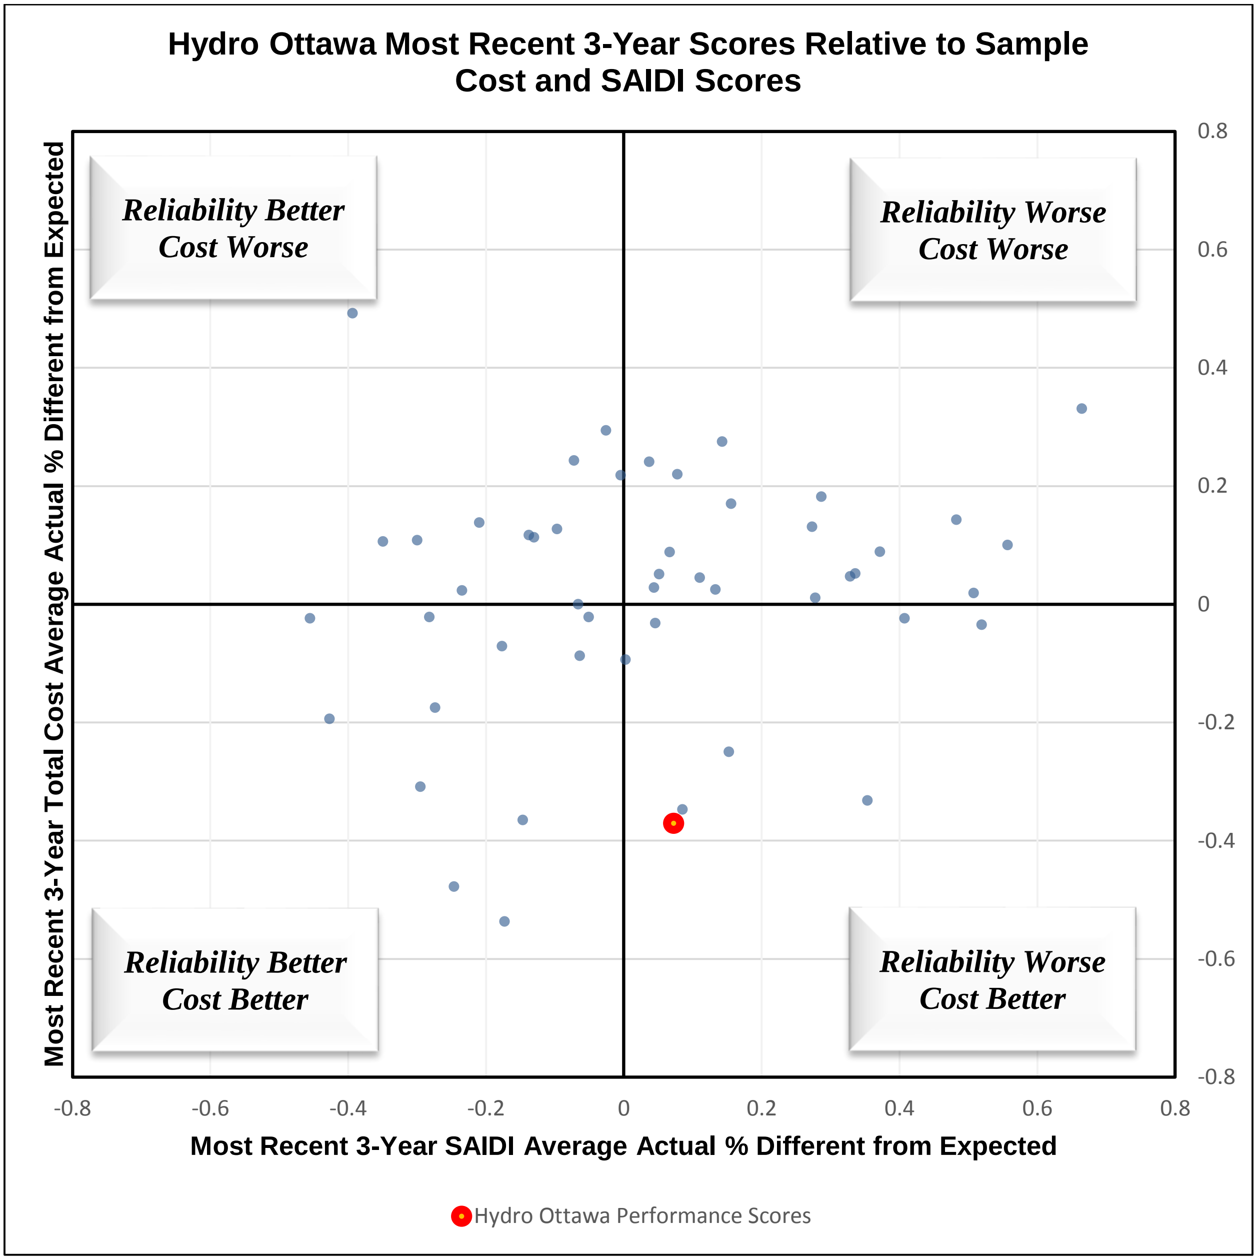
**Figure 1-6 Hydro Ottawa Total Cost and SAIDI Performance Position**



## 1.5 Custom IR Conclusions

PSE's benchmark research leads us to the following statements relating to Hydro Ottawa's Custom IR proposal:

1. Hydro Ottawa is entering the Custom IR period with strong recent cost performance (i.e., costs are below the expected values), with its average 2011 to 2013 total costs being estimated at 37.1% below benchmark values. This is statistically superior cost performance at a 90% confidence level. This performance level is commensurate with a 0.0% stretch factor (Group 1), using the 4th Generation IR criteria put forth in the November 2013 Board report. Hydro Ottawa ranks 4th out of the 78 distributors included in the sample.

2. Hydro Ottawa's Custom IR period (2016 through 2020) total cost level projections remain below benchmark expectations. By 2020, the company is estimated to still be below benchmark values by 13.9%. For the final three years of the Custom IR period, Hydro Ottawa continues to be a statistically significant superior cost performer at a 90% confidence level. This performance level indicates placing Hydro Ottawa in the 0.15% stretch factor level (Group 2).

3. The company's SAIFI for their 2012-2014 average is 25.6% above benchmark expectations. This implies Hydro Ottawa customers experience 25.6% more outages versus what the models predict. This result, in conjunction with the total cost result of low-cost performance, is suggestive of an aged infrastructure.

4. The company's SAIDI for their 2012-2014 average is 7.2% above benchmark expectations. This implies Hydro Ottawa customers experience 7.2% more outage minutes versus what the models predict. This is because of the higher than expected SAIFI value discussed in the prior conclusion.

# 2 Total Cost Benchmarking Datasets, Methods, Variable Definitions

The data for the U.S. utilities used in the study were acquired from publicly available data sources. There are 77 U.S. utilities in the sample, plus Hydro Ottawa. The utilities in the dataset along with their 2011 number of customers are provided in the table below.

**Table 2-1 Total Cost Sampled Utilities**

| Company | Number of Customers (2011) | Company | Number of Customers (2011) |
|---|---|---|---|
| Hydro Ottawa Limited | 305,266 | Louisville Gas and Electric Co | 394,063 |
| Alabama Power Co | 1,434,487 | Madison Gas and Electric Co | 141,414 |
| AmerenUE | 1,190,478 | MDU Resources Group, Inc. | 125,802 |
| Arizona Public Service Co | 1,120,236 | Metropolitan Edison Co | 552,631 |
| Atlantic City Electric Co | 547,762 | Mississippi Power Co | 185,768 |
| Appalachian Power Company | 961,129 | Monongahela Power Co | 386,819 |
| Avista Corp | 358,303 | Nevada Power Co | 838,482 |
| Baltimore Gas & Electric Co | 1,240,291 | New York State Electric & Gas Corp | 878,845 |
| Black Hills Power Inc | 68,172 | Niagara Mohawk Power Corp (National Grid) | 1,297,616 |
| Carolina Power & Light Co | 1,445,158 | Northern Indiana Public Service Co | 456,937 |
| Central Hudson Gas & Electric Corp | 274,152 | Northern States Power Co (XCEL) | 1,399,830 |
| Central Maine Power Co | 606,813 | Ohio Edison Co (First Energy) | 1,034,534 |
| Cincinnati Gas & Electric Co (Duke Energy OH) | 685,859 | Oklahoma Gas and Electric Co | 786,522 |
| Cleco Corp | 280,857 | Orange and Rockland Utilities Inc | 224,608 |
| Cleveland Electric Illuminating Co (First Energy) | 748,935 | Pacific Gas and Electric Co | 5,248,288 |
| Commonwealth Edison Co | 3,818,690 | Pennsylvania Electric Co | 589,651 |
| Connecticut Light & Power Co | 1,212,276 | Pennsylvania Power Co | 160,250 |
| Consolidated Edison Co of new York Inc | 3,329,304 | Portland General Electric Co | 823,171 |
| Consumers Energy Company | 1,788,799 | Potomac Electric Power Co | 787,137 |
| Dayton Power & Light Co | 513,539 | PP&L Inc | 1,403,889 |
| Delmarva Power & Light Co | 500,998 | PSI Energy Inc (Duke Energy IN) | 782,879 |
| Detroit Edison | 2,120,262 | Public Service Co of Colorado | 1,372,892 |
| Duke Energy Corp | 2,396,555 | Public Service Co of New Hampshire | 498,175 |
| Duquesne Light Co | 587,610 | Public Service Co of Oklahoma | 532,395 |
| El Paso Electric Co | 378,547 | Puget Sound Energy | 1,083,395 |
| Empire District Electric Co | 166,207 | Rochester Gas and Electric Corp | 367,300 |
| Entergy Arkansas Inc | 695,397 | San Diego Gas & Electric Co | 1,385,784 |
| Entergy Mississippi Inc | 438,140 | South Carolina Electric & Gas Co | 663,433 |
| Entergy new Orleans Inc | 159,431 | Southern California Edison Co | 4,921,228 |
| Florida Power & Light Co | 4,547,047 | Southern Indiana Gas and Electric Co (Vectern) | 146,136 |
| Florida Power Corp | 1,642,146 | Tampa Electric Co | 675,799 |
| Gulf Power Co | 432,401 | Tucson Electric Power Co | 403,340 |
| Idaho Power Co | 493,532 | United Illuminating Co | 323,738 |
| Indiana Michigan Power Co | 582,822 | Virginia Electric and Power Co | 2,438,226 |
| Indianapolis Power & Light Co | 468,195 | West Penn Power Co (Allegheny Power) | 717,269 |
| Jersey Central Power & Light Co | 1,099,194 | Western Massachusetts Electric Co (Northeast Utilities) | 206,279 |
| Kansas City Power & Light Co | 512,082 | Wisconsin Electric Power Co | 1,120,964 |
| Kentucky Power Co (AEP) | 173,641 | Wisconsin Power and Light Co | 458,041 |
| Kentucky Utilities Co | 540,839 | Wisconsin Public Service Co | 439,481 |

The total cost observations span the years 2002 to 2013. The large number of observations is more than sufficient for the creation of a statistically robust econometric model.

The output variables used in the total cost econometric benchmarking research are:

- Retail customers, and
- Peak demand.

The business condition variables used in the total cost econometric benchmarking research are:

- Regional input prices,
- Percent residential deliveries,
- Percent electric customers (out of total gas and electric customers),
- A binary variable for urban population above one million,
- Percent electric distribution in total electric gross plant,
- Elevation standard deviation, and
- Forestation of the service territory.

Both OM&A and total costs used in the benchmarking models for the U.S. distributors are derived using FERC Form 1 filing data.[9] U.S. electric utilities are required to file FERC Form 1 data annually, which includes operation and maintenance expenses broken down into specific cost categories (e.g. distribution, transmission, generation, customer billing, administrative and general). Form 1s also include plant in service and accumulated depreciation information that is used in constructing capital costs. PSE has added in all of Hydro Ottawa's CDM expenses and high voltage expenses to assure cost comparability between Hydro Ottawa and the U.S. data set.

The historical calculations for U.S. utilities' capital cost have been conducted using parallel procedures implemented by Pacific Economics Group ("PEG") in their benchmarking and productivity research of Ontario distributors found in Case EB-2010-0379 ("4$^{th}$ Generation Incentive Regulation"). Regarding Hydro Ottawa's capital cost definition, the historical data comes directly from PEG's 4$^{th}$ Generation IR dataset; projected data was provided to PSE by Hydro Ottawa. PSE has used PEG's "benchmark-based" capital cost definition found in their 4$^{th}$ Generation IR research, but has subtracted contributions in aid of construction ("CIAC") and added high voltage costs to Hydro Ottawa's data to make costs comparable to the U.S. dataset.

The OM&A cost definition used for Hydro Ottawa is used to create cost comparability with the U.S. sample. PSE began with Hydro Ottawa's benchmark-based cost definition and added in CDM expenses only for Hydro Ottawa. This was done since some of the U.S. utilities report CDM expenses within their customer service and information expenses, making CDM part of their total cost definition.[10] PSE also added Hydro Ottawa's high voltage expenses to the company's cost

[9] All FERC form data was downloaded by PSE from SNL Energy's database tool.

[10] This treatment is likely to be somewhat unfair to Hydro Ottawa since we cannot verify that all U.S. utilities report CDM expenses within customer service and information expenses. However, excluding CDM expenses would likely be advantageous to Hydro Ottawa. For this reason, PSE decided to include all of Hydro Ottawa's CDM expenses, to be conservative and to assure the results did not over-state the cost performance of the company.

definition. The FERC Form 1 does not break out high versus low voltage distribution expenses like Ontario does. For that reason, Hydro Ottawa's high voltage expenses have been added to make costs comparable. The table below summarizes the cost definition treatment.

**Table 2-2 Cost Definitions**

| Cost Element | Treatment |
|---|---|
| **4th Generation IR Benchmark-Based Costs** | Used this as a starting point for Hydro Ottawa |
| **CIAC** | Subtracted from Hydro Ottawa costs, since U.S. cost data does not include CIAC |
| **High Voltage Expenses** | Added to Hydro Ottawa costs, since U.S. cost data includes distribution high voltage costs |
| **CDM** | Added all CDM expenses to Hydro Ottawa costs, since some U.S. cost data includes CDM expenses |

For U.S. utilities, the output variables are calculated from FERC Form 1s and Platts UDI directories.[11] The historical output data for Hydro Ottawa comes from the Board's fourth generation incentive regulation data. Hydro Ottawa's projected outputs comes from forecasts provided to PSE by Hydro Ottawa.

Input prices are divided into two categories: capital and OM&A. The capital input price calculation is discussed in detail in the following section. The OM&A input price captures the regional market price level that each sampled company encounters when procuring OM&A inputs, such as employees or materials and services. There are two components used to construct the OM&A input price. These are labour and non-labour.

The labour component is calculated by taking wage levels of numerous job occupations and weighting them based on the U.S. Bureau of Labor Statistics ("BLS") estimates of job occupation weights in the Electric Power Generation, Transmission, and Distribution Industry. The BLS has estimates for wage levels for each job occupation by city and metropolitan area. For Hydro Ottawa, we gathered job occupation wage estimates from Statistics Canada, using wage data from Ottawa, translated job occupations to match their U.S. counterparts, and then weighted the job occupation wages by the BLS estimates. This provides consistency from the U.S. and Hydro Ottawa regarding labour input prices and also puts the input price in terms of each country's currency. We then escalated labour prices for U.S. utilities using BLS employment cost indexes for the utility sector and escalated Hydro Ottawa prices using the Ontario average weekly earnings estimates.

The non-labour component of the OM&A input price uses the gross domestic product price index (GDP-PI) for the U.S. utilities. The Ontario non-labour component uses the same GDP-PI in each year, but adjusted for the purchasing power parity ("PPP") index. This translates the non-labour input price component into Canadian dollars. To construct the overall OM&A input price we weighted each index using a 70% labour and a 30% non-labour rate. This was the same weighting

[11] We gathered data from annual editions of Platts, "UDI Directory of Electric Power Producers and Distributors" starting in 2003 through 2013.

used by PEG in their benchmarking research.

The “residential percentage of sales volume” variable is calculated based on data from FERC Form 1 (for U.S. utilities) and the Board’s 4th Generation Incentive Regulation data (for Hydro Ottawa). The percentage of residential volume compared to total volume is a proxy for the variance in electricity loads. Commercial and industrial customer loads tend to be more level across hours of the day. As the proportion of residential volume increases, distribution systems tend to increase their system peaks and load variability. This results in higher volatility in the loads served by the system.

The variable that measures the percentage of electric customers out of total gas and electric customers is derived from both FERC Form 1 data and FERC Form 2 data. The FERC Form 2 data includes the number of gas customers served by a natural gas distributor. This variable measures the economies of scope available from serving both electric and gas customers. The value is set to 100% for Hydro Ottawa, since the company does not serve natural gas customers.

The urban core variable used in the total cost benchmarking models is a “binary” or “indicator” variable. This variable provides key information on the added costs of serving electricity to a highly urban area. All utilities are given a value of zero unless they serve the urban core of a city whose population is above one million (U.S. cities are designated by the 2010 U.S. census). Hydro Ottawa’s value is set to “0” for this variable, since Ottawa’s city population does not exceed one million.[12]

The percentage of electric distribution plant in total distribution plant measures the available economies of scope that result from being a vertically integrated utility, as opposed to a distribution-only utility. We expect distribution unit costs to be lower for utilities that also have transmission and generation activities. For U.S. utilities, data for this variable is found from the utilities’ FERC Form 1s. The value is set to 100% for Hydro Ottawa, since the company does not have transmission or generation assets.

The percentage of forestation variable is based on GIS (geographic information system) forestation maps. Such maps are matched with the areas served by each utility to create the variable. We would expect that the higher the level of forestation, the higher OM&A costs required for right-of-way clearing and service restoration activities. GIS variable data is available for all sampled U.S. utilities and for Hydro Ottawa.

The elevation standard deviation variable is computed using GIS maps of elevation in each utility’s service territory. The variability of elevation levels poses both construction and maintenance challenges for local delivery systems. We capture this difficulty by computing the standard deviation of the elevation levels obtained from GIS maps.

## 2.1 Perpetual Inventory Capital Cost Method

This report evaluates Hydro Ottawa’s capital costs as a component of the total cost definition. PSE’s measure of capital cost is based on a service price approach. This approach has a solid basis

[12] According to Statistics Canada, Ottawa’s 2011 city population was 883,391.

in economic theory, and is the same method chosen by PEG in their 4th Generation IR research.[13] It allows for a clear-cut and standardized way to account for differences between utilities with respect to historical plant additions. The service price approach also has ample precedent in government-sponsored cost research. It is used by the Bureau of Labor Statistics of the U.S. Department of Labor in computing multi-factor productivity indexes for the U.S. private business sector and for several subsectors, including the utility services industry.

Based on this approach, the cost of capital in each period $t$ is the product of indices of the capital service price and capital quantity in place at the end of the prior period. The formula for this is given by:

$$CK_t = WKS_t \cdot XK_{t-1}$$

Here, in each period $t$, $CK_t$ is the cost of capital, $WKS_t$ is the capital service price index, and $XK_{t-1}$ is the capital quantity index value at the start of the period.

The capital quantity index is constructed using inflation-adjusted data on the value of net utility plant in a benchmark year, and on gross plant additions in subsequent years. It also uses an assumption about service lives. For the sake of consistency, we use 1989 as the benchmark year in the current study, based on PEG's prior decision in their 4th Generation IR benchmarking work. We use 1989 for all U.S. sampled utilities. Based on the benchmark year, a "triangulated weighted average" ("TWA") is used to calculate the capital stock in 1989. Subsequent years use the previous year's capital stock and escalate it by plant additions minus depreciation. For consistency, the plant additions have been calculated using PEG's methodology found in their 4th Generation IR research. This method is used both for Hydro Ottawa and U.S. distributors. The formulas for the capital quantity index in 1989 and in subsequent years are provided below.

$$XK^i_{1989} = \frac{Net\ Plant^i_{1989}}{TWA^i_{1989}}$$

$$XK^i_t = XK^i_{t-1} * d + \frac{Add^i_t}{WKA^i_t}$$

$$Add_t = (Gross\ Plant_t - Gross\ Plant_{t-1}) + .005 * Gross\ Plant_{t-1}$$

Under the service price approach employed in this study, capital cost has two components: opportunity cost and depreciation. The capital service price index is thus given by the formula:

$$WKS_t = r_t * WKA_{t-1} + d_t * WKA_t$$

Here, $r_t$ is the allowed rate of return based on the Board's historical calculated returns. This same annual value is also used in the capital service price computation for the U.S utilities in the dataset. Setting the same rate of return for all distributors provides consistency in determining the capital

[13] See Hall and Jorgensen (1967) for a seminal discussion of the use of service price methods for measuring capital cost.

costs, so that decisions by regulators do not enter into the benchmark evaluation, which is attempting to assess the performance of the utility itself. The parameter $d_t$ is the economic depreciation rate. We use the same value as PEG did, 4.59%, for this parameter in the study.

The variable that the capital service price components have in common is $WKA_t$. This is an index of the price of capital assets used in power distribution. We compute this index using data on differences in the cost of constructing utility plant between regions, and within regions over time. In particular for U.S. distributors, we use the Handy-Whitman indexes for total power distribution plant, which vary over time and across six geographic regions. For Hydro Ottawa, we use the annual Electric Utility Construction Price Index ("EUCPI") for the historical data and Conference Board of Canada forecasts of construction costs for future years.

We determine the relative levels of utility plant asset prices for 2012 by using the City Cost Indexes for electrical work in RSMeans' *Heavy Construction Cost Data*.[14] These indexes measure differences among cities in the cost of labour needed to install electrical equipment and differences in equipment prices. The construction service categories covered are raceways; conductors and grounding; boxes and wiring devices; motors, starters, boards, and switches; transformers and bus ducts; lighting; electric utilities; and power distribution. The level of the asset price index for each utility is the simple average of the RSMeans index values for cities in the service territory. This same source is used for both U.S. and Hydro Ottawa. The index is already adjusted for currency differences between the two countries.

[14] RS Means (2011).

## 2.2 Econometric Method

The benchmarking approach used in this report is the econometric approach. PSE believes this is the most accurate and fair method to use when comparing utility cost and reliability levels. It is also the same method preferred by the Board in the November 2013 Board Report.

The econometric approach explicitly adjusts for differences in utilities' service territories. In the power distribution industry, simple rate or reliability index comparisons do not provide appropriate benchmarks when evaluating performance. Uncontrollable factors influence attainable levels of total costs; such factors include geographical size, level of forestation, regional wage levels, mix of consumer classes, or serving an urban core. Therefore, more sophisticated tools that normalize for specific influencing factors must be employed to accurately assess performance. With this concept in mind, PSE has developed econometric benchmarking models that take into account factors that have proven to be statistically influential on distribution utility costs and reliability indexes.

The econometric benchmarking approach relies on comparisons between observed data values to the predicted values obtained from regressions. The researcher determines an appropriate functional form for the relationship between the studied metric and factors that influence it, and develops appropriate econometric methods for obtaining good parameter estimates of the specified model. In this report, we estimate the "translog cost function." The translog cost function is well established in academic literature and provides a high level of flexibility in estimating costs. This is also the same functional form preferred by the Board in the 4th Generation IR proceeding.

Cost predictions for each firm are obtained by inserting company-specific variable values into the estimated equation. Performance is defined as the percentage difference of the observed data to the predicted value of the data, as shown below.

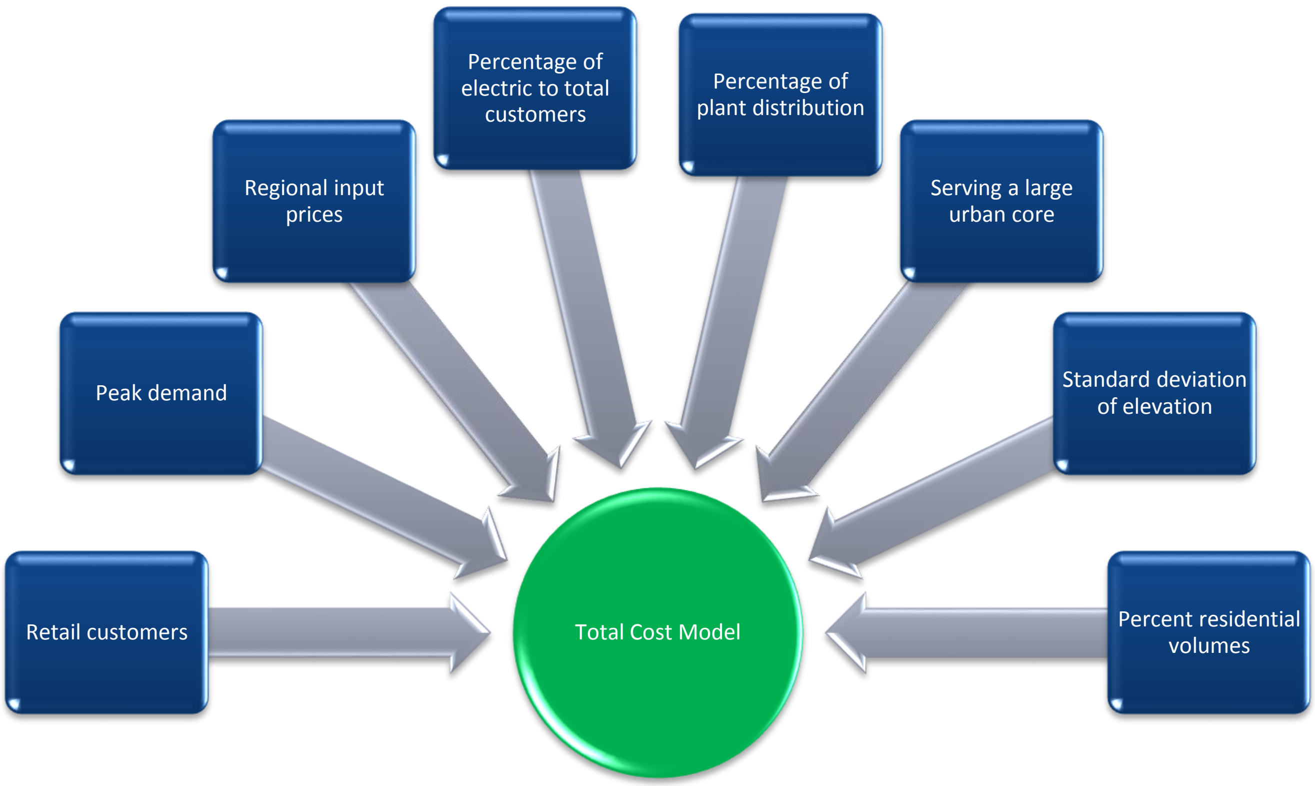
$$Performance = \ln\left(\frac{Observed\ or\ Projected\ Cost\ Data}{Predicted\ Cost\ Data}\right)$$

> <u>NOTE:</u> The term "ln" above denotes the natural log. The formula above is the calculation for log arithmetically calculating percentage differences. It is typically used by both PSE and PEG to display benchmark scores.

### 2.2.1 Variables Used

The variables included in the combined total cost analysis are shown in the figure below.

**Figure 2-1 Variables in Econometric Cost Models**



A diverse dataset which includes utilities with varying operational conditions is necessary to determine the influence on costs and reliability resulting from those conditions. There are many U.S. utilities which are either larger or smaller than Hydro Ottawa. This is in contrast to an Ontario-only dataset, where Hydro Ottawa tends to be an outlier due to its size. Due to this outlier status within the Ontario dataset, PSE considers the U.S.-only benchmarking results to be more robust in revealing the cost and reliability performance of the company, relative to an Ontario-only sample.

The specification used in the cost models includes three types of variables: outputs, input prices, and business condition variables. Outputs are defined as the "work" that the utility is doing. We defined two variables as outputs: the number of retail customers served and peak demand.

The input prices are defined as the external market price for operation, maintenance, and administration (OM&A) expenses and capital service costs. The market prices for labour and capital will vary depending on the geographic location of each sampled utility. The business condition variables are the other service territory characteristics that statistically influence total cost levels. Examples of business condition variables are serving an urban core, percentage of electric customers in total customers, percentage of forestation, etc.

### 2.2.2 Estimation Procedure and Translog Cost Function

As a starting point, we assume that the relationship between a utility's cost and the conditions that affect it, called "cost drivers," can be quantified and captured by a statistical function. This function, called a "cost function," allows PSE to specify cost as a dependent variable that can be explained by relevant independent or explanatory variables and associated parameters; the latter capture the effect of the independent variables on cost. Such a cost function is estimated using econometric techniques that rest on certain fundamental assumptions.

As implied by the term "independent," one of these assumptions is that the explanatory variables used in the model are factors that are outside the control of utility decision-makers. For instance, the wage paid to labour is driven by market conditions in the service territory and is largely outside the control of a firm's managers. On the other hand, the number of employees hired are within management's control, and thus cannot serve as an independent variable.

In general, cost is assumed to be a function of input prices, the output produced by the firm, and other independent variables that affect cost but are outside management's control. While a function specified in this manner can capture a reasonable level of cost variability, it does not explain all the elements that affect cost. Therefore, the function includes a random noise term to account for such idiosyncratic factors.

The following equation provides an example of a simple cost function:

$$C = \beta_o + \beta_1 * Y + \beta_2 * P + \varepsilon$$

In this equation, the terms C, Y, and P denote cost, output, and input prices, respectively. The $\beta$ terms denote model parameters that capture the magnitude and sign of the effect of the explanatory variables on cost, and the error term captures random noise. The latter is assumed to be independent of the explanatory variables.

The data used to estimate this cost relationship can be from a single firm with multiple time observations (time series data), from many firms observed at a single time period (cross-sectional data), or from many firms with multiple time observations (cross-sectional time-series or panel data). The estimation procedure used to estimate model parameters is affected by the type of data used to estimate the model. In our present study, we have a panel dataset with cost data from multiple firms with observations starting in 2002 and extending to 2013. Additionally, we included Hydro Ottawa's cost projections through 2020, allowing us to also benchmark those forecasts "out of sample". We use the model that is based on historical data and apply the estimated coefficients and projected independent variable values for Hydro Ottawa to calculate a predicted benchmark value. This predicted benchmark value is then compared to Hydro Ottawa's projected total cost amount.

A cost function can be specified as a single equation or a system of equations to get parameter estimates. A single equation model is specified as noted above. A system of equations results from applying economic theory that permits the derivation of cost share equations that are estimated along with the cost function to obtain more precise parameter estimates. The estimation procedure used for the total cost studies incorporates a system of equations that are based on the cost shares of OM&A and capital costs. This produces more precise estimates and benchmark results. The reliability benchmarking exercise uses a single equation model only.

### *2.2.2.1 Statistical Tests*

The precision of parameter estimates is an important dimension of the cost estimation exercise. It identifies business condition variables that have a statistically significant effect on cost. In particular, standard errors of parameter estimates, which measure the precision with which a parameter is estimated, are used to construct a test of a relevant hypothesis. The hypothesis to be tested is "the explanatory variable in question has no statistically significant effect on cost." This procedure is called the *t*-test. A variable is statistically significant if this hypothesis is rejected at a pre-specified level of confidence. We use a 90 percent confidence threshold in our research.

A cost model with plausibly signed and statistically significant parameter estimates is ultimately used to assess the cost performance of each firm in the sample. By "plausibly signed" we mean that its sign (positive/negative) accords with our intuitive understanding of the relationship between that parameter and the variable. For example, we would "expect" to see costs rise as the number of customers served increases (i.e. the customer parameter would be positively signed).

A cost model with estimated parameters is fitted with the business conditions of each utility to generate cost benchmarks, against which actual cost is evaluated. A cost benchmark reflects the performance of an average utility facing the business conditions of the utility whose values are used to generate the benchmark.

If a given utility's actual cost is below the benchmark cost, its cost performance is better than average—it spent less than did a hypothetical utility (with the same particular characteristics) would be expected to spend. If its actual cost is above the benchmark cost, its cost performance is worse than average. A statistical test of a cost efficiency hypothesis, based on the *t*-test, can also be constructed to identify whether the cost performance identified by the above exercise is statistically significantly different from average.

### *2.2.2.2 Model Specification*

A translog function is selected for the total cost model estimated in this study. The translog cost function was the same functional form chosen by PEG in their 4th Generation Incentive Regulation benchmarking research and the same one preferred by the Board in the November 2013 Board Report. Its general form, after suppressing time and firm subscripts, is given by:

$$\ln C = \alpha_o + \sum_i \alpha_i \ln Y_i + \sum_j \beta_j \ln W_j + \sum_h \gamma_h \ln Z_h + \frac{1}{2}\left[\sum_i \sum_k \alpha_{ik} \ln Y_i \ln Y_k + \sum_j \sum_n \beta_{jn} \ln W_j \ln W_n\right] + \sum_i \sum_j \alpha_{ij} \ln Y_i \ln W_j + \alpha_t t + \varepsilon$$

In this specification, $\alpha's$ and $\beta's$ are model parameters, and $\varepsilon$ is the random noise term. In addition, $Y_i$ quantifies output, $W_j$ input prices, $Z_h$ other business condition variables, and *t* is a time trend term. This form has been widely used in cost function research.[15] A major advantage is its flexibility, which permits it to provide a good approximation for the wide range of functional forms that the data can reflect.[16]

We also note several theoretical assumptions that aid in model specification and estimation. Among these is the idea that if all input prices rise, cost also rises proportionally. This is known as linear homogeneity, and it allows the restriction that the sum of input price parameters equals one. An additional restriction is symmetry in the parameters of the price interaction terms. In addition, we use Shepherd's lemma to derive cost share equations that we estimate jointly with the cost function. The general form of the cost share equation for input *j* is given by:

$$S_j = \beta_j + \sum_i \alpha_{ij} \ln Y_i + \sum_n \beta_{jn} \ln W_n + \upsilon_j$$

For the reliability models, we also specify quadratic models that include first-order explanatory terms and their squared counterparts. These models are specified as single equation models. The following presents the general form the reliability models take. Both the SAIDI and the SAIFI models are constructed in the same manner. We illustrate the basic form of the SAIDI model below.

$$SAIDI_j = \beta_o + \sum_i \alpha_i \ln X_i + \sum_i \beta_{ii} \ln X_i * \ln X_{\mathrm{i}} + \alpha_t t + \varepsilon$$

*2.2.2.3 Estimation Approach*

One of the reasons for joint estimation of cost and cost share model parameters is that there is contemporaneous correlation between the error terms in these systems of equations. Such correlation allows the use of a system of regression equations that result in more efficient (precise) estimates. In this study, the systems estimator we use is Feasible Generalized Least Squares ("FGLS").

In particular, PSE uses an iterative FGLS procedure that estimates the unknown error matrix consistently.[17] The estimates we compute are equivalent to Maximum Likelihood Estimates ("MLEs").[18] Our estimates thus possess all the desirable properties of MLEs, which include consistency and efficiency. Since the cost share equations by definition must sum to one at every observation, one cost share equation is redundant and is dropped. This does not pose a problem, since yet another property of the MLE procedure is that it is invariant to any such parameterization. Hence, the choice of which equation to drop will not affect the resulting estimates.

The single equation model is estimated using generalized least squares (GLS) in order to correct for cross-sectional heteroskedasticity and autocorrelation. The parameter estimates that result from

---

[15] In their Monte Carlo studies of functional forms' performance, Gagne and Ouellette (1998) use the translog as a benchmark because "it is the most widely used" functional form.

[16] See Guilkey, et al. (1983)

[17] See Zellner, A. (1962).

[18] See Dhrymes, P.J. (1971), Oberhofer, W. and J. Kmenta (1974) and Magnus, J.R. (1978).

this procedure are both consistent and efficient.

## 2.3 Benchmarks for Future Years

The same econometric model and its associated parameter values that are estimated using historical data (and used to develop Hydro Ottawa's historical benchmarks) are also used to calculate the company's benchmarks for future years. These parameter values are combined with projected variable values to calculate the expected total costs of Hydro Ottawa in the future years of the Custom IR period.

This procedure assumes that future total costs will be influenced by the independent variables in the same way that historical costs have been estimated to be influenced by the independent variables. Absent robust projected costs from a large sample of utilities, PSE is of the opinion that using the historical relationships between variables found to be statistically significant in the models is the best and most straightforward way of benchmarking future total cost levels.

PSE was provided OM&A expense, plant addition, reliability, customer counts, and demand projections from Hydro Ottawa. We then inserted these projections in each future year into the estimated econometric model.

Input prices need to also be projected into the future years. For the labour and non-labour components of the OM&A input price, PSE used price forecasts of the GDP-IPI and Ontario weekly average earnings from the Conference Board of Canada. The forecasts only go to 2019, so for the 2020 observation we used the 2019 growth rate and applied that same growth rate to 2020. We used the Implicit Price Index of Gross Fixed Capital Formation, Engineering Structures Electric Power Generation, Transmission, and Distribution (Canada) for the future-year capital construction cost estimates.[19]

Other projected variables that enter the models include percent residential, urban core, electric customers in gas and electric operations, electric distribution plant as a % of total electric gross plant, percent forestation, and the elevation standard deviation. Since these variables are not likely to meaningfully change over time, they were set at their most recently available historical value for the future years.

[19] These are the same escalators used by PEG in their benchmarking report prepared for Oshawa PUC Network's Custom IR application dated December 18, 2014.

# 3 Total Cost Benchmarking Results

The estimates from the total cost model are presented in Table 3-1. We note that the cost function parameter estimates are plausibly signed and have reasonable magnitudes. The first order terms of all variables have the theoretically expected signs and are statistically significant.

**Table 3-1 Total Cost Model Estimates**

| F | 0.016 | 3.041 | System Rbar-Squared | 0.961 | |
| R | 0.044 | 2.253 | Sample Period: | 2002-2013 | |
| | | | Number of Observations | 881 | |

Total cost increases with higher capital prices and output quantities. At the sample mean, a 1% increase in the number of customers (N on the table) and peak demand (D) are estimated to raise cost by 0.803% and 0.170%, respectively. The number of customers served is the dominant output-related cost driver, which is an expected result for an electric distribution total cost model. Input prices also will increase total costs. Holding the effect of all other variables constant, we find that a 1% increase in the price of capital (K) raises cost by 0.572%. This is higher than the elasticity of the price of the OM&A input, which is about 0.428% (based on linear homogeneity, the OM&A input price estimate is predetermined to be one minus the capital price estimate). The estimates reflect the capital intensiveness of the power distribution business.

The business condition coefficients are also signed as our hypothesis would suggest. All business condition variables are plausibly signed and statistically significant at a 90% confidence level. The estimate of the trend variable parameter is 0.2%. This suggests a modest upward shift in cost over time. This econometric trend indicates a modest negative productivity trend for the U.S. electric distribution industry.

The next table presents the Hydro Ottawa benchmark results for an average of the 2011 to 2013 years.

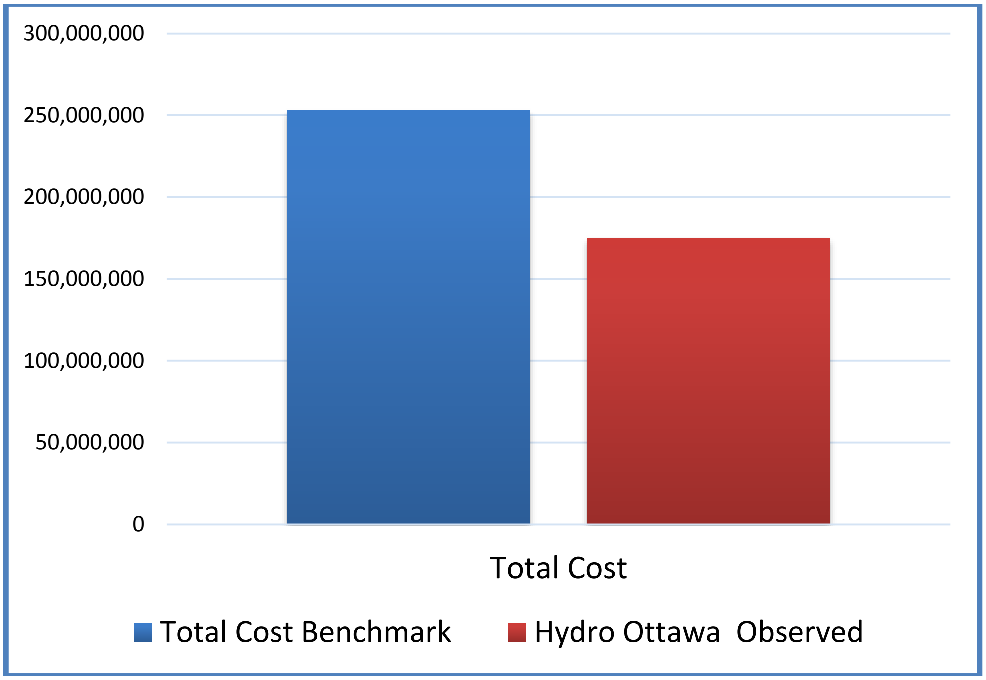
**Table 3-2 Average 2011-2013 Hydro Ottawa Total Cost Benchmark Results**

| Year | Actual | Predicted | % Difference | P-Value |
|---|---|---|---|---|
| **Average 2011-2013** | $175.1 Million | $253.1 Million | -37.1% | 0.001 |

Actual cost is below the predicted or benchmark value by about 37 percent. This is a statistically significant difference with a 90 percent degree of confidence, and shows that when benchmarked relative to the power distributors of the U.S., Hydro Ottawa has a statistically significantly superior total cost performance.

Put into dollar terms, the 2011-2013 average total costs of Hydro Ottawa were expected to be $253.1 million, but were actually $175.1 million. This is $78.0 million per year below the benchmark expectation over the 2011-2013 period. This result is illustrated in the figure below.

**Figure 3-1 2011-2013 Benchmarked Total Costs vs. Actual Costs (3-Year Average)**



The following table breaks down the historical and forecast year benchmark and company total costs from 2002 to 2015, and then during the Custom IR period of 2016 to 2020. During the historical period Hydro Ottawa has consistently been below its expected benchmark levels. In the second column, the percent below benchmark is illustrated.

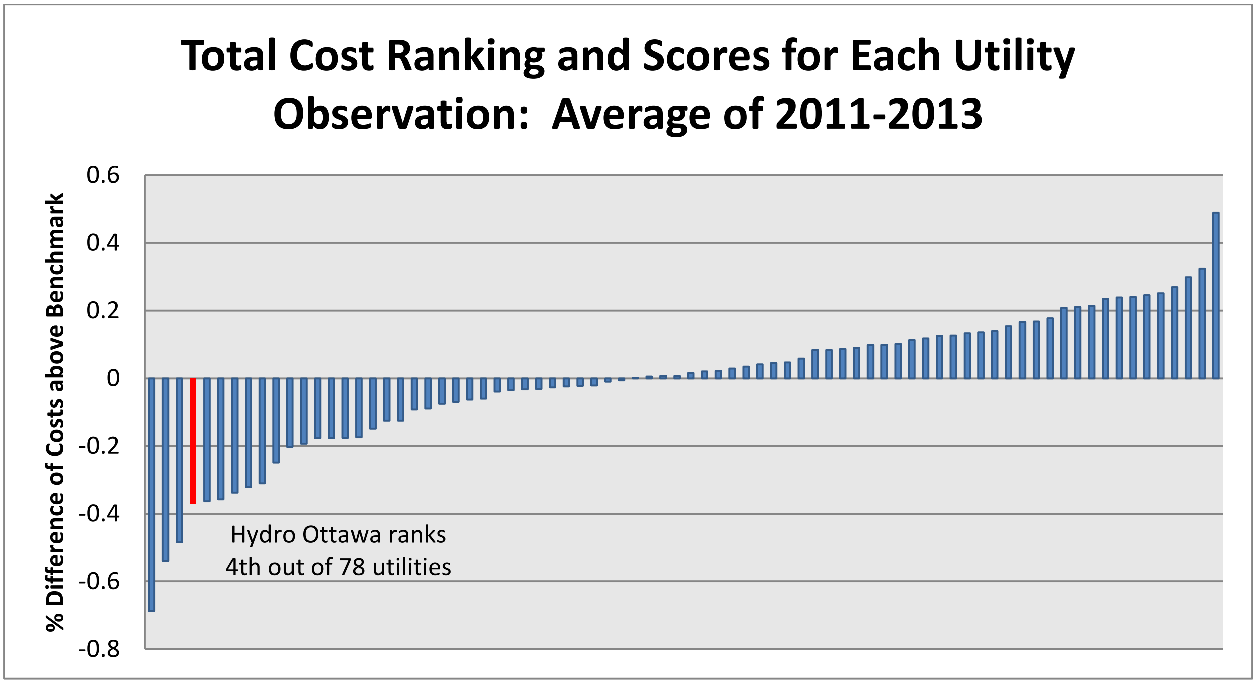
The company's Custom IR forecasts for OM&A and capital spending keep the company below benchmark levels, although not by as much as in the historical years. Nevertheless, they indicate that the company's proposed spending levels are reasonable and below model benchmark expectations.

**Table 3-3 2002-2020 Benchmark Total Costs vs. Historical and Projected**

| Year | Percent Below Combined Sample Total Cost Econometric Benchmark | Total Cost Econometric Benchmark, $M | Total Cost Hydro Ottawa, $M |
|---|---|---|---|
| 2002 | 50% | $193 | $117 |
| 2003 | 56% | $199 | $113 |
| 2004 | 56% | $203 | $116 |
| 2005 | 55% | $211 | $121 |
| 2006 | 50% | $214 | $129 |
| 2007 | 48% | $222 | $137 |
| 2008 | 41% | $231 | $153 |
| 2009 | 45% | $236 | $151 |
| 2010 | 45% | $249 | $159 |
| 2011 | 47% | $255 | $159 |
| 2012 | 35% | $251 | $177 |
| 2013 | 29% | $253 | $189 |
| 2014 | 22% | $260 | $209 |
| 2015 | 20% | $269 | $219 |
| 2016 | 18% | $279 | $232 |
| 2017 | 17% | $290 | $245 |
| 2018 | 16% | $301 | $257 |
| 2019 | 15% | $312 | $267 |
| 2020 | 14% | $324 | $282 |
| (Years shaded in green are during the Custom IR period) | | | |

The total cost observations for each utility can be ranked based on the percent difference in the actual total costs to the benchmark total costs. Hydro Ottawa is ranked 4th out of 78 utilities included in the sample when comparing the 2011-2013 scores (scores are the % difference between model-predicted and actual). The distribution of utilities and the company's placement is illustrated in the following figure.

**Figure 3-2 Econometric Total Cost Ranking**



# 4 Reliability Benchmarking Variables and Models

Nearly all jurisdictions that require reporting of reliability indicators include the metrics of SAIDI, SAIFI, and Customer Average Interruption Duration Index ("CAIDI").[20] SAIDI measures the average duration of sustained interruptions per utility customer. SAIFI is a gauge of the average frequency of sustained interruptions per customer. CAIDI evaluates the average duration time per sustained interruption. SAIDI is thus the product of SAIFI and CAIDI.

$$\text{SAIDI} = \frac{\Sigma_i \text{Minutes Customer } `i' \text{ is without Service}}{\text{Total Number of Customers on System}}$$

$$\text{SAIFI} = \frac{\Sigma_i \text{Frequency Customer } `i' \text{ is without Service}}{\text{Total Number of Customers on System}}$$

$$\text{CAIDI} = \frac{\text{SAIDI}}{\text{SAIFI}}$$

Several jurisdictions exclude extraordinary events from reliability statistics, with the goal of increasing historical comparability. The bulk of excluded events stem from major storms. These severe storms vary in number and intensity from year to year. MED definitions are determined by each regulatory commission. Definitions vary by state; some use the IEEE standard 1366-2003 to determine what constitutes a MED.[21] Other states have customized definitions. States are gradually shifting towards the IEEE standard; however, considerable differences across states remain.

PSE requested Hydro Ottawa provide us with their historical SAIDI and SAIFI indexes with MEDs excluded (using the IEEE definition of a MED). This enables Hydro Ottawa's data to conform to the most prominent MED definition found within the industry. Excluding MEDs enables all of the data to be used and assures it is not unduly influenced by extreme weather events.[22]

The industry reliability data for U.S. utilities is gathered through reports and rate case filings made public by state commissions. Reliability data used has been verified and sourced.

The reliability benchmarking models we developed use the following variables:

[20] Some states only require reporting of two of these measures. However, the excluded indicator can still be determined by the researcher. SAIDI is equal to the product of SAIFI and CAIDI.

[21] The IEEE 1366-2003 standard defines the "beta" method. If outages for a certain day exceed 2.5 standard deviations from the normal day, a major event day is declared. A normal day and the standard deviation are determined by the utility's previous five years of normal day data (not including the MEDs).

[22] In PSE's work for Toronto Hydro's Custom IR application, we benchmarked SAIDI and SAIFI with no MED exclusions. This was due to the inclusion of Ontario distributors who only report reliability statistics in this manner. In that proceeding, PEG argued that 2012 U.S. data should be excluded because of Hurricane Sandy. By excluding MEDs, all available years can be used in the study.

- Density (customers per line mile);
- The number of retail customers;
- Forestation;
- Percent of distribution plant that is underground;
- A binary variable on if the major event day exclusion uses the IEEE-2003 standard;
- The level of wind within a given service territory; and
- A time trend.

The following table lists the utilities included in the reliability dataset. All of these utilities were also in the cost dataset; however, some of the utilities in the cost dataset did not have reliability data publically available.

**Table 4-1 Sampled Utilities for Reliability Benchmarking**

| Company | Company |
|---|---|
| AmerenUE | Metropolitan Edison Co |
| Avista Corp | Minnesota Power Inc |
| Baltimore Gas & Electric Co | New York State Electric & Gas Corp |

| Kansas City Power & Light Co (MO) | United Illuminating Co |
| Kentucky Power Co (AEP) | West Penn Power Co |
| Louisville Gas and Electric Co | Western Massachusetts Electric Co |
| Madison Gas and Electric Co | |

## 4.1 Econometric Reliability Benchmarking Models

PSE's method of econometric modeling applies regression techniques to the sampled data to form a mathematical model. The model accepts inputs (operating conditions, service territory data, etc.) and produces an expected reliability index for each observation. By using the model, given a set of operating conditions, PSE can estimate an "expected" or benchmark reliability level for each utility in each year. This technique allows for "apples-to-apples" comparisons, and therefore produces a more accurate assessment of performance relative to simply making industry comparisons of SAIDI and SAIFI.

Both the SAIDI and SAIFI model uses data with MEDs excluded. Each model includes utilities with varying time-series lengths covering the years 2002 to 2013.[23] This type of dataset requires an estimation procedure that accounts for the cross-sectional time-series ("panel") nature of the data. We use a feasible generalized least squares ("FGLS") estimator that corrects for cross-sectional heterogeneity and addresses the panel form of the data. The estimator accomplishes this by correcting for group-wise (utility-by-utility) heteroskedasticy, and results in parameter estimates that are more accurate, consistent, and precise than methods that do not correct for group-wise heteroskedasticy.

The results from the SAIDI model is presented in the following table.

**Table 4-2 SAIDI Econometric Model Coefficients**

| Variable | Coefficient Estimate | T-Stat |
|---|---|---|
| Constant | 4.732 | 193.385 |
| Customers (Y) | 0.039 | 3.647 |
| Customer Density (D) | -0.174 | -5.570 |
| Wind Hours (W) | 0.042 | 2.654 |
| Percent Underground (U) | -0.511 | -22.742 |
| Percent Forestation (F) | 0.111 | 5.409 |
| IEEE (I) | 0.184 | 9.948 |
| Trend | -0.015 | -5.146 |

All parameter estimates have the expected signs and are statistically significant. Utilities that serve more densely populated and have more underground plant tend to have shorter outage durations per customer. On the other hand, utilities that serve more forested and windy service territories have longer outage durations per customer. Using the IEEE MED standard tends to increase SAIDI values versus other MED definitions in the sample.

The SAIFI results are presented in the table below.

[23] Utilities in the States began reporting reliability metrics at different times. Hydro Ottawa historical data goes through 2014.

**Table 4-3 SAIFI Econometric Model Coefficients**

| Variable | Coefficient Estimate | T-Stat |
|---|---|---|
| Constant | 0.157 | 7.945 |
| Customers (Y) | -0.024 | -2.530 |
| Customer Density (D) | -0.214 | -10.057 |
| Percent Forestation (F) | 0.093 | 5.891 |
| IEEE (I) | 0.032 | 1.893 |
| Trend | 0.032 | 1.893 |

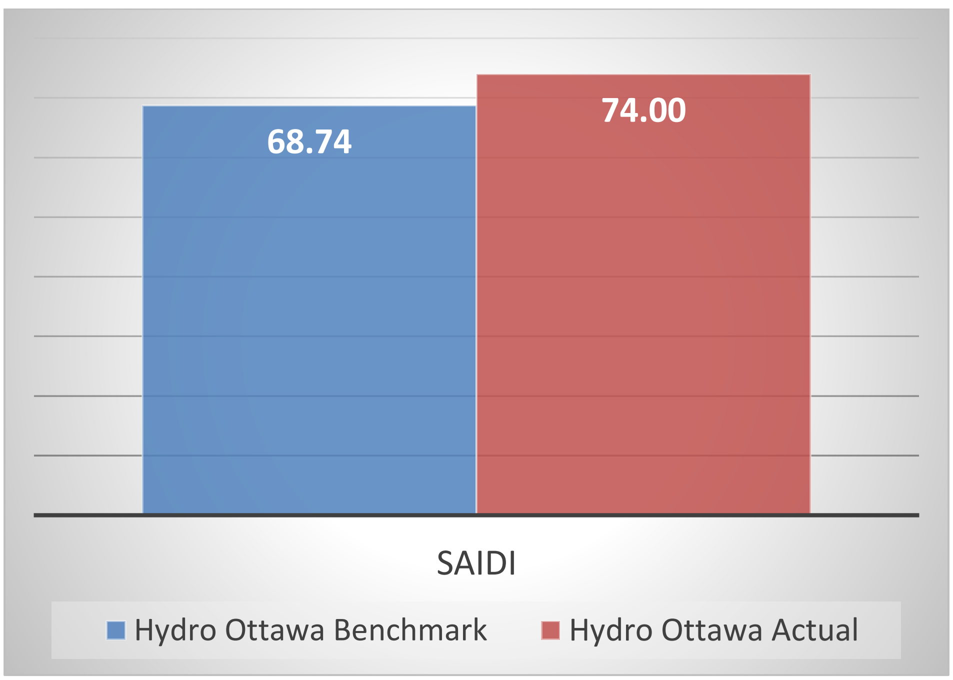
Utilities with more densely populated service territories experience fewer outage frequencies per customer. Conversely, utilities with service territories that are more forested have more frequent outages per customer. Utilities using the IEEE MED definition tend to have higher SAIFI values than those within the sample using other definitions.

## 4.2 Econometric Reliability Results

We find that Hydro Ottawa's 2012-2014 average SAIDI is 7.2 percent above the benchmark value. This result is not statistically significant at the 90 percent confidence level.

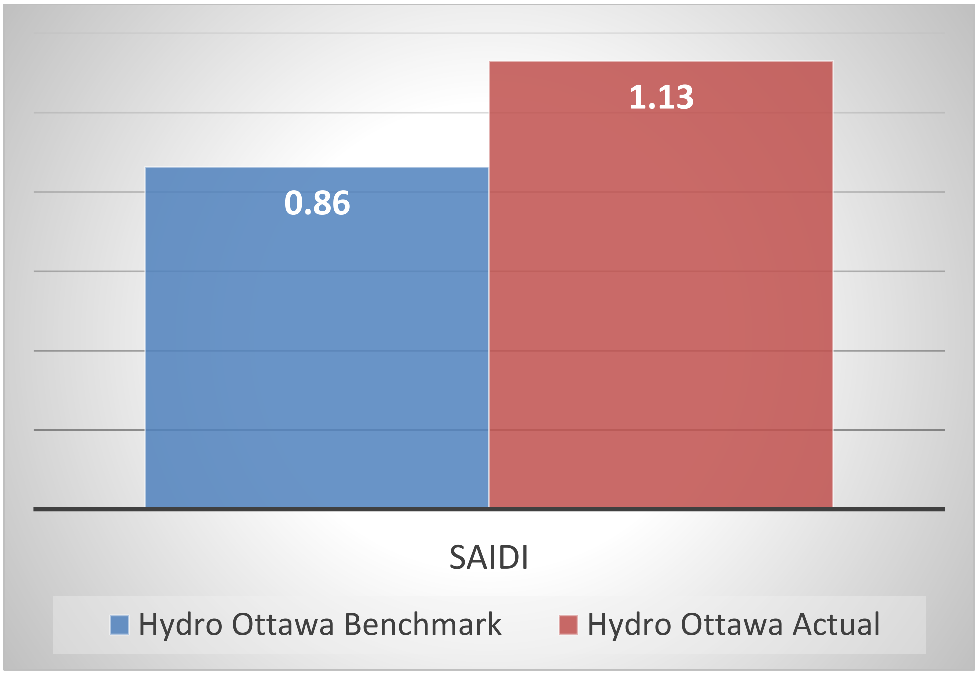
Our research on Hydro Ottawa's 2012-2014 average SAIFI indicates that the reliability level is 25.6 percent above the benchmark value. This not statistically significant at a 90 percent confidence level although is very close and is statistically significant at the 85 percent level. The benchmark comparisons for SAIDI are summarized in the following graph.

**Figure 4-1 2012-2014 Benchmarked SAIDI vs. Actual SAIDI (3-year Average)**



The benchmark comparisons for SAIFI are summarized in the following graph.

**Figure 4-2 2012-2014 Benchmarked SAIFI vs. Actual SAIFI (3-Year Average)**



The year-by-year breakdowns for both SAIDI and SAIFI are provided in the following table. This table provides both the actual reliability values for Hydro Ottawa, along with the econometric benchmark value.

**Table 4-4 Year-by-Year Reliability Benchmarks vs. Actual**

| Year | SAIDI (Econometric Benchmark) | SAIDI (THESL Value) | SAIDI (% Difference) | SAIFI (Econometric Benchmark) | SAIFI (THESL Value) | SAIFI (% Difference) |
|---|---|---|---|---|---|---|
| 2005 | 71.8 | 64.8 | -10.3 | 1.01 | 0.88 | -13.9 |
| 2006 | 71.1 | 84.0 | 16.7 | 0.99 | 1.02 | 2.8 |
| 2007 | 70.0 | 56.4 | -21.7 | 0.97 | 1.02 | 4.8 |
| 2008 | 68.8 | 58.2 | -16.7 | 0.95 | 0.79 | -18.8 |
| 2009 | 67.6 | 72.0 | 6.4 | 0.94 | 0.94 | 0.6 |
| 2010 | 67.0 | 76.2 | 12.8 | 0.92 | 1.25 | 31.0 |
| 2011 | 69.0 | 77.4 | 11.4 | 0.90 | 1.09 | 19.3 |
| 2012 | 70.8 | 78.0 | 9.7 | 0.88 | 1.32 | 40.4 |
| 2013 | 70.4 | 76.8 | 8.7 | 0.86 | 1.17 | 30.3 |
| 2014 | 65.0 | 67.2 | 3.3 | 0.84 | 0.90 | 6.3 |

Figure 4-3 below illustrates Hydro Ottawa's 2012-2014 average SAIDI performance relative to the most recent 3-year scores for the rest of the sample. The company ranks 37th out of the 57 utilities, with its three year average SAIDI score of 7.2 percent above its benchmark value.

**Figure 4-3 SAIDI Econometric Ranking and Scores**

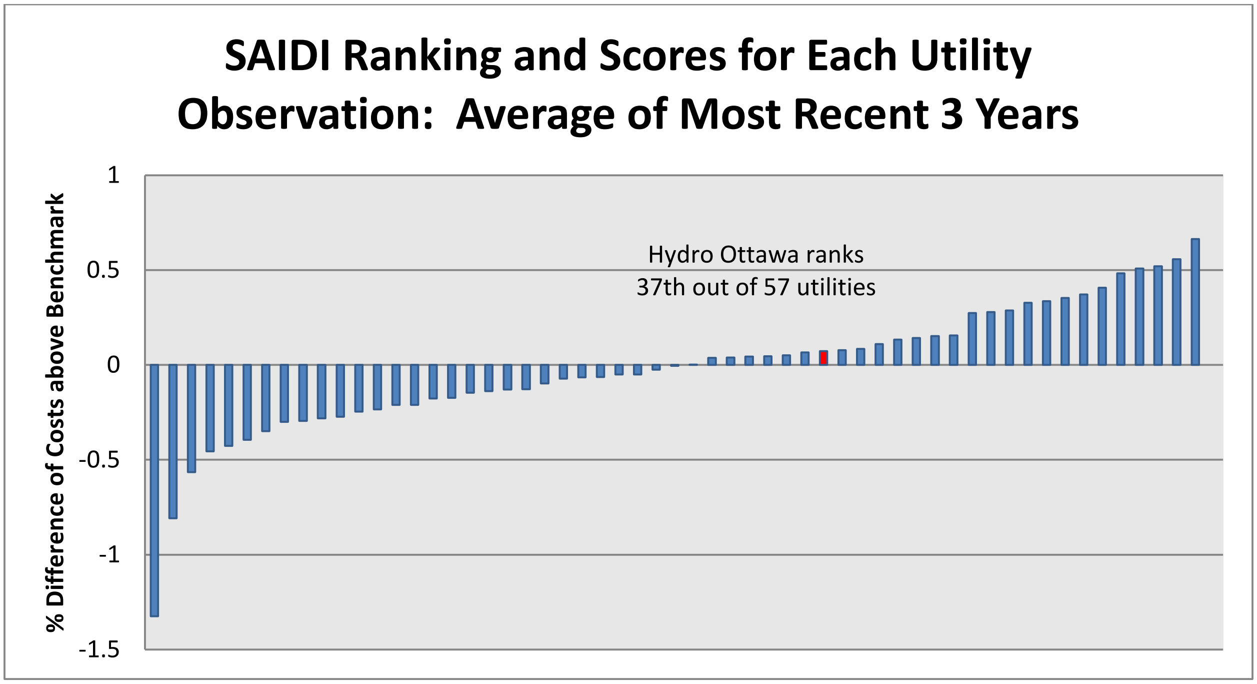


Figure 4-4 below illustrates Hydro Ottawa's 2012-2014 average SAIFI performance relative to the most recent 3-year scores for the rest of the sample. The company ranks 49th out of the 57 utilities, with its three year average SAIFI score of 25.7 percent above its benchmark value.

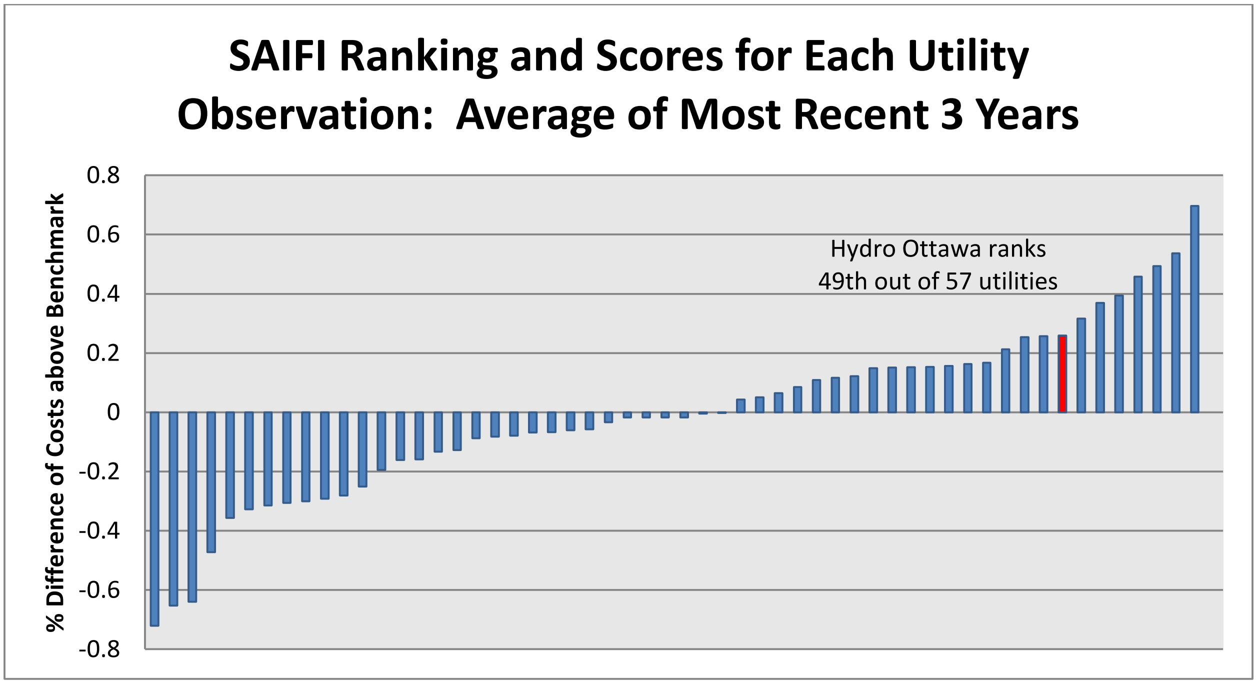
**Figure 4-4 SAIFI Econometric Ranking and Scores**

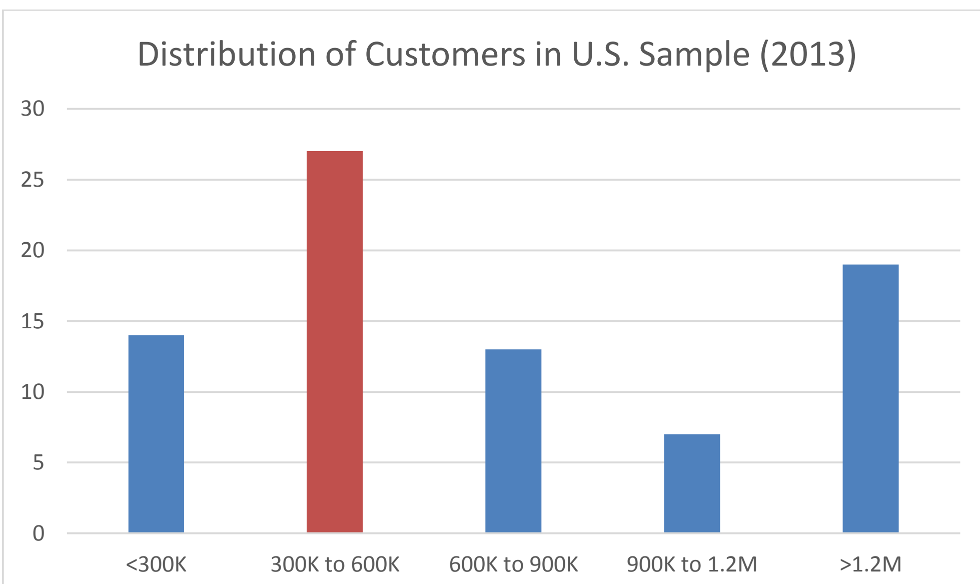


# 5 Importance of U.S. Data for Benchmarking Hydro Ottawa

The benchmarking exercise evaluates utility performance relative to a given sample, which produces a benchmark value for each utility in the sample. The benchmark value is generated using the specific utility's independent variable values; each utility's benchmark reflects what would be an average efficiency for that utility, relative to the sample. Thus, Hydro Ottawa's benchmark values represent the values we would expect from a hypothetical average utility with Hydro Ottawa's specific circumstances and service territory. If the average efficiency embodied in the benchmark value is generated using firms that are very dissimilar than the utility being benchmarked (i.e., the benchmarked utility is an outlier), then its performance evaluation has a high chance of being inaccurate.

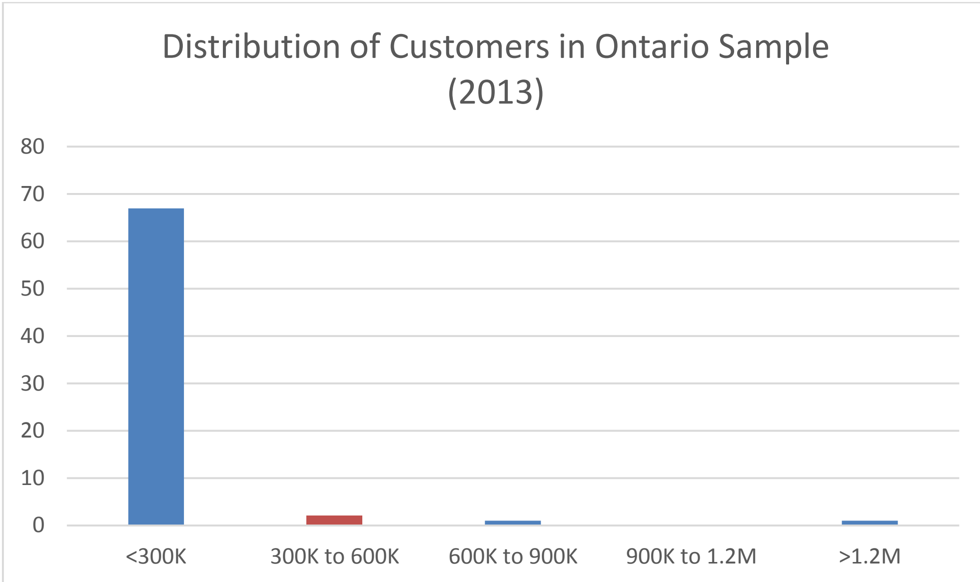
The number of customers served is the dominant output for electric distribution. The figure below displays the distribution of the number of customers per utility, within the sample used for this study. Hydro Ottawa's customer count grouping is indicated in red (i.e. 27 utilities in the sample, including Hydro Ottawa, had between 300,000 and 600,000 customers). Hydro Ottawa has a fair number of utilities that are both smaller and larger than the company within the U.S. sample—i.e., it is not an outlier in the U.S. sample with respect to number of customers.

**Figure 5-1 Distribution of Utilities in the U.S. Cost Sample, by Number of Customers (including Hydro Ottawa)**



Conversely, an Ontario-only sample of distributors does not adequately encompass the size of Hydro Ottawa. The figure below illustrates the outlier status of Hydro Ottawa, with only Hydro One Networks, Toronto Hydro, and Powerstream larger than Hydro Ottawa in terms of the number of customers. Of those three, only Powerstream is within the same grouping as Hydro Ottawa.

**Figure 5-2 Distribution of Utilities in the Ontario Cost Sample, by Number of Customers**



Based on the previous figures, we can conclude that an attempt to benchmark Hydro Ottawa's cost performance against only Ontario utilities is unlikely to produce a fair assessment. The model used to generate such a benchmark will embody performance based on utilities whose scale of operation are unlike Hydro Ottawa's.

The estimation procedure is designed to fit the data through the mean of model variables. As a result, parameter estimates are most accurate for those utilities with operating conditions that vary within a reasonable range of the mean of model variables. The further a utility's operating conditions are from the mean, especially if there are minimal sample observations nearby, the less accurate the cost benchmark based on the model.

# 6 Final Remarks

This report develops a framework for evaluating Hydro Ottawa's 2016-2020 Custom IR application. The parameters of this framework are set by considering three important questions: (1) What is Hydro Ottawa's historical total electric distribution cost performance? (2) What is the company's historical reliability performance? and (3) Are the proposed spending levels during the Custom IR period reasonable from a benchmarking perspective and what stretch factor do the proposed spending levels indicate?

**Question 1: What is Hydro Ottawa's historical total electric distribution cost performance?**

Hydro Ottawa's historical total cost performance reflects statistically significant superior performance at a 90% confidence level. Hydro Ottawa's 2011-2013 performance score is 37.1% below its benchmark. This value implies a 0.0% stretch factor based on the 4$^{th}$ Generation IR stretch factor criteria. Out of the 78 utilities in the cost sample, Hydro Ottawa ranks fourth.

**Question 2: What is the company's historical reliability performance?**

Hydro Ottawa's average 2012-2014 SAIDI indexes have been 7.2% above benchmark expectations. This is not a statistically significant difference. Hydro Ottawa's average 2012-2014 SAIFI indexes have been 25.7% above benchmark expectations. This is not a statistically significant difference at a 90% confidence level, but is significant at an 85% level.

**Question 3: Are the proposed spending levels during the Custom IR period reasonable from a benchmarking perspective and what stretch factor do the proposed spending levels indicate?**

The Hydro Ottawa Custom IR spending projections still indicate a strong total cost performance benchmark outcome. In the 2016 test year, Hydro Ottawa's total cost performance is 18.2% below the benchmark. By 2020, the projections indicate total cost performance will be 13.9% below the benchmark. Hydro Ottawa's Custom IR total cost performance remains statistically superior at the 90% confidence level. These results indicate a stretch factor of 0.15% based on the 4$^{th}$ Generation IR stretch factor criteria.

## About PSE's Economics and Market Research Group

Founded in 1974, PSE is a full-service consulting firm. PSE's benchmarking experience includes research for regulatory purposes and utility management improvement. Our benchmarking team consists of economists, planning and design engineers, rate and financial analysts, communications infrastructure consultants, and smart grid technology experts. In addition to our statistical benchmarking research, PSE's Economics and Market Research group has expertise in the areas of demand response, energy efficiency, value-based reliability planning, T&D merger valuations, load forecasting, load research, survey design, alternative regulation, and cost of service studies. For more information on PSE and a full list of services, visit our website at www.powersystem.org.

# About the Authors

### Steven A. Fenrick, Leader – Economics & Market Research

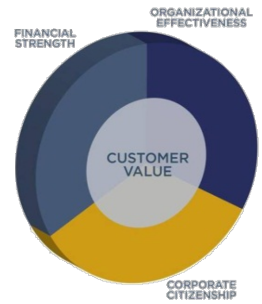
Mr. Fenrick has fourteen years of consulting experience in the evaluation of utility cost and reliability efficiency. He leads PSE's Economics and Market Research group which conducts research for the utility industry in the areas of benchmarking and productivity analysis, alternative regulation, demand response and energy efficiency, load forecasting, survey design, and market research. He has provided expert witness testimony on performance benchmarking, presented to Board of Directors at utilities, authored numerous reports, and has published papers in peer-reviewed journals. Mr. Fenrick has evaluated performance relating to electric and gas distribution, power transmission, power plant performance, and water distribution. These evaluations have been conducted for utilities, regulatory agencies, and consumer advocates. Mr. Fenrick earned a BS in Economics (Mathematical Emphasis) and a Master's in Applied Economics, both from the University of Wisconsin-Madison.

### Lullit Getachew, Senior Economist

Dr. Getachew has experience in conducting research and analysis in support of benchmarking projects for energy utilities. She has written a number of academic journal articles on benchmarking and performance evaluation. She has also prepared studies and reports for performance-based regulation of transmission and distribution energy businesses, undertaken total and operation cost benchmarking, prepared reports for rate settlements, and marketed flexibility in rate designs. Dr. Getachew earned her PhD in Economics at Rice University, her Master's in Law and Diplomacy at the Fletcher School at Tufts University, and her BA *magna cum laude* from Mount Holyoke College.

# CUSTOMER SERVICE STRATEGY (2016 – 2020)

## 1.0 BACKGROUND - CUSTOMER VALUE AND INNOVATION



At Hydro Ottawa, customer value is at the core of our corporate strategic plan[1]. Hydro Ottawa is committed to delivering value across the entire customer experience by providing reliable, responsive and innovative services at competitive rates.

Hydro Ottawa has been on a Customer Service improvement journey since 2004. Over the past number of years, many initiatives have been put in place and significant progress has been made. These improvements have had a positive impact in a number of areas including achieving Customer Satisfaction levels averaging 87 percent over ten years, as compared to a 76 percent Customer Satisfaction level in 2004; increasing First Call Resolution to an average of 82 percent, as compared to 74 percent in 2007; a 40 percent customer uptake of MyHydroLink (Hydro Ottawa's customer web portal) and a 28 percent adoption rate of Electronic Billing, as of March 31, 2015, to name, but, a few.

Concurrently, Hydro Ottawa has experienced a significant drop in customer complaints and calls, per customer, to the call centre, averaging 1.22 calls per customer in 2005 to an average of 1.03 calls per customer in 2014. During this period, the customer base increased by approximately 40,975 accounts, while call centre volumes reduced by approximately 9,078 calls.

Hydro Ottawa's customer service initiatives have also been recognized within the industry and by customers, alike. For example the:

---

[1] Corporate Strategic Plan, 2013 Annual Report, Hydro Ottawa Holding Incorporated, Pg. 6

- 2010 – Chartwell Best Practices Award Communications, EDA – Customer Service Award Finalist – Outage Communications project
- 2011 – EDA Customer Services Excellence Award – Customer Self Service
- 2012 – Chartwell – Customer Services Best Practices Award – Runner Up – Customer Self Service
- 2014 – EDA Communications Excellence Award – Go Paperless Campaign, BOMA – Pinnacle – Customer Service, Chartwell Best Practices Award Ebilling – Customer Service

In 2010, Hydro Ottawa introduced a Customer Service strategy[2]. This strategy initially focused on four areas: Complaint Management, Service Standards, Accuracy and Completeness and Quality. A fifth focus area was subsequently added: Innovation.

By listening to our customers through annual customer satisfaction surveys and other forms of engagement, Hydro Ottawa has delivered innovative customer services such as a 2010 North American Best Practices award winning Outage Communications solution and additional customer self-serve MyHydroLink enhancements such as “Bill Comparison” and a customer account “Dashboard”.

In 2012 Hydro Ottawa introduced a Mobile service. This industry leading and award winning initiative allowed Hydro Ottawa’s customers to access their billing information through the best of our MyHydroLink web portal features, along with extensive Outage Communication information, all from a mobile device of their choice.

In 2011, Hydro Ottawa received a Chartwell award for Best Practices in Outage Communications. Building on Hydro Ottawa’s success, further automation and

[2] Customer Service Strategy, Presentation to Enterprise Executive Team, September 15, 2010

communication features were added, including web maps and Twitter updates. Hydro Ottawa continues to validate the outage communications system and has identified further areas for improvement. Hydro Ottawa has implemented efficiency initiatives and has developed business requirement specifications to improve both the customer experience and internal productivity regarding outage communications. For further details and examples, please refer to Exhibit D-1-4, Section 3.2, Customer Service.

In addition, Hydro Ottawa has implemented many other customer service improvement initiatives including:

1. **Customer Service training** - has been provided to all staff including our field workers. This has included the development and dissemination of "Let's talk electricity" booklets to all employees so that they have relevant company and industry facts at their fingertips.

2. **Customer Care & Billing** (CC&B) – Hydro Ottawa has converted from a de-standardized billing system (PeopleSoft CIS) to a leading utility billing solution (Oracle CC&B).

3. **Monthly Billing** – Hydro Ottawa has transitioned all customers to monthly billing from bi-monthly billing in response to Hydro Ottawa's customer preferences for a more frequent bill cycle and for operational efficiencies.

4. **Electronic Billing** – Hydro Ottawa's customers now have the choice of receiving their bills electronically to their device of choice in place of traditional paper bills. Over 89,991customers (28%) as of March 31, 2015 now receive their bills electronically.
5. **Payment Options** - Customers are offered a number of payment options including pay by cheque, bank auto-withdrawal, equal monthly payment, or pay by credit card.

6. **MyHydroLink Web Account Portal** - Customers can control their interface with Hydro Ottawa through MyHydroLink (MHL) - a 24/7 web-based customer preference electronic "dashboard". 126,469 customers (40%) as of March 31, 2015 have registered as MHL subscribers where they can select options such as:

   ***a) My Electricity Usage***
   - Where they can view their electricity consumption with a variety of viewing options i.e., Hourly, Daily, Weekly, Monthly, et cetera.
   - Download My Data – where they can export their data to print, PDF, Excel and Green Button formats for further analysis.

   ***b) Moving***
   - Moving in/moving out instructions can be provided to Hydro Ottawa 24/7 at the customer's convenience.

   ***c) Payment Methods***
   - Preauthorized Payment – where the customer can set up a preauthorized payment arrangement without the need to speak with an agent.
   - Credit Card – where the customer can set up a credit card payment without the need to speak with an agent.

   ***d) My Bill***
   - E-Billing – the customer has an option to view their bills and have them electronically stored for up to two years.
   - Account History – where full billing and payment history is available.
   - Predict My Bill – where the customer has the option of receiving predictions of a future bill partway through the billing cycle. Predictions can be requested daily or weekly. This service can help to reduce "sticker shock" and promote conservation.

   ***e) My Profile***
   - Where customers can *add* and *remove* accounts conveniently.
   - Manage Profile – where the customer can manage their own account information, such as their mobile number, name prefix

(Mr., Mrs., Ms., Dr., et cetera), email and other social media contact information.

***f) My Account Summary***

- Account Summary – provides a convenient "at a glance" view of customer-selected account information.
- Bill Comparison – enables the comparison of a customer bill to their other Hydro Ottawa bills identifying variables such as consumption, rates, bill dates, weather, et cetera.
- View Multiple Accounts – enables customer to conveniently search for all associated accounts from one location.

**g)** ***Account Alerts including***:

- **Bill Alert** – an electronic alert requested by the customer when the customer-set threshold has been exceeded during the billing period. For example, if a customer sets a threshold to be alerted when the amount owing within a bill period reaches $50, the customer shall be notified automatically.
- **Consumption Alert** – an electronic alert is sent to a customer when the customer-set threshold has been exceeded during the billing period. For example, if a customer sets a threshold to be alerted when the consumption within a bill period reaches 600 kWhs, the customer shall be notified automatically.
- **Peak Consumption Alert** - an electronic alert is sent to a customer when the customer-set threshold has been passed within a given billing period. For example, if a customer sets a threshold to be alerted when the peak consumption within a bill period reaches 20%, the customer shall be notified automatically.
- **Payment Reminder Alert** – When chosen by the customer, an electronic alert shall be sent to a customer the day before their bill is due.

7. **Customer Value Performance Metrics** – Hydro Ottawa has developed an extensive list of measures, metrics and targets that report progress against historic trends, with circulation to Executive Management and our Board of Directors.

8. **Operational Notifications** – Hydro Ottawa has undertaken improvements to proactively notify customers regarding tree trimming requirements and planned outages.

9. **Website Improvements** – several navigational improvements have been made to Hydro Ottawa's web site and further enhancements are planned.

10. **Conservation and Demand Management** – many programs have been implemented with excellent results – both from a customer engagement and results perspective. Please refer to Exhibits A-3-1 and ?? for more details.

11. **Community Involvement** – Hydro Ottawa has been actively involved as active volunteers and contributors to United Way Ottawa and Christie Lake Kids, among other charitable activities

12. **Industry Involvement** – Hydro Ottawa is an active member within the Ontario electricity industry, as a participating member of the Coalition of Large Distributors and the Electricity Distributors Association. In Canada, Hydro Ottawa holds leadership positions within the Canadian Electricity Association (Chair of the CEA Customer Council, Chair of the CEA Distribution Council). In North America, Hydro Ottawa is an active participant and speaker within high profile industry organizations such as CS Week and Chartwell. Through these activities Hydro Ottawa learns and shares best practices so that Hydro Ottawa may continue to be on the leading edge of providing innovative customer services.

## 2.0 TRANSITIONING FROM CUSTOMER SERVICE TO CUSTOMER EXPERIENCE

With many customer service improvements implemented, in 2012-2013 Hydro Ottawa returned to basics – asking its customers what they would like to see Hydro Ottawa doing. Hydro Ottawa conducted market research and subsequently developed Hydro Ottawa's customer "personas" to help guide future Customer Service priorities.[3] Customer personas have enhanced Hydro Ottawa's understanding its customer diversity and segments so that their respective needs can be more effectively addressed in future customer service offerings.

Although Hydro Ottawa has been recognized as a Customer Service industry leader, Hydro Ottawa recognizes the need to continually monitor, anticipate and plan for the future. Hydro Ottawa's customers want more. Their expectations are high and will only get higher with forecasted price increases. The customer landscape is changing – customers are more mobile than ever, technology and choice continues to rapidly evolve and social media has become a core fabric in our market. Hydro Ottawa must respond by providing customers with innovative, leading-edge services that continue to meet their evolving needs and expectations.

Concurrently, Hydro Ottawa is focused on empowering every employee to act as an ambassador on behalf of the company in order to deliver "best-in-class" service to customers.

[3] The Customer Persona Research Program, Presentation by the Strategic Counsel, May 2013.

## 3.0 CUSTOMER EXPERIENCE VISION 2020

Based on input from Hydro Ottawa's customers garnered through the development of the customer personas, market research, customer satisfaction surveys and the Customer Service Strategic Plan, Hydro Ottawa developed a Customer Experience Strategy in Q4 2013 which was anchored by Hydro Ottawa's Customer Experience Vision and applied to the entire company.

**Hydro Ottawa's Customer Experience Vision is to be:**

- **Easy to do business with**
- **Caring**
- **Efficient**
- **Knowledgeable**

Supporting this Customer Experience vision, Hydro Ottawa has adopted Guiding Principles for Customer Service to address customers stated desire that Hydro Ottawa be Competent, Dependable, Understanding, Good Communicators, Accessible and Responsive.

In response to customer feedback, Hydro Ottawa has transitioned from a "**Customer Service**" to a "**Customer Experience**" focus. Customer Service initiatives typically address transactional items such as: how quickly a telephone is answered, how long an issue took to resolve, et cetera. Customer Experience initiatives take an overall view of how the customer is "feeling" related to the entire experience with the utility, including the transactional elements generally associated with Customer Service.

Some programs already implemented or in progress include Hydro Ottawa's transition to monthly (versus bi-monthly) billing, programs to transition customers to electronic billing, a Strategic Account Management Program and recommendations related to improving Hydro Ottawa's relationships with Developers and Contractors.

## 4.0 THE CUSTOMER EXPERIENCE IN 2020

By the year 2020, Hydro Ottawa's customer experience will be driven by choice – our customer's choice. Customers will be given options to allow them to be in control and to interact with Hydro Ottawa how and when they want. Customers will see Hydro Ottawa as an organization that is easy to do business with. Hydro Ottawa will be an organization that is customer centric in nature

A key to delivering this experience is transitioning from treating all customers in the same way to serving customers when, where and how they wish to interact with us.

In addition to the many steps, programs, tools and services already in place as outlined previously, by 2020 Hydro Ottawa's customers will:

1. Receive a **simpler, redesigned bill that is easier to understand and unilingual** in their language of choice (English or French)

2. Receive **video messages as a part of their electronic bill** to help keep them up to date on relevant news and information

3. Have the **option of automatically receiving Outage Communication Alerts** to notify them of power outages. They will have the choice of how they wish to be contacted, in the event of a planned or unplanned power outage with relevant information including outage location, estimated time of restoration, crew status, et cetera. Contact options will include email, text and telephone (including times not to call, if selected)

4. Be able to **compare their consumption to other customers** if they wish

5. Have **access to an Energy Calculator** which will allow them to further understand the impact of various end use devices in their home on consumption and pricing

6. For those customers that have adopted a Micro FIT installation – **information to show how Micro FIT energy production is progressing**

7. For Commercial Customers – have **online access to elements used in the calculation of their bills such as Demand, kVA and Power Factor readings**

8. **When contacting our call centre, receive a robust multi-channel experience.** Our call centre will be upgraded to handle the customer's choice of access including; phone, email, text, chat, fax, social media, agent routing and interactive voice response. These upgrades will enable our customers to experience the following benefits:
    - **a.** Quicker access to agents, and where necessary, to subject matter experts;
    - **b.** The option of receiving a call back instead of waiting in a call queue;
    - **c.** Automated access without the need to speak with an agent for common inquiries, such as account balance, due dates, et cetera;
    - **d.** Receive automated reminders (appointments, payment, et cetera).

9. **For Large Key Accounts, experience Hydro Ottawa transitioning from the historic "reactive" mode to a "proactive" account management approach,** with personal attention along with specific account services including enhanced bill service offerings

10. **Encounter an upgraded web experience that will** allow a smooth and seamless interface, including sophisticated search engine technology to enable quick access to desired information

## 5.0 ACHIEVING HYDRO OTTAWA'S CUSTOMER EXPERIENCE VISION 2020

To achieve Hydro Ottawa's 2020 Customer Experience Vision between the years 2016 - 2020, Hydro Ottawa will invest in selected technologies and processes building upon the foundational steps taken in 2014 and 2015, as outlined below.

**Table 1 – Achieving Hydro Ottawa's Customer Experience Vision**

| Customer Experience Category | Solution | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 |
|---|---|---|---|---|---|---|---|---|
| **Technologies** | 1) CC&B and Monthly Billing | | | | | | | |
| | 2) CC&B Enhancements | | | | | | | |
| | 3) Outage Communications System Upgrade | | | | | | | |

| | 6) Phase 2 | | | | | | | |

| |
|---|
| Implementation |
| Planning & Support |

### 5.1 Technologies

1. **Customer Care & Billing (CC&B) and Monthly Billing** – Hydro Ottawa has converted from a de-standardized billing system (PeopleSoft CIS) to a leading utility billing solutions (Oracle CC&B). All customers were transitioned in March, 2014 in response to our customer's preference for a more frequent bill cycle and for operational efficiencies.

2. **CC&B Enhancements** – Hydro Ottawa will continue developing opportunities to further enhance the base CC&B system to ensure that processes continue to meet regulatory requirements and customer's needs (i.e., Landlord Agreement functionality and a number of features to assist with bad debt management, et cetera.)

3. **Outage Communications System** – Hydro Ottawa will upgrade the existing outage communications system to eliminate potential points of failure, while providing premise-based outage reporting (behind a customer preference dashboard) to deliver the information to the customer through their choice of communications medium (i.e., phone, email, text).

4. **MyHydroLink Development and Support** – Hydro Ottawa will continue to support the popular web portal offering and will further enhance this service through further improvements such as:
    - **a)** A "Face lift" (refresh) of the MHL site;
    - **b)** Community Compare – Social bench marking, targeting and monitoring which would also be implemented on the mobile site;
    - **c)** Basic Energy Calculator;
    - **d)** Micro Fit information for customers who are generating electricity;
    - **e)** Administrative functionality;
    - **f)** Expanded usage information for all commercial customers such as Demand, KVA and Power Factor readings.

5. **Oracle Customer Self-Service (CSS)** – this capability will allow automation of customer web-initiated move ins/outs and account set-up through CC&B without the need to re-key data which will result in productivity gains.

6. **Customer Relationship Management System (CRM)** – provides robust information regarding the customer beyond their billing and payment status. This would be a specific system tailored for Key Account Customers.

7. **Avaya CC6** – A robust, multi-channel customer experience portal that manages phone calls, email, chat, fax, social media, agent routing, Interactive Voice Response (IVR), reporting and analysis. Features include:
   a. **Workforce Optimization** – Automated routing and reporting of assigned work to staff.
   b. **Multi-Media** – Expanding in-bound media options to include Short Message Service ("SMS"), Text, Web Chat and Email. This functionality provides the ability to intelligently route and report on various channels allowing customers to communicate with Hydro Ottawa when and how they wish to do so.
   c. **Experience Portal** – Enhancing IVR technology to offer such services as account balance, due dates, et cetera, through technology, thereby reducing call centre agent volumes.
   d. **Rescripting MPS 500** – providing a more streamlined IVR experience.
   e. **Proactive Outreach Manager** – A market leading application to create and manage agent based and automated voice, email, SMS text campaigns and notifications. This feature enables agent-free personalized contacts using any available media type to provide reminders or regular information updates such as account status, confirmation that a customer is home for an installation appointment, appointment rescheduling, payments, fraud notifications, et cetera.
   f. **Proactive Outreach for Payment** – Utilizing technology to automate the collections process.

g. **Callback Assist** – Offering callers in queue the option of a callback instead of continuing to wait in queue.
h. **Customer Survey** – The provision of automated customer surveys.

## 5.2 Processes

1. **Strategic Account Management Program** – a program to transition from a current reactive account management approach to a proactive account management approach.

2. **Promoting "Go Paperless"** – to continually drive postage and paper billing costs down

3. **Bill Redesign & Unilingual Bills** – to address Hydro Ottawa's customers desire to simplify their bills through an easier to understand bill, in the language of their choice (English or French).

Fax 416 975-1883

# The Customer Persona Research Program: Objectives and Components

- Who are our customers?
- How do they segment?
  - What proportion do they comprise of our total customer base?
  - What are the key trends affecting each segment?
  - How are they growing/shrinking?
- How do they want to interact with Hydro Ottawa?
  - How can we engage them? Do they want to be engaged?
  - What information and/or tools do they need?
  - What are their preferred modes of communication?
- What messages resonate with them?
  - How do we enhance reputation and trust?

**A combined qualitative/quantitative approach was taken**

## Recap of the Research Program

Sept. 2012

Survey of 2000 residential customers

Survey of 500 small/medium-sized business customers

One-on-one interviews with key accounts (20)

Focus groups with residential customers (7 segments/14 groups)

Focus groups with contractors and developers (1 with each)

Focus groups with small/medium-sized business customers (6 segments/12 groups)*

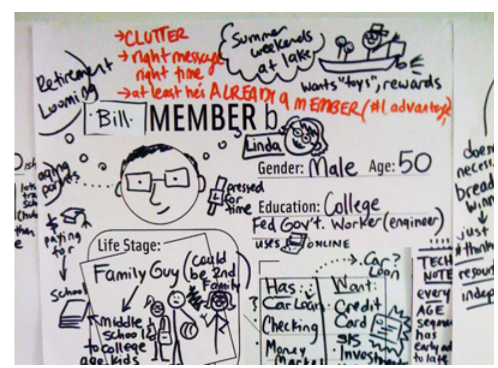
Feb. 2013

*Note: 2 additional 'make-up' groups were conducted among two segments for which attendance at the original groups was poor.

# How The Residential and Business Customer Personas Were Developed

- The results of the surveys of residential and small/medium-sized business customers were the basis for the initial segmentation. Segments were created based on:
  - Demographic/Firmagraphic data;
  - Lifestyle, general attitudes and characteristics;
  - Technology adoption;
  - Views of Hydro Ottawa;
  - Cost/bill sensitivity; and
  - Attitudes toward and interest in environment/energy conservation.

- Once the segments were determined, focus groups were conducted with participants who met the criteria (a simulator was developed to screen potential participants). These groups:
  - Developed our understanding of customers' attitudes and behaviours;
  - Explored how, if at all, Hydro Ottawa could connect/engage with these customers (wants, needs); and
  - Helped us to put context, language and personality to the segments.



# Labelling The Segments as *Primary* or *Secondary* Targets

- The segments/personas are identified as either *Primary* or *Secondary* targets based on the following:
  - Level of trust in Hydro Ottawa
  - Willingness to engage
  - Openness to information and communications
  - Extent to which they view Hydro Ottawa as credible source for information
  - Potential for Hydro Ottawa to shape future behaviours:
    - Interest in conservation
    - Interest in saving money
    - Stage-of-life/point of entry marketing
  - Trend data – how the segment might change (grow/shrink) over time

# Future Outlook: Key Trends Affecting Hydro Ottawa's Customer Base

Data for this section have been sourced from a number of organizations, including:

City of Ottawa

CMHC

TD Bank

Conference Board of Canada

# Demographic Trends

- **Ottawa's population is expected to grow faster than the average for Eastern Ontario.**
  - By 46.8%, from 910,000 in 2011 to over 1.3 million in 2036.

- **The most significant demographic force will be an aging population with fixed incomes and saddled with higher rates of debt.**
  - Proportion of seniors 65+ will rise from 12% to 20% by 2031, accounting for almost 50% of Ottawa's population growth. The very elderly (80+) will more than double. Over the next 20 years, the suburban and rural areas will experience more rapid aging than Ottawa's urban areas.
  - While Ottawa will continue to be slightly younger than the national average, the 25-34 age cohort is expected to continue to shrink as Baby-Boomers exit from this group.
  - Women currently outnumber men by a ratio of 107:100. This ratio is higher among seniors and will increase as the population ages.
  - The ratio of debt to disposable incomes is currently between 150%-165%, fuelled by consumer credit. While the aging population will have a moderating effect on this trend, it will be more than offset by increasing levels of debt carried by those born in later years.

- **Diversity will continue to be a predominant feature of Ottawa's population.**
  - Ottawa is a multi-ethnic city – 22% of the population are foreign-born, 156 ethnic groups speaking more than 70 languages are represented. Almost 30 per cent of Ottawa residents speak non-official languages: the top five being Chinese, Arabic, Italian, Spanish and German.
  - By 2031, nearly all of Ottawa's population growth is expected to come from immigration as the city ages. Notably, recent immigrants are, on average, more educated than their previous counterparts.

# Construction and Development Trends

- **Housing starts are forecast to slow in 2013 and beyond.**
  - An aging population, with a desire to remain homeowners while also downsizing, will fuel demand for condominium apartments.
  - Younger age cohorts, seeking greater affordability, are forecast to redirect their home ownership propensity toward multiple-unit dwellings.
  - Construction of new single-family homes will decline by over 20 per cent, while the number of new apartments will increase by 90 per cent. 2013 will mark the first period in 15 years where single-family housing starts are less than 2000 units. This level of starts, however, still constitutes 27 per cent of all new home starts in 2012. Multiple-unit dwellings comprise the other 73 per cent and of those, apartments make up the largest group at 2,800.

- **Construction activity is also down.**
  - Ottawa issued building permits worth $232 million in November 2012, down nearly 10 per cent from the previous year. The cooling in both residential and non-residential construction intentions is not unique to Ottawa, but a trend that is currently being witnessed across the province.
  - 2 major construction projects: redevelopment of Lansdowne Park ($300 million) and the Ottawa Light Rail system ($1.2 billion) with completion dates of 2014 and 2018, respectively.

# Customer Trends

- Rising customer expectations
- Social media as an early warning system – problem detection/resolution platform.  Unhappy customers have a platform to 'amplify' their anger or frustration
- Speed of service whether on the phone, web or at the service desk
- Customers are more resourceful and feel empowered – they determine if, when and where they engage with a brand – and they want to be respected
- Customers expect companies to anticipate needs and act as the information aggregator – they expect technologies to make experiences easier, instantaneous and intuitive
- Desire for self-service options
- Growth of video and mobile for customer service – creating more personalized customer experiences and opportunities to deepen the relationship
- Shifting of the relationship from transactional to 'trusted advisor'
- 'Greening' of customers – particularly among younger segments

PRIMARY

# Penny Pinched (19%)

"I don't think I could save any more money on Hydro than what I already do."

money is tight

family is dependent on me

own a home

single mom

living month to month

day-to-day life is stressful and busy

I have a lot of expenses

I try to save money wherever I can – look for discounts and use coupons.
Hydro is one of my largest household expenses, and I am doing as much as I can to reduce it.
I don't always have time to do things at night, so can't take full advantage of TOU rates.
I'm not sure what else I can do to lower my bill without spending money that I don't have.
I feel powerless when dealing with large companies – they should do more to make me feel that I'm important to them.

## Implications for HO Service

GROWING

Demonstrate customer empathy and, to the extent possible, flexibility

Empower these customers via self-serve and online solutions

### Relationship & Attitudes Toward HO

- I am more knowledgeable about Hydro Ottawa and the electricity sector than the average person
- Though I have adjusted to Time of Use rates, I don't like it

### Products and Services

- I would prefer a once monthly, or bi-weekly billing cycle
- You could move me to e-billing, for example, by, giving me $1 off each bill

### Communications & Messaging

- I want to be treated with respect and dignity
- You'll get my attention with contests, rewards, coupons and incentives

PRIMARY

# Greg Greene (19%)

"I do things according to what I believe, and I believe in taking action for the environment. I also like to know what's going on and to understand exactly how something works … I do a lot of research and have a lot of questions. I am open, analytical, fair and reasonable, but not impulsive."

**Stress-free lifestyle**

Up-to-speed on world events and the news

**financially secure**

work full-time

**middle age**

**not a lot of free time**

good life

**busy household**

Own a house in a wonderful neighbourhood

I am fairly comfortable with technology, but not obsessed with it.
I like to understand the big picture as well as the details.
When I make decisions, I research and weigh my various options. I am not impulsive.
I conserve energy wherever I can. I do not like waste.
I am prepared to pay more for things that are important to me – for example, I am more inclined than most to purchase electricity from Bullfrog Power – a small, but important action I can take to prevent climate change.

## Implications for HO Service

**GROWING**

at a moderate pace

A target for more information and education, especially about green options and HO's 'green' agenda

Possible positioning as a future 'premium' customer. Offer more choice and service bundles

Pilot new products

### Relationship & Attitudes Toward HO

- I am looking to Hydro Ottawa to be a trusted advisor
- I am loyal, but will consider switching to greener options
- I haven't joined Peaksaver because I don't want others controlling the thermostat

### Products and Services

- Green initiatives will appeal to me
- To catch my attention, ideas and innovation will have to make sense for the bigger picture, not just provide value for money

### Communications & Messaging

- When I call, I want to speak to someone who can answer my many questions
- Send me information by e-mail – I will follow any links to more information to get my many questions answered

# Sam Simplify (18%)

"I don't really think about Hydro, it's just part of our life. The fact that I don't think about them very much is probably a good thing. I don't want to be hearing from them all the time. If they do what they are supposed to do, and I am getting power, can afford it, and can understand the bill, that's all I want."

do not worry about finances

single

building my career

Worry about relationships

young professional

simple life

rent an apartment

I maintain connections with friends and family using technology and social media.
I am flooded with information and requests electronically.
I prefer that companies know as little as possible about me. When they have a good reason to collect information, I want to have the option of how the information will be used.
I don't think about hydro or the environment very much. My hydro bills are relatively low, so any efforts that I make to conserve make no difference on my bill.

## Implications for HO Service

DECLINING

These are your future homeowners

Possibility to shape their thinking and behaviour with appropriate messages and services

Affinity for technology, especially games, offers a potential route to connect

### Relationship & Attitudes Toward HO

- I just don't think about or know much about Hydro Ottawa, and that's OK with me
- I don't completely trust HO, perhaps because of the lack of transparency around the bill
- I pay fair value for Hydro

### Products and Services

- Anything you could offer to *simplify things* would be great
- I would be interested in loyalty programs, challenges, contests, and/or competitions
- YouTube videos are a good way to connect with me

### Communications & Messaging

- Help shape my future behaviours!
- I will only pay attention to quick, simple information – such as a tip beside the amount on the bill
- I prefer to contact HO online (chat) or by telephone (live person)
- I ignore the bill inserts – e-mail me

SECONDARY

# Salwa Swamped (14%)

"Hydro used to be one of the bills I didn't have to worry about. But now it just keeps on going up. It's like my son's eating habits."

care for aging parents

paying off debt

worry a lot about finances

sandwich generation

worry about son's health which isn't great

live with adult son in an apartment

I worry a lot about finances and money. I have some debt that I am trying to pay off, and worry about being laid off.
Technology is not a big part of my life.
I am not a pushy or an aggressive customer, but I would like to be treated with respect.
In regards to Hydro I am doing everything I can think of already to conserve, but if I can save a few more dollars with a new idea, that would be great.

## Implications for HO Service

GROWING

Treat with respect

Simplify interactions and solutions (one-step)

Take a 'low-tech' approach

Repeat conservation tips at regular intervals

### Relationship & Attitudes Toward HO

- I have a positive impression of HO, but their bills are increasing
- I monitor all expenditures closely, including Hydro
- I am not very aware of HO programs
- I am doing what I can to lower my bills

### Products and Services

- More frequent payment options.
- Give me tips on how to lower my bill quickly and cheaply
- Respect and help me
- Compensate me for moving to paperless bills and paying on time!
- Reward me for good behaviour!

### Communications & Messaging

- Take the opportunity to inform me if I call in
- I am overwhelmed, so sound bites please!
- I am unlikely to call HO, so they will need to pro-actively reach out to me
- I will tend to minimize a problem

SECONDARY

# Chris Critical (13%)

"I would pay attention if I wasn't used to it not being useful.  The whole debt retirement thing from previously poorly planned decisions --  if I have to assume responsibility for that then we do need to be more engaged, because clearly the people in charge have made massive mistakes."

average

actively read the news

work full-time

high school graduate

technology laggard

active in the community

Though I don't have nor want the latest and greatest technology.  I like the access to information it provides and am often Googling things to educate myself.
Good customer service involves educating me.  I want explanations.
With respect to hydro, I don't understand why we should be doing things to reduce our energy costs when the actual part of the bill that I control is negligible.
I find it outrageous that we are charged the debt retirement charge and the delivery fee.

## Implications for HO Service

STABLE

Education through earned media (dailies, talk radio)

Ongoing reputation management

Important to lay the foundation for and manage expectations around rate increases and/or capital investments

### Relationship & Attitudes Toward HO

- I feel that the bill is out of my control.  The largest % of the bill is fees, not my usage
- Most issues I have are more to do with the broader system than HO.
- I am willing to conserve, but I don't fully trust anything HO tells me

### Products and Services

- I'm not really interested in products and services

### Communications & Messaging

- I want to know more about HO and conservation, but I'm quite cynical about them, so I'm not sure I would listen to anything they say
- Use low cost ads and earned media to avoid my complaints about expensive advertising

SECONDARY

# Cy Burnett (9%)

"It's a travesty when companies don't provide choice. There should be a "I use very little of this service" option…a no frills option. Sometimes basic is best."

busy

Love technological gadgets

active social life

young

relationship-oriented

prize simplicity

My place is filled with the latest gadgets –iPhones, iPads, laptops, tvs, gaming system, computers, a server, etc.. I can't live without my smartphone in particular – it's my life in my hands.
I want companies to treat me as a partner.
I like customer service where the tone of the interaction is warm, where you can hear the smile
Satisfied with the Hydro service, but I don't know much about them.

## Implications for HO Service

GROWING

Authenticity

More choice/options

Personalized, but ensure privacy

Offer an avenue to feedback (this is the group that will move from active to participatory in terms of the customer relationship)

## Relationship & Attitudes Toward HO

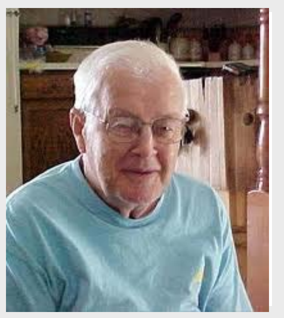
- HO is a trusted company
- I don't feel like I am paying too much–it's not a huge cost factor
- I favour conservation initiatives and clean energy
- HO needs to set the example "Walk the talk"

## Products and Services

- Apps, but I don't want to have to log-in or remember passwords
- Provide me with real time info
- Give me conservation tips beside the amount owed on the bill
- I prefer choice; opt-in approaches
- I worry about privacy of info

## Communications & Messaging

- I prefer a genuine tone, and dislike sales pitches
- I use live chat features on websites
- I prefer to be contacted by e-mail
- A combination of traditional and new media will reach me.
- Note: I only read headlines



SECONDARY

# Rick Frugal (17%)

"I want them to understand my needs. I want things presented in a simple fashion, reliability, reasonable rates and somebody who can deal with the problem."

**older kids help me with technology**

frugal

old-school values

**recently retired**

own a house

Conservation and being frugal is second nature to me, being brought up the way I was as a kid. I try to do as many chores as possible, such as the laundry, during the low-rate periods, and I have a clothesline in the basement so that I can avoid using the dryer.
I want customer service to feel like it does in a mom and pop business.
The best customer service remembers that I am environmentally conscious and dollar conscious.

## Implications for HO Service

GROWING

Very little adaptation required other than simplification to the bill – making it clearer, more legible and understandable

Attuned to messages about conservation and saving, but can only process limited number at a time

## Relationship & Attitudes Toward HO

- I am paying too much for hydro, even if I am actively conserving
- I don't understand the bill – It doesn't give me the information I need to further conserve
- It's my responsibility to conserve, but HO needs to educate me

## Products and Services

- I would be interested in getting an energy audit and learning more about green energy.
- I would love to be able to monitor conservation on a daily basis
- Give me simple tips on things I can do to impact the bill.

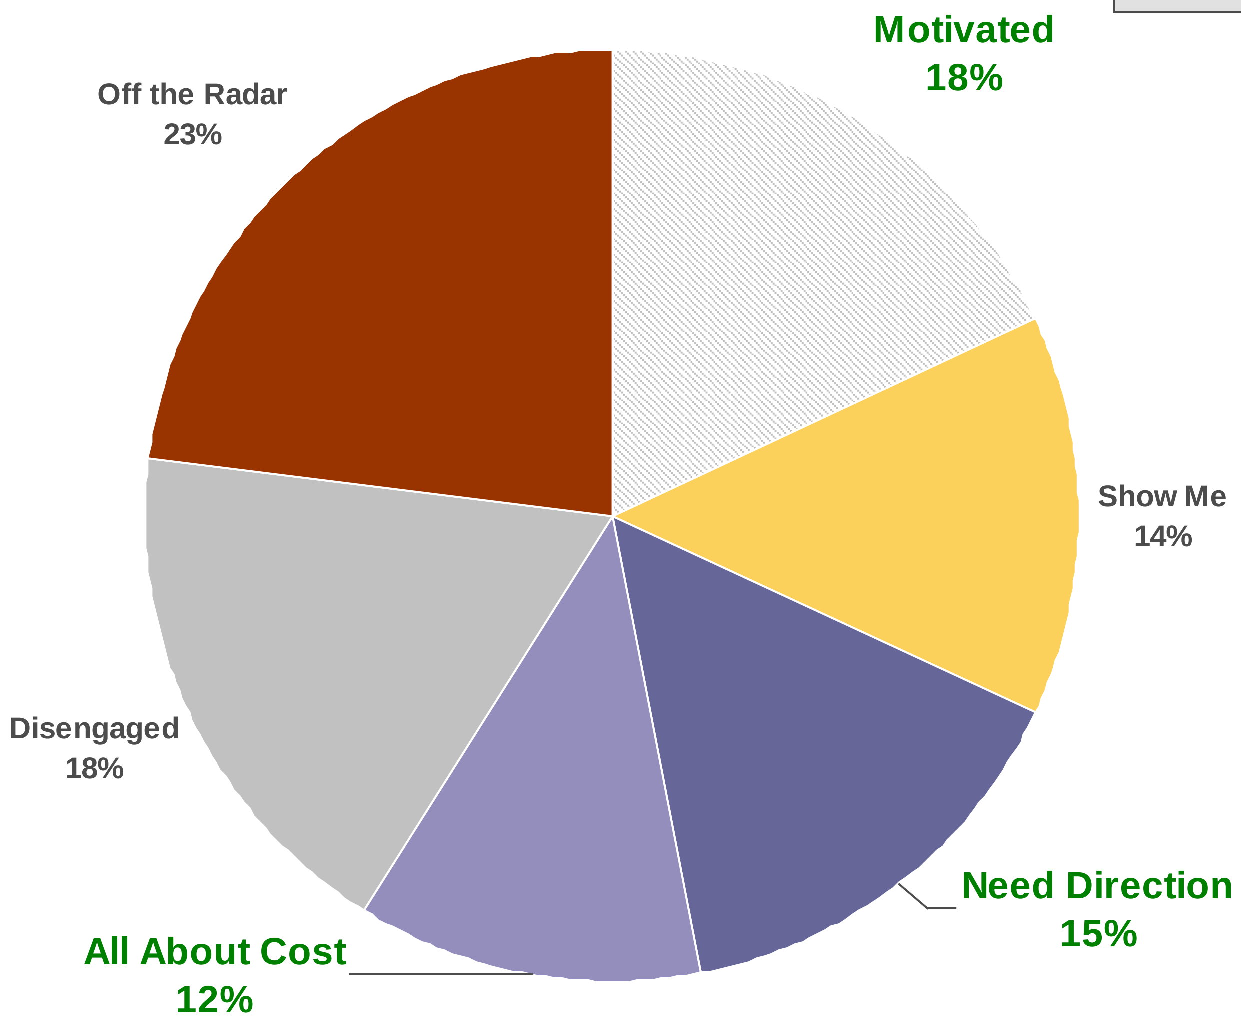
## Communications & Messaging

- My kids are major enablers – you can get me hooked through them.
- Give me tips via E-mail, person-to-person contact (e.g in a mall), calling me, or by placing them next to the amount on the bill.
- Make bill inserts more eye-catching

# The Business Personas

# Business Customer Segments

**Personas in green are those identified as *Primary* Hydro Ottawa Targets**



PRIMARY

# Motivated (18%)

"It's not only about getting the service, it's about creating a partnership…helping us do better.  Conserving is a huge priority for us. The meter is running as we speak."

serve long-term loyal customers

demanding of suppliers

large business

looking for cost-savings

constantly improving

We are always looking for cost-savings, especially since the recession hit us.
We use technology where we can to make us more efficient.  Likewise, if we can lower our costs by conserving energy, we are on board!
We are currently happy with the service we get from Hydro Ottawa in that it is very reliable. However, we would welcome a more engaged relationship with them.

## Implications for HO Service

STABLE

–

Higher demand on CSRs for dedicated SME service offering

Potential for closer integration of information systems between SMEs and HO

Key target for conservation programs

## Relationship & Attitudes Toward HO

- HO provides reliable service.  They are green, innovative and helpful.
- We are aware of HO programs and are actively using them
- We find the bill confusing
- The value for money offered by Hydro Ottawa services in unclear

## Products and Services

- Educate us!  We would love to use your advisory services
- Rewards, discounts, and loyalty programs are appealing to us
- Tailoring services to small businesses.
- Create customer profiles and use them to provide us with relevant energy-saving tips

## Communications & Messaging

- We want Hydro Ottawa to be more engaged with us
- We would contact Hydro Ottawa by phone or by using a Chat function
- Hydro Ottawa should contact us by text message or e-mail

PRIMARY

# Needs Direction (15%)

"They need to get to know us, but I'm not honestly sure what else I'd like them to be doing. I've already done everything I can to bring down my hydro costs."

established
passion
local
small business
long-lasting relationships
shrinking margins

The best suppliers that we work with are local…they have a passion that the big box stores don't. They are proactive, and take the time to get to know me and my staff.
Technology doesn't play a big part in our business.
Our margins are shrinking in this economy, so we are trying to decrease our expenses.
I've done everything I can think of to bring costs down on my utilities, but I don't think a lot about it any more.
If they could show us what else we could be doing, we would definitely listen.

## Implications for HO Service

GROWING

Combination of high-tech/low-tech approaches required

Relationship-oriented

Field rep visits would be well received (the personal touch)

Will take action on targeted, simplified advice + automated bill

## Relationship & Attitudes Toward HO

- We are happy with the service we are receiving from Hydro Ottawa
- I'm not sure how they could help us

## Products and Services

- I want to be recognized for being a good customer – make me feel important
- If Hydro Ottawa have ideas, they could pro-actively show us what else we can be doing to conserve

## Communications & Messaging

- I would like Hydro Ottawa to feel like a small, local supplier that listens
- I should call in and get the same person every time

PRIMARY

# All About Cost (12%)

“Utilities make you feel like you are non-existent.”

Very busy

long memory

in operation for a long time

low-tech

want to feel valued

We expect our suppliers to provide reliable service – if they don’t, it’s a problem.
We prefer face-to-face service.
We get poor service from the utilities. I want to feel valued by them.
ToU rates are a grab for money -- we have no choice but to use power during peak times
Hydro Ottawa are a monopoly, so they have no reason to work with us. But if they did offer suggestions on how to conserve, we would implement them.

## Implications for HO Service

STABLE

This group has the potential to damage HO brand

Interaction must look and be cost effective

Automated billing + occasional simple tips)

Benefit from yearly or bi-annual HO seminars

### Relationship & Attitudes Toward HO

- We see TOU as a grab for money
- We are not sure about the impact of retrofits
- We are frustrated over the bill and our inability to bring it down
- We understand the bill, but not the costs

### Products and Services

- You should connect with us as we are opening up our businesses and offer sector specific programs.

### Communications & Messaging

- Call us once a year to see if we have any problems.
- We don’t want a close relationship, but want to feel valued
- We need more hand-holding than most – we want the details, and to be able to meet in person if necessary

SECONDARY

# Disengaged (18%)

"The service I get from Hydro Ottawa is not stellar because I don't interact with them, and they're not at the bottom of the list because I don't interact with them so they don't piss me off. But I don't have a choice. I couldn't run my business without them."

Worry about collecting receivables

Internet is essential

**Professional firm**

constantly communicating with clients via e-mail

**revenues down**

Technology is important to my business. If the internet go down, it's a catastrophe.
Hydro is not a primary expense of our firm.
My bill went up when the smart meter went in. But, it's just the cost of doing business…it's like breathing. I still wish they could have different rates for businesses who can't divert their power usage to the off-hours
Short of Hydro Ottawa giving us lower rates, I'm not sure how I can bring my bill down.

## Implications for HO Service

STABLE

–

Customer service strategy should focus on 'drafting' this group via initiatives aimed at primary personas

Peaksaver program may be of interest (low requirement for engagement)

### Relationship & Attitudes Toward HO

- I don't know much about Hydro Ottawa or its services
- We don't question our hydro bills, as long as the cost stays consistent. Its an essential service
- Unless there is a problem, we prefer a hands off relationship with Hydro

### Products and Services

- We are unaware of programs we could participate in
- Energy audits would be helpful
- A dedicated business line would be greatly appreciated

### Communications & Messaging

- We are open to messages about conservation, but the challenge will be to get our attention
- Earned media or a formal letter with my name on it would work best. We don't pay attention to inserts. I may or may not look at e-mails

SECONDARY

# Off the Radar (23%)

"As a customer, you are provided with a lot of information, and you have to make sense of it. I'm not that knowledgeable about the whole thing. I have to get familiar with it just so I can operate properly. I would rather have someone come in…I am paying a lot of money on my bill, so why don't they take 15 minutes to sit down with me and give me some quick pointers."

lack time

shrinking margins

worry about costs

small

technology laggards

I worry about my costs, because I know that if they go up, I can't pass them on to my customers.
I'm not sure if we are getting good value for service from Hydro Ottawa. We do have reliable power, but the prices are going up and the company does not appear to be run well.
Happy with a hands-off relationship with Hydro Ottawa.
Only want a more engaged relationship if they're telling me how I can save money --I don't have time for much more.

## Implications for HO Service

GROWING

Same as for Disengaged

Customer service strategy should focus on 'drafting' this group via initiatives aimed at primary personas

Peaksaver program may be of interest (low requirement for engagement)

### Relationship & Attitudes Toward HO

- I don't really know much about Hydro Ottawa or its services.
- TOU has increased our bills
- Delivery and debt repayment charges upset me, as does the complexity of the bill

### Products and Services

- We would be interested in Conservation programs that would save us money
- Energy Audits would be helpful

### Communications & Messaging

- Hydro Ottawa will have a hard time getting our attention. I don't pay attention to the inserts
- I may look at e-mails, but it's not guaranteed

SECONDARY

# Show Me (14%)

"Seems like all the utilities have conservation programs…but when the amount we use goes way down, they jack rates up or add service fees so they can make money.  I feel like we are getting ripped off.  I would love it if they could come out to our location to talk to us and help bridge the red tape."

challenged to keep costs in check

technology is important

time pressures

large

Under expansion

We are in the process of upgrading our facilities, so I also worry about expanding our customer base to make it pay off.
Technology  allows all of us to be more accessible and efficient.
We feel electricity rates are cheap and delivery is reliable.
We don't like bureaucracy at Hydro Ottawa and the extra costs on the bills.
We would appreciate Hydro Ottawa to check-in every once in a while.  I would like to be heard, and to get feedback.

## Implications for HO Service

DECLINING

Some level of engagement will be important as a civic responsibility

Annual or bi-annual seminars, reaching out to include their 3rd party advisors (i.e., architects, engineers, accountants)

### Relationship & Attitudes Toward HO

- HO provides reliable service, but it's bureaucratic
- I try to conserve to bring down my bill, and then the fees go up, and new charges appear on the bill
- HO should be more pro-active in helping us conserve energy

### Products and Services

- Energy Audits would be helpful, as would webinars
- Provide consulting services on making new buildings more efficient
- Treat businesses differently than residential customers.  Give us special rates and a dedicated customer care team

### Communications & Messaging

- Tailor made for a case study approach to communications
- Examples of HO programs and services (by sector) is key to 'showing' this audience what can be done and the potential cost savings
- BOT, COC, professional associations as intermediaries

# Key Account Personas

# The Key Account experience is dependent on the extent of interaction with Hydro Ottawa's Key Account team.

- Those having **regular contact** with their Hydro Ottawa key account representative:
  - Find Hydro Ottawa to be responsive, supportive, helpful, a partner.
  - Hydro Ottawa is very engaged with their businesses, something that is greatly appreciated.

- Those having **little or no contact** with their Hydro Ottawa key account rep:
  - Are frustrated with the service and bureaucracy at Hydro Ottawa, in part because they are often calling the call centre when a need arises.
  - Often do not know who their account representative is or when they should be contacting that person (e.g. after a storm causes damage? To plan a retrofit?)
  - Would prefer a more engaged relationship, with Hydro Ottawa advising and educating them and their management teams on conservation, including retrofits.

- Conservation is an important priority for all Key Accounts, driven mostly by reducing costs.
- All are highly receptive to ideas and programs for reducing energy consumption.
- Capital costs are the largest barrier to conservation; incentive programs are valued.

# Contractor and Developer Personas

# Contractors

"The way to do business with Hydro Ottawa is to find someone on the inside to help you get something done.  The official route is not working for us.  I don't have any of the official numbers on my phone."

"They need to know that we are getting pressure from our clients.  We can't be responsive to our owners…..there's only so many times that we can tell them that we're trying."

| What works well | Suggested Improvements to Products and Services | Suggested Improvements to Pricing and Communications |

# Recommendations

# Common Themes And Issues

- A number of recommendations would address issues that affect all residential and business customer segments, including:
  - Taking steps to build the brand and reputation of Hydro Ottawa, putting a personality/face to the company
  - Employing earned media to positively profile Hydro Ottawa, correct misconceptions, educate customers and other stakeholders, and counteract negative impressions of the industry
  - Using prime real estate on the website to support the brand and deliver key messages regarding tools and programs such as MyHydroLink, PeakSaver+, energy savings tips and Hydro Ottawa success stories
  - Continuing the work currently underway to improve First Call Resolution (FCR) across all contact points
  - Developing a Customer Relationship Management strategy to maximize opportunities for exchange of information with customers each time there is a contact (i.e., capturing e-mail address, type of dwelling, etc. and relaying important/relevant Hydro Ottawa messages).
  - Simplify the bill

- For small and medium-sized business segments:
  - Creating a dedicated small business CSR team

# Residential Customer Segments

- Other recommendations speak to certain personas more than others.

| | PRIMARY TARGETS | | | OTHERS | | | |
|---|---|---|---|---|---|---|---|

Now What?

# How Do We Action the Personas Across the Organization?

- Not all parts of the organization will immediately see the relevance of the personas to their ongoing responsibilities and tasks. Ideally, they will become internalized across the organization over time and as they become more regularly deployed.

- **Creating Customer Empathy:**
  - Fundamentally, the personas are a tool to assist Hydro Ottawa in educating all staff about customers – who they are, what's important to them, what their issues and 'hot buttons' are – and building a stronger sense of empathy and understanding.
  - This is key to moving toward becoming a customer-centric organization.

- **Acting as a Filter in the Design of New Products, Services and Programs:**
  - Helps the design teams have a shared understanding of the real users in terms of their goals, capabilities, desires, limitations and contexts.
  - By asking "Would Salwa Swamped use this?" or "How would Penny Pinched react to this tool?" teams can stay focused on designing for the end user

- **Helping to Prioritize Projects and Investments:**
  - Based on an understanding of primary versus secondary target segments, proposed projects can be prioritized according to how well they address their needs and wants.

# Final Words

# Review:  The Research Program Objectives

- Who are our customers?
- How do they segment?
  - What proportion do they comprise of our total customer base?
  - What are the key trends affecting each segment?
  - How are they growing/shrinking?
- How do they want to interact with Hydro Ottawa?
  - How can we engage them?  Do they want to be engaged?
  - What information and/or tools do they need?
  - What are their preferred modes of communication?
- What messages resonate with them?
  - How do we enhance reputation and trust?

# WORKFORCE PLANNING STRATEGY

## 1.0 INTRODUCTION

This schedule describes Hydro Ottawa's workforce planning challenges and discusses the measures being taken by Hydro Ottawa to address these challenges. The workforce planning challenges discussed in this schedule stem largely from shifting workforce demographics resulting from an aging workforce and the need to attract and retain skilled workers to fulfill Hydro Ottawa's corporate priorities including its obligation to safely and reliably deliver electricity to Ottawa residences and businesses.

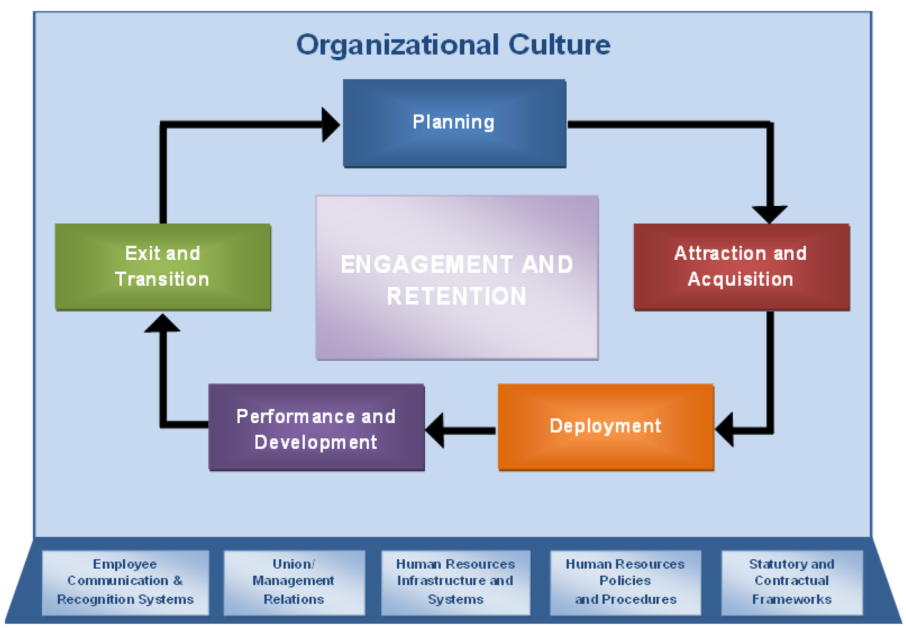
In its 2012 Cost of Service Application (EB 2011-0054), Hydro Ottawa outlined to the Ontario Energy Board ("OEB") the shifting demographics associated with an aging workforce, and the resulting need to attract and hire additional trades apprentices to off-set expected retirements – an essential requirement to continue enabling asset renewal and reliability programs through a sustained and prepared workforce. Hydro Ottawa further outlined the need to strategically build on its existing workforce by supplementing key support functions with additional resources and expertise to strengthen its capacity to deliver on business priorities tied to operational delivery, compliance and sustainability.

Anticipating and adopting proactive strategies to bridge talent supply gaps is crucial to ensuring a prepared and sustained workforce. Hydro Ottawa depends on a highly skilled, properly trained and knowledgeable workforce to maintain and enhance the reliability of the electricity distribution system, to execute its comprehensive asset management plan, and attend to increasing legislative and regulatory requirements all while addressing customer growth and an evolving customer relationship. Hydro Ottawa's 2016-2020 workforce planning is accordingly guided by current and probable requirements to address the known challenges arising from an aging workforce and infrastructure renewal, as well as the anticipated challenges arising from technological innovations and an ever-changing business landscape. In what follows, Hydro Ottawa addresses the measures it has implemented to proactively plan for these challenges.

## 2.0 TALENT MANAGEMENT FRAMEWORK

Hydro Ottawa has leveraged workforce planning, integrated within its Talent Management Framework, to enable business execution into the future and to mitigate the ongoing risk of an insufficient talent pipeline of skilled, prepared and knowledgeable workers. The Talent Management Framework (illustrated in Figure 1 below) provides a comprehensive and integrated human resources management model upon which priorities and initiatives are aligned. The Talent Management Framework centres around five key components of the employee experience in order to build performance and realize potential throughout the talent lifecycle: planning, attraction and acquisition, deployment, performance and development, and exit and transition. The Talent Management Framework is supported by systems that act as a strong foundation of enabling mechanisms.

**Figure 1 – Talent Management Framework**



Priorities and initiatives under the Talent Management Framework are informed through strategic workforce planning, which assesses changes in workforce demographics and environmental conditions, and responds with talent management approaches. The aim is to ensure operational capacity and continuity by supplying the right talent with the right skills, within the right structure, at the right time. The need to drive innovation and increase productivity has also been integrated into how Hydro Ottawa approaches workforce planning. To this end, workforce planning plays a role in containing costs, creating efficiencies, and in generating added value for our customers. Hydro Ottawa has focused its workforce planning into three areas as follows:

- Workforce Demographics
- Workforce Modeling
- Talent Strategies to Sustain and Prepare the Workforce

## 3.0 WORKFORCE DEMOGRAPHICS

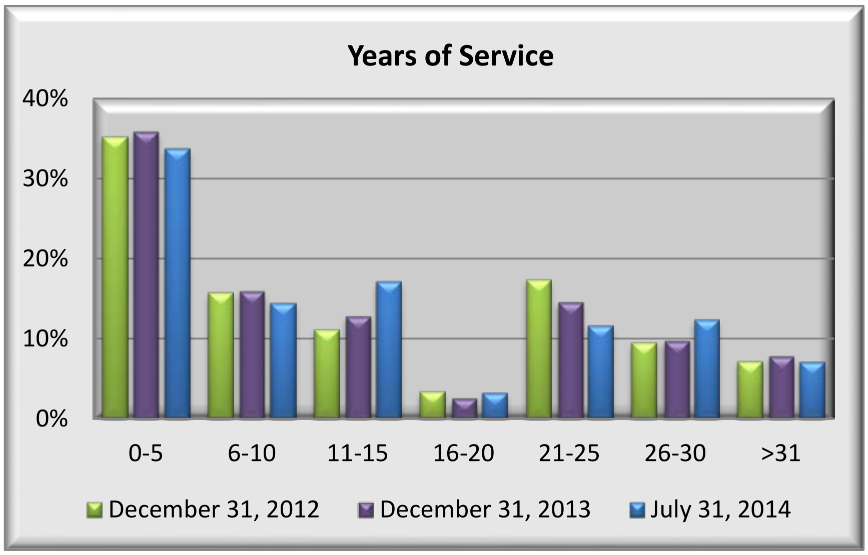
### 3.1 Aging Workforce

As outlined in the Electricity Sector Council's widely cited "Power in Motion Labour Market Information Study" ("LMI"), the electricity sector is anticipating that an aging workforce will challenge its ability to attract skilled workers into the next several years.[1] The LMI in part attributes these pressures to past hiring trends within the electricity sector, with an influx of skilled workers in the 1970s and 1980s as the legacy distribution system was built. Employment reached record levels in the early 1990s, and then fell in the mid-1990s until the mid-2000s as a result of decreased investments in infrastructure and, in Ontario, because of the amalgamation of local distribution companies. As depicted in Figure 2, Hydro Ottawa's years of service distribution is consistent with this

[1] Electricity Sector Council (now, Electricity Human Resources Canada) works to strengthen the ability of the Canadian electricity industry to meet current and future needs for their workforce, which includes having conducted and disseminated Labour Market Information Studies in 2008 and 2011 (Updated 2012).

historical trend. The average years of service for a Hydro Ottawa employee is 13 years.[2]

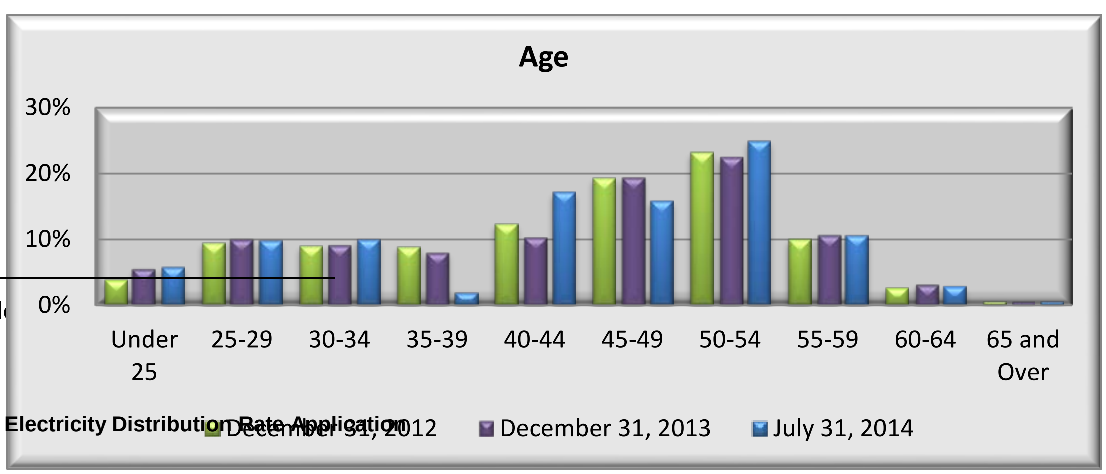
**Figure 2 – Years of Service Distribution**



The average age of Hydro Ottawa's current workforce is 43, with an overall age distribution depicted in Figure 3. Employees under the age of 30 represent 15.7% of the workforce, an increase from 13.6% since 2012 that is attributable to increased hiring of trades apprentices and engineering graduates since that time.

Employees aged 50 or over represent 39.3% of the workforce, an increase from 32.9% since 2012. The surge of new entrants into the electricity sector, including at Hydro Ottawa, prior to the mid-1990s are now aged 50 plus, reflected by an overall demographic peak for 45-54 year old

**Figure 3 – Age Distribution**



[2] Unl

### 3.2 Anticipated Retirement Attrition

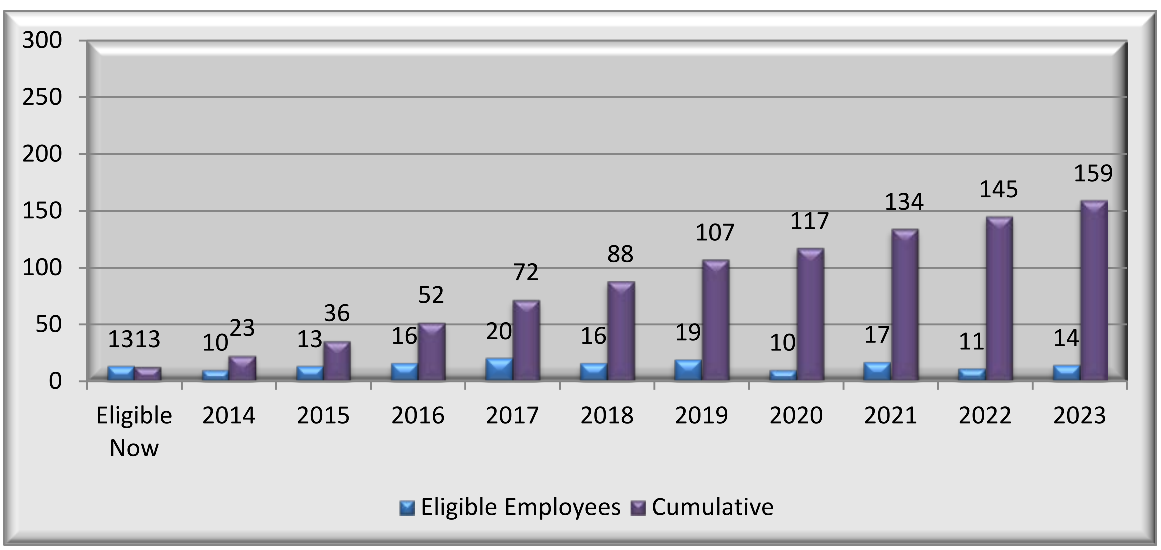
In 2014, Hydro Ottawa began to experience a predicted increase in retirements that is expected to continue into the next ten years as employees elect to retire from the organization at their earliest unreduced eligibility date.[3] On average, employees are retiring at age 59, with 60% retiring within two years of eligibility. The average age of retirement has increased from 57 in 2012, in part attributable to pro-active measures outlined in Section 5.4. This means that employees are choosing to leave the organization at a slightly later age, with 6% of those currently eligible to retire instead choosing to maintain their employment with Hydro Ottawa.

Despite this positive trend, the volume of forecasted retirement eligibility over the next ten years is significant and Hydro Ottawa must effectively address these anticipated departures from the workforce to ensure operational capacity and continuity. Slightly over 40% of Hydro Ottawa's workforce will have become eligible to retire by 2023, of which almost 60% are skilled workers in trades or technical professions. Based on the existing trades and technical workforce, this means that up to 44% of these employees are forecasted to retire by 2023. The number of eligible retirements for all employees is represented in Figure 4, and the eligible retirements in the trades and technical workforce is represented in Figure 5.

[3] Employees are deemed "eligible to retire" for an unreduced early pension based on criteria established under the Ontario Municipal Employees Retirement System ("OMERS").

**Figure 4 – Eligible Retirements, All Employees**

**Figure 5 – Eligible Retirements, Trades and Technical Employees**



Over the next ten years, Hydro Ottawa projects the potential loss of approximately 7,693 years of experience from the organization as a result of retirements, including approximately 4,854 years of trades and technical experience. With more than one-third of the existing workforce population having five years of service or less and the projected retirement of employees, the workforce at Hydro Ottawa is increasingly less experienced in what is an increasingly complex and a safety focused business operating environment. As a result, given that almost half of the existing trades and technical talent within the organization will have reached retirement eligibility within ten years, it is critical that the organization proactively forecast talent demands and anticipated supply gaps early – particularly for positions filled through apprenticeship programs.

Workforce demographic assessments are a key element in Hydro Ottawa's workforce planning approach. Monitoring and planning for retirements in particular is critical to ensuring Hydro Ottawa's continued ability to deliver on its core business objectives with skilled and trained resources.

## 4.0 WORKFORCE MODELING

A key component of workforce planning, workforce modeling is primarily used at Hydro Ottawa to forecast the supply of labour in relation to operational demand for resourcing. The objective of workforce modeling is to anticipate gaps and inform proactive strategies to address said gaps. The modeling approach provides insight across work segments to identify potential supply gaps based on a number of variables that are validated annually to adjust projected hiring and talent strategies in response to Hydro Ottawa's internal and external environments. Hydro Ottawa's workforce modeling serves to identify the best combination of internal resources, overtime utilization, and contracted services for the delivery of services and programs.

Hydro Ottawa's workforce modeling is leveraged in the deployment of its Distribution System Plan and Asset Management Plan, where prudent cost management efforts require managing the renewal of its distribution system and delivering on daily operating requirements within the resources allocated in capital and operating plans.

### 4.1 Labour Demand and Supply

Hydro Ottawa's workforce modeling is integrated with operational demand to ensure that forecasting optimally aligns with business requirements by considering projected operational labour requirements.

In order to determine labour supply, Hydro Ottawa's workforce modeling considers the available number of journeypersons or skilled technical employees in a given profession or trade, retirement eligibility, the apprentice pipeline feeding each trade, and supplementary labour resources that contribute to the work undertaken. The modeling is then adjusted based on productive time.

### 4.2 Retirement Rate

As outlined above, workforce modeling of forecasted retirements assumes that employees will retire at a rate of 60% within two years of reaching retirement eligibility.

### 4.3 Non-Retirement Attrition Rates

As competition for skilled talent increases due to escalating retirements within the electricity sector at large, Hydro Ottawa's modeling also considers non-retirement attrition due to resignation to be a key variable. Current workforce modeling assumes a non-retirement attrition rate of 2.05% based on 2013 actuals; this rate is adjusted annually, based on the prior year.

### 4.4 Internal Movements

Hydro Ottawa continues to foster its internal talent pipeline as demographics shift throughout our business, and this results in internal movements of our trades and technical workforce as employees take on leadership roles or grow their professional capacity within our operations in another role. As skilled trades or technical workers leverage their expertise, it is important to proactively anticipate the gaps they leave behind. With this in mind, Hydro Ottawa's workforce modeling assumes that 2.43% of the trades and technical workforce will move laterally or as a result of promotion within any year. This rate is based on 2013 actuals and is adjusted annually, based on the prior year.

### 4.5 Modeling Outputs

Based on the above-noted variables, workforce modeling enables Hydro Ottawa to identify its projected gaps in internal labour, and to determine how best to fill these gaps using contracted services, overtime, and/or hiring. Several factors are considered, such as: costs of contracted services or overtime utilization, labour market availability, appropriate ratio of journeypersons to apprentices, legislated allowances for overtime on a per employee basis, and the influence of environmental factors or business considerations that may impact assumptions used to inform modeling.

## 5.0 TALENT STRATEGIES TO SUSTAIN AND PREPARE THE WORKFORCE

Hydro Ottawa's workforce planning approach serves to inform the organization's talent management priorities and initiatives, including the design of key programs and strategies that emerge or are adjusted to ensure that talent demands are met and sustained.

### 5.1 Sustaining the Trades

Through structured in-house apprenticeship programs, Hydro Ottawa is revitalizing the trades employee-base to ensure a ready supply of trades talent. Hydro Ottawa has five Apprenticeship Programs in the following trades: Powerline Maintainer, Cable Jointer, Meter Technician, Station Electrician and System Operator. The total number of apprentices is 43, which represents 21% of our trades workforce. The number of apprentices as a proportion of each trade varies from 13% to 33%. Since the introduction of formalized Apprentice Programs in 2005, Hydro Ottawa has enabled 51 apprentices to achieve journeyperson status, representing approximately 29% of the existing trades workforce.

With the anticipated number of retirements over the next ten years, combined with forecasted increases in labour demand as a result of additional work requirements associated with the asset management plan, municipal infrastructure projects, and organic growth in the customer base, Hydro Ottawa expects to continue investing in apprenticeship as a viable source of talent for the skilled trades. To ensure that planned training investments remain prudent and to limit overall headcount increases within the organization as a whole as our trades are replenished, Hydro Ottawa based forecasted hiring on the following principles:

- Increase overall productivity to ensure greater availability of productive time, while also establishing initiatives to gain efficiencies that increase the quality of the time worked.
- Hire apprentices by using vacancies as they become available, including the redistribution of vacancies from support functions to the trades.
- Where available in the labour market, attract and hire journeypersons to fill vacancies, with the aim of reducing the overall required training investment in apprenticeship and leverage qualified resources with a shorter lead time to achieve maximum productivity.
- Balance hiring with the appropriate use of overtime to supplement labour gaps, and continue to leverage contracted services where cost-effective and available to meet demand. These options offer flexibility to Hydro Ottawa in resourcing peak or temporary demands for labour, without unnecessarily inflating the overall workforce complement.

With the application of these principles in mind, Table 1 outlines the forecasted hiring projections for the Powerline Maintainer trade at Hydro Ottawa. In particular, workforce modeling indicates that the demand for labour has the potential to outpace Hydro Ottawa's ability to replenish anticipated retirements, non-retirement attrition, and internal movements from the Powerline Maintainer trade solely through apprentice hiring. In addition to hiring apprentices, Hydro Ottawa will continue to simultaneously attract and hire qualified Powerline Maintainers at the same rate it has been able to attain in the past few years.

**Table 1 – Forecasted Hiring in Powerline Maintainer Trade**

| | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | Total |
|---|---|---|---|---|---|---|---|---|
| Apprentice Hiring | 6 | 5 | 5 | 5 | 5 | 4 | 4 | 34 |
| Journeyperson Hiring | 2 | 2 | 2 | 2 | 2 | 2 | 2 | 14 |

In anticipation of future hiring requirements within the Powerline Maintainer trade, in 2011, Hydro Ottawa entered into a partnership with Algonquin College to design and deliver a two-year Powerline Technician Diploma Program. Through this Diploma Program, students develop the essential skills and knowledge required to design, plan, construct and maintain electrical distribution lines through class work and hands-on learning. Algonquin College provides theory based courses and leads program administration, while Hydro Ottawa delivers safety and core skills instruction in a practical field environment. This program leverages the skills of experienced Hydro Ottawa Powerline Maintainers, including those who are being developed for leadership roles and those who are nearing retirement or have retired.

As a result of this strategic educational partnership with Algonquin College, Hydro Ottawa has hired 10 Powerline Technician Diploma Program graduates since 2013 when the first cohort completed their program. In doing so, Hydro Ottawa avoided the ongoing costs of intra-provincial apprentice recruitment, and was able to significantly reduce the costs of apprenticeship through a shortened vestibule training period for these hires. This has enabled safe and early field deployment of apprentices to on-the-job learning in the delivery of capital projects.

Forecasting suggests that Hydro Ottawa's remaining trades are appropriately supplied relative to labour demand, and resulting hiring plans focus on replenishing each trade with apprentices based on forecasted attrition. Hiring projections for apprentice hiring in the remaining trades are outlined in Table 2. Due to the specific nature of these trades, which are not regulated under the *Ontario College of Trades Apprenticeship Act (2009)*, Hydro Ottawa is currently limited in hiring qualified journeypersons from the external labour market for these trades.

**Table 2 – Forecasted Apprentice Hiring in Remaining Trades**

| | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | Total |
|---|---|---|---|---|---|---|---|---|
| Cable Jointer | | | 2 | | 2 | | 2 | 6 |
| Meter Technician | | 2 | 2 | 2 | 2 | | | 8 |
| Station Electrician | 3 | 4 | | | | | | 7 |
| System Operator | | 1 | 1 | 2 | 2 | 1 | | 7 |

### 5.2 Talent Attraction and Acquisition

The Occupational Projection Summary[4] for Electrical Trades and Telecommunications Occupations, over the 2013-2022 period, forecasts that national job openings within this occupational group are expected to total 76,948 (arising from expansion demands and replacement resulting from retirements or mobility) and that 62,002 job seekers (arising from graduates, immigration and mobility) are expected to be available to fill those job openings. The associated analysis establishes an expectation that solid economic growth will translate to a faster increase in the number of Electrical Power Line and Cable Workers (NOC 7244), among other occupations in this group, than the average increase in workers in the rest of the economy. Power System Electricians (NOC 7243) are projected to experience a labour shortage during the projection period. Further, it is expected that the primary source of talent for this occupational group will be from the post-secondary educational system.

The labour market, once driven by employer demand, now hinges on labour supply, making an employer's brand and its ability to attract the best talent possible matter now more than ever before. Hydro Ottawa makes a concerted effort to attract the next generation of workers to meet the organization's present and future talent needs by extending our brand through cost-effective social media channels, trades-focused career

[4] Employment and Social Development Canada's Canadian Occupational Projection System (COPS) develops national job projections and analysis for 140 occupations in Canada.

fairs that reach students at critical junctures in their decision-making about careers, and community outreach to support internationally trained workers in accessing employment. Both co-operative educational placements and a robust summer student program are a valuable source of future employees. Hydro Ottawa also emphasizes strategic partnerships with educational institutions that foster a vibrant and viable talent supply on a sustainable basis, such as the Powerline Technician Diploma Program through Algonquin College and associated applied research opportunities with students in Algonquin's Electrical Engineering Technology program.

In addition to investing in apprenticeships, Hydro Ottawa offers training and development opportunities to attract engineering graduates. The training and development internship for engineering graduates is based on performance-measured deliverables that align with criteria defined by the Professional Engineers of Ontario, and leads to acquisition of the Professional Engineer designation and transition into a Distribution Engineer role at Hydro Ottawa.

Hydro Ottawa also believes it is imperative to attract, retain and develop diverse professionals to spur innovation, drive growth and sustain competitive advantage in the marketplace. Doing so enables Hydro Ottawa to offer additional customer value; create an inclusive culture that leverages diversity in everyday business enhancing engagement and innovation; and broadening involvement to initiatives and organizations that promote diversity, adding a new dimension to Hydro Ottawa's brand. Hydro Ottawa's diversity initiatives focus on attracting and engaging diverse populations represented within the current workforce and its customer communities, including: women, visible minorities, people with disabilities, those who identify as LGBT, and youth. Recognizing the value of immigrant populations within the Canadian workforce and, specifically, as an under-leveraged talent pool within the electricity sector, new Canadians are also considered to be a critical talent segment. Hydro Ottawa's focus on diversity consists of foundational initiatives intended to foster overall inclusion, complemented by specific initiatives targeted towards the identified diversity groups.

### 5.3 Strategic Talent Deployment

Hydro Ottawa's approach to talent deployment focuses on the strategic preparation and positioning of new hires and new people leaders in order to achieve reduced time to productivity and value realization, better integration of new hires into company culture, increased retention of new hires and a smoother transition of new people leaders. This approach ensures that new employees are proactively brought on board to replace employees leaving due to retirement or other forms of attrition, and that measures are in place to ensure the transfer of knowledge accumulated by older workers throughout their careers.

As Hydro Ottawa moves into 2016, its approach to strategic talent deployment ensures that resources are provided with optimal leadership and that productivity is enabled by effective organizational design. To this end, and in anticipation of prolonged leadership turnover as the result of retirements, Hydro Ottawa is ever mindful of its responsibility to ensure supervisory spans of control are designed to maximize onsite safety and productivity. Hydro Ottawa is further mindful of the need to yield productivity benefits through consolidation of work, rationalization of headcount for redeployment in trades hiring, and ongoing evaluation of possibilities to outsource work that is not considered to be a core or valued-added aspect of service delivery.

### 5.4 Knowledge Management and Transfer

With the prospect of losing a significant proportion of experienced workers to retirement over the next ten years, Hydro Ottawa must stem the loss of knowledge unique to the organization through effective knowledge transfer mechanisms. This is consistent with the findings reflected in "Knowledge Management and Transfer for the Electricity Industry in Canada,"[5] which supports mitigating initiatives against the loss of explicit and tacit knowledge within the electricity sector. With specialized skills powering our workforce and the risk of losing depth in our corporate knowledge base, Hydro Ottawa recognizes that engaging older workers and retirees is a key consideration in ensuring

[5] Knowledge Management and Transfer for the Electricity Sector in Canada, Electricity Sector Council, 2010

operational capacity and continuity. As a result, Hydro Ottawa has introduced an initiative aimed at:

- Delaying retirements, where appropriate, to maintain a culture that values experience and supports knowledge transfer opportunities.
- Determining how to best engage employees transitioning into retirement by leveraging ability for hiring overlaps for unique positions and integrating pre-retirement older workers into mentoring programs to enhance knowledge transfer.
- Exploring how retirees can continue to be engaged after retirement and remain Ambassadors in the community which includes establishing a retiree resource pool.
- Reviewing policies, practices and procedures to identify enhancements to better serve older workers and keep retirees engaged.

Branded as Prime Time to reflect that older workers are at the height of their careers rather than at the end, this initiative is in part responsible for increased retention of late-career experienced workers. In 2014 alone, the average age of retirement reached a peak of 60 years.

As part of its Prime Time offerings, Hydro Ottawa continues to support a knowledge transfer overlap to an experienced incumbent retiring from a unique position within the organization. In approving hiring overlaps of this nature, Hydro Ottawa is cognizant that each request must be assessed on a case-by-case to weigh the importance of a specific position to its business operations, the type of knowledge that must be transferred, and the required duration for knowledge transfer to occur. By adopting this methodology, Hydro Ottawa can ensure that the knowledge, skills and corporate memory are passed on to the next generation of the electricity workforce and that this transition is seamless. Without the implementation of knowledge transfer mechanisms, Hydro Ottawa is at risk of losing significant corporate memory, declines in productivity, compromised business continuity, and losses of intellectual capital.

### 5.5 Leadership Capability and Capacity

Over the next five years, 35% of Hydro Ottawa's existing people leaders will be eligible to retire, increasing to 57% by 2023. With this in mind, Hydro Ottawa continues to focus on replenishing its talent pipeline through effective succession planning and management activities.

As Hydro Ottawa continues to replenish the leadership pipeline, it also recognizes the sector-wide challenge of increasing overall leadership performance within electricity organizations. The Centre for Creative Leadership's 2009 study on "The Leadership Challenge in the Energy Sector" indicated that the top priority for leadership development into the future is to improve the ability to lead employees with notable skill gaps in building and leading a team, confronting difficult employee situations, building a broad functional orientation and career management.[6]

To strengthen the leadership capability of people leaders, Hydro Ottawa has a comprehensive approach to management and leadership development in which learning progresses from foundational to enrichment to leadership excellence. People leaders and emerging leaders receive targeted development opportunities which are supplemented by a coaching program to accelerate leadership development, in addition to mentorship opportunities with the aim of transferring knowledge cross-functionally and cross-generationally within the business.

## 6.0 CONCLUSION

Hydro Ottawa will continue to experience the effect of the changing landscape in which it operates, including experiencing the full impact of employee demographics and the associated loss of highly skilled, experienced and knowledgeable employees due to retirements and other attrition. The responses to this rapidly changing environment, if

[6] The Leadership Challenge in the Energy Sector, Centre for Creative Leadership, 2009.

not proactive and meaningful, will inevitably hamper the continued successes of the organization and challenge the organization's ability to fulfill its responsibilities to its customers. Hydro Ottawa must maintain and ensure that the current and future level of its business is sustained throughout these changing times by ensuring that it has a sufficient, sustainable and prepared workforce.

Hydro Ottawa's multi-prong workforce planning efforts are designed to synergistically manage the effects of the dynamically changing electricity industry while ensuring appropriate resources and skills are in place to meet the existing and long-term needs of the business and its customers.

# EMPLOYEE COMPENSATION

## 1.0 INTRODUCTION

This schedule sets out Hydro Ottawa Limited's ("Hydro Ottawa") approach to total compensation and its headcount actuals and projections.

Hydro Ottawa's approach to compensation is driven by the need to attract and retain a highly skilled workforce and to support a performance-driven work culture by appropriately and fairly rewarding performance in the achievement of the company's strategic direction, while at the same time controlling total compensation costs. Hydro Ottawa also rewards performance and productivity in accordance with the company's organizational values and position competencies.

## 2.0 TOTAL COMPENSATION

Hydro Ottawa's approach to total compensation consists of the following major components which reinforce the total value proposition: salaries, incentive-based pay for senior employees only, benefit plans, pension plan, premiums and allowances.

### 2.1 Merit-based Salaries

Hydro Ottawa's salary structure for executive, management and non-union employees consists of a number of salary scales representing positions of similar scope and responsibility. A formalized point factor system is in place to evaluate positions and determine the salary scale in which they are placed. This ensures internal equity. Salary scales are reviewed on an ad-hoc basis to ensure competitiveness within the utility, industrial and broader public sectors.

Employees are paid an annual salary within the salary scale based on education and experience. Annual increases to salaries, within the salary scales, are solely merit-based and determined by performance and contributions made in the previous year. A robust performance management system is in place for this purpose. An overall performance rating is established and a merit increase associated with the rating is provided. Performance and merit increases are directly tied to Hydro Ottawa's corporate performance scorecard, to ensure that the focus of this workforce segment[1] is aligned to the advancement of Hydro Ottawa's strategic direction.

In determining the appropriate range of merit increases associated with each performance rating, Hydro Ottawa reviews the national, provincial and local salary projections of major compensation consulting firms, including those projections for the utility and broader public sectors, as well as consumer price indices.

### 2.2 Incentive Based Pay

Since 2008, only senior management employees are eligible for annual incentive-based pay, as a component of their total cash compensation, which is expressed as a percentage of annual salary. These employees have a direct line of sight to the success of the company's strategic direction. Approximately 40 or less than 7% of employees are eligible for incentive-based pay in any given year.

Incentive-based pay is determined based on the achievement of financial and non-financial corporate, divisional and individual objectives. Financial targets and non-financial targets for senior management employees are established and approved each year by the Board of Directors and are designed to achieve continuous improvement in relation to the company's strategic direction, which include a number of strategic objectives focused on customer service, operational and organizational efficiency and effectiveness, and service reliability.

Table 1 below demonstrates the variability in this component of total cash compensation as it relates to the achievement of priorities.

[1] Executive, management and non-union employees.

**Table 1 – Average Annual Incentive-Based Pay**

| | 2012 Actuals | 2013 Actuals | 2014 Actuals | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|---|
| **Number of Employees** | 40 | 39 | 37 | 42 | 42 |
| **Average Amount** | $15,825 | $17,558 | $16,527 | $16,358 | $16,816 |

## 2.3 Collective Agreement

The International Brotherhood of Electrical Workers ("IBEW"), Local 636 represent Hydro Ottawa's unionized employees. This includes the company's trades, technical, clerical and administrative employees.

The current collective agreement is in effect from April 1, 2013 until March 31, 2017. The collective agreement provides for negotiated wage increases and employee step progressions. Negotiated wage increases are 2.6% for 2013, 2.7% for 2014, 2.7% for 2015 and 2.8% for 2016. The wage increases are on average 10% lower than the increases from the previous three year collective agreement.

A number of labour efficiencies were achieved during the most recent round of collective bargaining, some of which directly and indirectly relate to total compensation. These include longer periods of employment for temporary employees, improved distribution of overtime during emergencies, parameters with respect to responsibility pay, the pro-rating of leaves for new employees, the ability to designate specific vacation periods, a simplified process for the relocation of employees for accommodations, rationalization of flame resistant clothing, and an improved process for the replacement of tools and equipment.

## 2.4 Pension Plan

Hydro Ottawa employees are part of the Ontario Municipal Employees Retirement System ("OMERS"), a multi-employer, contributory, defined benefit pension plan established by the Province for employees of municipalities, local boards and school boards in Ontario. Pension benefits are determined by a formula based on the highest consecutive five-year average of contributory earnings and years of service. Both participating employers and participating employees are required to make equal contributions to the plan based on the participating employees' contributory earnings.

Employers and employees that are members of the OMERS pension plan contribute a lesser percentage on earnings received up to the annual Yearly Maximum Pensionable Earnings (YMPE), and a higher percentage on earnings above the YMPE. The YMPE is equal to the Canada Pension Plan (CPP) earnings limit as the OMERS pension plan is designed to work together with the CPP to provide a stable retirement income.

Hydro Ottawa's contribution rates to OMERS have steadily increased over the years from 7.4% in 2011 to 9% in 2015 for earnings below the YMPE and from 10.7% to 14.6% for earnings above the YMPE. In an effort to continue to reduce the funding deficit that occurred due to the 2008 global economic downturn, OMERS contribution rates increased in 2012 and 2013 and, due to better returns in 2013, contribution rates have remained unchanged since that time. The OMERS Sponsors Corporation put in place a Funding Management Strategy[2] in late 2014 which limits contribution rate increases at slightly more than 1% higher than the 2014 blended contribution rate. Given the continued deficit position of the OMERS pension plan, it is projected that over the period of this rate application contribution rates will likely increase, both below and above the annual YMPE, for the employee and employer portions respectively.

### 2.5 Insured Benefits

Hydro Ottawa's insured benefit plans provide employees with income security and protection from catastrophic and life events. Insured benefits coverage is provided to active full-time employees in the following areas:

- Health, including vision care, prescription drugs and paramedical services;
- Dental, including major dental and orthodontics services;
- Long term disability benefits;
- Short term disability benefits; and

[2] As described in *Managing the Benefits and Contributions of the OMERS Primary Plan*, October 27, 2014.

- Life Insurance

As part of the most recent round of collective bargaining in 2013, slight increases in some insured benefit provisions were made, spread out over the four year period of the collective agreement; however, at the same time, further cost containment measures were introduced to supplement those measures already in place, such as reasonable and customary limitations and generic substitution.

In addition, given the increasing costs over the last decade of Hydro Ottawa's insured benefit plans, along with the company's aging demographics, competitive marketing of the plans was undertaken in 2013. In late Q3 of 2014, Hydro Ottawa partnered with a new insured benefits provider for all of the company's insured benefit plans. This change resulted in the reduction of benefits premiums, streamlined administrative processes and enhanced self-serve options while ensuring the sustainability of the current level of benefits.

### 2.6 Post-Retirement Benefits

Hydro Ottawa's post-retirement benefits consist of life insurance and a small retirement grant for eligible employees primarily linked to positive attendance at work.

Hydro Ottawa completes a full actuarial valuation of the future value of the post-retirement benefits every three years, which is consistent with industry standards. In the interim years, an extrapolation is completed to determine if there has been a material change from the previous year.

The most recent actuarial valuation was performed as at December 31, 2014. A copy of this report is available in Attachment D-1 (B). The valuation determined that the accrued post-retirement life insurance obligation increased from 2013 to 2014, which is primarily attributable to a reduction in the discount rate used in 2014. The accrued retirement grant amount decreased from 2013 to 2014, which is attributable to the retirement of employees in 2013 that were paid their retirement grant, thereby reducing the company's future obligations.

Hydro Ottawa has taken steps to contain its future benefit costs by limiting the type, scope and applicability of post-retirement benefits.

## 3.0 HEADCOUNT

Hydro Ottawa has categorized employees/positions into three groups in calculating the total full time equivalents ("FTE"). These groups are comprised of full-time permanent equivalents and temporary equivalents (which can be full-time or part-time)[3].

- Management – includes executives, directors, managers, supervisors and senior professionals such as professional engineers.
- Non-Union – includes non-unionized professionals such as engineers-in-training, budget officers and executive assistants.
- Union – includes all employees who are represented by the IBEW.

The tables below summarize Hydro Ottawa's FTEs for 2012 Actual, 2013 Actual, 2014 Budget Forecast, 2015 Budget Forecast, and 2016 Budget Forecast. Hydro Ottawa's FTE count is determined using standard methodology. For the 2012 and 2013 actuals, FTE is a calculated value derived from the total regular hours paid each year divided by the regular hours of work scheduled each year by a single employee in that group. For the 2014, 2015 and 2016 forecasted budgets, FTE is calculated as all budgeted positions, adjusted for part-year budgeting for new positions.

### 3.1 Full-time Permanent Equivalents

Table 2 below illustrates Hydro Ottawa's forecasted plan to stabilize its total number of permanent full-time employees/positions.

[3] Summer students and co-op students are not included as these short term hires are viewed as developmental in nature.

**Table 2 – Full-time Permanent Equivalents**

| | 2012 Actuals | 2013 Actuals | 2014 Forecast | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|---|
| **Management** | 129.1 | 124.4 | 128.7 | 132.6 | 132.6 |
| **Non-Union** | 36.7 | 44.0 | 42.1 | 39.7 | 39.7 |
| **Union** | 417.3 | 424.6 | 431.2 | 429.8 | 429.8 |
| **Total** | 583.1 | 593 | 602 | 602.1 | 602.1 |

Since 2012, the total number of full-time permanent management and non-union employees combined has remained relatively static. Increases to FTEs have been and are forecasted to be primarily in the union group. In accordance with its Workforce Planning Strategy (Exhibit D1-5-1), Hydro Ottawa is continuing to revitalize the trades employee-base to ensure a ready supply of trades talent to meet operational demand.

The management group FTEs decreased in 2013 versus 2012. This was largely attributable to not filling a number of positions when they became vacant due to employee departures and retirements. Hydro Ottawa employs a stringent vacancy management process to ensure that position replacements or backfills are justified and aligned with its Workforce Planning Strategy (Exhibit D1-5-1). The 2014 forecast shows a marginal increase in the total FTE count for the management and non-union groups combined, as a result of the requirement for additional developmental supervisory positions in order to meet safety and operational demand needs.

As Hydro Ottawa moves into 2015 and 2016, its Workforce Planning Strategy (Exhibit D1-5-1) outlines the principles by which it is moving forward in managing overall headcount within the organization as a whole while its trades are replenished by the redistribution of vacancies from support functions.

## 3.2 Temporary Equivalents

Table 3 below summarizes the number of actual and forecasted temporary equivalents for 2012 to 2016, which includes temporary full-time and part-time resources. In 2013, Hydro Ottawa increased its usage of a temporary workforce. This increase in temporary equivalents is attributable to Hydro Ottawa's efforts to have a more flexible workforce which addresses seasonal and other workloads and can be more easily adjusted upwards or downwards as required. Hydro Ottawa's 2014, 2015 and 2016 forecasts continue this approach, allowing the company to contain compensation costs.

**Table 3 – Temporary Equivalents (full-time or part-time)**

| | 2012 Actuals | 2013 Actuals | 2014 Forecast | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|---|
| **Management** | 2.0 | 2.1 | 2.3 | 4.8 | 4.8 |
| **Non-Union** | 6.3 | 4.9 | 9.5 | 8.0 | 8.0 |
| **Union** | 2.0 | 10.8 | 14.0 | 7.7 | 7.7 |
| **Total** | 10.3 | 17.8 | 25.8 | 20.5 | 20.5 |

### 3.3 Full-time Permanent and Temporary Equivalents

Table 4 below provides the total number of actual and forecasted permanent and temporary FTEs, and demonstrates Hydro Ottawa's plan to stabilize its workforce.

**Table 4 – Full Time Equivalents – Permanent and Temporary**

| | 2012 Actuals | 2013 Actuals | 2014 Forecast | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|---|
| **Management** | 131.1 | 126.4 | 131.0 | 137.5 | 137.5 |
| **Non-Union** | 43.1 | 48.8 | 51.6 | 47.7 | 47.7 |
| **Union** | 419.3 | 435.4 | 445.2 | 437.5 | 437.5 |
| **Total** | 593.5 | 610.6 | 627.8 | 622.7 | 622.7 |

In 2013 there was a net increase of FTEs over 2012. This overall increase is comprised of a reduction in the total FTEs for the management group and an increase in the union and non-union groups. The increase of FTEs in the union group was primarily due to the hiring of additional trades apprentices, journeypersons and technical employees consistent with Hydro Ottawa's Workforce Planning Strategy (Exhibit D1-5-1), as well as the use of more temporary equivalents. The increase in non-union FTEs is largely as a result of an increase in the number of engineers in training.

Table 4 also shows the number of FTEs in the 2015 and 2016 forecasts decreasing as compared with the total number of FTEs in the 2014 forecast.

## 4.0 TOTAL COMPENSATION

Table 5 below summarizes Hydro Ottawa's actual and forecasted total compensation including salary, wages and benefits from 2012 to 2016.

**Table 5 - Total Compensation (Salary, Wages, & Benefits)***

| | 2012 Actuals | 2013 Actuals | 2014 Forecast | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|---|
| **Management** | $17,406,925 | $17,636,573 | $19,151,701 | $18,986,945 | $19,602,474 |
| **Non-Union** | $4,145,040 | $4,778,621 | $4,973,974 | $4,528,497 | $4,794,319 |
| **Union** | $39,353,778 | $42,601,466 | $43,963,563 | $45,573,310 | $47,547,490 |
| **Total** | $60,905,742 | $65,016,660 | $68,089,238 | $69,088,752 | $71,944,283 |

*Hydro Ottawa has completed Appendix 2-K, Employee Compensation Breakdown, (Attachment AC).

### 4.1 2013 Actuals versus 2012 Actuals

The total compensation increase from 2012 to 2013 is largely due to the increase in FTEs in the union and non-union groups as discussed in section 3.3 above, as well as an increase in OMERS contributions for 2013 as outlined above in section 2.4.

Additionally, there was an increase in overtime costs in 2013, primarily as a result of the mutual aid provided by Hydro Ottawa trades employees to Toronto Hydro, Hydro One and Hydro One Brampton in response to the restoration efforts arising from the significant ice storm which occurred in the Toronto area and across much of Eastern and Central Ontario in December 2013.

### 4.2 2014 Forecast versus 2013 Actual

The increase in the total compensation forecast for 2014 versus the actuals for 2013 is attributed to the forecasted increase in FTEs for all groups, in particular, the hiring of additional temporary employees as noted in Table 3 above and the requirement for additional developmental supervisory positions in order to meet safety and operational demand needs, as indicated in section 3.1 above.

### 4.3 2015 and 2016 Forecast versus 2014 Forecast

Hydro Ottawa's forecast for 2015 shows a slight decrease in total compensation for the management and non-union groups compared to the 2014 forecast. For the 2016 forecast, the total compensation for these groups is slightly above the 2014 forecast. This trending demonstrates Hydro Ottawa's commitment to prudently managing the total compensation for the management and non-union groups.

The increase in the 2015 and 2016 forecasted total compensation for the union group is based on the negotiated collective agreement wage increases as per 2.3 above and the revitalization of the trades, via the redistribution of vacancies from support functions, to ensure a ready supply of trades talent to meet operational demand.

The increase in the 2016 forecasted total compensation costs for all groups is also attributable to forecasted increases in benefit and pension costs, given the above noted wage increases and as a result of the expiry of a rate guarantee for certain benefit premiums.

### 4.4 2017 to 2020 Forecast

Hydro Ottawa's approach to compensation and its plan to stabilize its workforce is anticipated to continue throughout the 2017 to 2020 period. However, Hydro Ottawa must contend during this period with the increasing effects of its aging workforce and the significant volume of forecasted retirement eligibility which must be effectively addressed to ensure operational capacity and continuity. In addition, Hydro Ottawa will be faced with the need to continue planning and responding to the ever-changing business landscape including the anticipated challenges arising from technological innovations and the evolving and dynamic labour market conditions.

# POST-RETIREMENT BENEFITS FOR EMPLOYEES OF HYDRO OTTAWA GROUP OF COMPANIES

## ACTUARIAL VALUATION AS AT DECEMBER 31, 2014

Prepared in January 2014

# Table of Contents

# INTRODUCTION

## PURPOSE

Hydro Ottawa Group of Companies ("Hydro Ottawa") retained the services of Morneau Shepell Ltd. to perform a valuation of post-retirement benefits as at December 31, 2014.

This report was prepared for Hydro Ottawa and its auditors in accordance with CICA 3461 for the following purposes:

- To determine the accrued benefit obligation as at December 31, 2014;
- To determine the benefit cost to be recognized in the financial statements for the fiscal year ending December 31, 2014;
- To determine the accrued benefit liability for post-retirement benefits as at December 31, 2014;
- To provide the information and the actuarial opinion required by Hydro Ottawa's auditors.

This report was also prepared for Hydro Ottawa and its auditors in accordance with IAS 19 for the following purposes:

- To determine as at January 1, 2014 the impact of the transition to IFRS and the 2014 expense (income) that will be used for comparative purposes;
- To provide an estimate of the 2015 expense (income).

The post-retirement benefits covered by this report are:

- Post-retirement life insurance program
- Retirement grant program

## EVOLUTION OF THE ACCRUED BENEFIT OBLIGATION

The table below shows the evolution of the accrued benefit obligation from December 31, 2013 to December 31, 2014.

| | Life Insurance $ | Retirement Grant $ |
|---|---|---|
| Accrued benefit obligation as at December 31, 2013 | 8,414,200 | 983,900 |
| Interest cost | 399,800 | 45,800 |
| Service cost | 154,000 | 44,000 |
| Benefit payments | (463,200) | (107,300) |
| Actuarial loss (gain) | 1,365,400 | (67,600) |
| Accrued benefit obligation as at December 31, 2014 | 9,870,200 | 898,800 |

## ACTUARIAL LOSSES (GAINS) BREAKDOWN

The table below shows the breakdown of the above actuarial gain and loss.

| Actuarial Loss / (Gain) | Life Insurance $ | Retirement Grant $ |
|---|---|---|
| New membership data | 400,300 | (48,100) |
| New termination rates assumption | (118,100) | (57,200) |
| Updated mortality assumption | (5,300) | (3,700) |
| New administration fees for life insurance | (56,200) | — |
| New interest rate (from 4.8% to 4%) | 1,144,700 | 41,400 |
| Total Loss (Gain) | 1,365,400 | (67,600) |

# SECTION 1 – ACCOUNTING RESULTS UNDER CICA 3461

The following tables present the 2014 fiscal year benefit cost and the December 31, 2014 funded position and accrued benefit liability for reporting purposes under CICA 3461. Further details can be found in Appendix D.

## INCOME STATEMENT ITEMS – 2014 BENEFIT COST

| | Life Insurance<br>$ | Retirement Grant<br>$ |
|---|---|---|
| Current Service Cost | 154,000 | 44,000 |
| Interest Cost | 399,800 | 45,800 |
| Actuarial Loss (Gain) | 1,365,400 | (67,600) |
| Benefit Cost (Credit) | 1,919,200 | 22,200 |

## RECONCILIATION BETWEEN FUNDED POSITION AND BALANCE SHEET AS AT DECEMBER 31, 2014

| | Life Insurance<br>$ | Retirement Grant<br>$ |
|---|---|---|
| Accrued Benefit Obligation (“ABO”) | 9,870,200 | 898,800 |
| Assets | — | — |
| Funded Position | (9,870,200) | (898,800) |
| | | |
| Unamortized Amounts: | | |
| Transitional Obligation | — | — |
| Actuarial Losses (gains) | — | — |
| Past Service Costs | — | — |
| Accrued Benefit Liability (balance sheet item) | (9,870,200) | (898,800) |

# SECTION 2 – TRANSITION TO IAS 19

In February 2013, the AcSB decided to defer the mandatory IFRS changeover date for rate-regulated entities to January 1, 2015. It is our understanding that Hydro Ottawa has elected this extension and will be changing over to IFRS in 2015.

The following table compares results at transition date (i.e. January 1, 2014) under CICA 3461 and IAS19. They are presented in aggregate although our accounting calculations are performed by plan.

## IMPACT OF TRANSITION TO IAS 19

| | CICA 3461 Jan 1, 2014 | IAS 19 Jan 1, 2014 | Transition Impact |
|---|---|---|---|
| Accrued Benefit Obligation | 9,398,100 | 9,398,100 | — |
| Assets | — | — | — |
| Funded Position | (9,398,100) | (9,398,100) | — |
| | | | |
| Unamortized Amounts: | | | |
| Actuarial Losses (gains) | — | — | — |
| Past Service Costs | — | — | — |
| Accrued Benefit Liability | (9,398,100) | (9,398,100) | — |
| Pre-tax adjustment to retained earnings | | | — |

Since there were no unamortized amounts as at January 1, 2014, the transition from CICA 3461 to IAS 19 has no impact.

The following table shows the 2014 benefit cost under IAS 19 for comparative purposes.

## 2014 BENEFIT COST UNDER IAS 19

| | Life Insurance $ | Retirement Grant $ |
|---|---|---|
| Current Service Cost | 154,000 | 44,000 |
| Interest Cost | 399,800 | 45,800 |
| Expense recognized through P&L | 553,800 | 89,800 |
| Actuarial Loss (Gain) recognized through the OCI | 1,365,400 | (67,600) |
| Total Benefit Cost | 1,919,200 | 22,200 |

The following table shows the 2015 estimated benefit cost under IAS 19.

## 2015 ESTIMATED BENEFIT COST UNDER IAS 19

| | Life Insurance $ | Retirement Grant $ |
|---|---|---|
| Current Service Cost | 181,500 | 41,300 |
| Interest Cost | 391,600 | 34,600 |
| Expense recognized through P&L | 573,100 | 75,900 |
| Actuarial Loss (Gain) recognized through the OCI | — | — |
| Total Benefit Cost | 573,100 | 75,900 |

# SECTION 3 - ACTUARIAL OPINION

With respect to the Post-Retirement Benefits plan for Employees of Hydro Ottawa Group of Companies and its subsidiaries,

We certify, to the best of our knowledge, the following:

1) The Post-Retirement Benefits other than Pension for employees of Hydro Ottawa Group of Companies are defined benefits for purposes of CICA 3461 and IAS 19.
2) Our valuation and extrapolation were made in accordance with the standards of the Canadian Institute of Actuaries (CIA). The financial statement items resulting from our valuation and extrapolation thereof have been determined in accordance with our understanding of CICA 3461 and IAS 19. We are aware that Hydro Ottawa's auditors intend to take into account our work. Our actuarial valuation and extrapolation thereof were performed using best-estimate assumptions developed by Hydro Ottawa as provided for in the accounting standard. Since best-estimate assumptions were used, we understand that they do not include any margin for adverse deviations. The discount rate selected by Hydro Ottawa was determined based on Morneau Shepell's methodology which complies with the Educational Note published by the Canadian Institute of Actuaries in September 2011. We do not express any opinion on the assumptions. The main assumptions used are detailed in appendix A.
3) The projected unit credit method prorated on service was used for the accounting valuation and the determination of the expense (income). It was applied in a manner consistent with CICA 3461 and IAS 19.
4) We have confirmed with the plan administrator that the plans' provisions are up to date as at the date of our valuation report. We have compared the provisions with the previous actuarial valuation and have validated any amendment that occurred on the basis of the values produced on the membership data. We have not been informed of any event that has occurred thereafter and that would materially affect the results of the actuarial valuation, the extrapolation or the financial statements of the company.
5) We are members in good standing of the Canadian Institute of Actuaries (CIA). Among the signatories of this opinion, at least one actuary holds the title of Fellow. We have all the necessary qualifications to carry out the work required to prepare the results contained in this document.
6) We have been duly appointed by the plan sponsor to prepare the above actuarial details at December 31, 2014 in accordance with the standards of the Canadian Institute of Actuaries.
7) We have used a materiality of $100,000 for the accrued benefit obligation.

We hereby declare that, in our opinion:

- The data on which this valuation is based are sufficient and reliable for the purpose of the valuation;
- This report has been prepared and our opinion given in accordance with accepted actuarial practice in Canada;
- Emerging experience differing from the assumptions may result in gains or losses. These will be revealed in future actuarial valuations.

We are available, at your convenience, to provide you with any additional information that you may require.

Best regards,

Louis Bernatchez, FCIA
Partner

# APPENDIX A – ACTUARIAL ASSUMPTIONS AND METHODS

The following table summarizes the actuarial assumptions used for the valuations.

## ACTUARIAL ASSUMPTIONS

| | December 31, 2013 | | December 31, 2014 | |
|---|---|---|---|---|
| Discount Rate | 4.8% | | 4.0% | |
| Mortality | CPM2014 – Private Sector<br>CPM improvement scale A<br>(draft version) | | CPM2014 – Private Sector<br>CPM improvement scale B<br>(final version) | |
| Termination of employment | Age | | Age | |
| | 20 | 10.0% | 20 | 7.0% |
| | 25 | 7.5% | 25 | 5.0% |
| | 30 | 5.0% | 30 | 5.0% |
| | 35 | 3.4% | 35 | 5.0% |
| | 40 | 2.4% | 40 | 3.0% |
| | 45 | 1.5% | 45 | 2.0% |
| | 50 | 0.0% | 50 | 2.0% |
| | 55 | 0.0% | 55 | 0.0% |
| Retirement age | Upon attainment of Rule of 90; or | | Upon attainment of Rule of 90; or | |
| | Completion of 30 years of service subject to a minimum of 55, and a maximum of 71 | | Completion of 30 years of service subject to a minimum of 55, and a maximum of 71 | |
| Salary increases | 3.10% | | 3.10% | |
| Expenses and taxes | 17.95% | | 17.40% | |
| Age difference between spouses | Women are 3 years younger than men | | Women are 3 years younger than men | |

## ACTUARIAL COST METHOD

For all active employees, the accrued benefit obligation and the current service cost were calculated using the "projected benefit method pro rated on service". According to this method, the accrued benefit obligation is equal to the actuarial present value of all future benefits (net of retiree cost sharing), taking into account the assumptions described above, multiplied by the ratio of an employee's service at the valuation date to total service at the full eligibility date.

The current service cost for a period for each member who has not reached the full eligibility date is equal to the actuarial present value of benefits attributed to the employee divided by the total service at full eligibility date.

For each member who is at or past the full eligibility date and each retiree, the accrued benefit obligation is determined as the actuarial present value of all future post-retirement benefits which will be paid on their behalf. The current service cost for members at or past the full eligibility date and for retirees is zero.

# APPENDIX B – MEMBERSHIP DATA

The accrued benefit obligation as at December 31, 2014 is based on data supplied to us by Hydro Ottawa in December 2014.

We have performed tests to verify reasonableness and internal consistency and are satisfied that the data is sufficient and reliable for the purposes of this valuation.

Statistics on the data are shown in the tables below:

## LIFE INSURANCE PROGRAM

| Summary of Membership Data | December 2011 | December 2014 |
|---|---|---|
| **Active Employees** | | |
| Number | 623 | 639 |
| Average age | 44.3 | 43.8 |
| Average service | 14.1 | 13.9 |
| Average salary | $77,200 | $83,200 |

| | | |
|---|---|---|
| **Retirees** | | |
| Number | 304 | 336 |
| Average age | 70.9 | 71.2 |
| Average insurance in force | $33,700 | $33,600 |

## RETIREMENT GRANT PROGRAM

| Summary of Membership Data | December 2011 | December 2014 |
|---|---|---|
| **Active Employees** | | |
| Number | 423 | 425 |
| Average age | 43.1 | 42.4 |
| Average service | 14.9 | 14.5 |
| Average salary | $67,800 | $73,900 |

# APPENDIX C – SUMMARY OF PLAN PROVISIONS

The following is a summary of the main provisions of post-retirement benefits for Hydro Ottawa. This summary is based on information provided by Hydro Ottawa.

| | |
|---|---|
| **Cost sharing** | 100% employer paid |

| | |
|---|---|
| **Retired members** | |
| Dependant coverage | None |

| | |
|---|---|
| Upon termination other than retirement or disability | No coverage |

| | |
|---|---|
| Upon retirement | |
| • With less than 10 years of service | Flat coverage of $2,000 |
| • With more than 10 years of service, and | |
| – Hired before May 1, 1967 | 70% of the amount for which you were insured, prior to retirement. |
| – Hired after May 1, 1967 and | |
| > Elected coverage under Options 2, 3, or 4 at any time prior to retirement | 50% of final annual earnings reducing by 2.5% at the end of each year following retirement for ten years, to a minimum of 25% |
| > Elected coverage under Option 1 | 50% of final annual earnings |

| Active members | |
|---|---|
| Retirement Grant | |
| | Eligibility: If 25 years of service at retirement<br>• four week's pay or<br>• a retirement grant<br>The retirement grant is based on the employee's sick leave record and is calculated as follows;<br>The amount of the retirement grant is the years of service (to a maximum of 35 days) multiplied by the sick leave factor. Allowance will be made of exclude one three-month illness (sixty working days) from the calculation.<br><br>Average Sick Leave usage per year — Eligibility<br>4.0 days — 100%<br>4.5 days — 80%<br>5.0 days — 60%<br>5.5 days — 40%<br>6.0 days — 20%<br>Over 6.0 days — 0% |

# HEALTH, SAFETY AND ENVIRONMENT

## 1.0 INTRODUCTION

As a company with deep roots in the community, established through more than 100 years of providing an essential service to homes and businesses, Hydro Ottawa Limited's ("Hydro Ottawa") customers expect the company to safely, responsibly and efficiently deliver electricity in a manner that protects the health and safety of employees, contracted partners, customers, and the broader community while also being a good steward of the environment we all share. Hydro Ottawa is fully committed to meeting that expectation.

Hydro Ottawa has adopted a best practice, continual improvement approach to meet legislative and regulatory requirements in the areas of health, safety and environment; and to maintain standards of performance relative to risks associated with its ongoing business activities. In 2014, Hydro Ottawa successfully obtained re-registration of its integrated health, safety and environmental management system certified to the International Organization for Standardization (ISO) 14001:2004 and the Occupational Health and Safety Assessment Series (OHSAS) 18001:2007. This registration has been consistently maintained since 2008.

## 2.0 EMPLOYEE SAFETY

At the core of Hydro Ottawa's business is the fundamental commitment to protecting the health and safety of employees. The foundation of occupational health and safety in Ontario, and at Hydro Ottawa is the internal responsibility system. This model has roles and responsibilities for all parties in the workplace, and for those associated with the workplace that have decision making or financial authority for the organization.

### 2.1 Internal Responsibility System

Hydro Ottawa has entrenched the internal responsibility system in the organization as both a general philosophy of shared accountability and as a direct reflection of the specific roles and responsibilities required by legislation and regulations. Building upon this basic model, Hydro Ottawa has a corporate Occupational Health, Safety and Environmental (OHSE) Accountability Program which details a number of specific OHSE activities required by each party in the workplace, in addition to their job-specific duties.

Further strengthening the internal responsibility and accountability model is the OHSE Management Framework, a structured system of management review, discussion and recommendation involving employees from the Supervisor to the Executive level. In addition to oversight at each level of management, Hydro Ottawa has a multi-workplace Joint Health and Safety Committee (JHSC) which functions within a mandate established by Terms of Reference approved by the Ministry of Labour. This mandate includes inspection, recommendation and worker representation functions for the various occupations and workplaces at Hydro Ottawa.

As part of the OHSE Management Framework, Hydro Ottawa exercises appropriate due diligence, and complies with legislative and regulatory requirements, by:

- establishing instruction, training and orientation programs for operational areas;
- auditing or reviewing the workplace for foreseeable health, safety and environmental risks;
- having policies, programs, procedures, processes and work instructions in place to protect workers and the environment against risks;
- actively demonstrating a strong, sustainable level of commitment to the health and safety of workers and to minimizing harm to the environment by reviewing regular reports on the operation of the occupational health, safety and environmental programs, particularly incidents and cases of non-compliance with legislation and regulations; and
- maintaining documents and records via a formal document/records management system.

### 2.2 Integrated Occupational Health, Safety and Environmental (OHSE) Management System

To ensure that the company's OHSE programs are current, effective and well-managed, Hydro Ottawa utilizes a structured focus on compliance together with a formal, documented approach to continual improvement.

This approach has been applied through the adoption of an integrated OHSE management system registered to the international ISO 14001 environmental standard and the OHSAS 18001 health and safety specification. These standards are based on the principles of planning, implementing, monitoring, measuring and pursuing continual improvement in Hydro Ottawa's OHSE programs and performance. Hydro Ottawa's integrated OHSE management system includes program elements on risk management, legal requirements, roles and responsibilities, competence and training, communication and consultation, document and record management, emergency preparedness and response, compliance evaluation, investigation and corrective action processes, audit and management review processes.

### 2.3 Safety Training

Training is not only a legislative requirement under the *Occupational Health and Safety Act* and other key statues and codes that govern Hydro Ottawa, but it also contributes to higher employee efficiency and safer operations. As depicted in Figure 1, Hydro Ottawa provides an average of over 40 hours of safe work practices training annually for all trades employees whose work is carried out in higher hazard environments, and an average of over 20 hours for all employees.

**Figure 1 – Safe Work Practices Training**

In addition to the increasing training needs that accompany apprenticeship programs, an emerging pressure that Hydro Ottawa is experiencing is the substantial increase in legislated health and safety related education and training in the province of Ontario. Recent initiatives related to worker and supervisor knowledge of the *Occupational Health and Safety Act* (Bill 160), the new Working at Heights training standard, and pending changes resulting from the Globally Harmonized System (replacement for Workplace Hazardous Materials Information System) will result in additional cost pressures for the company in both direct training development and delivery, and loss of productive time. This pressure will continue to grow as the Ministry of Labour develops and mandates additional training standards over the next five years.

Integral to Hydro Ottawa's OHSE management system, and its OHSE Accountability Program, all supervisors at Hydro Ottawa share a common performance deliverable tied to workplace safety. In 2010, Hydro Ottawa recognized an opportunity to position new operational supervisors for accelerated proficiency through the development of a Safe Supervisor Program. Implemented in 2011, this program provides new operational supervisors with the critical and substantial safety knowledge and skills needed for performance in their roles through intensive training and development that includes practical learning in the areas of audits, field inspections, incident investigations, equipment inspections, leading safety meetings and other activities. Partnered with a Safety Specialist who oversees their development as a mentor, operational supervisors receive development progress reports that formally assess their learning against expectations tied to the key OHSE knowledge and skills required to undertake their supervisory responsibilities.

### 2.4 Contractor Management

The importance of safety in Hydro Ottawa's operations extends beyond its own employees to include contractors who perform work on the company's behalf. Continued use of contractors is required to meet Hydro Ottawa's peak construction and maintenance needs, and safe, efficient and high quality performance from contractors is essential to the delivery of electricity to Hydro Ottawa's customers. To effectively manage projects involving contractors, Hydro Ottawa utilizes a project management methodology and a contractor OHSE management program, which align project planning and implementation activities as they relate to contractors and sub-contractors.

In 2014, Hydro Ottawa expanded and enhanced its contractor management program by partnering with a contractor management firm to implement more comprehensive and cost effective contractor pre-qualification and compliance monitoring processes. This partnership has resulted in the automation of previously manual processes; the provision of contractor performance scorecarding, benchmarking and trending capabilities; and the ability to do more in-depth review and tracking of contractor safety programs, worker training and competencies, and work performance.

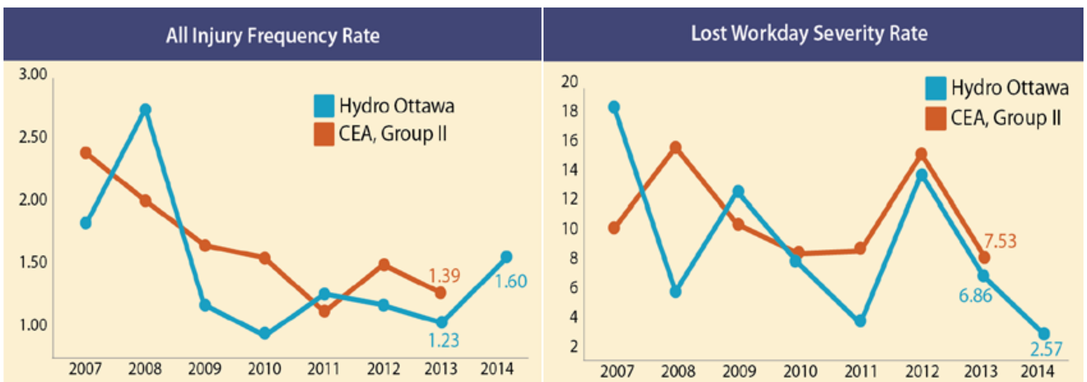
### 2.5 Safety Inspections

The number of safety inspections of Hydro Ottawa and contractor crews has doubled over recent years as part of efforts to more proactively manage safety risks. Over the 2016 to 2020 period, Hydro Ottawa is planning to leverage mobile tools and technology to enable more flexible and efficient completion, recording and reporting of health and safety related planning and monitoring activities such as Supervisor, and JHSC workplace inspections, Supervisor and Safety Specialist site visits and incident investigations, and tailboards. These tools and technologies will eliminate paper-based recording in the field, and enable Hydro Ottawa to more effectively and efficiently report on the findings and follow up actions resulting from these activities through enhanced analytics and reporting functionality.

### 2.6 Performance and Results

Hydro Ottawa's safety programs continue to show positive performance results with rates at or below the Canadian Electricity Association (CEA) Group II[1] average, Figure 2, from 2010 to 2013 for lost workday severity rate, and similar trending in the last two years for all injury frequency rate.

**Figure 2 – Comparison: All Injury Frequency and Lost Workday Severity Rates**

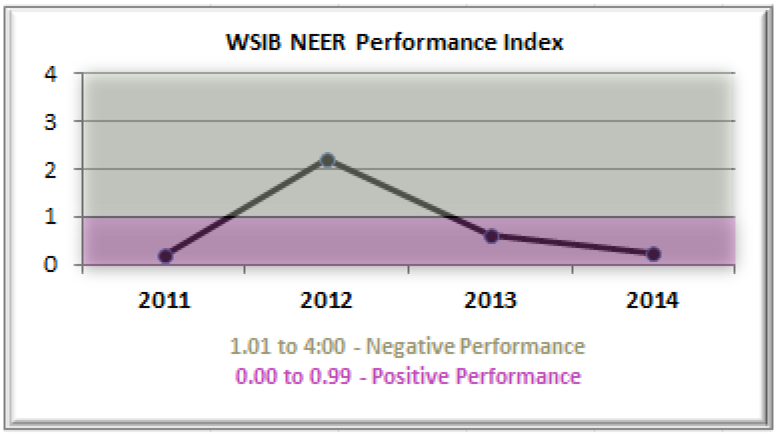


*CEA 2014 rates are not yet available.

The Workplace Safety and Insurance Board (WSIB) classify firms into rate groups based on their activities. Hydro Ottawa is in the oil, power and water distribution rate group which pays a premium that is one of the lowest rates that the WSIB charges employers. Hydro Ottawa's WSIB New Experimental Experience Rating (NEER) costs and performance index, Figure 3, shows positive performance in the last two years as a result of effective accident prevention programs and diligent case management.

[1] CEA member organizations with 301 to 1,500 employees.

**Figure 3 – WSIB NEER Performance Index**



Hydro Ottawa's continued focus on working safely has also resulted in the Infrastructure Health and Safety Association's (IHSA) President's Award in 2013 for completing one million person hours of work without experiencing a lost time injury, and Outstanding Achievement Awards from the Canadian Society of Safety Engineering (CSSE), at both the local and national levels, in 2013 for the Safe Supervisor Program.

## 3.0 EMPLOYEE HEALTH AND WELLNESS

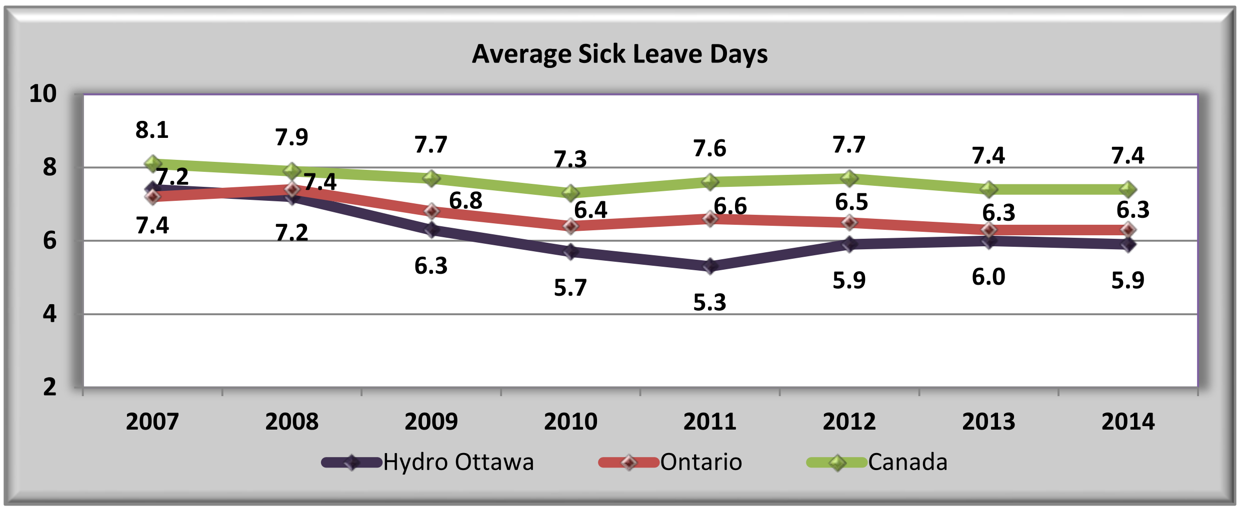
Along with an emphasis on safety, healthy and well employees lead to a more productive workforce. Hydro Ottawa has programs and strategies in place to help prevent illness and injury and reduce the associated lost time. This includes programs to alleviate soft tissue injuries given that half of the employees perform physically demanding jobs, occupational and non-occupational illness/injury work re-integration programs to ensure employees return to work early and safe and perform in a meaningful way, and other supports to promote employee health and wellness over the long term.

### 3.1 Attendance Management Program

Hydro Ottawa's Attendance Management Program monitors employee attendance, recognizes positive attendance and provides the framework for addressing excessive absenteeism. Hydro Ottawa's average number of sick days per employee in 2013 was 6.

This was below the Ontario and Canada benchmarks of 6.3 days and 7.4 days per employee respectively. In 2014, Hydro Ottawa's average number of sick days per employee decreased slightly to 5.9 and continues to be lower than the Ontario and Canada benchmarks as indicated in Figure 4.

**Figure 4 – Comparison: Average Sick Leave Days**



Ontario and Canada Data Source: Statistics Canada – Days Lost per Worker – Illness or Disability (Full time paid workers)

## 4.0 PUBLIC SAFETY

### 4.1 Compliance

Hydro Ottawa takes the health and safety of the public as seriously as it does the health and safety of its employees. Public safety is considered in all phases of Hydro Ottawa's operations from facility and equipment design, through construction to operations and maintenance. All job planning activities take into account public safety, so that the public is not adversely affected by construction and maintenance activities conducted on Hydro Ottawa property, on customer property and along the many city roadways where infrastructure is located. To ensure compliance under Regulation 22/04 which requires electrical utilities to design, build and maintain their distribution infrastructure to recognized standards, Hydro Ottawa participates in multiple Electrical Safety Authority (ESA) due diligence inspections per year, as well as two ESA compliance audits.

### 4.2 Public Education

The other major component of public safety is that of education. Hydro Ottawa provides highly visible signage warning of hazards on all of its distribution substations and ground level transformers. Hydro Ottawa works to foster a culture of safety and energy conservation in the community through a number of education campaigns. Since 2005, more than 1,300 presentations in 197 elementary schools across the Ottawa community have been delivered, training more than 161,000 students. Additional information on electrical safety and conservation is provided on the company's website.

## 5.0 ENVIRONMENT

### 5.1 Environmental Compliance

Hydro Ottawa is subject to federal, provincial and municipal environmental legislation and regulations, and in order to ensure compliance, Hydro Ottawa continually monitors for legislative and regulatory changes that may impose additional duties, requirements or costs on the organization. If any changes are identified, Hydro Ottawa revises its practices and procedures if and as required. Hydro Ottawa also regularly monitors its current regulatory approvals and permits to ensure they are complied with and renewed as required. Hydro Ottawa's operations require that a variety of environmental reports be submitted at scheduled and ad-hoc intervals throughout a year to ensure compliance, such as the Ontario Ministry of Environment's Director's Instructions related to the storage and destruction of polychlorinated biphenyls (PCBs), the National Pollutant Release Inventory and the Ontario Hazardous Waste Inventory Network. In addition, Hydro Ottawa performs quarterly chemical and waste storage inspections and provides ad-hoc spill reports to the Ontario Ministry of Environment.

Throughout any year, Hydro Ottawa can experience a number of unexpected releases of substances into the environment, with the majority of these releases coming from oil filled transformers that fail due to age or because they are damaged. Hydro Ottawa has a 24-hour response system, with employees trained to promptly report releases to the Ministry of Environment and to organize immediate response through an on-call spill remediation contractor. Field employees receive training in spill reporting and containment, with large vehicles carrying spill response kits to provide basic containment. The spill kits contain protective equipment for employees, absorbent materials and mats to prevent spill entry into sensitive areas.

Hydro Ottawa is working to actively eliminate PCBs from its electrical distribution system. Federal regulations introduced in 2008 established end of use dates for all PCBs from 2009 to 2025, depending upon the location and concentration of PCBs. Hydro Ottawa has fulfilled all requirements to date and to ensure compliance with the 2025 end of use deadlines. Hydro Ottawa is continuing the removal of the remaining PCBs from its system in accordance with its Asset Management Plan.

### 5.2 Environmental Sustainability

Hydro Ottawa's continuing focus in the area of environmental sustainability has resulted in it being recognized, for the last four years, as one of Canada's Greenest Employers, as a Delta Management Clean 16 and Clean 50 in 2013, and by the industry with a CEA Environmental Commitment Award in 2014.

Hydro Ottawa's environmental sustainability efforts have been focussed in three priority areas since 2010:

- Reducing the company's carbon footprint through improvements in fleet, facilities, technology infrastructure, and non-hazardous waste management and recycling;
- Greening procurement and the supply chain; and
- Building a culture of environmental sustainability in Hydro Ottawa's business practices and workforce.

The priority areas cover many aspects of the company's operations and address matters of importance to customers, governments and the sector as a whole. The three priority areas provide the company with the best options for reducing its environmental impacts, and improving its environmental performance, while considering costs and return on investment.

#### *5.2.1 Reducing the Company's Carbon Footprint*

A key area of attention continues to be the energy efficiency of facilities to contribute to an overall reduction in the company's energy consumption and greenhouse gas emissions. In this regard, between 2011 and 2014 Hydro Ottawa made improvements to offices and work centres following energy audits, and installed building automation systems, and lighting, insulation and window upgrades in its distribution substation buildings to more efficiently manage lighting and heating, ventilation and air conditioning (HVAC) operations.

A pilot study has been initiated at one facility to help reduce energy and water usage, optimize performance of renewable energy systems, and increase Hydro Ottawa's green footprint. Technology has been installed which allows for energy and water consumption and savings to be displayed in real time in a graphical manner, reporting on consumption and costing, and the setting of user defined email alerts to notify of outages or deviations from baseline usage. This initiative will be refined over the next year and expanded to other Hydro Ottawa facilities.

Hydro Ottawa is currently planning for the construction of a more efficient and strategically located Eastern Operations and Administrative Campus, as well as a Southern Operations and Warehouse facility. These facilities will be certified to the Leadership in Energy and Environmental Design (LEED) standards. Construction of these facilities, and the sale of some of the existing facilities, will provide a significant reduction in energy consumption and greenhouse gas emissions.

Hydro Ottawa also continues to invest in green fleet vehicles and technology where it is available for commercial fleets. Fleet initiatives in support of this approach along with additional initiatives related to technology, are planned from 2016 – 2020, such as:

- continuing to replace vehicles, as per the established fleet replacement schedule, with hybrid or more energy efficient vehicles in each class where available;

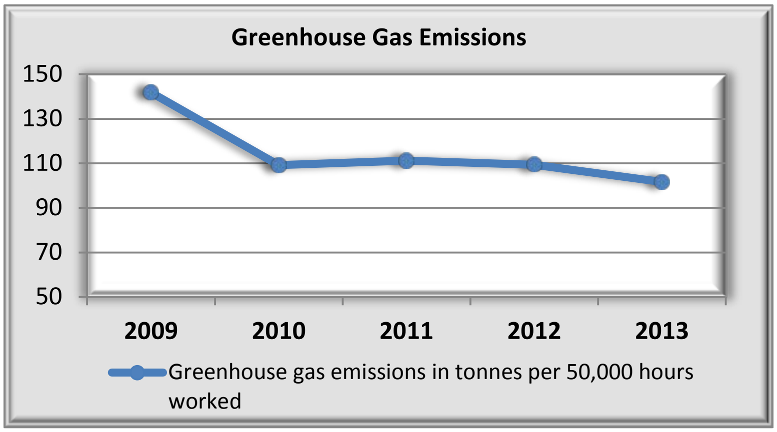
- incorporating hybrid technology to operate hydraulics for aerial devices (“buckets”) and battery technology in the entire fleet of vans to eliminate idling for heating and lighting while servicing underground cabling;
- piloting electric vehicles as appropriate;
- introducing biofuels such as ethanol and biodiesel;
- continuing to convert aerial devices to Biopure biodegradable oil, which is non-toxic, metal-free and inherently biodegradable;
- continuing efforts to optimize the fleet size; and
- leveraging vehicle Global Positioning System (GPS) technology and a new fleet management software to reduce operating costs through maintenance efficiencies, reduced fuel demand and greenhouse gas emissions.

Reducing the environmental impact of information technology platforms continues to be another approach Hydro Ottawa is utilizing to reduce the company’s carbon footprint. Some of the completed initiatives and those underway over the next few years include:

- implementing a server virtualization and consolidation program which has been decommissioning servers;
- establishing power management settings and double-sided printing defaults for all devices;
- establishing a Storage Area Network Program that has the capability to store a higher density of information on one server which means fewer servers are required for the same amount of information;
- initiating a virtual workstation pilot that provides the same service virtually for multiple users versus the typical arrangement of one physical workstation per user;
- establishing a new managed print services agreement with an external provider to standardize on a single brand of printers and eliminate all local and personal printers; and
- continuing to equip Hydro Ottawa facilities with video and teleconferencing capability in an effort to reduce travel between sites.

As outlined in Figure 5, Hydro Ottawa's greenhouse gas emissions (vehicle fuel combustion emissions, buildings combustion emissions and SF6 gas emissions) based on hours worked, have decreased steadily as a result of the increased focus placed on environmental sustainability.

**Figure 5 – Greenhouse Gas Emissions**



Reducing the amount of non-hazardous waste that is generated and diverting more away from landfill are also important elements of reducing the company's carbon footprint. Hydro Ottawa tracks all solid and liquid wastes, including operational waste streams, and has systems in place to ensure high diversion rates are maintained. Hydro Ottawa recycles many items including cans, glass, cardboard, paper, plastic, wood, tree trimmings, transformers and electrical equipment, tires, meters, e-waste (laptops, servers, desktops, printers, and cell phones) and metals.

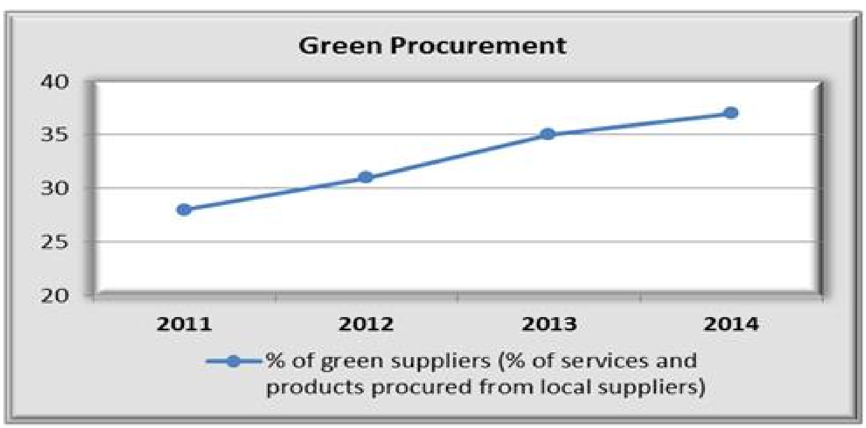
Hydro Ottawa's non-hazardous waste diversion rate was 91 percent for 2013, and 89 percent for 2014. While the company's diversion rate varies slightly from year to year, depending on the type and volume of materials being removed from service, and the availability of recycling options for the resulting waste, the non-hazardous waste diversion rate has consistently been above 90 percent from 2009 to 2013. Hydro Ottawa's LEED certified facilities will provide an opportunity for improvement in non-hazardous waste source separation and overall non-hazardous waste diversion rates by providing for a more centralized recycling model.

### *5.2.2 Greening Procurement and the Supply Chain*

Hydro Ottawa's approach to green procurement ensures that environmentally friendly purchasing decisions are made, where opportunities exist, while still ensuring that the procurement process delivers value for money.

Hydro Ottawa has put in place a point system for evaluating supplier proposals using environmental designations and practices as a "tie-breaker" for differentiating close competitive bidders. Hydro Ottawa also sources goods and services locally where it is cost-effective to do so, in order to minimize transportation and associated impacts on the environment. To that end, as represented in Figure 6, Hydro Ottawa tracks the relative proportion of purchase orders placed with firms in and surrounding the National Capital Region. Thirty-five percent of goods and services were purchased from local suppliers within a 100 km radius of the National Capital Region in 2013, measured in terms of dollars spent, and in 2014, 37% of goods and services were purchased locally, which represents a 6% increase over 2013.

**Figure 6 – Green Procurement**



### *5.2.3 Building a Culture of Environmental Sustainability*

By fostering a culture of environmental stewardship within the company, employees become champions for the greening of Hydro Ottawa's operations, and a key source of ideas for how to further reduce environmental impacts.

As measured through an engagement survey, employees have a strong level of awareness of the company's commitment and actions regarding environmental sustainability, as well as their role in this regard. Hydro Ottawa works to ensure employees have the tools they need to reduce waste and conserve energy, whether through the default settings on their electronic devices, the availability of recycling and waste separation stations in the workplace, or mechanisms for electronic collaboration and communication.

Hydro Ottawa is also greening its customer service practices by providing more online services through *MyHydroLink,* and working to grow the number of customers opting for paperless billing, in an effort to work with customers to reduce environmental impacts.

Hydro Ottawa plans to continue to engage employees in further greening its business operations and practices so as to increase the company's environmental performance and reduce environmental impacts.

# SHARED SERVICES AND CORPORATE COST ALLOCATION

## 1.0 INTRODUCTION

Hydro Ottawa Limited ("Hydro Ottawa") provides and receives services to/from its affiliated companies Energy Ottawa Inc. ("Energy Ottawa") and Hydro Ottawa Holding Inc. (the "Holding Company"), in order to realize economies of scale, manage costs and maintain service levels.

Hydro Ottawa is the largest entity within the Hydro Ottawa Group of Companies, contributing approximately 90 percent of the revenues and assets. With the exception of strategic Management Services, Internal Audit, Legal, Treasury and Enterprise Risk Management services from the Holding Company, Hydro Ottawa maintains its own resources for the shared corporate services of Human Resources ("HR"), Information Technology ("IT"), Facilities, Supply Chain, Building and Facilities Support, Fleet, Communications, Conservation, Regulatory and Finance services. While the affiliates also have some resources of their own, Hydro Ottawa does provide certain shared corporate services to Energy Ottawa and the Holding Company.

The Holding Company provides shared corporate services such as strategic direction and oversight to Hydro Ottawa in the areas of Finance, Treasury, Internal Audit, Risk Management, Legal, Regulatory, Corporate Administration, Human Resources, Safety & Environment, Information Technology, Corporate Communications and Management Services. Some Board of Directors related costs are also included in the cost allocation to Hydro Ottawa following corporate governance reforms implemented on December 1, 2014, described later in this exhibit.

Furthermore, both Hydro Ottawa and the Holding Company allocate the cost of shared corporate services to Conservation Demand Management ("CDM"), according the fully-allocated costing methodology for non-rate-regulated activities described in the

*Conservation and Demand Management Code for Electricity Distributors, September 16, 2010*.

## 2.0 SHARED SERVICE MODEL

Hydro Ottawa's shared service methodology has not changed since the last rate application in 2012, except for the inclusion of Treasury Services and Board of Directors related costs described later in this section.

In accordance with the *Affiliate Relationships Code for Electrical Distributors and Transmitters*, the prices for the shared corporate services are determined by fully-allocated cost-based pricing, with the exception of Meter Data Service Provider costs which are based on market pricing. The pricing models and methodology were developed internally and the services are provided under the terms of Service Level Agreements ("SLA").

Table 1 below identifies the functional services provided by Hydro Ottawa to its affiliates and describes the pricing methodology used for each functional service.

**Table 1: Pricing Methodology for services provided by Hydro Ottawa**

| Functional Service | Pricing Methodology |
|---|---|
| Human Resources | Cost per employee |
| Facilities | Market rate for rent, proportionate share of cost for operations and maintenance, property taxes, and furnishings |
| IT Services | Cost per employee |
| Finance | Proportionate share of cost factored by time spent |
| Communications | Proportionate share of cost factored by time spent |
| Metering, Meter Data Services | Market based |
| Mechanic Services | Internal labour rate factored by time spent |

Table 2 identifies the management services received by Hydro Ottawa from the Holding Company and describes the pricing methodology used for each Management service.

**Table 2: Pricing Methodology for services received from the Holding Company**

| Management Service | Pricing Methodology |
|---|---|
| Legal, Corporate Administration & Regulatory | Proportionate share of cost factored by time spent |
| Finance, Internal Audit & Enterprise Risk Management | |
| HR, Safety & Environment | |
| Corporate Communications | |
| Information Management & Technology Services | |
| Management Services | |
| Conservation | |
| Treasury Services | Proportionate share of cost based on borrowing activity |
| Board of Directors | Proportionate share of cost |

The Holding Company costs are allocated to all affiliates based on an assessment of the budgeted costs in relation to activity level within each affiliate and the proportionate share of time spent. This assessment is completed annually to determine the appropriate allocation of costs. At year end, the allocations are reviewed and any material differences between actuals and budget are adjusted through a true up process to ensure costs are properly allocated to affiliates and to non-rate regulated activities.

The range of services provided and received by Hydro Ottawa to and from its affiliates is reviewed annually and adjusted to take into account changing circumstances. Since the 2012 rate application, the following new services have been added to the Service Level Agreements.

- Treasury administration services provided by the Holding Company were consolidated under the umbrella of the SLAs starting in 2012 in order to improve efficiency and transparency around the costs related to borrowing activities and maintaining credit ratings/credit facilities. The costs related to treasury administration services are allocated to affiliates based on their level of borrowing activity.
- Communications services provided by Hydro Ottawa to Energy Ottawa and to CDM were added to the allocations starting in 2013.
- Fleet costs associated with the CDM van provided by Hydro Ottawa were also added to the allocations starting in 2013.

- Certain governance reforms were implemented effective December 1, 2014 in order to achieve a more efficient and cost effective governance structure. The Boards of Directors of the Holding Company and Hydro Ottawa were reconfigured to reduce the duplication and redundancy that existed with the two boards. The Hydro Ottawa Board was reduced from its previous size of seven members to a board of three members, composed of the Chair of the Holding Company Board, the President and Chief Executive Officer of the Holding Company, and one member of management of Hydro Ottawa who is not employed by an affiliate. The Chair of the Holding Company Board and the President and Chief Executive Officer of the Holding Company also serve on the reconfigured eleven-member Holding Company Board. As a consequence of these reforms, all costs related to the Board of Directors are now budgeted under the Holding Company and a proportion of the cost is allocated to Hydro Ottawa through the SLAs starting in 2015. This has resulted in a net reduction of cost to Hydro Ottawa of approximately $40,000 annually.

**Table 3: Board of Directors-Related Costs before and After Governance Reform**

| | Annual Cost |
|---|---|
| Board of Directors cost before | $160,000 |
| Board of Directors cost after | $120,000 |
| Reduction in Cost due to Governance Reform | ($40,000) |

## 3.0 SERVICES PROVIDED TO AND FROM AFFILIATES

A copy of OEB Appendix 2-N is reproduced at the end of this Exhibit for reference. This appendix provides cost information and allocation details relating to each shared service provided or received by Hydro Ottawa in the historical years (2012 to 2014), the bridge year (2015) and the test year (2016). The amount of Board of Directors related costs included in the Holding Company's allocation to Hydro Ottawa in the years 2015 and 2016 is also provided in this appendix.

Table 4 provides a summary of the services provided by Hydro Ottawa to its affiliates and to non-rate regulated CDM activities.

**Table 4: Summary of Shared Corporate Services provided by Hydro Ottawa**

| Provided By | Provided To | 2012 Actual | 2013 Actual | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|---|---|
| Hydro Ottawa | Holding Company[1] | $743,921 | $771,477 | $785,029 | $818,932 | $835,388 |
| Hydro Ottawa | Energy Ottawa[1] | $532,668 | $983,140 | $989,715 | $1,043,155 | $1,061,482 |
| Hydro Ottawa | CDM[2] | $292,962 | $433,950 | $437,837 | $455,664 | $464,836 |
| **Total** | | **$1,569,551** | **$2,188,567** | **$2,212,581** | **$2,317,751** | **$2,361,706** |

[1] Represents the costs allocated to the Holding Company and Energy Ottawa, which are reflected as Other Revenue in Exhibit C-2-1.

[2] The costs allocated to CDM are treated as an offset to OM&A.

Table 5 provides a summary of the services received by Hydro Ottawa from its parent Holding Company.

**Table 5: Summary of Shared Corporate Services received by Hydro Ottawa**

| Provided By | Provided To | 2012 Actual | 2013 Actual | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|---|---|
| Holding Company | Hydro Ottawa | $3,501,812 | $3,454,602 | $3,626,081 | $3,646,744 | $3,720,040 |
| Holding Company | CDM | $156,200 | $155,398 | $173,917 | $173,256 | $176,736 |
| **Total** | | **$3,658,012** | **$3,610,000** | **$3,799,998** | **$3,820,000** | **$3,896,776** |

## 4.0 VARIANCE ANALYSIS

Table 6 and Table 7 below identify the variances for the following:

- 2016 Test Year vs 2012 Actual
- 2016 Test Year vs 2013 Actual

Explanations for significant variances are provided after the tables.

**Table 6: 2016 Test Year vs 2012 Actual**

| Provided By | Provided To | 2012 Actual | 2016 Test Year | $ Variance | % Variance |
|---|---|---|---|---|---|
| Hydro Ottawa | Holding Company | $743,921 | $835,388 | $91,467 | 12% |
| Hydro Ottawa | Energy Ottawa | $532,668 | $1,061,482 | $528,814 | 99% |
| Hydro Ottawa | CDM | $292,962 | $464,836 | $171,874 | 59% |
| Holding Company | Hydro Ottawa | $3,501,812 | $3,720,040 | $218,228 | 6% |
| Holding Company | CDM | $156,200 | $176,736 | $20,536 | 13% |

The $528,814 variance between 2012 Actual and 2016 Test Year for services provided by Hydro Ottawa to Energy Ottawa is due to an increase in the activities of the affiliate. In late 2012, Energy Ottawa acquired three additional hydroelectric plants and additional interest in the Ring Dam and remaining water rights at Chaudière Falls, increasing its number of employees from 14 before the acquisition to 36 after the acquisition. The cost of the various corporate services provided by Hydro Ottawa was reassessed in 2013 to take into account the additional volume of work and time spent in support of Energy Ottawa. The allocations for HR and IT services were both impacted significantly as they are based on cost per employee.

The $171,874 variance between 2012 Actual and 2016 Test Year for services provided by Hydro Ottawa to CDM is primarily due to increase in HR and IT services required to support additional CDM employees and new cost allocations for Communications Services and Fleet introduced in 2013, as described earlier in this Exhibit.

The $218,228 variance between 2012 Actual and 2016 Test Year for services provided by the Holding Company to Hydro Ottawa include inflationary increases and the new allocation for Board of Directors-related costs starting in 2015 as described earlier. These increases are partially offset by a reduction in proportionate share of Treasury services to 67% as greater effort will be focused on borrowing activities for Energy Ottawa capital works planned.

**Table 7: 2016 Test Year vs 2013 Actual**

| Provided By | Provided To | 2013 Actual | 2016 Test Year | $ Variance | % Variance |
|---|---|---|---|---|---|
| Hydro Ottawa | Holding Company | $771,477 | $835,388 | $63,911 | 8% |
| Hydro Ottawa | Energy Ottawa | $983,140 | $1,061,482 | $78,342 | 8% |
| Hydro Ottawa | CDM | $433,950 | $464,836 | $30,886 | 7% |
| Holding Company | Hydro Ottawa | $3,454,602 | $3,720,040 | $265,438 | 8% |
| Holding Company | CDM | $155,398 | $176,736 | $21,338 | 14% |

All of the variances between 2013 Actual and 2016 Test Year are consistent with previous explanations and general inflationary cost increases.

## 5.0 RECONCILIATION OF REVENUE IN APPENDIX 2-N

The Board's Filing Requirements require applicants to provide a reconciliation of the revenue in Appendix 2-N to the amounts included in Other Revenue in Exhibit C-2-1.

Table 8 summarizes the costs allocated by Hydro Ottawa to the Holding Company and Energy Ottawa which are included in Other Revenue.

**Table 8: Revenues from Affiliates Included in Other Revenue**

| Provided By | Provided To | 2012 Actual | 2013 Actual | 2014 Q2 Forecast | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|---|---|
| Hydro Ottawa | Holding Company | $743,921 | $771,477 | $785,029 | $818,932 | $835,388 |
| Hydro Ottawa | Energy Ottawa | $532,668 | $983,140 | $989,715 | $1,043,155 | $1,061,482 |
| **Total** | | **$1,276,589** | **$1,754,617** | **$1,774,744** | **$1,862,087** | **$1,896,870** |

## 6.0 BOARD OF DIRECTORS COSTS

The Board's Filing Requirements also require applicants to identify any Board of Director-related costs for affiliates that are included in its own costs. Hydro Ottawa confirms that there are no Board of Directors costs for affiliated entities included in its costs.

## Appendix 2-N
## Shared Services and Corporate Cost Allocation

**Year:** 2016 Test Year

### Shared Services

| Name of Company | | Service Offered | Pricing Methodology | Price for the Service | Cost for the Service |
|---|---|---|---|---|---|
| From | To | | | $ | $ |
| HOL | HOHI | Human Resources | Cost | 127,304 | 127,304 |
| HOL | HOHI | Facilities | Market/Cost | 233,828 | 151,710 |
| HOL | HOHI | IT Services | Cost | 219,064 | 219,064 |
| HOL | HOHI | Finance | Cost | 172,908 | 172,908 |
| HOL | HOHI | Communications | Cost | 82,284 | 82,284 |
| **Total Charged from HOL to HOHI** | | | | **835,388** | **753,270** |
| HOL | Energy Ottawa | Human Resources | Cost | 190,704 | 190,704 |
| HOL | Energy Ottawa | Facilities | Market/Cost | 76,811 | 60,017 |
| HOL | Energy Ottawa | IT Services | Cost | 335,716 | 335,716 |
| HOL | Energy Ottawa | Finance | Cost | 198,487 | 198,487 |
| HOL | Energy Ottawa | Communications | Cost | 33,888 | 33,888 |
| HOL | Energy Ottawa | Metering, Meter Data Services | Market | 79,800 | * |
| HOL | Energy Ottawa | Mechanic Services | Cost | 146,076 | 146,076 |
| **Total Charged from HOL to Energy Ottawa** | | | | **1,061,482** | **964,888** |
| HOL | CDM | Human Resources | Cost | 95,892 | 95,892 |
| HOL | CDM | Facilities | Market/Cost | 50,256 | 35,483 |
| HOL | CDM | IT Services | Cost | 165,016 | 165,016 |
| HOL | CDM | Finance | Cost | 120,924 | 120,924 |
| HOL | CDM | Communications | Cost | 24,204 | 24,204 |
| HOL | CDM | Fleet | Cost | 8,544 | 8,544 |
| **Total Charged from HOL to CDM** | | | | **464,836** | **450,063** |
| | | | | | |

* Metering, Meter Data Services costs related to Energy Ottawa are considered immaterial and not practicable to determine

### Corporate Cost Allocation

| Name of Company | | Service Offered | Pricing Methodology | % of Corporate Costs Allocated | Amount Allocated |
|---|---|---|---|---|---|
| From | To | | | % | $ |
| HOHI | HOL | Legal, Corporate Admin & Regulatory | Cost | 50% | 215,030 |
| HOHI | HOL | Finance, Internal Audit & Enterprise Risk Mgmt | Cost | 64% | 1,468,530 |
| HOHI | HOL | Treasury | Cost | 67% | 258,085 |
| HOHI | HOL | HR, Safety & Environment | Cost | 92% | 588,788 |
| HOHI | HOL | Corporate Communications | Cost | 20% | 189,541 |
| HOHI | HOL | Information Management & Technology Services | Cost | 45% | 249,438 |
| HOHI | HOL | Management Services | Cost | 46% | 627,871 |
| HOHI | HOL | Board of Directors | Cost | 27% | 122,757 |
| **Total Charged from HOHI to HOL** | | | | | **3,720,040** |
| HOHI | CDM | Management Services | Cost | 50% | 176,736 |
| **Total Charged from HOHI to CDM** | | | | | **176,736** |
| | | | | | |

**Note:**

**1** **This appendix must be completed in relation to each service provided or received for the Historical (actuals), Bridge and Test years. The required information includes:**

· ***Type of Service:***
**Services such as billing, accounting, payroll, etc. The applicant must identify any costs related to the Board of Directors of the parent company that are allocated to the applicant.**

· ***Pricing Methodology:***

**Pricing Methodology includes approaches such as cost-base, market-base, tendering, etc. The applicant must provide evidence demonstrating the pricing methodology used. The applicant must also provide a description of why that pricing methodology was chosen, whether or not it is in conformity with ARC, and why it is appropriate.**

· ***% Allocation:***

**The applicant must provide the percentage of the costs allocated to the entity for the service being offered. The Applicant must also provide a description of the allocator and why it is an appropriate allocator.**

# PURCHASE OF NON-AFFILIATE SERVICES

## 1.0 PROCUREMENT PROCESS

The Hydro Ottawa Procurement Policy, Attachment D-2(A), stipulates that all acquisitions shall be covered by purchase orders, with noted exceptions, such as utilities and taxes, as defined by policy. Spending authority is set out in the Approval Authority for Procurements and Disbursements, Attachment POL-En-006.00 and controlled by electronic workflow embedded in the business system (JD Edwards – EnterpriseOne).

In 2014, Hydro Ottawa moved to improve control and consistency in the procurement of major contracts s by implementing a new Contract Procurement Process. See D-2, Attachment C) for further details.

Hydro Ottawa also has long standing alliances with seven key suppliers. Monthly forecast sessions enable the supplier to work their supply channels to pipeline material to meet projected need dates with minimal commitment on Hydro Ottawa's part. The alliance partnerships position Hydro Ottawa to take delivery only when ready to proceed with the relevant job. The supplier holds the inventory. All residential transformers and underground cable are delivered in this manner in addition to some commercial transformers and poles for new or replacement pole lines.

All non-affiliate purchases are in compliance with the above-noted policies.

## 2.0 HISTORIC EXPENDITURES

The following tables contain information on the purchases of non-affiliate services for 2012 through 2014 by Hydro Ottawa Limited ("Hydro Ottawa"). The total costs are those costs paid to the Suppliers each year, excluding tax. The dollar amounts have been redacted for confidentiality purposes. If parties feel that the information is required, Hydro Ottawa will follow the Ontario Energy Board's (the "Board") Practice Direction on

Confidential Filings in order to provide the information. Suppliers have been included in the list if the total purchases exceeded $750k.

Beside each supplier reference in the table below is an indication of the type(s) of procurement methodology employed.

**Table 1: 2012 Suppliers**

| Procurement Method | Supplier | Service / Product |

# HYDRO OTTAWA CORPORATE POLICIES

| **Subject**: Procurement | | |
|---|---|---|
| **Category**: Finance | **Policy Number**: POL-Fi-003.00 | |
| **Administrator:** Director of Finance | **Owner:** Chief Financial Officer | **Approver:** President and CEO |

1. **PURPOSE**

The purpose of this policy is to document the principles that govern the acquisition of goods and services by Hydro Ottawa.

The objectives of the Procurement Policy are to:
- Establish an efficient process for the purchase of quality goods and services
- Ensure favourable prices are obtained to maximize the value of all purchases for Hydro Ottawa stake-holders
- Ensure Hydro Ottawa procures all goods and services from reputable/ethical vendors.
- Support the protection of the environment
- Ensure fair, open, transparent and accountable competitive processes are followed in the acquisition of goods and services
- Ensure compliance with all applicable laws and regulations.

2. **SCOPE**

All employees of Hydro Ottawa.

3. **DEFINITIONS**

***Call-Ups*** are requests to purchase goods and services available for sale under a Standing Offer.
***Hydro Ottawa*** refers to the Hydro Ottawa Group of Companies.
***Emergency*** is defined as a sudden, urgent, unexpected occurrence or occasion requiring immediate action.
***Low Dollar Value*** is defined as ≤ $2000.
***Inventory Items*** are materials that are routinely ordered/tracked by Procurement and issued to field operations for construction and maintenance activities.
***Invoices without Reference*** are invoices for goods and services that have not been pre-authorized by a purchase order and/or vendor contract.
A ***Non-Competitive Procurement***, in the context of this policy, refers to an acquisition from a:

i. Sole Source, where there is only one identifiable source for a given good or service, or a
ii. Directed Source, where there is more than one identifiable source for a given good or service, but there are compelling reasons why the selected vendor is not determined by an open competition.

***Non-Inventory Items*** are goods and services Hydro Ottawa business entities purchase either directly from a vendor or through the assistance of the Procurement function.
***Personal Payments*** refer to "out of pocket" business expenditures paid for by employees through cash, personal debit/credit card or personal cheque transactions.
***Procurement*** (Unit) is defined as the individual or team of individuals responsible for the Procurement function within Hydro Ottawa.
A ***Standing Offer*** agreement is an offer from a vendor to supply "on demand" goods and services at pre-arranged prices under negotiated terms and conditions.

## 4. POLICY DIRECTIVES

a. Purchases of goods and services are categorized as follows:

**Inventory Items:**

Construction materials that are purchased solely by Procurement working in conjunction with Hydro Ottawa field operations.

**Non-Inventory Items:**

i. Goods and services acquired by Procurement on behalf of Hydro Ottawa Business entities using the following purchasing vehicles:
- Standing Offers
  - Where Standing Offers are in place, they are the preferred procurement vehicle for the purchase of related goods and services
  - A good and/or service to a maximum of $100,000 can be procured by a Call-Up under a specific Standing Offer
  - Any Call-Up for a good and/or service over $100,000 requires competitive bids from existing Standing Offer suppliers

  Note: Where only one Standing Offer supplier exists the Requisitioner has the option of initiating a Directed Source procurement or requesting that a new competitive bid procurement process takes place
- Request for Proposal, Quotation and/or Tender
  - For values greater than $2000 to a maximum of $25,000, Procurement will obtain a minimum of two oral or written competitive quotations
  - For values over $25,000 Procurement will obtain a minimum of three written competitive quotations

  Note: Following the selection of the winning supplier a Purchase Order and/or vendor contract will be issued by Procurement.

ii. Goods and services > $2000 that can be acquired without the requirement of a Purchase Order and/or vendor contract (Reference Annex 1 – Schedule 6 of Hydro Ottawa's policy on Approval Authority for Procurements and Disbursements)

iii. Low Dollar Value goods and services that Hydro Ottawa business entities purchase directly from vendors using the following purchase vehicles:
- Petty Cash (To a maximum of $100)
- Hydro Ottawa Credit Card
- Personal Payment

Note: Low Dollar Value purchases do not require Purchase Orders/competitive bids.

b. Procurement is responsible for ensuring that goods and services are acquired using the appropriate procurement method.

c. Approvals for the purchase of all goods and services will be in accordance with Hydro Ottawa's policy on Approval Authority for Procurements and Disbursements.

d. With the exception of Standing Offers and emergency purchases, PO's initiated after the provision of goods or services and/or the receipt of supplier invoices are a serious violation of this policy and will:

   i. Require the approval of two management levels above the Requisitioner

   ii. Be reported on a quarterly basis to senior Divisional management

e. Vendor bids for the provision of goods will be assessed using a 50% weighting factor for price.

f. Vendor bids for the provision of services will be assessed using a 30% weighting factor for price.

g. When appropriate, bid evaluations will include environmental impact as part of the assessment criteria.

h. Non-financial bid evaluation criteria will be jointly set by Procurement and the Requisitioner.

i. The use of any non-standard terms and conditions relating to Hydro Ottawa procurement documentation requires prior approval by the Legal group.

j. The splitting of purchase requests into multiple Purchase Orders is a serious violation of this policy.

k. The following three conditions must be met before amendments to released Purchase Orders will be actioned by Procurement:
    i. Requested cost increases do not exceed 50% of the original Purchase Order/contract value, and
    ii. There are no material changes in scope as defined in the original Purchase Order, and
    iii. A revised requisition, with details on the reasons for the required changes, has been resubmitted/re-approved per Hydro Ottawa's policy on Approval Authority for Procurements and Disbursements.

    Note: The absence of any of the above would result in a requirement for a new procurement process.

l. A vendor contract, relating to either a competitive or non-competitive procurement of goods and services, can be extended by up to one year (under the original or more favourable terms and conditions) with the joint approval of the sponsoring EMT member and Manager of Supply Chain.

   Note: The maximum term of a vendor contract (including extensions) is limited to 3 years.

m. Employees involved in both competitive and non-competitive procurements must comply with Hydro Ottawa's conflict of interest guidelines as defined in Hydro Ottawa's Code of Business Conduct.

n. The dollar limits referenced in this policy are in Canadian currency and are exclusive of taxes and duties.

## 5. RELATED POLICIES, PROCEDURES and REFERENCE DOCUMENTS

Approval Authority for Procurements and Disbursements Policy (POL-En-006.00)
Hydro Ottawa Corporate Credit Card Policy (POL-Fi-001.00)
Petty Cash Policy (POL-Fi-004.00)
Business Expense Reimbursement Policy (POL-Fi-005.00)
Discipline and Discharge Policy (POL-Hr-005.00).
Request to Direct Source Goods and Services Form
Hydro Ottawa's Code of Business Conduct
Contractor OHSE Requirements (WI-MS-002.00)

## 6. EXCLUSIONS

**Non-Competitive Procurements**

Examples of when the competitive procurement process may be waived are as follows:

i. The need is one of pressing urgency and must be addressed quickly to alleviate a threat to:
    - the health, safety or welfare of Hydro Ottawa employees and/or the public
    - Hydro Ottawa and/or public property
    - essential services

    Note: During emergency situations it is understood urgently needed goods and services may be services may be procured without the issuance of a purchase order.

ii. The time, effort and expense of a competitive procurement are not justified given the nature of the goods or services being acquired.
    Example: The provision of price competitive professional services from an embedded vendor who, through a long standing relationship with Hydro Ottawa, has an in-depth understanding of the corporation's business needs/requirements

iii. There is only one qualified supplier capable of supplying the required good or service

iv. There are pre-requisites to bidding that can only be satisfied by one supplier

v. The need is a follow-on to a previously acquired good or service and, if price competitive, is most appropriately provided by the original contractor

vi. The value of the good or service being acquired does not exceed $2000

**Non-Competitive Procurement Approval Requirements**

i. SOLE SOURCE procurements require prior authorization in accordance with Annex 1 – Schedule 1 of Hydro Ottawa's policy on Approval Authority for Procurements and Disbursements

ii. DIRECTED SOURCE procurements require authorization in accordance with Annex 1 – Schedule 4 of Hydro Ottawa's policy on Approval Authority for Procurements and Disbursements

Note:
1. The cost of known follow-on support activity (to a maximum of 3 years) associated with a Directed Source procurement should be included in the initial total purchase value to avoid duplication in approval requests (e.g. annual hardware/software maintenance, ongoing software support, quarterly/yearly audits etc.). After 3 years a decision to continue with the follow-on support requires re-approval in accordance with Hydro Ottawa's policy on Approval Authority for Procurements and Disbursements.

2. A Request To Direct Source Goods and Services Form must be completed to justify all Directed Source acquisitions of goods or services in excess of $2,000.
Note: Hydro Ottawa management approvals are not required when the non-competitive procurement has been authorized by Hydro Ottawa's Board of Directors and/or its committees.

## 7. ADDITIONAL POLICY ELEMENTS

**Requisitioner's Responsibilities:**

i. Provide sufficient lead time for the processing of procurement documentation
ii. Initiate a Purchase Requisition in JDE and, through the imbedded workflow, secure approval to purchase
iii. Develop the Statement of Requirements or detailed Specification as applicable to the requirement and the acquisition method
iv. Work collaboratively with Procurement to define the non-financial bid evaluation criteria/weighting and the selection process as appropriate to the acquisition method
v. In conjunction with Procurement, evaluate suppliers' bids in accordance with the pre-determined evaluation criteria/weighting

**Procurement's Responsibilities:**

i. Act as custodian of the Procurement Policy and all associated procurement procedures and in so doing:
    - Monitor conformance with the policy and procedures
    - Reject any Purchase Requisitions which, in the opinion of Procurement, do not comply with this policy and supporting procedures
    - Raise any incidents of non-compliance through the Procurement management hierarchy for resolution
ii. Provide advice and guidance to internal customers and work collaboratively with them during the procurement process to:
    - Determine the most appropriate acquisition method
    - Establish the non-financial bid evaluation criteria/weighting and the selection process as appropriate to the procurement method
    - Prepare the solicitation documents including the Statement of Requirements or detailed Specifications
    - Evaluate supplier submissions including the completion of a vendor risk assessment and validation of compliance with Hydro Ottawa's Contractor OHSE Management Program (Reference Contractor OHSE Requirements – WI-MS-002.00)
    - Ensure bidding prerequisites are fair and objective
iii. Identify/validate Sole Source (vs. Directed Source) procurements
iv. Work collaboratively with internal customers to determine opportunities to aggregate purchases and establish vehicles for the acquisition of common buys
v. Routinely inform internal customers about the availability of Standing Offers, supply arrangements and supplier source lists for the acquisition of goods or services
vi. Assess the complexity and risk of purchases to determine when vendor contracts are required and interface with Legal accordingly
vii. Debrief unsuccessful suppliers, in consultation with internal customers if requested by a supplier

viii. Work collaboratively with internal customers to evaluate supplier performance ensuring compliance with contract deliverables/service level commitments
Note: In the case of long term agreements performance assessments should be completed annually and/or in advance of any contract renewals and/or extensions
ix. Provide management with requested reports on procurement activity
x. Ensure all likely follow-on activity is identified and included in the initial approval request for Directed Source acquisitions

**Management's Responsibilities:**
i. Communicate details of the Procurement Policy to employees
ii. Ensure all procurements comply with this policy
iii. Ensure the availability of current year (and, when required, future years') budget funding to support the acquisition
iv. Collaborate with Procurement in the
- aggregation of Hydro Ottawa common purchases
- evaluation of supplier submissions
- assessment of supplier performance

v. Address minor policy non-compliance issues with the responsible employee and escalate serious policy violations to the Policy Owner

## 8. COMPLIANCE

Serious policy infractions will be addressed in accordance with Hydro Ottawa's Code of Business Conduct and policy on Discipline and Discharge (POL-Hr-005.00).

## 9. APPROVAL HISTORY

| Revision | Release Date: | Policy Owner Sign-off: | Approved By: | Effective Date: |

| Scheduled Re-affirmation Date: **January 1, 2016** | Responsibility: **Chief Financial Officer** |
|---|---|

## 10. POLICY EXCEPTIONS

Exceptions to the above directives and/or changes to this policy must receive written pre-authorization from the President and CEO. For clarification on any aspect of this policy contact the Director of Finance.

# HYDRO OTTAWA CORPORATE POLICIES

| **Subject**: Approval Authority for Procurements and Disbursements | | |
|---|---|---|
| **Category**: Enterprise | **Policy Number**: POL-En-006.00 | |
| **Administrator:** Director Finance | **Owner:** Chief Financial Officer | **Approver:** President and CEO |

1. **PURPOSE**
The purpose of this policy is to define the limits of procurement and disbursements approval authority delegated to specified positions within Hydro Ottawa.

2. **SCOPE**
The Hydro Ottawa Group of Companies.

3. **DEFINITIONS**
***Temporary***, in the context of this policy, is defined as ≤ 30 consecutive calendar days.
***Delegation of Approval Authority*** refers to the long term assignment of financial decision making authority by the President and CEO to various positions within Hydro Ottawa.
***Temporary Sub-delegation of Approval Authority*** refers to the short term reassignment of financial decision making authority during management/supervisor absences.
A ***Sole Source Procurement*** is when there is only one identifiable source for a given good or service.
A ***Directed Source Procurement*** is when there is more than one identifiable source for a given good or service, but there are compelling reasons why the selected vendor is not determined by an open competition.
***EA*** refers to Executive Assistant.
***AA*** refers to Administrative Assistant.

4. **POLICY DIRECTIVES**
   a. The President and CEO has been granted, by the Boards of Directors of the Hydro Ottawa Group of Companies, full decision making authority on all Hydro Ottawa day-to-day financial matters.
   b. This authority has been delegated by the President and CEO to various employees within the Hydro Ottawa Group of Companies based on their position and business mandate.
   c. Details on the delegation and temporary sub-delegation of approval authority for procurements and disbursements are provided in Annex 1 of this policy, which is structured as follows:

| | |
|---|---|
| Schedule 1 | Delegation of Approval Authority for Purchase Requisitions |
| Schedule 2 | Temporary Sub-Delegation of Approval Authority for Purchase Requisitions |
| Schedule 3 | Approval of Purchase Orders |
| Schedule 4 | Approval of Directed Source Procurements |
| Schedule 5 | Approval of Expense Reports |
| Schedule 6 | Approval of Payments That Do Not Require Purchase Orders |

   d. All values in Annex 1 are expressed in Canadian currency and are exclusive of taxes and duties.
   e. Responsibility rests with the approver to ensure there are current year (and if necessary future years') budget funds to pay for goods and services procured through purchase orders and/or procurement contracts.
   f. The procurement of /discretionary spending on the following specialized categories of goods and services must have co-approval from the appropriate Hydro Ottawa "functional" division before action is taken:

| Category | Functional Division Co-Approval |
|---|---|
| IM & IT Products and Services | IM & IT |
| Advertising | Communications |
| Legal Services | CFO (Legal) |
| Commercial Insurance | CFO (Treasury) |
| Sponsorships/Donations | Communications |
| Leases | CFO (Treasury) |
| Recruitment Services | HR |

Note:

- CFO (Legal) approval is not required when:
  - there is an established relationship between the legal service provider and Hydro Ottawa, and
  - CFO (Legal) initially approved the vendor.
- Commercial Insurance excludes HR employee benefit insurance programs such as life insurance, health and dental plans, the Worker Safety Insurance Board etc.

g. Individuals are responsible for sub-delegating their approval authority *before departing on planned absences* by documenting the sub-delegate's name and the duration the of the authority reassignment in an email which, at a minimum, should be sent to:

To: Director Human Resources
Supervisor Procurement
Supervisor Accounts Payable

Copy: Name of sub-delegated signing authority
The manager of the individual sub-delegating their signing authority
Supporting Executive/Administrative Assistant

Note: The above email can be sent by the appropriate EA/AA copying the individual who is sub-delegating their approval authority.

h. Approval authority can be sub-delegated to a peer within the employee's division or to a subordinate as detailed in Annex 1 - Schedule 2 of this policy.

i. Chiefs must sub-delegate their approval authority to a direct report within their division (i.e. lateral assignments are not permitted).

j. When approval authority has been sub-delegated to a subordinate, all financial transactions must be co-approved by the CFO Division per Annex 1 - Schedule 2 of this policy.

k. In the case of absences where a sub-delegate has not been named, approval authority will revert to the individual's direct manager who can either retain the signing authority responsibilities until the individual returns or initiate the assignment of temporary signing authority as described in 4 g. above.

l. The sub-delegation of signing authority for periods > 30 consecutive days requires the approval of the individual's direct manager (e.g. sub-delegation of a Director's signing authority for a 31 day period would require approval of the Division Chief.)

m. Individuals who are appointed to a management position as a result of Hydro Ottawa's Emergency Succession Plan will assume full approval authority of the appointed position.

## 5. RELATED POLICIES, PROCEDURES and REFERENCE DOCUMENTS

Approval Authority for Procurements and Disbursements Policy – Annex 1.
Hydro Ottawa Credit Card Policy (POL-Fi-001.00)
Business Expense Reimbursement Policy (POL-Fi-005.00)
Travel Expense Reimbursement Policy (POL-Fi-002.00)

Insurance Policy (POL-Fi-006.00)
Discipline and Discharge Policy (POL-Hr-005.00).
Recruiting and Staffing – Management Group Positions (POL-Hr-006.00).

## 6. EXCLUSIONS

There are no exclusions

## 7. ADDITIONAL POLICY ELEMENTS

There are no additional policy elements

## 8. COMPLIANCE

Policy violations will be addressed in accordance with Hydro Ottawa's Code of Business Conduct and policy on Discipline and Discharge (POL-Hr-005.00).

## 9. APPROVAL HISTORY

| Revision | Release Date: | Policy Owner Sign-off: | Approved By: | Effective Date: |
|---|---|---|---|---|
| .00 | January 1, 2013 | Chief Financial Officer | President and CEO | January 1, 2013 |
| Revision .NN | Revision Date Month/Day/Year | Policy Owner Sign-off: Chief Financial Officer | Approved By: President and CEO | Effective Date: Month/Day/Year |

| | |
|---|---|
| Scheduled Re-affirmation Date: **January 1, 2016** | Responsibility: CFO |

## 10. POLICY EXCEPTIONS

Exceptions to the above directives and/or changes to this policy must receive written pre-authorization from the President and CEO. For clarification on any aspect of this policy contact the Director, Finance.

# Approval Authority for Procurements and Disbursements

## ANNEX 1 – AUTHORITY LEVELS

Schedule 1

**Delegation of Approval Authority**
**Purchase Requisitions**

| Approver | Mandate | Limit |
|---|---|---|
| President & CEO | Enterprise | > $1,000,000 |
| Chief | Division | To $1,000,000 |
| Director | Group | To $500,000 |
| Manager | Section | To $100,000 |
| Supervisor | Unit | To $5,000 |
| Executive Assistant | N/A | To $1,000 |

**NOTES:**

1. The above authorization limits relate to purchase requisitions for both competitive and sole source procurements.
2. Directed source procurement approval requirements are provided in Schedule 4.
3. Approval to purchase goods and services must be obtained from the division that will be paying the associated invoices/incurring the expenses.
4. Responsibility rests with the approver to ensure there are current year (and if necessary future years') budget funds to pay for goods and services procured through purchase orders and/or third party contracts.
5. Requisitions (and purchase orders) are *not* required for procurements:
   - ≤ $2000 (unless stipulated by the supplier)
   - listed in Schedule 6
6. All purchases must comply with Hydro Ottawa's Procurement Policy (POL-Fi-003.00).
7. Higher approval limits for specific operational positions (based on job function) require authorization from the President & CEO.

# Approval Authority for Procurements and Disbursements

## ANNEX 1 – AUTHORITY LEVELS

Schedule 2

**Temporary Sub-delegation of Approval Authority**
**Purchase Requisitions**

| Original Signing Authority | Limit | Temporary Sub-delegated Signing Authority | CFO Division Co-Approval |
|---|---|---|---|
| President & CEO | > $1,000,000 | Chief | Chief Financial Officer |
| Chief | To $1,000,000 | Director | Director Finance |
| Director | To $500,000 | Manager | Controller |
| Manager | To $100,000 | Supervisor | Manager Accounting |
| Supervisor | To $5,000 | N/A | N/A |
| Executive Assistant | To $1,000 | N/A | N/A |

**NOTES:**

1. Temporary is defined as ≤ 30 consecutive calendar days.
2. In the absence of Director positions within a Division, Chiefs would sub-delegate signing authority to a Manager.
   Note: The Manager's sub-delegated approval limit would be $500,000.
3. Sub-delegation of a signing authority for any period in excess of 30 consecutive days requires approval of the individual's manager.
4. CFO Division co-approval is required when approval authority has been sub-delegated to a subordinate.
   Note: CFO Division co-approval is *not required* when approval authority has been sub-delegated to a peer within the division.
5. When a CFO Division employee is named as the temporary sub-delegated signing authority, co-approval must be obtained from one of the Director Finance, Treasurer, General Counsel or Director of Regulatory Affairs.
6. Supervisors and EAs cannot sub-delegate their approval authority.
7. All NOTES in Schedule 1 apply to Schedule 2.

## Approval Authority for Procurements and Disbursements

### ANNEX 1 – AUTHORITY LEVELS

Schedule 3

| Approval of Purchase Orders | | |
|---|---|---|
| **Approver** | **Mandate** | **Limit** |
| President & CEO | Enterprise | > $1,000,000 |
| Chief Financial Officer | Enterprise | > $1,000,000 |
| Director Finance | Enterprise | To $1,000,000 |
| Manager Supply Chain | Enterprise | To $500,000 |
| Supervisor Procurement | Enterprise | To $100,000 |
| Procurement Agent | Enterprise | To $5,000 |

**NOTES:**

1. The above relates to approval to make a commitment to a 3rd party supplier through the execution of Purchase Orders by the CFO division.
2. If a contract is required, in addition to the Purchase Order, Procurement will consult with Legal, as appropriate.
3. The Purchase Order approver cannot be the same individual as the Requisition approver.
4. Invoices will be paid to a maximum of 105% of the Purchase Order value.
5. Purchase Orders are *not* required for procurements:
    - ≤ $2000 (unless stipulated by the supplier)
    - Listed in Schedule 6

## Approval Authority for Procurements and Disbursements

### ANNEX 1 – AUTHORITY LEVELS

Schedule 4

| Approval of Directed Source Procurements | | |
|---|---|---|
| **Approver** | **Mandate** | **Limit** |
| Sponsoring EMT Member + CFO + President & CEO | Enterprise | > $100,000 |
| Sponsoring EMT Member + Director Finance | Division | $50,000 - $100,000 |
| Sponsoring Director + Manager Supply Chain | Group | < $50,000 |

**NOTES:**

1. A Directed Source Procurement is when there is more than one identifiable source for a given good or service, but there are compelling reasons why the selected vendor is not determined by an open competition. (Refer to Hydro Ottawa's Procurement Policy – POL-Fi-003.00 for additional details on Directed Source Procurements)
2. Hydro Ottawa management approvals are not required for Directed Source Procurements authorized by Hydro Ottawa's Board of Directors and/or its committees.

## Approval Authority for Procurements and Disbursements

### ANNEX 1 – AUTHORITY LEVELS

Schedule 5

| Approval of Expense Reports | | |
|---|---|---|
| **Approver** | **Mandate** | **Limit** |
| President & CEO | Enterprise | > $10,000 |
| Chiefs | Division | To $10,000 |
| Directors | Group | To $5,000 |
| Managers | Section | To $2,000 |
| Supervisor | Unit | To $500 |

**NOTES:**

1. Individuals cannot approve their own expense reports.
2. The Temporary Sub-delegation of Approval Authority listed in Schedule 2 includes authority to approve expense reports per the above limits. (CFO co-approval is not required for sub-delegate approved expense reports.)

## Approval Authority for Procurements and Disbursements

### ANNEX 1 – AUTHORITY LEVELS

Schedule 6

| Approval of Payments that do not Require Purchase Orders (Invoices Without Reference) | |
|---|---|
| **1. Approval limits same as Schedule 1** | |
| **Expense Item** | **Responsible Division** |
| Freight & forwarding | CFO |
| Courier | |
| * Commercial Insurance premiums | |
| Corporate income tax | |
| Licenses and registrations | |
| Legal Costs (Non HR related) | |
| Legal Costs (HR related) | HR |
| Planning permits, access fees, development fees, easements | Distribution & Customer Service |
| Hot water tank rentals | |
| Sponsorships, market promotions, donations | Communications & Marketing |
| Conferences | All |
| Subscriptions and Publications | All |
| Emergency related purchases of goods and services | All |
| **2. Specified Approvers** | |
| **Expense Item** | **One of:** |
| Property taxes | Manager Supply Chain/Director Finance |
| Utilities | |
| Interest and financing charges | Treasurer/Chief Financial Officer |
| HST | Controller/Director Finance |
| Other taxes and duties | |
| IESO Monthly Settlement | |
| Embedded Generators (FIT, MicroFIT, HCI, RESOP) | |
| Bank charges | |
| Payments to Retailers | |
| Payroll-related remittances | Director Human Resources Services/Chief Human Resources Officer |
| Telecommunication services | Manager IT Operations/Chief Information Officer |

* Note: Excludes HR employee benefit insurance programs such as life insurance, health and dental plans, Worker Safety Insurance Board etc.

## ANNEX 1 – AUTHORITY LEVELS

Schedule 6 (continued)

| **Approval of Payments that do not Require Purchase Orders**<br>**(Invoices Without Reference)** |
|---|
| **Notes:**<br>1. Schedule 6 identifies invoices for goods and services > \$2000 that are payable without a requirement for/reference to a purchase order.<br>2. Invoices for any goods or services ≤ \$2000 do not require a purchase order.<br>3. Emergency is defined as a sudden, urgent, unexpected occurrence or occasion requiring immediate action.<br>4. Changes to the expense item listing and related authorizations in Schedule 6 require the approval of the Chief Financial Officer.<br>5. **Section 2 - Specified Approvers** are invoices where payment is time sensitive and authorization requires specialized knowledge/insights to validate the invoice amount.<br>6. There are no dollar limits associated with the expense items listed in **Section 2 - Specified Approvers**.<br>7. Individuals indentified in **Section 2 - Specified Approvers** must determine supporting documentation requirements for invoice approval with concurrence from Director Finance. |

# CORPORATE PROCEDURE

| Subject: Contract Procurement Process | | |
|---|---|---|
| **Category**: Finance | | **Procedure Number**: PRO-Fi-013.00 |
| **Policy Ref:** POL-Fi-003.00<br>Procurement | **Administrator**<br>Director of Finance | **Owner**<br>Chief Financial Officer |

**1. PURPOSE**
To ensure consistency and accountability in the contract procurement process.

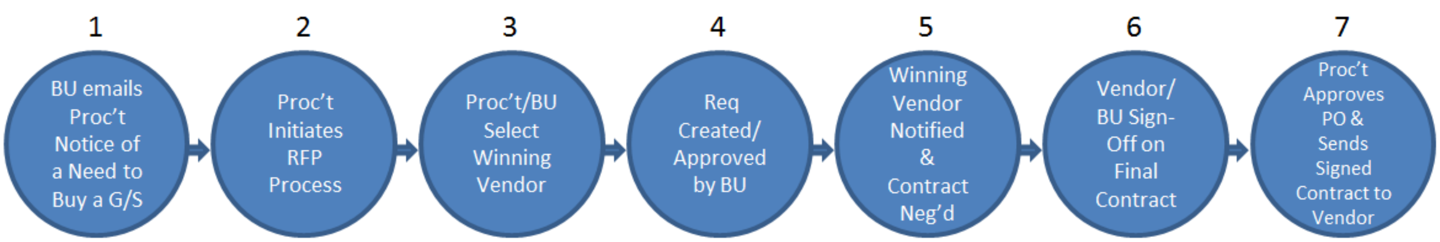
**2. SCOPE**
All Hydro Ottawa employees involved in contract procurements.

**3. DEFINITIONS**
**BU** refers to a Hydro Ottawa business unit
**G/S** refers to a good or service
**Hydro Ottawa** refers to Hydro Ottawa Holding Inc. and its affiliates
**Legal** refers to Hydro Ottawa's Legal Group
**PO** refers the Hydro Ottawa Purchase Order module within JDE
**Procurement or Proc't** refers to the Procurement Unit within Hydro Ottawa's Supply Chain Section
**Pro Forma Contract** refers to any Hydro Ottawa contract that has been prepared by Legal and contains standard terms and conditions
**Req** refers to the Requisition module within JDE
**RFP** refers to Request for Proposal
**RFQ** refers to Request for Quote

**All** references to dollar amounts shall be in Canadian currency and exclusive of taxes

**4. PROCEDURE DESCRIPTION**

**Contract Procurement Process Overview**



| Responsibility | Ref | Instructions |
|---|---|---|
| BU – Requisitioner | 4.1 | When it is anticipated a pending purchase will require a procurement contract, the BU shall email the details to the Supervisor, Procurement providing a description of the G/S involved, an estimate of the total cost (excluding taxes/duties), specifics on the timing of the purchase and confirmation of budget funding.<br>Note:<br>a. The email should be copied to the appropriate BU signing level (per Annex 1 Schedule 1 of Hydro Ottawa's policy on Approval Authority for Procurements and Disbursements (POL-En-006.00)<br>b. The final decision to proceed with an RFP/Contract procurement (vs. an alternate procurement vehicle such as an RFQ or PO) rests solely with Procurement<br>c. The need to send a Request For Information (RFI) to prospective vendors shall be jointly determined by the BU and Procurement<br>d. A non-competitive procurement process begins with step 4.4 above once the required Sole/Directed Source approvals are obtained per Hydro Ottawa's Procurement Policy (POL-Fi-003.00) |

| Responsibility | Ref | Instructions |
|---|---|---|
| Procurement | 4.2 | Per the Procurement Policy, an RFP is issued containing a detailed Statement of Work (written by the BU) and the requirement that vendors accept Hydro Ottawa's pro-forma contract terms and conditions. |
| Procurement/BU | 4.3 | The winning vendor is selected based on pre-set evaluation criteria.<br>Note: The winning vendor selection shall remain Hydro Ottawa confidential until the Req is created/approved. |
| BU | 4.4 | The Req is created in JDE and approved per Annex 1 Schedule 1 of Hydro Ottawa's policy on Approval Authority for Procurements and Disbursements (POL-En-006.00). Note: Electronic attachments to the Requisition shall include:<br>a. The Statement of Work<br>b. The winning vendor's proposed solution<br>c. Solution pricing<br>d. The pro-forma contract and, if known, any potential non-standard contract terms and conditions<br>e. Summary comments on open issues i.e. potential risk areas including recommendations on contingency funding to address risk issues |
| Procurement/BU | 4.5 | The winning vendor is notified and the contract is negotiated.<br>Note:<br>a. The winning vendor is advised that any commitments made by Hydro Ottawa during negotiations are subject to the BU sign-off on the final contract and the execution of the PO within JDE by Procurement<br>b. Procurement (not the BU) shall engage Legal as/when required in the event changes are required to Hydro Ottawa's pro-forma contract wording<br>c. Material changes (in the judgement of Procurement) between the winning vendor's RFP response and the negotiated contract (such as changes in contract terms and conditions, price, risks, key elements of the deliverables etc.) require an update to/re-approval of the Req within JDE<br>d. In the event of material changes per 4.5 (c.) above, Procurement shall consult with Legal to determine if the RFP needs to be re-issued<br>e. Procurement creates a PO within JDE and registers the PO number as the contract number on the duplicate originals of the final agreement<br>f. The PO shall identify any contingency funding required to address risk issues that are contained in the final contract<br>g. Contingency funding shall remain Hydro Ottawa confidential and excluded from the financial information detailed in the contract<br>h. Procurement shall provide a scanned copy of the final agreement to both the contract and procurement signing authorities for their review. |
| Procurement/BU | 4.6 | The Vendor/BU sign-off on the final contract.<br>Note:<br>a. Duplicate originals of the final contract are presented to the vendor for their sign-off<br>b. Following vendor approval, the contracts are returned to Hydro Ottawa and signed off by the BU per the following: |

**Hydro Ottawa Contract Procurement Signing Limits**

| Approver | Mandate | Limit |
|---|---|---|
| President & CEO | Enterprise | > $5,000,000 |
| Chief | Division | To $5,000,000 |
| Director | Group | To $500,000 |
| Manager | Section | To $100,000 |
| Supervisor | Unit | To $5,000 |

c. Chiefs shall provide the President & CEO with email notifications of contract sign-offs valued from $1,000,000 to $5,000,000.

| Responsibility | Ref | Instructions |
|---|---|---|
| Procurement | 4.7 | Once both parties have signed off on the contract, the PO is approved within JDE.<br>Note:<br>a. Approvals shall be in accordance with Annex 1 Schedule 3 of Hydro Ottawa's policy on Approval Authority for Procurements and Disbursements (POL-En-006.00)<br>b. A duplicate contract original is returned to the vendor<br>c. Procurement attaches a scanned copy of the second duplicate original to the PO within JDE and files the hard copy for their records |

5. **RELATED POLICIES, PROCEDURES & REFERENCE DOCUMENTS**
   Procurement Policy (POL-Fi-003.00)
   Approval Authority for Procurements and Disbursements Policy (POL-En-006.00)
   Discipline and Discharge Policy (POL-Hr-005.00)

6. **COMPLIANCE**
   Periodic audits will be carried out by the Internal Audit & Risk Management group to assess compliancy with the procedures detailed above. Non-compliant behaviour will be escalated to the Chief Financial Officer who will determine the appropriate disciplinary action.

7. **APPROVAL HISTORY**

| Revision | Release Date | | Procedure Admin Sign-off: | Procedure Owner Approval: |
|---|---|---|---|---|
| .00 | July 1, 2014 | | Director of Finance | Chief Financial Officer |
| Revision | Revision Date: | Description of Changes | Procedure Admin Sign-off: | Procedure Owner Approval: |
| .NN | Month/Day/Year | | Director of Finance | Chief Financial Officer |

| Scheduled Re-affirmation Date | Responsibility |
|---|---|
| July 1, 2016 | Director of Finance |

**Exceptions** and/or **changes** to this procedure must receive written authorization from the Chief Financial Officer. For **clarification** on any aspect of this policy contact the Director of Finance.

# ONE-TIME COSTS

## 1.0 INTRODUCTION

Hydro Ottawa Limited confirms there are no one-time costs in 2016 as part of this application.

# REGULATORY COSTS

## 1.0 INTRODUCTION

Regulatory costs for Hydro Ottawa Limited ("Hydro Ottawa") are included in the Uniform System of Accounts ("USoA") 5655, 5630 and 5620 – a summary of Regulatory Expenses are shown in Table 1. Please refer to Appendix 2-M - Regulatory Cost Schedule for further details. This includes Ontario Energy Board (the "Board") cost assessments and licence fees, Electrical Safety Authority ("ESA") cost assessments, intervenor and other cost awards, professional services (legal and consulting) and costs to publish public notices, all of which are considered on-going costs. Annual assessment fees paid to the Board is the largest expenditure in this category. Hydro Ottawa has seen increases in total Regulatory Costs, the budget for the test year, 2016 is $1.4M. The volume of proceedings at the Board continues to increase, resulting in higher annual cost awards. Furthermore, the continual changes within the electricity industry, including aging infrastructure and an aging workforce as well as a number of issues specific to Hydro Ottawa means that this application is for the 2016 test year only and is not considered a base year for a subsequent IRM process.

Hydro Ottawa's costs of regulatory staff have not been included in USoA Accounts 5655, 5630 or 5620. These costs are contained within the general OM&A budgets. Personnel from other departments who work on the preparation of the rate case (such as finance, distribution asset management, treasury, human resources, customer service, information technology, etc.) are not included in Accounts 5655, 5630 or 5620. These costs are contained within their departmental budgets.

**Table 1 – Regulatory Cost Schedule (Summary)**

| Last Rebasing Year (2012 Board Approved) | Most Current Actuals Year 2014 | 2015 Bridge Year | 2016 Test Year |

# LOW-INCOME ENERGY ASSISTANCE PROGRAM

## 1.0 INTRODUCTION

In accordance with the LEAP Report, since 2011, Hydro Ottawa has allocated 0.12 percent of its total distribution revenue requirement towards the LEAP Emergency Financial Assistance program.

Table 1 below shows Hydro Ottawa's annual LEAP contributions, and the number of customers assisted for 2012-2015:

**Table 1 – LEAP Contributions and Number of Customers Assisted**

| | Actual 2012 | Actual 2013 | Actual 2014 | Bridge 2015 |
|---|---|---|---|---|
| Annual Contribution | $185,000.00 | $187,000.00 | $187,300.00 | $190,984.00 |
| Carryover from prior years | 6,465.47 | 9,483.02 | 0.00 | 46,341.83 |
| Administration Fees | 27,750.00 | 28,050.00 | 28,095.00 | 28,647.60 |
| Total Available | 163,715.47 | 168,433.47 | 159,205 | 162,336.40 |
| | | | | |
| Total Number of Applicants | 530 | 663 | 435 | N/A |
| Number of Applicants Assisted | 435 | 487 | 329 | N/A |

Currently, Hydro Ottawa continues to work with the United Way as its Lead Agency, with the Salvation Army administering the various Intake Agencies throughout the City of Ottawa.

As prescribed by the Board, Hydro Ottawa contributes 0.12% of its Board-Approved distribution revenue requirement annually to LEAP, and will continue to do so from 2016 through 2020.

Prior to 2011, Hydro Ottawa participated and supported the Winter Warmth program, which provided assistance to low-income residents in Ottawa with winter heating bills. Hydro Ottawa confirms that there are no amounts included in the revenue requirement for the Test Years for Winter Warmth or any other such legacy assistance program.

# CHARITABLE AND POLITICAL DONATIONS

## 1.0 INTRODUCTION

Hydro Ottawa Limited ("Hydro Ottawa") follows the OEB's Accounting Procedures Handbook ("APH") with respect to charitable and political donations. As per the APH, Donations are tracked in the Uniform System of Accounts ("USoA") 6205 Donations and are not included in the revenue requirement for the Test Years.

Only donations specifically for the Low-Income Energy Assistance Program ("LEAP") as tracked in the USoA Sub-account 6205 Donations, sub-account LEAP Funding are included in the revenue requirement for the Test Years. The Board has prescribed the LEAP program to provide assistance to low-income consumers in paying their electricity bills. Please refer to Exhibit D-2-5 for further details on the LEAP program.

The following Table 1 summarizes charitable and political donations that are both recoverable and non-recoverable for revenue requirement from 2012 to 2016 Test Year.

**Table 1– Charitable and Political Donations Summary**

| Category | 2012 Actual | 2013 Actual | Most Current Actuals Year 2014 | 2015 Bridge Year | 2016 Test Year |
|---|---|---|---|---|---|
| Rate Recoverable | $185,000 | $187,000 | $187,152 | $190,984 | $210,088 |
| Non-Rate Recoverable | $190,124 | 190,536 | 190,214 | 154,750 | 156,275 |
| TOTAL | **$375,124** | **$377,536** | **$377,366** | **$345,734** | **$366,363** |

Hydro Ottawa will also adhere to any requirements for the recording of charitable and political donations for any new Board-Approved programs to assist low-income customers, such as the Low-Income Strategy Review (EB-2014-0227), that are regulated by the Board.

# NON-RECOVERABLE CONTRIBUTIONS

## 1.0 INTRODUCTION

Hydro Ottawa Limited ("Hydro Ottawa") confirms that no political contributions have been included in the revenue requirement for the Test Years. Please refer to Exhibit D-2-6 for a summary of non-rate recoverable charitable and political donations.

# DEPRECIATION/AMORTIZATION/DISPOSAL SCHEDULE

Hydro Ottawa Limited ("Hydro Ottawa") is not proposing to make any changes from the amortization rates that were previously accepted in the 2012 Electricity Distribution Rate Application (EB-2011-0054) therefore an amortization study is not included with this application. Hydro Ottawa's useful lives are provided in Table 4 and are consistent with the 2012 lives.

Hydro Ottawa uses the half-year rule for calculating depreciation/amortization in the year that capital additions are added to the rate base for both actual and budgeted pooled assets, except in the case of discrete material assets, such as a station. In those specific cases, that actual or forecasted in-service month would be used to calculate the depreciation/amortization.

The following tables (Table 1 and Table 2) detail the amortization expenses for 2012 Actual, 2013 Actual, 2014 Forecast, and 2015 to 2020 Budget, by asset group. As noted in the 2012 Electricity Distribution Rate Application (EB-2011-0054), Hydro Ottawa received approval to recover the cost of meters stranded as a result of the installation of Smart Meters over a six year period; $2,987k has been included in the amortization expense for years 2012 and 2013, which are the fifth and last year period.

Also included in the Tables is the effect on amortization from disposals in 2012 and 2013 and 2014 forecast and budgeted disposals for 2015 to 2020.

Hydro Ottawa has not provided Chapter 2 MIFRS Appendices (2-CA to 2-CI) of the Board's Chapter 2 2.7.4 Depreciation, Amortization and Depletion of the Filing Requirements for Transmission and Distribution Applications as it is a simplified approach to the calculation of depreciation expense and the requested information is already provided in Chapter 2 Appendix 2 – BA.

**Table 1: Amortization Expense 2012 to 2016 (In $000's)**

| **Asset Group** | **2012 Amortization Expense** | **2012 Disposal** | **2013 Amortization Expense** | **2013 Disposal** | **2014 Amortization Expense** | **2014 Disposal** | **2015 Amortization Expense** | **2015 Disposal** | **2016 Amortization Expense** | **2016 Disposal** |

# TAXES, OR PAYMENTS IN LIEU OF TAXES

## 1.0 INTRODUCTION

Hydro Ottawa Limited ("Hydro Ottawa") is required to make Payments in Lieu of Taxes ("PILS") based on its taxable income. Hydro Ottawa has used the PILS Workform Model (the "PILS Tax Model") supplied by the Board for 2015 Cost of Service Applications Filers to calculate the PILS payable for each of the Test Years (2016 to 2020).

The amount for PILs included in the revenue requirements for each of the 2016 to 2020 Test Years is summarized in Table 1.1 below. The PILS Tax Models for the 2016 to 2020 Test Years are included as Attachments D-4(C), (D), (E), (F) and (G) and in both PDF and Excel.

**Table 1.1 Corporate PILS for Test Years 2016 to 2020**

| Test Year | Income Tax/PILS ($000) |
|---|---|
| 2016 | $4,958 |
| 2017 | $4,799 |
| 2018 | $6,074 |
| 2019 | $8,473 |
| 2020 | $7,587 |

No modifications have been made to the general principles and methodologies of the PILS Tax Model. However, the PILS Tax Model supplied by the Board for 2015 Cost of Service Applications Filers incorrectly includes the Ontario Small Business Deduction, which was eliminated in Ontario's 2014 budget for tax years ending after May 1, 2014 for large companies with taxable capital employed in Canada greater than $15 million. The effect of this is an underestimate of PILS of $64,000 per Test Year, which has not been reflected in the PILS summarized in Table 1.1, but will be updated when the PILS Tax Model is issued by the Board for 2016 Filers.

## 2.0 GENERAL METHODOLOGY

For 2016 to 2020 PILS, Hydro Ottawa has used a combined Federal and Ontario tax rate of 26.50%. This rate is applied to Hydro Ottawa's regulatory taxable income determined through the PILS Tax Model to calculate income taxes payable before the deduction of tax credits. This amount is then grossed up by the 1 – tax rate formula to determine the tax provision component of the revenue requirement for each Test Year.

The regulatory taxable income in each Test Year includes forecasted Capital Cost Allowances ("CCA"). These forecasts use the estimated ending Undepreciated Capital Cost ("UCC") balance from the previous year as the opening balance and then adds net capital additions (applying the half-year rule) to determine the UCC balance available for the year.

For example, the 2016 Test Year uses the forecasted 2015 ending balance and then adds the net capital additions for 2016 to provide the UCC balance available for the 2016 CCA deduction. The Cumulative Eligible Capital ("CEC") deductions for 2016 to 2020 were also determined in the same manner based on the 2016 to 2020 forecasts for Eligible Capital Expenditures.

## 3.0 PRINCIPLES & INTEGRITY CHECKS

Hydro Ottawa has followed the same principles as it has for its previous rate applications. These principles include the integrity checks required as per section 2.7.5.2 of the filing requirements and are summarized below:

### 3.1 Taxable Additions

The depreciation and amortization added back agrees with the numbers disclosed in the rate base section of the application.

The accounting Other Post-Employment Benefits (OPEB) and pension amounts added back agree with the Operating Management and Expenses ("OM&A") analysis for compensation. The amounts deducted are reasonable.

### 3.2 Undepreciated Capital Cost and Capital Cost Allowances

Schedule 8 of the most recent federal T2 tax return filed with the application agrees with the PILS Tax Models filed.

The capital additions and deductions agree with the rate base section for the 2014 Historical Year, 2015 Bridge Year and 2016 to 2020 Test Years.

The CCA deductions in the 2014 Historical Year, 2015 Bridge Year and 2016 to 2020 Test Years agree with the UCC schedules filed.

The capital cost allowance and eligible capital expenditure deductions are fully maximized in each year.

### 3.3 Loss Carry-Forwards

Hydro Ottawa is forecasted not to have any non-capital or capital loss carryforwards available at the end of 2015 and does not expect to have any such losses available for the 2016 to 2020 Test Years.

### 3.4 Tax Rates

The corporate income tax rate used to calculate PILS in the PILS Tax Model is consistent with the current legislated rates.

### 3.5 Non-Distribution and Non-Recoverable Eliminations

Hydro Ottawa has excluded all non-distribution costs and non-recoverable revenue and costs in the tax calculations.

## 4.0 TAX CREDITS

As in previous years, Hydro Ottawa continues to claim the Federal Apprenticeship Job Creation Tax Credit, the Ontario Apprenticeship Training Credit, and the Ontario Co-op Education Tax Credit.

The Federal Apprenticeship Job Creation Tax Credit is 10% of salaries and wages paid to eligible apprentices, up to a maximum of $2,000 per year per apprentice for the first two years of the apprenticeship contract.

The Ontario Apprenticeship Training Credit is 35% of eligible expenditures (such as salaries and wages), up to a maximum of $10,000 per apprentice during the first 48 months of the apprenticeship program for expenditures incurred after March 26, 2009.

The Ontario Co-operative Education Tax Credit is 25% of eligible expenditures up to a maximum of $3,000 per student per year.

Hydro Ottawa has forecasted the tax credits available and has deducted the available tax credits for the 2016 to 2020 Test Years as outlined in the tables below.

**Table 4.1 Total Apprenticeship & Coop Tax Credits Claimed for Test Years 2016 to 2020**

| Year | Federal Apprenticeship Tax Credit | Ontario Apprenticeship Tax Credit | Ontario Coop Education Tax Credit | Total Tax Credits Claimed |
|---|---|---|---|---|
| 2016 Test Year | $20,000 | $160,000 | $37,500 | $217,500 |
| 2017 Test Year | $20,000 | $210,000 | $37,500 | $267,500 |
| 2018 Test Year | $20,000 | $200,000 | $37,500 | $257,500 |
| 2019 Test Year | $18,000 | $190,000 | $37,500 | $245,500 |
| 2020 Test Year | $16,000 | $180,000 | $37,500 | $233,500 |

**Table 4.2 Federal Apprenticeship Tax Credits Calculation for Test Years 2016 to 2020**

| Year | Number Eligible | Test Year 2016 | Test Year 2017 | Test Year 2018 | Test Year 2019 | Test Year 2020 |
|---|---|---|---|---|---|---|
| 2013 | 0 | | | | | |
| 2014 | 6 | | | | | |
| 2015 | 5 | 5 | | | | |
| 2016 | 5 | 5 | 5 | | | |
| 2017 | 5 | | 5 | 5 | | |
| 2018 | 5 | | | 5 | 5 | |
| 2019 | 4 | | | | 4 | 4 |
| 2020 | 4 | | | | | 4 |
| | | | | | | |
| Total/yr | | 10 | 10 | 10 | 9 | 8 |
| Credit/yr | | $20,000 | $20,000 | $20,000 | $18,000 | $16,000 |

**Table 4.3 Ontario Apprenticeship Tax Credits Calculation for Test Years 2016 to 2020**

| Year | Number Eligible | Test Year 2016 | Test Year 2017 | Test Year 2018 | Test Year 2019 | Test Year 2020 |
|---|---|---|---|---|---|---|
| 2013 | 0 | 0 | | | | |
| 2014 | 6 | 6 | 6 | | | |
| 2015 | 5 | 5 | 5 | 5 | | |
| 2016 | 5 | 5 | 5 | 5 | 5 | |
| 2017 | 5 | | 5 | 5 | 5 | 5 |
| 2018 | 5 | | | 5 | 5 | 5 |
| 2019 | 4 | | | | 4 | 4 |
| 2020 | 4 | | | | | 4 |
| | | | | | | |
| Total/yr | | 16 | 21 | 20 | 19 | 18 |
| Credit/yr | | $160,000 | $210,000 | $200,000 | $190,000 | $180,000 |

The Ontario Co-op Education Tax Credit for each of the Test Years 2016 to 2020 has been calculated by assuming 15 eligible co-op students are hired per Test Year, with an average tax credit per student of $2,500, or total credits of $37,500 per Test Year. This is based on Hydro Ottawa's historical annual expenditure per Co-op student.

## 5.0 PILS VARIANCES

Table 5.1 summarizes the PILs for the 2012 Approved and Actual, 2013 Actual and 2014 Forecast. Table 5.2 summarizes the PILs for the 2015 Bridge Year and 2016 to 2020 Test Years. The PILs include amounts relating to corporate income taxes only. Ontario capital taxes have been eliminated as of July 1, 2010. The Ontario Small Business Deduction was eliminated May 1, 2014 for large companies with taxable capital employed in Canada greater than $15 million.

**Table 5.1 – Corporate PILs by Year (2012 to 2014)**
**($000)**

| | 2012 Approved $000 | 2012 Actual $000 | 2013 Actual $000 | 2014 Forecast $000 |
|---|---|---|---|---|
| Income Taxes | $6,003 | $6,857 | $6,806 | $3,000 |

**Table 5.2 – Corporate PILs by Year (2015 to 2020)**
**($000)**

| | 2015 Forecast $000 | 2016 Forecast $000 | 2017 Forecast $000 | 2018 Forecast $000 | 2019 Forecast $000 | 2020 Forecast $000 |
|---|---|---|---|---|---|---|
| Income Taxes | NIL | $4,958 | $4,799 | $6,074 | $8,473 | $7,587 |

### 5.1 2012 Actual to 2012 Approved

2012 actual PILS was slightly higher than the 2012 approved PILS mainly due to a higher pre-tax income and differences between the depreciation add back and CCA deduction. Hydro Ottawa Limited's 2012 Tax Return is provided as Attachment D-4(A).

### 5.2 2013 Actual to 2012 Actual

2013 PILS was not significantly different from 2012 PILS and Hydro Ottawa Limited's 2013 Tax Return is provided as Attachment D-4(B).

### 5.2 2014 Forecast to 2013 Actual

2014 PILS is forecasted to decrease from 2013 PILS due to higher CCA deductions from computer software (class 12) additions available in 2014.

### 5.3 2015 Forecast to 2014 Forecast

2015 PILS is forecasted to decrease from 2014 PILS due to higher CCA deductions from computer software (class 12) additions available in 2015.

### 5.4 2016 Forecast to 2015 Forecast

2016 PILS is forecasted to increase due to higher net income in 2016 and significantly less CCA deductions being available in 2016 as compared to 2015. The CCA was reduced as the majority of Class 12 UCC had been utilized in previous years.

### 5.5 2017 Forecast to 2016 Forecast

2017 PILS is forecasted not to be significantly different from 2016 PILS as higher regulatory net income is offset by an increase in CCA deductions.

### 5.6 2018 Forecast to 2017 Forecast

2018 PILS is forecasted to increase due to higher net income in 2018 and a large increase in the accounting amortization add back.

### 5.7 2019 Forecast to 2018 Forecast

2019 PILS is forecasted to increase due to a slight increase in net income and amortization add back in 2018 and approximately $4 million less in CCA deductions available in 2019 as compared to 2018.

### 5.8 2020 Forecast to 2019 Forecast

2020 PILS is forecasted to decrease due to $5.3 million in additional CCA deductions being available in 2020 as compared to 2019.

PIL FILING

# T2 Corporation Income Tax Return

055 Do not use this area

This form serves as a federal, provincial, and territorial corporation income tax return, unless the corporation is located in Quebec or Alberta. If the corporation is located in one of these provinces, you have to file a separate provincial corporation return.

All legislative references on this return are to the federal *Income Tax Act*. This return may contain changes that had not yet become law at the time of publication.

Send one completed copy of this return, including schedules and the *General Index of Financial Information* (GIFI), to your tax centre or tax services office. You have to file the return within six months after the end of the corporation's tax year.

For more information see **www.cra.gc.ca** or Guide T4012, *T2 Corporation – Income Tax Guide*.

## Identification

**Business number (BN)** . . . . . . . . . . 001 86339 1363 RC0001

| Did the corporation emigrate from Canada during the tax year? | 292 | | X |
| Do you want to be considered as a quarterly instalment remitter if you are eligible? | 293 | | |

If the corporation was eligible to remit instalments on a quarterly basis for part of the tax year, provide the date the corporation ceased to be eligible 294 ______ YYYY MM DD

If the corporation's major business activity is construction, did you have any subcontractors during the tax year? 295 1 Yes ☐ 2 No ☐

## Taxable income

| | Description | Line | Amount | | Total | |
|---|---|---|---|---|---|---|
| | Net income or (loss) for income tax purposes from Schedule 1, financial statements, or GIFI. | 300 | | | 27,004,004 | A |
| **Deduct:** | Charitable donations from Schedule 2 | 311 | 103,185 | | | |
| | Gifts to Canada, a province, or a territory from Schedule 2 | 312 | | | | |
| | Cultural gifts from Schedule 2 | 313 | | | | |
| | Ecological gifts from Schedule 2 | 314 | | | | |
| | Gifts of medicine from Schedule 2 | 315 | | | | |
| | Taxable dividends deductible under section 112 or 113, or subsection 138(6) from Schedule 3 | 320 | | | | |
| | Part VI.1 tax deduction* | 325 | | | | |
| | Non-capital losses of previous tax years from Schedule 4 | 331 | | | | |
| | Net capital losses of previous tax years from Schedule 4 | 332 | | | | |
| | Restricted farm losses of previous tax years from Schedule 4 | 333 | | | | |
| | Farm losses of previous tax years from Schedule 4 | 334 | | | | |
| | Limited partnership losses of previous tax years from Schedule 4 | 335 | | | | |
| | Taxable capital gains or taxable dividends allocated from a central credit union | 340 | | | | |
| | Prospector's and grubstaker's shares | 350 | | | | |
| | Subtotal | | 103,185 | ▶ | 103,185 | B |
| | Subtotal (amount A **minus** amount B) (if negative, enter "0") | | | | 26,900,819 | C |
| **Add:** | Section 110.5 additions or subparagraph 115(1)(a)(vii) additions | 355 | | | | D |
| | **Taxable income** (amount C **plus** amount D) | 360 | | | 26,900,819 | |
| | Income exempt under paragraph 149(1)(t) | 370 | | | | |
| | **Taxable income** for a corporation with exempt income under paragraph 149(1)(t) (line 360 **minus** line 370) | | | | 26,900,819 | Z |

* This amount is equal to 3.5 times the Part VI.1 tax payable at line 724 on page 8. Use 3.2 for tax years ending before 2012.

## Small business deduction

**Canadian-controlled private corporations (CCPCs) throughout the tax year**

| | | | |
|---|---|---|---|
| Income from active business carried on in Canada from Schedule 7 | **400** | 27,004,004 | A |
| Taxable income from line 360 on page 3, **minus** 100/28* 3.57143 of the amount on line 632** on page 7, **minus** 1/(0.38 - X***) 4 times the amount on line 636**** on page 7, and **minus** any amount that, because of federal law, is exempt from Part I tax | **405** | 26,900,819 | B |
| Business limit (see notes 1 and 2 below) | **410** | 500,000 | C |

**Notes:**

1. For CCPCs that are not associated, enter $ 500,000 on line 410. However, if the corporation's tax year is less than 51 weeks, prorate this amount by the number of days in the tax year divided by 365, and enter the result on line 410.
2. For associated CCPCs, use Schedule 23 to calculate the amount to be entered on line 410.

**Business limit reduction:**

Amount C 500,000 x **415** ***** 1,458,453 D / 11,250 = 64,820,133 E

Reduced business limit (amount C **minus** amount E) (if negative, enter "0") **425** F

**Small business deduction**

Amount A, B, C, or F, whichever is the least x 17 % = **430** G

Enter amount G on line 1 on page 7.

* 10/3 for tax years ending before November 1, 2011. The result of the multiplication by line 632 has to be pro-rated based on the number of days in the tax year that are in each period: before November 1, 2011, and after October 31, 2011.

** Calculate the amount of foreign non-business income tax credit deductible on line 632 without reference to the refundable tax on the CCPC's investment income (line 604) and without reference to the corporate tax reductions under section 123.4.

*** General rate reduction percentage for the tax year. It has to be pro-rated based on the number of days in the tax year that are in each calendar year. See page 5.

**** Calculate the amount of foreign business income tax credit deductible on line 636 without reference to the corporation tax reductions under section 123.4.

***** **Large corporations**

- If the corporation is not associated with any corporations in both the current and previous tax years, the amount to be entered on line 415 is: (total taxable capital employed in Canada for the **prior year** minus $10,000,000) x 0.225%.
- If the corporation is not associated with any corporations in the current tax year, but was associated in the previous tax year, the amount to be entered on line 415 is: (total taxable capital employed in Canada for the **current year** minus $10,000,000) x 0.225%.
- For corporations associated in the current tax year, see Schedule 23 for the special rules that apply.

## General tax reduction for Canadian-controlled private corporations

**Canadian-controlled private corporations throughout the tax year**

| | | | | |
|---|---|---|---|---|
| Taxable income from line 360 on page 3* | | | 26,900,819 | A |

# Notes checklist

| Corporation's name | Business number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- Parts 1, 2, and 3 of this schedule must be completed from the perspective of the person (referred to in these parts as the **accountant**) who prepared or reported on the financial statements. If the person preparing the tax return is not the accountant referred to above, they must still complete Parts 1, 2, 3, and 4, as applicable.
- For more information, see Guide RC4088, *General Index of Financial Information (GIFI)* and Guide T4012, *T2 Corporation – Income Tax Guide*.
- Complete this schedule and include it with your T2 return along with the other GIFI schedules.

## Part 1 – Information on the accountant who prepared or reported on the financial statements

| | Line | 1 Yes | 2 No |
|---|---|---|---|
| Does the accountant have a professional designation? | 095 | X | |
| Is the accountant connected* with the corporation? | 097 | | X |

* A person connected with a corporation can be: (i) a shareholder of the corporation who owns more than 10% of the common shares; (ii) a director, an officer, or an employee of the corporation; or (iii) a person not dealing at arm's length with the corporation.

**Note**
If the accountant does not have a professional designation **or** is connected to the corporation, you do not have to complete Parts 2 and 3 of this schedule. However, you **do have** to complete Part 4, as applicable.

## Part 2 – Type of involvement with the financial statements

Choose the option that represents the highest level of involvement of the accountant: 198

| | | |
|---|---|---|
| Completed an auditor's report | 1 | X |
| Completed a review engagement report | 2 | |
| Conducted a compilation engagement | 3 | |

## Part 3 – Reservations

If you selected option **1** or **2** under **Type of involvement with the financial statements** above, answer the following question:

| | Line | 1 Yes | 2 No |
|---|---|---|---|
| Has the accountant expressed a reservation? | 099 | | X |

## Part 4 – Other information

If you have a professional designation and are not the accountant associated with the financial statements in Part 1 above, choose one of the following options: 110

| | | |
|---|---|---|
| Prepared the tax return (financial statements prepared by client) | 1 | |
| Prepared the tax return and the financial information contained therein (financial statements have not been prepared) | 2 | |

| | Line | 1 Yes | 2 No |
|---|---|---|---|
| Were notes to the financial statements prepared? | 101 | X | |

If **yes**, complete lines 104 to 107 below:

| | Line | 1 Yes | 2 No |
|---|---|---|---|
| Are subsequent events mentioned in the notes? | 104 | | X |
| Is re-evaluation of asset information mentioned in the notes? | 105 | | X |
| Is contingent liability information mentioned in the notes? | 106 | X | |
| Is information regarding commitments mentioned in the notes? | 107 | X | |
| Does the corporation have investments in joint venture(s) or partnership(s)? | 108 | | X |

## Part 4 – Other information (continued)

**Impairment and fair value changes**

In any of the following assets, was an amount recognized in net income or other comprehensive income (OCI) as a result of an impairment loss in the tax year, a reversal of an impairment loss recognized in a previous tax year, or a change in fair value during the tax year? . . . . . 200 1 Yes [ ] 2 No [X]

If **yes**, enter the amount recognized:

| | | In net income<br>Increase (decrease) | | In OCI<br>Increase (decrease) |
|---|---|---|---|---|
| Property, plant, and equipment | 210 | | 211 | |
| Intangible assets | 215 | | 216 | |
| Investment property | 220 | | | |
| Biological assets | 225 | | | |
| Financial instruments | 230 | | 231 | |
| Other | 235 | | 236 | |

**Financial instruments**

Did the corporation derecognize any financial instrument(s) during the tax year (other than trade receivables)? . . . . . 250 1 Yes [ ] 2 No [X]

Did the corporation apply hedge accounting during the tax year? . . . . . 255 1 Yes [ ] 2 No [X]

Did the corporation discontinue hedge accounting during the tax year? . . . . . 260 1 Yes [ ] 2 No [X]

**Adjustments to opening equity**

Was an amount included in the opening balance of retained earnings or equity, in order to correct an error, to recognize a change in accounting policy, or to adopt a new accounting standard in the current tax year? . . . . . 265 1 Yes [X] 2 No [ ]

If **yes**, you have to maintain a separate reconciliation.

**SCHEDULE 100**

# CHARITABLE DONATIONS AND GIFTS

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- For use by corporations to claim any of the following:
  - charitable donations;
  - gifts to Canada, a province, or a territory;
  - gifts of certified cultural property;
  - gifts of certified ecologically sensitive land; or
  - additional deduction for gifts of medicine.
- The donations and gifts are eligible for a five-year carryforward.
- Use this schedule to show a credit transfer following an amalgamation or the wind-up of a subsidiary as described under subsections 87(1) and 88(1) of the *Income Tax Act*.
- For donations and gifts made after March 22, 2004, subsection 110.1(1.2) of the *Income Tax Act* provides as follows:
  - Where a particular corporation has undergone an acquisition of control, for tax years that end on or after the acquisition of control, no corporation can claim a deduction for a gift made by the particular corporation to a qualified donee before the acquisition of control
  - If a particular corporation makes a gift to a qualified donee pursuant to an arrangement under which both the gift and the acquisition of control is expected, no corporation can claim a deduction for the gift unless the person acquiring control of the particular corporation is the qualified donee.
- Under proposed changes, the eligible amount of a charitable gift is the amount by which the fair market value of the gift exceeds the amount of an advantage, if any, for the gift.
- Under proposed changes, a gift of medicine made after March 18, 2007, to qualifying organizations for activities outside of Canada, may be eligible for an additional deduction if the gift is an eligible medical gift. This additional deduction is calculated in Part 6.
- File one completed copy of this schedule with your *T2 Corporation Income Tax Return*.
- For more information, see the *T2 Corporation – Income Tax Guide*.

## Part 1 – Charitable donations

| Charity/Recipient | Amount ($100 or more only) |
|---|---|
| United Way | 69,885 |
| United Way | 25,000 |
| United Way | 100 |
| Alogonquin College | 6,000 |
| South East Ottawa Community Health Centre | 1,000 |
| Our Youth At Work Assoication | 500 |
| Clarendon & Miller Fire Department | 100 |
| The Ottawa Hospital Foundation | 100 |
| Canada Helps | 100 |
| Royal Ottawa Foundation for Mental Health | 100 |
| Colorectal Cancer Association of Canada | 100 |
| Heart & Stroke Foundation of Canada | 100 |
| University of Ottawa Heart Institute | 100 |
| Subtotal | 103,185 |
| **Add:** Total donations of less than $100 each | |
| Total donations in current tax year | 103,185 |

| | Line | | Federal | Québec | Alberta |
|---|---|---|---|---|---|
| Charitable donations at the end of the previous tax year | | | | | |
| **Deduct:** Charitable donations expired after five tax years* | 239 | | | | |
| Charitable donations at the beginning of the tax year | 240 | | | | |
| **Add:** | | | | | |
| Charitable donations transferred on an amalgamation or the wind-up of a subsidiary | 250 | | | | |
| Total current-year charitable donations made (enter this amount on line 112 of Schedule 1) | 210 | 103,185 | | 103,185 | |
| Subtotal (line 250 **plus** line 210) | | | 103,185 | 103,185 | 103,185 |
| **Deduct:** Adjustment for an acquisition of control (for donations made after March 22, 2004) | 255 | | | | |
| Total charitable donations available | | | 103,185 A | 103,185 | 103,185 |
| **Deduct:** Amount applied against taxable income (cannot be more than amount K in Part 2) (enter this amount on line 311 of the T2 return) | 260 | | 103,185 | 103,185 | 103,185 |
| Charitable donations closing balance | 280 | | | | |

* For the federal and Alberta, the gifts expire after five tax years. For Québec, gifts made in a tax year that ended before March 24, 2006, expire after five tax years and gifts made in a tax year that ended after March 23, 2006, expire after twenty tax years.

## Amounts carried forward – Charitable donations

| Year of origin: | | Federal | Québec | Alberta |
|---|---|---|---|---|
| 1st prior year | 2011-12-31 | | | |
| 2nd prior year | 2010-12-31 | | | |
| 3rd prior year | 2009-12-31 | | | |
| 4th prior year | 2008-12-31 | | | |
| 5th prior year | 2007-12-31 | | | |
| 6th prior year* | 2006-12-31 | | | |
| 7th prior year | 2005-12-31 | | | |
| 8th prior year | 2004-12-31 | | | |
| 9th prior year | 2003-12-31 | | | |
| 10th prior year | 2002-12-31 | | | |
| 11th prior year | 2001-12-31 | | | |
| 12th prior year | 2001-09-30 | | | |
| 13th prior year | 2000-09-30 | | | |
| 14th prior year | 1999-09-30 | | | |
| 15th prior year | 1998-09-30 | | | |
| 16th prior year | 1997-09-30 | | | |
| 17th prior year | 1996-09-30 | | | |
| 18th prior year | 1995-09-30 | | | |
| 19th prior year | 1994-09-30 | | | |
| 20th prior year | 1993-09-30 | | | |
| 21st prior year* | 1992-09-30 | | | |
| **Total** (to line A) | | | | |

* For the federal and Alberta, the 6th prior year gifts expire in the current year. For Québec, the 6th prior year gifts made in a tax year that ended before March 24, 2006, expire in the current year and the 21st prior year gifts made in a tax year that ended after March 23, 2006, expire in the current year.

## Part 2 – Calculation of the maximum allowable deduction for charitable donations

| | | | | |
|---|---|---|---|---|
| Net income for tax purposes* **multiplied** by 75 % | | | 20,253,003 | B |
| Taxable capital gains arising in respect of gifts of capital property included in Part 1** | 225 | | C | |
| Taxable capital gain in respect of deemed gifts of non-qualifying securities per subsection 40(1.01) | 227 | | D | |
| The amount of the recapture of capital cost allowance in respect of charitable gifts | 230 | | | |
| Proceeds of disposition, less outlays and expenses** | | E | | |
| Capital cost** | | F | | |
| Amount E or F, whichever is less | 235 | | | |
| Amount on line 230 or 235, whichever is less | | | G | |
| Subtotal (**add** amounts C, D, and G) | | | H | |
| Amount H **multiplied** by 25 % | | | | I |
| Subtotal (amount B **plus** amount I) | | | 20,253,003 | J |
| **Maximum allowable deduction for charitable donations** (enter amount A from Part 1, amount J, or net income for tax purposes, whichever is less) | | | 103,185 | K |

* For credit unions, this amount is before the deduction of payments pursuant to allocations in proportion to borrowing and bonus interest.

** This amount must be prorated by the following calculation: eligible amount of the gift **divided by** the proceeds of disposition of the gift.

## Part 3 – Gifts to Canada, a province, or a territory

| | | | |
|---|---|---|---|
| Gifts to Canada, a province, or a territory at the end of the previous tax year | | | |
| **Deduct:** Gifts to Canada, a province, or a territory expired after five tax years | 339 | | |
| Gifts to Canada, a province, or a territory at the beginning of the tax year | 340 | | ► |
| **Add:** Gifts to Canada, a province, or a territory transferred on an amalgamation or the windup of a subsidiary | 350 | | |
| Total current-year gifts made to Canada, a province, or a territory* | 310 | | |
| Subtotal (line 350 **plus** line 310) | | | |
| **Deduct:** Adjustment for an acquisition of control (for gifts made after March 22, 2004) | 355 | | |
| Total gifts to Canada, a province, or a territory available | | | |
| **Deduct:** Amount applied against taxable income (enter this amount on line 312 of the T2 return). | 360 | | |
| Gifts to Canada, a province, or a territory closing balance | 380 | | |

* Not applicable for gifts made after February 18, 1997, unless a written agreement was made before this date. If no written agreement exists, enter the amount on line 210 and complete Part 2.

## Part 4 – Gifts of certified cultural property

| | | Federal | Québec | Alberta |
|---|---|---|---|---|
| Gifts of certified cultural property at the end of the previous tax year | | | | |
| **Deduct:** Gifts of certified cultural property expired after five tax years* | 439 | | | |
| Gifts of certified cultural property at the beginning of the tax year | 440 | | | |
| **Add:** Gifts of certified cultural property transferred on an amalgamation or the windup of a subsidiary | 450 | | | |
| Total current-year gifts of certified cultural property | 410 | | | |
| Subtotal (line 450 **plus** line 410) | | | | |
| **Deduct:** Adjustment for an acquisition of control (for gifts made after March 22, 2004) | 455 | | | |
| Total gifts of certified cultural property available | | | | |
| **Deduct:** Amount applied against taxable income (enter this amount on line 313 of the T2 return) | 460 | | | |
| Gifts of certified cultural property closing balance | 480 | | | |

* For the federal and Alberta, the gifts expire after five tax years. For Québec, gifts made in a tax year that ended before March 24, 2006, expire after five tax years and gifts made in a tax year that ended after March 23, 2006, expire after twenty tax years.

## Amount carried forward – Gifts of certified cultural property

| Year of origin: | | Federal | Québec | Alberta |
|---|---|---|---|---|
| 1st prior year | 2011-12-31 | | | |
| 2nd prior year | 2010-12-31 | | | |
| 3rd prior year | 2009-12-31 | | | |
| 4th prior year | 2008-12-31 | | | |
| 5th prior year | 2007-12-31 | | | |
| 6th prior year* | 2006-12-31 | | | |
| 7th prior year | 2005-12-31 | | | |
| 8th prior year | 2004-12-31 | | | |
| 9th prior year | 2003-12-31 | | | |
| 10th prior year | 2002-12-31 | | | |
| 11th prior year | 2001-12-31 | | | |
| 12th prior year | 2001-09-30 | | | |

# DIVIDENDS RECEIVED, TAXABLE DIVIDENDS PAID, AND PART IV TAX CALCULATION

**SCHEDULE 3**

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- This schedule is for the use of any corporation to report:
  - non-taxable dividends under section 83;
  - deductible dividends under subsection 138(6);
  - taxable dividends deductible from income under section 112, subsection 113(2) and paragraphs 113(1)(a), (b) or (d); or
  - taxable dividends paid in the tax year that qualify for a dividend refund.
- The calculations in this schedule apply only to private or subject corporations.
- Parts, sections, subsections, and paragraphs referred to on this schedule are from the federal *Income Tax Act.*
- A recipient corporation is connected with a payer corporation at any time in a tax year, if at that time the recipient corporation:
  - controls the payer corporation, other than because of a right referred to in paragraph 251(5)(b); or
  - owns more than 10% of the issued share capital (with full voting rights), and shares that have a fair market value of more than 10% of the fair market value of all shares of the payer corporation.
- File one completed copy of this schedule with your *T2 Corporation Income Tax Return*.
- Column A – Enter "X" if dividends received from a foreign source (connected corporation only).
- Column F1 – Enter the amount of dividends received reported in column 240 that are eligible.
- Column F2 – Enter the code that applies to the deductible taxable dividend.
- Column F3 – Enter if dividends have been received or not after December 20, 2012. This information is required for corporations that must complete Schedules 71 and 72. For more details with regards to this column, consult the Help.

## Part 1 – Dividends received in the tax year

**Do not include dividends received from foreign non-affiliates.**

| | | Complete if payer corporation is connected | | | |
|---|---|---|---|---|---|
| Name of payer corporation (from which the corporation received the dividend) 200 | A | B Enter 1 if payer corporation is connected 205 | C Business Number of connected corporation 210 | D Tax year-end of the payer corporation in which the sections 112/113 and subsection 138(6) dividends in column F were paid YYYY/MM/DD (See note) 220 | E Non-taxable dividend under section 83 230 |
| | | | | | |

**Total** (enter on line 402 of Schedule 1)

**Note**: If your corporation's tax year-end is different than that of the connected payer corporation, your corporation could have received dividends from more than one tax year of the payer corporation. If so, use a separate line to provide the information for each tax year of the payer corporation.
For more details, consult the Help.

| | | | | Complete if payer corporation is connected | | |
|---|---|---|---|---|---|---|
| F Taxable dividends deductible from taxable income under section 112, subsections 113(2) and 138(6), and paragraphs 113(1)(a), (b), or (d)* 240 | F1 Eligible dividends (included in column F) | F2 | F3 | G Total taxable dividends paid by connected payer corporation (for tax year in column D) 250 | H Dividend refund of the connected payer corporation (for tax year in column D)** 260 | I Part IV tax before deductions F x 1 / 3 *** 270 |
| | | | | | | |
| | | | | | | J |

**Total** (enter the amount from column F on line 320 of the T2 return and amount J in Part 2)

* If taxable dividends are received, enter the amount in column 240, but if the corporation is not subject to Part IV tax (such as a public corporation other than a subject corporation as defined in subsection 186(3)), enter “0” in column 270. Life insurers are not subject to Part IV tax on subsection 138(6) dividends.

** If the connected payer corporation’s tax year ends after the corporation’s balance-due day for the tax year (two or three months, as applicable), you have to estimate the payer’s dividend refund when you calculate the corporation’s Part IV tax payable.

*** For dividends received from connected corporations: Part IV tax = $\frac{\text{Column F x Column H}}{\text{Column G}}$

## Part 2 – Calculation of Part IV tax payable

| | | | |
|---|---|---|---|
| Part IV tax before deductions (amount J in Part 1) | | | |
| **Deduct:** | | | |
| Part IV.I tax payable on dividends subject to Part IV tax | | 320 | |
| | | Subtotal | |
| **Deduct:** | | | |
| Current-year non-capital loss claimed to reduce Part IV tax | 330 | | |
| Non-capital losses from previous years claimed to reduce Part IV tax | 335 | | |
| Current-year farm loss claimed to reduce Part IV tax | 340 | | |
| Farm losses from previous years claimed to reduce Part IV tax | 345 | | |
| Total losses applied against Part IV tax | | x 1 / 3 = | |
| Part IV tax payable (enter amount on line 712 of the T2 return) | | 360 | |

## Part 3 – Taxable dividends paid in the tax year that qualify for a dividend refund

| | A | B | C | D | D1 |
|---|---|---|---|---|---|
| | Name of connected recipient corporation | Business Number | Tax year end of connected recipient corporation in which the dividends in column D were received YYYY/MM/DD (See note) | Taxable dividends paid to connected corporations | Eligible dividends (included in column D) |
| | 400 | 410 | 420 | 430 | |
| 1 | Hydro Ottawa Holding Inc. | 89411 0816 RC0001 | 2012-12-31 | 15,000,000 | |

**Note**

If your corporation's tax year-end is different than that of the connected recipient corporation, your corporation could have paid dividends in more than one tax year of the recipient corporation. If so, use a separate line to provide the information for each tax year of the recipient corporation. For more details, consult the Help.

**Total** 15,000,000

| | | | |
|---|---|---|---|
| Total taxable dividends paid in the tax year to other than connected corporations | | 450 | |
| Eligible dividends (included in line 450) | 450a | | |
| Total taxable dividends paid in the tax year that qualify for a dividend refund (total of column D above **plus** line 450) | | 460 | 15,000,000 |

## Part 4 – Total dividends paid in the tax year

Complete this part if the total taxable dividends paid in the tax year that qualify for a dividend refund (line 460 above) is different from the total dividends paid in the tax year.

| | | | |
|---|---|---|---|
| Total taxable dividends paid in the tax year for the purposes of a dividend refund (from above) | | | 15,000,000 |
| Other dividends paid in the tax year (total of 510 to 540) | | | |
| Total dividends paid in the tax year | | 500 | 15,000,000 |
| **Deduct:** | | | |
| Dividends paid out of capital dividend account | 510 | | |
| Capital gains dividends | 520 | | |
| Dividends paid on shares described in subsection 129(1.2) | 530 | | |
| Taxable dividends paid to a controlling corporation that was bankrupt at any time in the year | 540 | | |
| Subtotal | | ▶ | |
| Total taxable dividends paid in the tax year that qualify for a dividend refund | | | 15,000,000 |

**Schedule 5**

# TAX CALCULATION SUPPLEMENTARY – CORPORATIONS

| Corporation's name | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- Use this schedule if, during the tax year, the corporation:
  - had a permanent establishment in more than one jurisdiction (corporations that have no taxable income should only complete columns A, B and D in Part 1);
  - is claiming provincial or territorial tax credits or rebates (see Part 2); or
  - has to pay taxes, other than income tax, for Newfoundland and Labrador, or Ontario (see Part 2).
- Regulations mentioned in this schedule are from the *Income Tax Regulations.*
- For more information, see the *T2 Corporation – Income Tax Guide.*
- Enter the regulation number in field 100 of Part 1.

## Part 1 – Allocation of taxable income

**100** ______ Enter the Regulation that applies (402 to 413).

| A Jurisdiction Tick yes if the corporation had a permanent establishment in the jurisdiction during the tax year. * | | B Total salaries and wages paid in jurisdiction | C (B x taxable income**) / G | D Gross revenue | E (D x taxable income**) / H | F Allocation of taxable income (C + E) x 1/2*** (where either G or H is nil, do not multiply by 1/2) |
|---|---|---|---|---|---|---|
| Newfoundland and Labrador | 003 1 Yes | 103 | | 143 | | |
| Newfoundland and Labrador offshore | 004 1 Yes | 104 | | 144 | | |
| Prince Edward Island | 005 1 Yes | 105 | | 145 | | |
| Nova Scotia | 007 1 Yes | 107 | | 147 | | |
| Nova Scotia offshore | 008 1 Yes | 108 | | 148 | | |
| New Brunswick | 009 1 Yes | 109 | | 149 | | |
| Quebec | 011 1 Yes | 111 | | 151 | | |
| Ontario | 013 1 Yes | 113 | | 153 | | |
| Manitoba | 015 1 Yes | 115 | | 155 | | |
| Saskatchewan | 017 1 Yes | 117 | | 157 | | |
| Alberta | 019 1 Yes | 119 | | 159 | | |
| British Columbia | 021 1 Yes | 121 | | 161 | | |
| Yukon | 023 1 Yes | 123 | | 163 | | |
| Northwest Territories | 025 1 Yes | 125 | | 165 | | |
| Nunavut | 026 1 Yes | 126 | | 166 | | |
| Outside Canada | 027 1 Yes | 127 | | 167 | | |
| **Total** | | 129 G | | 169 H | | |

* "Permanent establishment" is defined in Regulation 400(2).

** If the corporation has income or loss from an international banking centre: the taxable income is the amount on line 360 or line Z of the T2 return **plus** the total amount not required to be included, or **minus** the total amount not allowed to be deducted, in calculating the corporation's income under section 33.1 of the federal *Income Tax Act*.

*** For corporations other than those described under Regulation 402, use the appropriate calculation described in the Regulations to allocate taxable income.

**Notes:**

1. After determining the allocation of taxable income, you have to calculate the corporation's provincial or territorial tax payable. For more information on how to calculate the tax for each province or territory, see the instructions for Schedule 5 in the *T2 Corporation – Income Tax Guide*.
2. If the corporation has provincial or territorial tax payable, complete Part 2.

## Part 2 – Ontario tax payable, tax credits, and rebates

| Total taxable income | Income eligible for small business deduction | Provincial or territorial allocation of taxable income | Provincial or territorial tax payable before credits |
|---|---|---|---|
| 26,900,819 | | 26,900,819 | 3,058,594 |

| | | | | |
|---|---|---|---|---|
| **Ontario basic income tax** (from Schedule 500) | 270 | 3,093,594 | | |
| **Deduct:** Ontario small business deduction (from Schedule 500) | 402 | 35,000 | | |
| Subtotal | | 3,058,594 | 3,058,594 | A6 |
| **Add:** | | | | |
| Ontario additional tax re Crown royalties (from Schedule 504) | 274 | | | |
| Ontario transitional tax debits (from Schedule 506) | 276 | | | |
| Recapture of Ontario research and development tax credit (from Schedule 508) | 277 | | | |
| Subtotal | | | | B6 |
| Subtotal (amount A6 **plus** amount B6) | | | 3,058,594 | C6 |
| **Deduct:** | | | | |
| Ontario resource tax credit (from Schedule 504) | 404 | | | |
| Ontario tax credit for manufacturing and processing (from Schedule 502) | 406 | | | |
| Ontario foreign tax credit (from Schedule 21) | 408 | | | |
| Ontario credit union tax reduction (from Schedule 500) | 410 | | | |
| Ontario transitional tax credits (from Schedule 506) | 414 | | | |
| Ontario political contributions tax credit (from Schedule 525) | 415 | | | |
| Subtotal | | | | D6 |
| Subtotal (amount C6 **minus** amount D6) (if negative, enter "0") | | | 3,058,594 | E6 |
| **Deduct:** Ontario research and development tax credit (from Schedule 508) | 416 | | | |
| Ontario corporate income tax payable before Ontario corporate minimum tax credit (amount E6 **minus** amount on line 416) (if negative, enter "0") | | | 3,058,594 | F6 |
| **Deduct:** Ontario corporate minimum tax credit (from Schedule 510) | 418 | | | |
| Ontario corporate income tax payable (amount F6 **minus** amount on line 418) (if negative, enter "0") | | | 3,058,594 | G6 |
| **Add:** | | | | |
| Ontario corporate minimum tax (from Schedule 510) | 278 | | | |
| Ontario special additional tax on life insurance corporations (from Schedule 512) | 280 | | | |
| Subtotal | | | | H6 |
| Total Ontario tax payable before refundable credits (amount G6 **plus** amount H6) | | | 3,058,594 | I6 |
| **Deduct:** | | | | |
| Ontario qualifying environmental trust tax credit | 450 | | | |
| Ontario co-operative education tax credit (from Schedule 550) | 452 | 48,895 | | |
| Ontario apprenticeship training tax credit (from Schedule 552) | 454 | 173,885 | | |
| Ontario computer animation and special effects tax credit (from Schedule 554) | 456 | | | |
| Ontario film and television tax credit (from Schedule 556) | 458 | | | |
| Ontario production services tax credit (from Schedule 558) | 460 | | | |
| Ontario interactive digital media tax credit (from Schedule 560) | 462 | | | |
| Ontario sound recording tax credit (from Schedule 562) | 464 | | | |
| Ontario book publishing tax credit (from Schedule 564) | 466 | | | |
| Ontario innovation tax credit (from Schedule 566) | 468 | | | |
| Ontario business-research institute tax credit (from Schedule 568) | 470 | | | |
| Other Ontario tax credits | | | | |
| Subtotal | | 222,780 | 222,780 | J6 |
| **Net Ontario tax payable or refundable credit** (amount I6 **minus** amount J6) (if a credit, enter a negative amount) Include this amount on line 255. | 290 | | 2,835,814 | K6 |

## Summary

Enter the total net tax payable or refundable credits for all provinces and territories on line 255.

**Net provincial and territorial tax payable or refundable credits** . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . **255** 2,835,814

If the amount on line 255 is positive, enter the net provincial and territorial tax payable on line 760 of the T2 return.
If the amount on line 255 is negative, enter the net provincial and territorial refundable tax credits on line 812 of the T2 return.

| 8. | 42 | | 545,416 | | | 0 | | 545,416 | 12 | 0 | 0 | 65,450 | 479,966 |
| 9. | 45 | | 157,105 | | | 0 | | 157,105 | 45 | 0 | 0 | 70,697 | 86,408 |
| 10. | 50 | | 1,150,153 | 1,659,176 | | 0 | 829,588 | 1,979,741 | 55 | 0 | 0 | 1,088,858 | 1,720,471 |
| 11. | 47 | | 249,898,195 | 44,705,815 | | 0 | 22,352,908 | 272,251,102 | 8 | 0 | 0 | 21,780,088 | 272,823,922 |
| | | **Totals** | 590,032,798 | 53,708,537 | | 9,206 | 26,849,667 | 616,882,462 | | | | 44,037,141 | 599,694,988 |

**Note:** Class numbers followed by a letter indicate the basic rate of the class taking into account the additional deduction allowed. Class 1a: 4% + 6% = 10% (class 1 to 10%), class 1b: 4% + 2% = 6% (class 1 to 6%).

* Include any property acquired in previous years that has now become available for use. This property would have been previously excluded from column 3. List separately any acquisitions that are not subject to the 50% rule, see Regulation 1100(2) and (2.2).

** Include amounts transferred under section 85, or on amalgamation and winding-up of a subsidiary. See the *T2 Corporation Income Tax Guide* for other examples of adjustments to include in column 4.

*** The net cost of acquisitions is the cost of acquisitions (column 3) **plus** or **minus** certain adjustments from column 4. For exceptions to the 50% rule, see Interpretation Bulletin IT-285, *Capital Cost Allowance – General Comments*.

**** Enter a rate only, if you are using the declining balance method. For any other method (for example the straignt-line method, where calculations are always based on the cost of acquisitions), enter N/A. Then enter the amount you are claiming in column 11.

***** If the tax year is shorter than 365 days, prorate the CCA claim. Some classes of property do not have to be prorated. See the *T2 Corporation Income Tax Guide* for more information.

# Fixed Assets Reconciliation

Reconciliation of change in fixed assets per financial statements to amounts used per tax return.

## Tax return

| | | | | |

# CUMULATIVE ELIGIBLE CAPITAL DEDUCTION

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- For use by a corporation that has eligible capital property. For more information, see the *T2 Corporation Income Tax Guide*.
- A separate cumulative eligible capital account must be kept for each business.

## Part 1 – Calculation of current year deduction and carry-forward

| | | | | | |
|---|---|---|---|---|---|
| **Cumulative eligible capital - Balance at the end of the preceding taxation year** (if negative, enter "0") | | | 200 | 944,758 | A |
| **Add:** Cost of eligible capital property acquired during the taxation year | 222 | 10,072 | | | |
| Other adjustments | 226 | | | | |
| Subtotal (line 222 plus line 226) | | 10,072 x 3 / 4 = | 7,554 | | B |
| Non-taxable portion of a non-arm's length transferor's gain realized on the transfer of an eligible capital property to the corporation after December 20, 2002 | 228 | x 1 / 2 = | | | C |
| amount B minus amount C (if negative, enter "0") | | | 7,554 ▶ | 7,554 | D |
| Amount transferred on amalgamation or wind-up of subsidiary | | | 224 | | E |
| Subtotal (add amounts A, D, and E) | | | 230 | 952,312 | F |
| **Deduct:** Proceeds of sale (less outlays and expenses not otherwise deductible) from the disposition of all eligible capital property during the taxation year | 242 | | G | | |
| The gross amount of a reduction in respect of a forgiven debt obligation as provided for in subsection 80(7) | 244 | | H | | |
| Other adjustments | 246 | | I | | |
| (add amounts G,H, and I) | | x 3 / 4 = | 248 | | J |
| **Cumulative eligible capital balance** (amount F minus amount J) | | | | 952,312 | K |
| (if amount K is negative, enter "0" at line M and proceed to Part 2) | | | | | |
| Cumulative eligible capital for a property no longer owned after ceasing to carry on that business | | | 249 | | |
| amount K | 952,312 | | | | |
| **less** amount from line 249 | | | | | |
| **Current year deduction** | 952,312 | x 7.00 % = | 250 | 66,662 * | |
| (line 249 plus line 250) (enter this amount at line 405 of Schedule 1) | | | 66,662 ▶ | 66,662 | L |
| **Cumulative eligible capital – Closing balance** (amount K minus amount L) (if negative, enter "0") | | | 300 | 885,650 | M |

* You can claim any amount up to the maximum deduction of 7%. The deduction may not exceed the maximum amount prorated by the number of days in the taxation year divided by 365.

## Part 2 – Amount to be included in income arising from disposition

(complete this part only if the amount at line K is negative)

| | | | | | |
|---|---|---|---|---|---|
| Amount from line K (show as positive amount) | | | | | N |
| Total of cumulative eligible capital (CEC) deductions from income for taxation years beginning after June 30, 1988 | | | 400 | 1 | |
| Total of all amounts which reduced CEC in the current or prior years under subsection 80(7) | | | 401 | 2 | |
| Total of CEC deductions claimed for taxation years beginning before July 1, 1988 | 402 | 3 | | | |
| Negative balances in the CEC account that were included in income for taxation years beginning before July 1, 1988 | 408 | 4 | | | |
| Line 3 minus line 4 (if negative, enter "0") | | ▶ | | 5 | |
| Total of lines 1, 2 and 5 | | | | 6 | |
| Amounts included in income under paragraph 14(1)(b), as that paragraph applied to taxation years ending after June 30, 1988 and before February 28, 2000, to the extent that it is for an amount described at line 400 | | 7 | | | |
| Amounts at line T from Schedule 10 of previous taxation years ending after February 27, 2000 | | 8 | | | |
| Subtotal (line 7 plus line 8) | 409 | ▶ | | 9 | |
| Line 6 minus line 9 (if negative, enter "0") | | | | ▶ | O |
| Line N minus line O (if negative, enter "0") | | | | | P |
| | | Line 5 | x 1 / 2 = | | Q |
| Line P minus line Q (if negative, enter "0") | | | | | R |
| | | Amount R | x 2 / 3 = | | S |
| Amount N or amount O, whichever is less | | | | | T |
| **Amount to be included in income** (amount S plus amount T) (enter this amount on line 108 of Schedule 1) | | | | 410 | |

Canada Revenue Agency / Agence du revenu du Canada

**SCHEDULE 13**

# CONTINUITY OF RESERVES

| Name of corporation | Business number | Tax year end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- For use by corporations to provide a continuity of all reserves claimed which are allowed for tax purposes.
- File one completed copy of this schedule with the corporation's *T2 Corporation Income Tax Return*.
- For more information, see the *T2 Corporation Income Tax Guide*.

## Part 1 – Capital gains reserves

| | Description of property 001 | Balance at the beginning of the year $ 002 | Transfer on an amalgamation or the wind-up of a subsidiary $ 003 | Add $ | Deduct $ | Balance at the end of the year $ 004 |
|---|---|---|---|---|---|---|
| 1 | | | | | | |
| | **Totals** | 008 | 009 | | | 010 |

The amount from line 008 **plus** the amount from line 009 should be entered on line 880 of Schedule 6, *Summary of Dispositions of Capital Property*. The amount from line 010 should be entered on line 885 of Schedule 6.

## Part 2 – Other reserves

| Description | Balance at the beginning of the year $ | Transfer on an amalgamation or the wind-up of a subsidiary $ | Add $ | Deduct $ | Balance at the end of the year $ |
|---|---|---|---|---|---|
| Reserve for doubtful debts | 110 649,697 | 115 | 54,472 | | 120 704,169 |
| Reserve for undelivered goods and services not rendered | 130 | 135 | | | 140 |
| Reserve for prepaid rent | 150 | 155 | | | 160 |
| Reserve for refundable containers | 190 | 195 | | | 200 |
| Reserve for unpaid amounts | 210 | 215 | | | 220 |
| Other tax reserves | 230 | 235 | | | 240 |
| **Totals** | 270 649,697 | 275 | 54,472 | | 280 704,169 |

Enter "X" in the column above if the tax reserve has also been reported on the corporation's financial statements. This allows offsetting entries on Schedule 1, resulting in a zero effect on net income for tax purposes.

The amount from line 270 **plus** the amount from line 275 should be entered on line 125 of Schedule 1, *Net Income (Loss) for Income Tax Purposes*, as an addition. The amount from line 280 should be entered on line 413 of Schedule 1 as a deduction.

# Continuity of financial statement reserves (not deductible)

## Financial statement reserves (not deductible)

| | Description | Balance at the beginning of the year | Transfer on an amalgamation or the wind-up of a subsidiary | Add | Deduct | Balance at the end of the year |
|---|---|---|---|---|---|---|
| 1 | Allowance for Doubtful Debts | 1,176,400 | | | 105,501 | 1,070,899 |
| 2 | Contingent Liability | 549,242 | | | | 549,242 |
| 3 | Employee future benefit | 5,988,000 | | | 5,988,000 | |
| 4 | | | | | | |
| | Reserves from Part 2 of Schedule 13 | | | | | |
| | **Totals** | 7,713,642 | | | 6,093,501 | 1,620,141 |

The total opening balance plus the total transfers should be entered on line 414 of Schedule 1 as a deduction.
The total closing balance should be entered on line 126 of Schedule 1 as an addition.

Canada Revenue Agency / Agence du revenu du Canada

**SCHEDULE 15**

# DEFERRED INCOME PLANS

| Name of corporation | Business Number | Tax year end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- Complete the information below if the corporation deducted payments from its income made to a registered pension plan (RPP), a registered supplementary unemployment benefit plan (RSUBP), a deferred profit sharing plan (DPSP), or an employee profit sharing plan (EPSP).
- If the trust that governs an employee profit sharing plan is **not resident** in Canada, please indicate if the T4PS, *Statement of Employees Profit Sharing Plan Allocations and Payments,* Supplementary slip(s) were filed for the last calendar year, and whether they were filed by the trustee or the employer.

| | Type of plan (see note 1) 100 | Amount of contribution $ (see note 2) 200 | Registration number (RPP, RSUBP, and DPSP only) 300 | Name of EPSP trust 400 | Address of EPSP trust 500 | T4PS slip(s) filed by: (see note 3) (EPSP only) 600 |
|---|---|---|---|---|---|---|
| 1 | 1 | 4,537,094 | 345983 | | | |

**Note 1**: Enter the applicable code number:

1 – RPP
2 – RSUBP
3 – DPSP
4 – EPSP

**Note 2**: You do not need to add to Schedule 1 any payments you made to deferred income plans. To reconcile such payments, calculate the following amount:

Total of all amounts indicated in column 200 of this schedule ........................... 4,537,094 **A**

**Less:**

Total of all amounts for deferred income plans deducted in your financial statements 4,537,094 **B**

Deductible amount for contributions to deferred income plans (amount A **minus** amount B) (if negative, enter "0") ..................................... **C**

**Enter amount C on line 417 of Schedule 1**

**Note 3**: T4PS slip(s) filed by: 1 – Trustee
2 – Employer

**SCHEDULE 23**

# AGREEMENT AMONG ASSOCIATED CANADIAN-CONTROLLED PRIVATE CORPORATIONS TO ALLOCATE THE BUSINESS LIMIT

- For use by a Canadian-controlled private corporation (CCPC) to identify all associated corporations and to assign a percentage for each associated corporation. This percentage will be used to allocate the business limit for purposes of the small business deduction. Information from this schedule will also be used to determine the date the balance of tax is due and to calculate the reduction to the business limit.
- An associated CCPC that has more than one tax year ending in a calendar year, is required to file an agreement for each tax year ending in that calendar year.

**Column 1:** Enter the legal name of each of the corporations in the associated group. Include non-CCPCs and CCPCs that have filed an election under subsection 256(2) of the *Income Tax Act* (ITA) not to be associated for purposes of the small business deduction.

**Column 2:** Provide the Business Number for each corporation (if a corporation is not registered, enter "NR").

**Column 3:** Enter the association code that applies to each corporation:

1 – Associated for purposes of allocating the business limit (unless code 5 applies)
2 – CCPC that is a "third corporation" that has elected under subsection 256(2) not to be associated for purposes of the small business deduction
3 – Non-CCPC that is a "third corporation" as defined in subsection 256(2)
4 – Associated non-CCPC
5 – Associated CCPC to which code 1 does not apply because of a subsection 256(2) election made by a "third corporation"

**Column 4:** Enter the business limit for the year of each corporation in the associated group. The business limit is computed at line 4 on page 4 of each respective corporation's T2 return.

**Column 5:** Assign a percentage to allocate the business limit to each corporation that has an association code 1 in column 3. The total of all percentages in column 5 cannot exceed 100%.

**Column 6:** Enter the business limit allocated to each corporation by multiplying the amount in column 4 by the percentage in column 5. Add all business limits allocated in column 6 and enter the total at line A. Ensure that the total at line A falls within the range for the calendar year to which the agreement applies:

| Calendar year | Acceptable range |
|---|---|
| 2006 | maximum $300,000 |
| 2007 | $300,001 to $400,000 |

| Calendar year | Acceptable range |
|---|---|
| 2008 | maximum $400,000 |
| 2009 | $400,001 to $500,000 |

If the calendar year to which this agreement applies is after 2009, ensure that the total at line A does not exceed $500,000.

## Allocating the business limit

Date filed (do not use this area) . . . . . 025 Year Month Day

Enter the calendar year to which the agreement applies . . . . . 050 Year 2012

Is this an amended agreement for the above-noted calendar year that is intended to replace an agreement previously filed by any of the associated corporations listed below? . . . . . 075 1 Yes ☐ 2 No ☒

| | 1<br>Names of associated corporations<br>100 | 2<br>Business Number of associated corporations<br>200 | 3<br>Association code<br>300 | 4<br>Business limit for the year (before the allocation)<br>$ | 5<br>Percentage of the business limit<br>%<br>350 | 6<br>Business limit allocated*<br>$<br>400 |
|---|---|---|---|---|---|---|
| 1 | Hydro Ottawa Limited | 86339 1363 RC0001 | 1 | 500,000 | 100.0000 | 500,000 |
| 2 | Hydro Ottawa Holding Inc. | 89411 0816 RC0001 | 1 | 500,000 | | |

| 7 | Chaudiere Hydro Inc. | 81281 3103 RC0001 | 1 | 500,000 | | |
| 8 | Chaudiere Water Power Inc. | 10093 1955 RC0001 | 1 | 500,000 | | |
| | | | | **Total** | 100.0000 | 500,000 A |

**Business limit reduction under subsection 125(5.1) of the ITA**

The business limit reduction is calculated in the small business deduction area of the T2 return. One of the factors used in this calculation is the "Large corporation amount" at line 415 of the T2 return. If the corporation is a member of an associated group** of corporations in the current tax year, the amount at line 415 of the T2 return is equal to 0.225% x (A - $10,000,000) where, "A" is the total of taxable capital employed in Canada*** of each corporation in the associated group for its last tax year ending in the preceding calendar year.

* Each corporation will enter on line 410 of the T2 return, the amount allocated to it in column 6. However, if the corporation's tax year is less than 51 weeks, prorate the amount in column 6 by the number of days in the tax year divided by 365, and enter the result on line 410 of the T2 return.

Special rules apply if a CCPC has more than one tax year ending in a calendar year and is associated in more than one of those years with another CCPC that has a tax year ending in the same calendar year. If the tax year straddles January 1, 2009, the business limit for the second (or subsequent) tax year(s) will be equal to the lesser of the business limit that would have been determined for the first tax year ending in the calendar year, if $500,000 was used in allocating the amounts among associated corporations and the business limit determined for the second (or subsequent) tax year(s) ending in the same calendar year. Otherwise, the business limit for the second (or subsequent) tax year(s) will be equal to the lesser of the business limit determined for the first tax year ending in the calendar year and the business limit determined for the second (or subsequent) tax year(s) ending in the same calendar year.

** The associated group includes the corporation filing this schedule and each corporation that has an "association code" of 1 or 4 in column 3.

*** "Taxable capital employed in Canada" has the meaning assigned by subsection 181.2(1) or 181.3(1) or section 181.4 of the ITA.

Canada Revenue Agency / Agence du revenu du Canada

**Schedule 31**

# Investment Tax Credit – Corporations

## General information

- Use this schedule:
  - to calculate an investment tax credit (ITC) earned during the tax year;
  - to claim a deduction against Part I tax payable;
  - to claim a refund of credit earned during the current tax year;
  - to claim a carryforward of credit from previous tax years;
  - to transfer a credit following an amalgamation or wind-up of a subsidiary, as described under subsections 87(1) and 88(1) of the federal *Income Tax Act*;
  - to request a credit carryback to one or more previous years; or
  - if you are subject to a recapture of ITC.
- The ITC is eligible for a three-year carryback (if not deductible in the year earned). It is also eligible for a twenty-year carryforward.
- All legislative references are to the federal *Income Tax Act* and *Income Tax Regulations*.
- Investments or expenditures, described in subsection 127(9) of the Act and Part XLVI of the Regulations, that earn an ITC are:
  - qualified property and qualified resource property (Parts 4 to 7 of this schedule);
  - expenditures that are part of the SR&ED qualified expenditure pool (Parts 8 to 17). File Form T661, *Scientific Research and Experimental Development (SR&ED) Expenditures Claim;*
  - pre-production mining expenditures (Parts 18 to 20);
  - apprenticeship job creation expenditures (Parts 21 to 23); and
  - child care spaces expenditures (Parts 24 to 28).
- Include a completed copy of this schedule with the *T2 Corporation Income Tax Return*. If you need more space, attach additional schedules.
- For more information on ITCs, see the section called "Investment Tax Credit" in Guide T4012, *T2 Corporation – Income Tax Guide*, Information Circular IC 78-4, *Investment Tax Credit Rates*, and its related Special Release*.*
- For more information on SR&ED, see Brochure RC4472, *Overview of the Scientific Research and Experimental Development Program (SR&ED) Tax Incentive Program*; Brochure RC4467, *Support for your R&D in Canada*, and T4088*, Guide to Form T661 – Scientific Research and Experimental Development (SR&ED) Expenditures Claim.* Also see the *Eligibility of Work for SR&ED Investment Tax Credits Policy* at **www.cra.gc.ca//txcrdt/sred-rsde/clmng/lgbltywrkfrsrdnvstmnttxcrdts-eng.html**.

## Detailed information

- For the purpose of this schedule, **investment** means the capital cost of the property (excluding amounts added by an election under section 21 of the Act), determined without reference to subsections 13(7.1) and 13(7.4), minus the amount of any government or non-government assistance that the corporation has received, is entitled to receive, or can reasonably be expected to receive for that property when it files the income tax return for the year in which the property was acquired.
- An ITC deducted or refunded in a tax year for a depreciable property, other than a depreciable property deductible under paragraph 37(1)(b), reduces the capital cost of that property in the next tax year. It also reduces the undepreciated capital cost of that class in the next tax year. An ITC for SR&ED deducted or refunded in a tax year will reduce the balance in the pool of deductible SR&ED expenditures and the adjusted cost base (ACB) of an interest in a partnership in the next tax year. An ITC from pre-production mining expenditures deducted in a tax year reduces the balance in the pool of deductible cumulative Canadian exploration expenses in the next tax year.
- Property acquired has to be **available for use** before a claim for an ITC can be made. See subsections 127(11.2) and 248(19) for more information.
- Expenditures for SR&ED and capital costs for a property qualifying for an ITC must be identified by the claimant on Form T661 and Schedule 31 no later than 12 months after the claimant's income tax return is due for the tax year in which it incurred the expenditures or capital costs.
- Partnership allocations – Subsection 127(8) provides for the allocation of the amount that may reasonably be considered to be a partner's share of the ITCs of the partnership at the end of the fiscal period of the partnership. An allocation of ITCs is generally considered to be the partner's reasonable share of the ITCs if it is made in the same proportion in which the partners have agreed to share any income or loss and if section 103 is not applicable for the agreement to share any income or loss. Special rules apply to specified and limited partners. For more information, see Guide T4068, *Guide for the Partnership Information Return*.
- For SR&ED expenditures, the expression **in Canada** includes the "exclusive economic zone" (as defined in the *Oceans Act* to generally consist of an area that is within 200 nautical miles from the Canadian coastline), including the airspace, seabed and subsoil for that zone.
- For the purpose of this schedule, the expression **Atlantic Canada** includes the Gaspé Peninsula and the provinces of Newfoundland and Labrador, Prince Edward Island, Nova Scotia, and New Brunswick, as well as their respective offshore regions (prescribed in Regulation 4609).
- For the purpose of this schedule, **qualified property** means property in Atlantic Canada that is used primarily for manufacturing and processing, farming or fishing, logging, storing grain, or harvesting peat. Property in Atlantic Canada that is used primarily for oil and gas, and mining activities is considered qualified property only if acquired by the taxpayer **before** March 29, 2012. Qualified property includes new buildings and new machinery and equipment (prescribed in Regulation 4600), and if acquired by the taxpayer **after** March 28, 2012, new energy generation and conservation property (prescribed in Regulation 4600). Qualified property can also be used primarily to produce or process electrical energy or steam in a prescribed area (as described in Regulation 4610). See the definition of **qualified property** in subsection 127(9) of the Act for more details.
- For the purpose of this schedule, **qualified resource property** means property in Atlantic Canada that is used primarily for oil and gas, and mining activities, if acquired by the taxpayer **after** March 28, 2012, and **before** January 1, 2016. Qualified resource property includes new buildings and new machinery and equipment (prescribed in Regulation 4600). See the definition of **qualified resource property** in subsection 127(9) of the Act for more details.

## Detailed information (continued)

- For the purpose of this schedule, **pre-production mining exploration expenditures** are expenses incurred **after** March 28, 2012, by the taxpayer to determine the existence, location, extent, or quality of certain mineral resources in Canada, excluding expenses incurred in the exploration of an oil or gas well. See subparagraph (a)(i) of the definition of **pre-production mining expenditure** in subsection 127(9) for more details.
- For the purpose of this schedule, **pre-production mining development expenditures** are expenses incurred **after** March 28, 2012, by the taxpayer to bring a new mineral resource mine in Canada into production, excluding expenses in the development of a bituminous sands deposit or an oil shale deposit. See subparagraph (a)(ii) of the definition of **pre-production mining expenditure** in subsection 127(9) for more details.

## Part 1 – Investments, expenditures and percentages

| **Investments** | **Specified percentage** |
|---|---|
| Qualified property acquired primarily for use in Atlantic Canada | 10 % |
| Qualified resource property acquired primarily for use in Atlantic Canada and acquired: | |
| – after March 28, 2012, and before 2014 | 10 % |
| – after 2013 and before 2016 | 5 % |
| – after 2015* | 0 % |
| **Expenditures** | |
| If you are a Canadian-controlled private corporation (CCPC), this percentage may apply to the portion that you claim of the SR&ED qualified expenditure pool that does not exceed your expenditure limit (see Part 10) | 35 % |
| **Note:** If your current year's qualified expenditures are more than the corporation's expenditure limit (see Part 10), the excess is eligible for an ITC calculated at the 20 % rate**. | |
| If you are a corporation that is not a CCPC and have incurred qualified expenditures for SR&ED in any area in Canada: | |
| – before 2014** | 20 % |
| – after 2013** | 15 % |
| If you are a taxable Canadian corporation that incurred pre-production mining expenditures before March 29, 2012 | 10 % |
| If you are a taxable Canadian corporation that incurred pre-production mining exploration expenditures***: | |
| – after March 28, 2012, and before 2013 | 10 % |
| – in 2013 | 5 % |
| – after 2013*** | 0 % |
| If you are a taxable Canadian corporation that incurred pre-production mining development expenditures****: | |
| – after March 28, 2012, and before 2014**** | 10 % |
| – in 2014 | 7 % |
| – in 2015 | 4 % |
| – after 2015**** | 0 % |
| If you paid salary and wages to apprentices in the first 24 months of their apprenticeship contract for employment | 10 % |
| If you incurred eligible expenditures after March 18, 2007, for the creation of licensed child care spaces for the children of your employees and, potentially, for other children | 25 % |

* A transitional relief rate of 10% may apply to property acquired after 2013 and before 2017, if the property is acquired under a written agreement entered into before March 29, 2012, or the property is acquired as part of a phase of a project where the construction or the engineering and design work for the construction started before March 29, 2012. See paragraph (a.1) of the definition of **specified percentage** in subsection 127(9) for more details.

** The reduction of the rate from 20% to 15% applies to 2014 and later tax years, except that, for 2014 tax years that start before 2014, the reduction is pro-rated based on the number of days in the tax year that are after 2013.

*** Pre-production mining exploration expenditures are described in subparagraph (a)(i) of the definition of **pre-production mining expenditure** in subsection 127(9).

**** A transitional relief rate of 10% may apply to expenditures incurred after 2013 and before 2016, if the expenditure is incurred under a written agreement entered into before March 29, 2012, or the expenditure is incurred as part of the development of a new mine where the construction or the engineering and design work for the construction of the new mine started before March 29, 2012. See subparagraph (k)(ii) of the definition of **specified percentage** in subsection 127(9) for more details. Pre-production mining development expenditures are described in subparagraph (a)(ii) of the definition of **pre-production mining expenditure** in subsection 127(9).

| Corporation's name | Business number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

## Part 2 – Determination of a qualifying corporation

Is the corporation a qualifying corporation? . . . . . 101 1 Yes [ ] 2 No [X]

For the purpose of a refundable ITC, a **qualifying corporation** is defined under subsection 127.1(2). The corporation has to be a CCPC and its taxable income (before any loss carrybacks) for its previous tax year cannot be more than its **qualifying income limit** for the particular tax year. If the corporation is associated with any other corporations during the tax year, the total of the taxable incomes of the corporation and the associated corporations (before any loss carrybacks), for their last tax year ending in the previous calendar year, cannot be more than their qualifying income limit for the particular tax year.

**Note:** A CCPC calculating a refundable ITC, is considered to be associated with another corporation if it meets any of the conditions in subsection 256(1), except where:

- one corporation is associated with another corporation solely because one or more persons own shares of the capital stock of both corporations; and
- one of the corporations has at least one shareholder who is not common to both corporations.

If you are a **qualifying** corporation, you will earn a **100%** refund on your share of any ITCs earned at the 35% rate on qualified **current** expenditures for SR&ED, up to the allocated expenditure limit. The 100% refund does not apply to qualified **capital** expenditures eligible for the 35% credit rate. They are only eligible for the **40%** refund*.

Some CCPCs that are **not qualifying** corporations may also earn a **100%** refund on their share of any ITCs earned at the 35% rate on qualified **current** expenditures for SR&ED, up to the allocated expenditure limit. The expenditure limit can be determined in Part 10. The 100% refund does not apply to qualified **capital** expenditures eligible for the 35% credit rate. They are only eligible for the **40%** refund*.

The 100% refund will not be available to a corporation that is an **excluded corporation** as defined under subsection 127.1(2). A corporation is an excluded corporation if, at any time during the year, it is a corporation that is either controlled by (directly or indirectly, in any manner whatever) or is related to:

a) one or more persons exempt from Part I tax under section 149;

b) Her Majesty in right of a province, a Canadian municipality, or any other public authority; or

c) any combination of persons referred to in a) or b) above.

* Capital expenditures incurred after December 31, 2013, including lease payments for property that would have been a capital expenditure if purchased directly, are **not** qualified SR&ED expenditures and are **not** eligible for an ITC on SR&ED expenditures.

## Part 3 – Corporations in the farming industry

Complete this area if the corporation is making SR&ED contributions.

Is the corporation claiming a contribution in the current year to an agricultural organization whose goal is to finance SR&ED work (for example, check-off dues)? . . . . . 102 1 Yes [ ] 2 No [X]

Contributions to agricultural organizations for SR&ED* . . . . . 103

If **yes**, complete Schedule 125, *Income Statement Information*, to identify the type of farming industry the corporation is involved in. For more information on Schedule 125, see the *Guide to the General Index of Financial Information (GIFI) for Corporations*. Enter contributions on line 350 of Part 8.

* Enter only contributions not already included on Form T661. Include all of the contributions made before 2013 and 80% of the contributions made after 2012.

# Qualified Property and Qualified Resource Property

## Part 4 – Eligible investments for qualified property and qualified resource property from the current tax year

| CCA* class number 105 | Description of investment 110 | Date available for use 115 | Location used (province or territory) 120 | Amount of investment 125 |
|---|---|---|---|---|
| | | | | |

**Total of investments for qualified property and qualified resource property** ______ A

* CCA: capital cost allowance

## Part 5 – Current-year credit and account balances – ITC from investments in qualified property and qualified resource property

ITC at the end of the previous tax year . . . . . . . . . . B

**Deduct:**

Credit deemed as a remittance of co-op corporations . . . . . . **210**

Credit expired . . . . . . . . . . **215**

Subtotal (line 210 **plus** line 215) ▶ C

ITC at the beginning of the tax year (amount B **minus** amount C) . . . . . . **220**

**Add:**

Credit transferred on amalgamation or wind-up of subsidiary . . . . . . **230**

ITC from repayment of assistance . . . . . . . . **235**

Qualified property; and qualified resource property acquired after March 28, 2012, and before January 1, 2014* (applicable part of amount A from Part 4) . . . . . . x 10 % = **240**

Qualified resource property acquired after December 31, 2013, and before January 1, 2016 (applicable part of amount A from Part 4) . . . . . . . x 5 % = **242**

Credit allocated from a partnership . . . . . . . . **250**

Subtotal (total of lines 230 to 250) ▶ D

Total credit available (line 220 **plus** amount D) . . . . . . . . . . E

**Deduct:**

Credit deducted from Part I tax (enter at amount D in Part 30) . . . . . . **260**

Credit carried back to the previous year(s) (amount H from Part 6) . . . . . . a

Credit transferred to offset Part VII tax liability . . . . . . **280**

Subtotal (total of line 260, amount a, and line 280) ▶ F

Credit balance before refund (amount E **minus** amount F) . . . . . . . . G

**Deduct:**

Refund of credit claimed on investments from qualified property and qualified resource property (from Part 7) . . . . . . **310**

**ITC closing balance of investments from qualified property and qualified resource property** (amount G **minus** line 310) **320**

* Include investments acquired after 2013 and before 2017 that are eligible for transitional relief.

## Part 6 – Request for carryback of credit from investments in qualified property and qualified resource property

| | Year | Month | Day | | |
|---|---|---|---|---|---|
| 1st previous tax year | | | | . . . . . . Credit to be applied | **901** |
| 2nd previous tax year | | | | . . . . . . Credit to be applied | **902** |
| 3rd previous tax year | | | | . . . . . . Credit to be applied | **903** |

**Total** (enter at amount a in Part 5) H

## Part 7 – Refund for qualifying corporations on investments from qualified property and qualified resource property

Current-year ITCs (total of lines 240, 242, and 250 from Part 5) . . . . . . . . I

Credit balance before refund (amount G from Part 5) . . . . . . . . J

**Refund** ( 40 % of amount I or J, whichever is less) . . . . . . . . K

Enter amount K or a lesser amount on line 310 in Part 5 (also enter it on line 780 of the T2 return if the corporation does not claim an SR&ED ITC refund).

## SR&ED

### Part 8 – Qualified SR&ED expenditures

**Current expenditures**

| | | | |
|---|---|---|---|
| Current expenditures (from line 557 on Form T661) | | | |
| **Add:** | | | |
| Contributions to agricultural organizations for SR&ED* | | | |
| Current expenditures (line 557 on Form T661 **plus** line 103 from Part 3)* | | ► 350 | |
| Capital expenditures incurred **before** 2014 (from line 558 on Form T661)** | | 360 | |
| Repayments made in the year (from line 560 on Form T661) | | 370 | |
| **Qualified SR&ED expenditures** (total of lines 350 to 370) | | 380 | |

* If you are claiming only contributions made to agricultural organizations for SR&ED, line 350 should equal line 103 in Part 3. Do not file Form T661.

** Capital expenditures incurred after December 31, 2013, are not qualified SR&ED expenditures.

### Part 9 – Components of the SR&ED expenditure limit calculation

**Part 9 only applies if the corporation is a CCPC.**

**Note:** A CCPC that calculates SR&ED expenditure limit is considered to be associated with another corporation if it meets any of the conditions in subsection 256(1), except where:

- one corporation is associated with another corporation solely because one or more persons own shares of the capital stock of the corporation; and
- one of the corporations has at least one shareholder who is not common to both corporations.

Is the corporation associated with another CCPC for the purpose of calculating the SR&ED expenditure limit? 385 1 Yes [ ] 2 No [X]

Complete lines 390 and 398, if you answered **no** to the question at line 385 above or if the corporation is not associated with any other corporations (the amounts for associated corporations will be determined on Schedule 49).

| | | | |
|---|---|---|---|
| Enter your taxable income for the previous tax year* (prior to any loss carry-backs applied) | | 390 | 32,674,141 |
| Enter your taxable capital employed in Canada for the previous tax year minus $10 million. If this amount is nil or negative, enter "0". If this amount is over $40 million, enter $40 million | 612,746,430 | 398 | 40,000,000 |

* If either of the tax years referred to at line 390 is less than 51 weeks, **multiply** the taxable income by the following result: 365 **divided** by the number of days in these tax years.

### Part 10 – SR&ED expenditure limit for a CCPC

| | | | |
|---|---|---|---|
| **For a stand-alone corporation:** | | $ 8,000,000 | |
| **Deduct:** | | | |
| Taxable income for the previous tax year (line 390 from Part 9) or $500,000, whichever is more | 32,674,141 x 10 = | 326,741,410 | A |
| Excess ($8,000,000 **minus** amount A; if negative, enter "0") | | | B |
| $ 40,000,000 **minus** line 398 from Part 9 | a | | |
| Amount a **divided** by $ 40,000,000 | | | C |
| **Expenditure limit for the stand-alone corporation** (amount B **multiplied** by amount C) | | | D* |
| **For an associated corporation:** | | | |
| If associated, the allocation of the SR&ED expenditure limit as provided on Schedule 49 | 400 | | E* |

**Where the tax year of the corporation is less than 51 weeks, calculate the amount of the expenditure limit as follows:**

Amount D or E ______ x $\frac{\text{Number of days in the tax year}}{365}$ 366 = ______ F

**Your SR&ED expenditure limit for the year** (enter the amount from line D, E, or F, whichever applies) 410 ______

* Amount D or E cannot be more than $3,000,000.

## Part 11 – Investment tax credits on SR&ED expenditures

| | | | | | | |
|---|---|---|---|---|---|---|
| Current expenditures (line 350 from Part 8) or the expenditure limit (line 410 from Part 10), whichever is less* | 420 | | x | 35 % | = | G |
| Line 350 **minus** line 410 (if negative, enter "0")** | 430 | | x | 20 % | = | H |
| Line 410 **minus** line 350 (if negative, enter "0") | | | b | | | |
| Capital expenditures (line 360 from Part 8) or amount b above, whichever is less* | 440 | | x | 35 % | = | I |
| Line 360 **minus** amount b above (if negative, enter "0")** | 450 | | x | 20 % | = | J |
| **Repayments** (amount from line 370 in Part 8) | | | | | | |

If a corporation makes a repayment of any government or non-government assistance, or contract payments that reduced the amount of qualified expenditures for ITC purposes, the amount of the repayment is eligible for a credit at the rate that would have applied to the repaid amount. Enter the amount of the repayment on the line that corresponds to the appropriate rate.**

| | | | | | | |
|---|---|---|---|---|---|---|
| 460 | | x | 35 % | = | | c |
| 480 | | x | 20 % | = | | d |

Subtotal (amount c **plus** amount d) ▶ K

**Current-year SR&ED ITC** (total of amounts G to K; enter on line 540 in Part 12) L

* For corporations that are not CCPCs, enter "0" for amounts G and I.

** For tax years that end after 2013, the general SR&ED rate is reduced from 20% to 15%, except that, for 2014 tax years that start before 2014, the reduction is pro-rated based on the number of days in the tax year that are after 2013.

## Part 12 – Current-year credit and account balances – ITC from SR&ED expenditures

ITC at the end of the previous tax year M

**Deduct:**

Credit deemed as a remittance of co-op corporations 510

Credit expired 515

Subtotal (line 510 **plus** line 515) ▶ N

ITC at the beginning of the tax year (amount M **minus** amount N) 520

**Add:**

Credit transferred on amalgamation or wind-up of subsidiary 530

Total current-year credit (from amount L in Part 11) 540

Credit allocated from a partnership 550

Subtotal (total of lines 530 to 550) ▶ O

Total credit available (line 520 **plus** amount O) P

**Deduct:**

Credit deducted from Part I tax (enter at amount E in Part 30) 560

Credit carried back to the previous year(s) (amount S from Part 13) e

Credit transferred to offset Part VII tax liability 580

Subtotal (total of line 560, amount e, and line 580) ▶ Q

Credit balance before refund (amount P **minus** amount Q) R

**Deduct:**

Refund of credit claimed on SR&ED expenditures (from Part 14 or 15, whichever applies) 610

**ITC closing balance on SR&ED** (amount R **minus** line 610) 620

## Part 13 – Request for carryback of credit from SR&ED expenditures

| | Year | Month | Day | | | |
|---|---|---|---|---|---|---|
| 1st previous tax year | | | | Credit to be applied | 911 | |
| 2nd previous tax year | | | | Credit to be applied | 912 | |
| 3rd previous tax year | | | | Credit to be applied | 913 | |
| | | | | **Total** (enter at amount e in Part 12) | | S |

## Part 14 – Refund of ITC for qualifying corporations – SR&ED

Complete this part only if you are a qualifying corporation as determined at line 101 in Part 2.

Is the corporation an excluded corporation as defined under subsection 127.1(2)? . . . . . 650 1 Yes [ ] 2 No [X]

Current-year ITC (lines 540 **plus** 550 from Part 12 **minus** amount K from Part 11) . . . . . f

Refundable credits (amount f above or amount R from Part 12, whichever is less)* . . . . . T

**Deduct:**

Amount T or amount G from Part 11, whichever is less . . . . . U

Net amount (amount T **minus** amount U; if negative, enter "0") . . . . . V

Amount V **multiplied** by 40 % . . . . . W

**Add:**

Amount U . . . . . X

**Refund of ITC** (amount W **plus** amount X – enter this, or a lesser amount, on line 610 in Part 12) . . . . . Y

Enter the total of lines 310 from Part 5 and 610 from Part 12 on line 780 of the T2 return.

* If you are also an excluded corporation [as defined in subsection 127.1(2)], this amount must be multiplied by 40%. Claim this, or a lesser amount, as your refund of ITC for amount Y.

## Part 15 – Refund of ITC for CCPCs that are not qualifying or excluded corporations – SR&ED

Complete this box only if you are a CCPC that is not a qualifying or excluded corporation as determined at line 101 in Part 2.

Credit balance before refund (amount R from Part 12) . . . . . Z

**Deduct:**

Amount Z or amount G from Part 11, whichever is less . . . . . AA

Net amount (amount Z **minus** amount AA; if negative, enter "0") . . . . . BB

Amount BB or amount I from Part 11, whichever is less . . . . . CC

Amount CC **multiplied** by 40 % . . . . . DD

**Add :**

Amount AA . . . . . EE

**Refund of ITC** (amount DD **plus** amount EE) . . . . . FF

Enter FF, or a lesser amount, on line 610 in Part 12 and also on line 780 of the T2 return.

# Recapture – SR&ED

## Part 16 – Recapture of ITC for corporations and corporate partnerships – SR&ED

You will have a recapture of ITC in a year when **all** of the following conditions are met:

- you acquired a particular property in the current year or in any of the 20 previous tax years, if the credit was earned in a tax year ending after 1997 and did not expire before 2008;
- you claimed the cost of the property as a qualified expenditure for SR&ED on Form T661;
- the cost of the property was included in calculating your ITC or was the subject of an agreement made under subsection 127(13) to transfer qualified expenditures; and
- you disposed of the property or converted it to commercial use after February 23, 1998. This condition is also met if you disposed of or converted to commercial use a property that incorporates the particular property previously referred to.

**Note:**

The recapture **does not apply** if you disposed of the property to a non-arm's-length purchaser who intended to use it all or substantially all for SR&ED. When the non-arm's-length purchaser later sells or converts the property to commercial use, the recapture rules will apply to the purchaser based on the historical ITC rate of the original user.

You will report a recapture on the T2 return for the year in which you disposed of the property or converted it to commercial use. In the following tax year, add the amount of the ITC recapture to the SR&ED expenditure pool.

If you have more than one disposition for calculations 1 and 2, complete the columns for each disposition for which a recapture applies, using the calculation formats below.

### Calculation 1 – If you meet all of the above conditions

| Amount of ITC you originally calculated for the property you acquired, or the original user's ITC where you acquired the property from a non-arm's length party, as described in the note above **700** | Amount calculated using ITC rate at the date of acquisition (or the original user's date of acquisition) on either the proceeds of disposition (if sold in an arm's length transaction) or the fair market value of the property (in any other case) **710** | Amount from column 700 or 710, whichever is less |
|---|---|---|
| | | |

**Subtotal** (enter this amount at amount C in Part 17) ______ A

### Calculation 2 – Only if you transferred all or a part of the qualified expenditure to another person under an agreement described in subsection 127(13); otherwise, enter nil in amount B in Part 16 on page 9.

| **A**<br>Rate that the transferee used in determining its ITC for qualified expenditures under a subsection 127(13) agreement **720** | **B**<br>Proceeds of disposition of the property if you dispose of it to an arm's length person; or, in any other case, enter the fair market value of the property at conversion or disposition **730** | **C**<br>Amount, if any, already provided for in Calculation 1 (This allows for the situation where only part of the cost of a property is transferred under a subsection 127(13) agreement.) **740** |
|---|---|---|
| | | |

### Calculation 2 (continued) – Only if you transferred all or a part of the qualified expenditure to another person under an agreement described in subsection 127(13); otherwise, enter nil in amount B below.

| **D**<br>Amount determined by the formula (A x B) – C | **E**<br>ITC earned by the transferee for the qualified expenditures that were transferred **750** | **F**<br>Amount from column D or E, whichever is less |
|---|---|---|
| | | |

**Subtotal** (enter this amount at amount D in Part 17) ______ B

**Calculation 3**

As a member of the partnership, you will report your share of the SR&ED ITC of the partnership after the SR&ED ITC has been reduced by the amount of the recapture. If this amount is a positive amount, you will report it on line 550 in Part 12. However, if the partnership does not have enough ITC otherwise available to offset the recapture, then the amount by which reductions to ITC exceed additions (the excess) will be determined and reported on line 760 below.

Corporate partner's share of the excess of SR&ED ITC (amount to be reported at amount E in Part 17) **760** ______

## Part 17 – Total recapture of SR&ED investment tax credit

| | | |
|---|---|---|
| Recaptured ITC for calculation 1 from amount A in Part 16 | | C |
| Recaptured ITC for calculation 2 from amount B in Part 16 | | D |
| Recaptured ITC for calculation 3 from line 760 in Part 16 | | E |
| **Total recapture of SR&ED investment tax credit** – total of amounts C to E | | F |

Enter amount F at amount A in Part 29.

# Pre-Production Mining

## Part 18 – Pre-production mining expenditures

**Exploration information**

A mineral resource that qualifies for the credit means a mineral deposit from which the principal mineral to be extracted is diamond, a base or precious metal deposit, or a mineral deposit from which the principal mineral to be extracted is an industrial mineral that, when refined, results in a base or precious metal.

In column 800, list all minerals for which pre-production mining expenditures have taken place in the tax year.

For each of the minerals reported in column 800, identify each project (in column 805), mineral title (in column 806), and mining division (in column 807) where title is registered. If there is no mineral title, identify only the project and mining division.

| List of minerals 800 | Project name 805 |
|---|---|
| | |

| Mineral title 806 | Mining division 807 |
|---|---|
| | |

**Pre-production mining expenditures***

**Exploration:**

Pre-production mining expenditures that the corporation incurred in the tax year for the purpose of determining the existence, location, extent, or quality of a mineral resource in Canada:

Prospecting . . . . . 810 ______

Geological, geophysical, or geochemical surveys . . . . . 811 ______

Drilling by rotary, diamond, percussion, or other methods . . . . . 812 ______

Trenching, digging test pits, and preliminary sampling . . . . . 813 ______

**Development:**

Pre-production mining expenditures incurred in the tax year for bringing a new mine in a mineral resource in Canada into production in reasonable commercial quantities and incurred before the new mine comes into production in such quantities:

Clearing, removing overburden, and stripping . . . . . 820 ______

Sinking a mine shaft, constructing an adit, or other underground entry . . . . . 821 ______

Other pre-production mining expenditures incurred in the tax year:

| Description 825 | Amount 826 |
|---|---|
| | |

Add amounts in column 826 ______ ► ______ A

Total pre-production mining expenditures (total of lines 810 to 821 and amount A) . . . . . 830 ______

**Deduct:**

Total of all assistance (grants, subsidies, rebates, and forgivable loans) or reimbursements that the corporation has received or is entitled to receive in respect of the amounts referred to at line 830 above . . . . . 832 ______

Excess (line 830 **minus** line 832) (if negative, enter "0") . . . . . ______ B

**Add:**

Repayments of government and non-government assistance . . . . . 835 ______

**Pre-production mining expenditures** (amount B **plus** line 835) . . . . . ______ C

* A pre-production mining expenditure is defined under subsection 127(9).

## Part 19 – Current-year credit and account balances – ITC from pre-production mining expenditures

| | | | | | |
|---|---|---|---|---|---|
| ITC at the end of the previous tax year | | | | | D |
| **Deduct:** | | | | | |
| Credit deemed as a remittance of co-op corporations | 841 | | | | |
| Credit expired | 845 | | | | |
| Subtotal (line 841 **plus** line 845) | | | ▶ | | E |
| ITC at the beginning of the tax year (amount D **minus** amount E) | | | 850 | | |
| **Add:** | | | | | |
| Credit transferred on amalgamation or wind-up of subsidiary | | | 860 | | |
| Pre-production mining expenditures* incurred before January 1, 2013 (applicable part of amount C from Part 18) 870 ____ x 10 % = | | | a | | |
| Pre-production mining exploration expenditures incurred in 2013 (applicable part of amount C from Part 18) 872 ____ x 5 % = | | | b | | |
| Pre-production mining development expenditures incurred in 2014 (applicable part of amount C from Part 18) 874 ____ x 7 % = | | | c | | |
| Pre-production mining development expenditures incurred in 2015 (applicable part of amount C from Part 18) 876 ____ x 4 % = | | | d | | |
| Current year credit (total of amounts a to d) | 880 | | ▶ | | F |
| Total credit available (total of lines 850, 860, and amount F) | | | | | G |
| **Deduct:** | | | | | |
| Credit deducted from Part I tax (enter at amount F in Part 30) | 885 | | | | |
| Credit carried back to the previous year(s) (amount I from Part 20) | | | e | | |
| Subtotal (line 885 **plus** amount e) | | | ▶ | | H |
| **ITC closing balance from pre-production mining expenditures** (amount G **minus** amount H) | | | 890 | | |

* Also include pre-production mining development expenditures incurred before 2014 and pre-production mining development expenditures incurred after 2013 and before 2016 that are eligible for transitional relief.

## Part 20 – Request for carryback of credit from pre-production mining expenditures

| | Year | Month | Day | | | |
|---|---|---|---|---|---|---|
| 1st previous tax year | | | | Credit to be applied | 921 | |
| 2nd previous tax year | | | | Credit to be applied | 922 | |
| 3rd previous tax year | | | | Credit to be applied | 923 | |
| | | | | **Total** (enter at amount e in Part 19) | | I |

### Apprenticeship Job Creation

## Part 21 – Total current-year credit – ITC from apprenticeship job creation expenditures

If you are a related person as defined under subsection 251(2), has it been agreed in writing that you are the only employer who will be claiming the apprenticeship job creation tax credit for this tax year for each apprentice whose contract number (or social insurance number or name) appears below? (If not, you cannot claim the tax credit.) 611 1 Yes ☐ 2 No ☐

For each apprentice in their first 24 months of the apprenticeship, enter the apprenticeship contract number registered with Canada, or a province or territory, under an apprenticeship program designed to certify or license individuals in the trade. For the province, the trade must be a Red Seal trade. If there is no contract number, enter the social insurance number (SIN) or the name of the eligible apprentice.

| | A<br>Contract number<br>(SIN or name of apprentice)<br>601 | B<br>Name of eligible trade<br>602 | C<br>Eligible salary and wages*<br>603 | D<br>Column C x<br>10 %<br>604 | E<br>Lesser of<br>column D or<br>$ 2,000<br>605 |

# Child Care Spaces

## Part 24 – Eligible child care spaces expenditures

Enter the eligible expenditures that the corporation incurred to create licensed child care spaces for the children of the employees and, potentially, for other children. The corporation cannot be carrying on a child care services business. The eligible expenditures include:

- the cost of depreciable property (other than specified property); and
- the specified child care start-up expenditures;

acquired or incurred only to create new child care spaces at a licensed child care facility.

### Cost of depreciable property from the current tax year

| | CCA* class number 665 | Description of investment 675 | Date available for use 685 | Amount of investment 695 |
|---|---|---|---|---|
| 1. | | | | |

Total cost of depreciable property from the current tax year **715**

**Add:**

Specified child care start-up expenditures from the current tax year . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . **705**

Total gross eligible expenditures for child care spaces (line 715 **plus** line 705) . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . A

**Deduct:**

Total of all assistance (including grants, subsidies, rebates, and forgivable loans) or reimbursements that the corporation has received or is entitled to receive in respect of the amounts referred to at line A) . . . . . . . . . . . . . . . . . . **725**

Excess (amount A **minus** line 725) (if negative, enter "0") . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . B

**Add:**

Repayments of government and non-government assistance . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . **735**

**Total eligible expenditures for child care spaces** (amount B **plus** line 735) . . . . . . . . . . . . . . . . . . . . . . . . . . . **745**

* CCA: capital cost allowance

## Part 25 – Current-year credit – ITC from child care spaces expenditures

The credit is equal to 25% of eligible child care spaces expenditures incurred to a maximum of $10,000 per child care space created in a licensed child care facility.

Eligible expenditures (from line 745) . . . . . . . . . . . . . . . . . . . . . . . . . . . . . x 25 % = C

Number of child care spaces . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . **755** x $ 10,000 = D

**ITC from child care spaces expenditures** (amount C or D, whichever is less) . . . . . . . . . . . . . . . . . . . . . . . . . . . . E

## Part 26 – Current-year credit and account balances – ITC from child care spaces expenditures

ITC at the end of the previous tax year . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . F

## Recapture – Child Care Spaces

### Part 28 – Recapture of ITC for corporations and corporate partnerships – Child care spaces

The ITC will be recovered against the taxpayer's tax otherwise payable under Part I of the Act if, at any time within 60 months of the day on which the taxpayer acquired the property:

- the new child care space is no longer available; or
- property that was an eligible expenditure for the child care space is:
  - disposed of or leased to a lessee; or
  - converted to another use.

| | | | |
|---|---|---|---|
| If the property disposed of is a child care space, the amount that can reasonably be considered to have been included in the original ITC (paragraph 127(27.12)(a)) | 792 | | |
| In the case of eligible expenditures (paragraph 127(27.12)(b)), the lesser of: | | | |
| The amount that can reasonably be considered to have been included in the original ITC | 795 | | |
| 25% of either the proceeds of disposition (if sold in an arm's length transaction) or the fair market value (in any other case) of the property | 797 | | |
| Amount from line 795 or line 797, whichever is less | | | A |

**Corporate partnerships**

As a member of the partnership, you will report your share of the child care spaces ITC of the partnership after the child care spaces ITC has been reduced by the amount of the recapture. If this amount is a positive amount, you will report it on line 782 in Part 26. However, if the partnership does not have enough ITC otherwise available to offset the recapture, then the amount by which reductions to ITC exceed additions (the excess) will be determined and reported on line 799 below.

| | | | |
|---|---|---|---|
| **Corporate partner's share of the excess of ITC** | 799 | | |
| **Total recapture of child care spaces investment tax credit** (total of line 792, amount A, and line 799) | | | B |

Enter amount B at amount B in Part 29.

## Summary of Investment Tax Credits

### Part 29 – Total recapture of investment tax credit

| | | |
|---|---|---|
| Recaptured SR&ED ITC (from amount F in Part 17) | | A |
| Recaptured child care spaces ITC (from amount B in Part 28) | | B |
| **Total recapture of investment tax credit** (amount A **plus** amount B) | | C |

Enter amount C on line 602 of the T2 return.

### Part 30 – Total ITC deducted from Part I tax

| | | |
|---|---|---|
| ITC from investments in qualified property deducted from Part I tax (from line 260 in Part 5) | | D |
| ITC from SR&ED expenditures deducted from Part I tax (from line 560 in Part 12) | | E |
| ITC from pre-production mining expenditures deducted from Part I tax (from line 885 in Part 19) | | F |
| ITC from apprenticeship job creation expenditures deducted from Part I tax (from line 660 in Part 22) | 14,000 | G |
| ITC from child care space expenditures deducted from Part I tax (from line 785 in Part 26) | | H |
| **Total ITC deducted from Part I tax** (total of amounts D to H) | 14,000 | I |

Enter amount I at line 652 of the T2 return.

**SCHEDULE 53**

# GENERAL RATE INCOME POOL (GRIP) CALCULATION

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

On: 2012-12-31

- If you are a Canadian-controlled private corporation (CCPC) or a deposit insurance corporation (DIC), use this schedule to determine the general rate income pool (GRIP).
- When an eligible dividend was paid in the tax year, file a completed copy of this schedule with your *T2 Corporation Income Tax Return*. Do not send your worksheets with your return, but keep them in your records in case we ask to see them later.
- Subsections referred to in this schedule are from the I*ncome Tax Act*.
- Subsection 89(1) defines the terms eligible dividend, excessive eligible dividend designation, general rate income pool, and low rate income pool.

## Eligibility for the various additions

Answer the following questions to determine the corporation's eligibility for the various additions:

**2006 addition**

1. Is this the corporation's first taxation year that includes January 1, 2006? . . . . . ☐ Yes ☒ No
2. If not, what is the date of the taxation year end of the corporation's first year that includes January 1, 2006? Enter the date and go directly to question 4 . . . . . 2006-12-31
3. During that first year, was the corporation a CCPC or would it have been a CCPC if not for the election of subsection 89(11) ITA? . . . . . ☒ Yes ☐ No
   **If the answer to question 3 is yes, complete Part "GRIP addition for 2006".**

**Change in the type of corporation**

4. Was the corporation a CCPC during its preceding taxation year? . . . . . ☒ Yes ☐ No
5. Corporations that become a CCPC or a DIC . . . . . ☐ Yes ☒ No
   **If the answer to question 5 is yes, complete Part 4.**

**Amalgamation (first year of filing after amalgamation)**

6. Corporations that were formed as a result of an amalgamation . . . . . ☐ Yes ☒ No
   **If the answer to question 6 is yes, answer questions 7 and 8. If the answer is no, go to question 9.**
7. Was one or more of the predecessor corporations neither a CCPC nor a DIC? . . . . . ☐ Yes ☐ No
   **If the answer to question 7 is yes, complete Part 4.**
8. Was one or more of the predecessor corporation a CCPC or a DIC during the taxation year that ended immediately before amalgamation? . . . . . ☐ Yes ☐ No
   **If the answer to question 8 is yes, complete Part 3.**

**Winding-up**

9. Corporations that wound-up a subsidiary . . . . . ☐ Yes ☒ No
   **If the answer to question 9 is yes, answer questions 10 and 11. If the answer is no, go to Part 1.**
10. Was the subsidiary neither a CCPC nor a DIC during its last taxation year? . . . . . ☐ Yes ☐ No
    **If the answer to question 10 is yes, complete Part 4.**
11. Was the subsidiary a CCPC or a DIC during its last taxation year? . . . . . ☐ Yes ☐ No
    **If the answer to question 11 is yes, complete Part 3.**

## Part 1 – Calculation of general rate income pool (GRIP)

| | | | | | |
|---|---|---|---|---|---|
| GRIP at the end of the previous tax year | | | 100 | 153,012,807 | A |
| Taxable income for the year (DICs enter "0") * | 110 | 26,900,819 | B | | |
| Income for the credit union deduction * (amount E in Part 3 of Schedule 17) 120 | | | | | |
| Amount on line 400, 405, 410, or 425 of the T2 return, whichever is less * 130 | | | | | |
| For a CCPC, the lesser of aggregate investment income (line 440 of the T2 return) and taxable income * 140 | | | | | |
| Subtotal (**add** lines 120, 130, and 140) ► | | | C | | |
| Income taxable at the general corporate rate (line B **minus** line C) (if negative enter "0") | 150 | 26,900,819 | | | |
| After-tax income (line 150 x general rate factor for the tax year ** 0.72 ) | | | 190 | 19,368,590 | D |
| Eligible dividends received in the tax year | 200 | | | | |
| Dividends deductible under section 113 received in the tax year | 210 | | | | |
| Subtotal (**add** lines 200 and 210) ► | | | | | E |
| GRIP addition: | | | | | |
| Becoming a CCPC (line PP from Part 4) | 220 | | | | |
| Post-amalgamation (total of lines EE from Part 3 and lines PP from Part 4) | 230 | | | | |
| Post-wind-up (total of lines EE from Part 3 and lines PP from Part 4) | 240 | | | | |
| Subtotal (**add** lines 220, 230, and 240) ► | | | 290 | | F |
| Subtotal (**add** lines A, D, E, and F) | | | | 172,381,397 | G |
| Eligible dividends paid in the previous tax year | 300 | | | | |
| Excessive eligible dividend designations made in the previous tax year | 310 | | | | |
| **Note:** If becoming a CCPC (subsection 89(4) applies), enter "0" on lines 300 and 310. | | | | | |
| Subtotal (line 300 **minus** line 310) ► | | | | | H |
| GRIP before adjustment for specified future tax consequences (line G **minus** line H) (amount can be negative) | | | 490 | 172,381,397 | |
| Total GRIP adjustment for specified future tax consequences to previous tax years (amount W from Part 2) | | | 560 | | |
| **GRIP at the end of the tax year** (line 490 **minus** line 560) | | | 590 | 172,381,397 | |

Enter this amount on line 160 of Schedule 55.

* For lines 110, 120, 130, and 140, the income amount is the amount before considering specified future tax consequences. This phrase is defined in subsection 248(1). It includes the deduction of a loss carryback from subsequent tax years, a reduction of Canadian exploration expenses and Canadian development expenses that were renounced in subsequent tax years (e.g., flow-through share renunciations), reversals of income inclusions where an option is exercised in subsequent tax years, and the effect of certain foreign tax credit adjustments.

** The **general rate factor** for a tax year is 0.68 for any portion of the tax year that falls before 2010, 0.69 for any portion of the tax year that falls in 2010, 0.70 for any portion of the tax year that falls in 2011, and 0.72 for any portion of the tax year that falls after 2011. Calculate the general rate factor in Part 5 for tax years that straddle these dates.

## Part 2 – GRIP adjustment for specified future tax consequences to previous tax years

Complete this part if the corporation's taxable income of any of the previous three tax years took into account the specified future tax consequences defined in subsection 248(1) from the current tax year. Otherwise, enter "0" on line 560.

**First previous tax year** 2011-12-31

| | | | |
|---|---|---|---|
| Taxable income before specified future tax consequences from the current tax year | | 32,674,141 J1 | |
| Enter the following amounts before specified future tax consequences from the current tax year: | | | |
| Income for the credit union deduction (amount E in Part 3 of Schedule 17) | K1 | | |
| Amount on line 400, 405, 410, or 425 of the T2 return, whichever is less | L1 | | |
| Aggregate investment income (line 440 of the T2 return) | M1 | | |
| Subtotal (**add** lines K1, L1, and M1) ► | | N1 | |
| Subtotal (line J1 **minus** line N1) (if negative, enter "0") | | 32,674,141 ► | 32,674,141 O1 |

## Part 2 – GRIP adjustment for specified future tax consequences to previous tax years (continued)

| Future tax consequences that occur for the current year<br>Amount carried back from the current year to a prior year | | | | | |
|---|---|---|---|---|---|
| **Non-capital loss carry-back (paragraph 111 (1)(a) ITA)** | **Capital loss carry-back** | **Restricted farm loss carry-back** | **Farm loss carry-back** | **Other** | **Total carrybacks** |

Subtotal (line O3 **minus** line U3) (if negative, enter "0") ______ V3

**GRIP adjustment for specified future tax consequences to the third previous tax year**
(line V3 **multiplied by** the general rate factor for the tax year 0.72 ) . . . . . . . . . **540** ______

**Total GRIP adjustment for specified future tax consequences to previous tax years:**
(**add** lines 500, 520, and 540) (if negative, enter "0") . . . . . . . . . ______ W

Enter amount W on line 560.

## Part 3 – Worksheet to calculate the GRIP addition post-amalgamation or post-wind-up (predecessor or subsidiary was a CCPC or a DIC in its last tax year)

**nb. 1** Post amalgamation . . . ☐ Post wind-up . . . . . . ☐

Complete this part when there has been an amalgamation (within the meaning assigned by subsection 87(1)) or a wind-up (to which subsection 88(1) applies) and the predecessor or subsidiary corporation was a CCPC or a DIC in its last tax year. In the calculation below, **corporation** means a predecessor or a subsidiary. The last tax year for a predecessor corporation was its tax year that ended immediately before the amalgamation and for a subsidiary corporation was its tax year during which its assets were distributed to the parent on the wind-up.

For a post-wind-up, include the GRIP addition in calculating the parent's GRIP at the end of its tax year that immediately follows the tax year during which it receives the assets of the subsidiary.

Complete a separate worksheet for **each** predecessor and **each** subsidiary that was a CCPC or a DIC in its last tax year. Keep a copy of this calculation for your records, in case we ask to see it later.

Corporation's GRIP at the end of its last tax year . . . . . . . . . . ______ AA

Eligible dividends paid by the corporation in its last tax year . . . . . . . . ______ BB

Excessive eligible dividend designations made by the corporation in its last tax year . . . . . . ______ CC

Subtotal (line BB **minus** line CC) ______ ► ______ DD

**GRIP addition post-amalgamation or post-wind-up (predecessor or subsidiary was a CCPC or a DIC in its last tax year)**
(line AA **minus** line DD) . . . . . . . . . . ______ EE

After you complete this calculation for each predecessor and each subsidiary, calculate the total of all the EE lines. Enter this total amount on:

- line 230 for post-amalgamation; or
- line 240 for post-wind-up.

## Part 4 – Worksheet to calculate the GRIP addition post-amalgamation, post-wind-up (predecessor or subsidiary was not a CCPC or a DIC in its last tax year), or the corporation is becoming a CCPC

**nb. 1** Corporation becoming a CCPC . . . . . . ☐ Post amalgamation . . . . . . . . . . ☐ Post wind-up . . . . . . . . . . . . . ☐

Complete this part when there has been an amalgamation (within the meaning assigned by subsection 87(1)) or a wind-up (to which subsection 88(1) applies) and the predecessor or subsidiary was not a CCPC or a DIC in its last tax year. Also, use this part for a corporation becoming a CCPC. In the calculation below, **corporation** means a corporation becoming a CCPC, a predecessor, or a subsidiary.

For a post-wind-up, include the GRIP addition in calculating the parent's GRIP at the end of its tax year that immediately follows the tax year during which it receives the assets of the subsidiary.

Complete a separate worksheet for **each** predecessor and **each** subsidiary that was not a CCPC or a DIC in its last tax year. Keep a copy of this calculation for your records, in case we ask to see it later.

| | | | | |
|---|---|---|---|---|
| Cost amount to the corporation of all property immediately before the end of its previous/last tax year | | | | FF |
| The corporation's money on hand immediately before the end of its previous/last tax year | | | | GG |
| Unused and unexpired losses at the end of the corporation's previous/last tax year: | | | | |
| Non-capital losses | | | | |
| Net capital losses | | | | |
| Farm losses | | | | |
| Restricted farm losses | | | | |
| Limited partnership losses | | | | |
| Subtotal | | ► | | HH |
| Subtotal (**add** lines FF, GG, and HH) | | | | II |
| All the corporation's debts and other obligations to pay that were outstanding immediately before the end of its previous/last tax year | | JJ | | |
| Paid-up capital of all the corporation's issued and outstanding shares of capital stock immediately before the end of its previous/last tax year | | KK | | |
| All the corporation's reserves deducted in its previous/last tax year | | LL | | |
| The corporation's capital dividend account immediately before the end of its previous/last tax year | | MM | | |
| The corporation's low rate income pool immediately before the end of its previous/last tax year | | NN | | |
| Subtotal (**add** lines JJ, KK, LL, MM, and NN) | | ► | | OO |
| **GRIP addition post-amalgamation or post-wind-up (predecessor or subsidiary was not a CCPC or a DIC in its last tax year), or the corporation is becoming a CCPC** (line II **minus** line OO) (if negative, enter "0") | | | | PP |

After you complete this worksheet for each predecessor and each subsidiary, calculate the total of all the PP lines. Enter this total amount on:

- line 220 for a corporation becoming a CCPC;
- line 230 for post-amalgamation; or
- line 240 for post-wind-up.

## Part 5 – General rate factor for the tax year

Complete this part to calculate the general rate factor for the tax year.

| | | | | | | |
|---|---|---|---|---|---|---|
| 0.68 | x | number of days in the tax year before January 1, 2010 / number of days in the tax year | / 366 | . . . . . . . . . . . = | | QQ |
| 0.69 | x | number of days in the tax year in 2010 / number of days in the tax year | / 366 | . . . . . . . . . . . = | | RR |
| 0.7 | x | number of days in the tax year in 2011 / number of days in the tax year | / 366 | . . . . . . . . . . . = | | SS |
| 0.72 | x | number of days in the tax year after December 31, 2011 / number of days in the tax year | 366 / 366 | . . . . . . . . . . . = | 0.72000 | TT |

**General rate factor for the tax year** (total of lines QQ to TT) . . . . . . . . . . . . . . . . . . . . 0.72000 UU

Canada Revenue Agency / Agence du revenu du Canada

**SCHEDULE 55**

# PART III.1 TAX ON EXCESSIVE ELIGIBLE DIVIDEND DESIGNATIONS

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- Every corporation resident in Canada that pays a taxable dividend (other than a capital gains dividend within the meaning assigned by subsection 130.1(4) or 131(1)) in the tax year must file this schedule.
- Canadian-controlled private corporations (CCPC) and deposit insurance corporations (DIC) must complete Part 1 of this schedule. All other corporations must complete Part 2.
- Every corporation that has paid an eligible dividend must also file Schedule 53, *General Rate Income Pool (GRIP) Calculation*, or Schedule 54, *Low Rate Income Pool (LRIP) Calculation*, whichever is applicable.
- File the completed schedules with your *T2 Corporation Income Tax Return* no later than six months from the end of the tax year.
- All legislative references on this schedule are to the federal *Income Tax Act*.
- Subsection 89(1) defines the terms eligible dividend, excessive eligible dividend designation, general rate income pool (GRIP), and low rate income pool (LRIP).
- The calculations in Part 1 and Part 2 do not apply if the excessive eligible dividend designation arises from the application of paragraph (c) of the definition of excessive eligible dividend designation in subsection 89(1). This paragraph applies when an eligible dividend is paid to artificially maintain or increase the GRIP or to artificially maintain or decrease the LRIP.

**Do not use this area**

## Part 1 – Canadian-controlled private corporations and deposit insurance corporations

| | | | | |
|---|---|---|---|---|
| Taxable dividends paid in the tax year **not included** in Schedule 3 | | | | |
| Taxable dividends paid in the tax year **included** in Schedule 3 | | 15,000,000 | | |
| Total taxable dividends paid in the tax year | 100 | 15,000,000 | | |
| Total eligible dividends paid in the tax year | | | 150 | A |
| GRIP at the end of the tax year (line 590 on Schedule 53) (if negative, enter "0") | | | 160 172,381,397 | B |
| Excessive eligible dividend designation (line 150 **minus** line 160) | | | | C |
| **Deduct**: | | | | |
| Excessive eligible dividend designations elected under subsection 185.1(2) to be treated as ordinary dividends* | | | 180 | D |
| Subtotal (amount C **minus** amount D) | | | | E |
| **Part III.1 tax on excessive eligible dividend designations – CCPC or DIC** (amount E **multiplied** by 20 %) | | | 190 | F |

Enter the amount from line 190 on line 710 of the T2 return.

## Part 2 – Other corporations

| | | | | |
|---|---|---|---|---|
| Taxable dividends paid in the tax year **not included** in Schedule 3 | | | | |
| Taxable dividends paid in the tax year **included** in Schedule 3 | | | | |

| Total excessive eligible dividend designations in the tax year (amount from line A of Schedule 54) | | | | G |
| **Deduct**: | | | | |
| Excessive eligible dividend designations elected under subsection 185.1(2) to be treated as ordinary dividends* | | | 280 | H |
| Subtotal (amount G **minus** amount H) | | | | I |
| **Part III.1 tax on excessive eligible dividend designations – Other corporations** (amount I **multiplied** by 20 %) | | | 290 | J |

Enter the amount from line 290 on line 710 of the T2 return.

* You can elect to treat all or part of your excessive eligible dividend designation as a separate taxable dividend in order to eliminate or reduce the Part III.1 tax otherwise payable. You must file the election on or before the day that is 90 days **after** the day the notice of assessment for Part III.1 tax was sent. We will accept an election before the assessment of the tax. For more information on how to make this election, go to **www.cra.gc.ca/eligibledividends**.

**Schedule 500**

# Ontario Corporation Tax Calculation

| Corporation's name | Business number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- Use this schedule if the corporation had a permanent establishment (as defined in section 400 of the federal *Income Tax Regulations*) in Ontario at any time in the tax year and had Ontario taxable income in the year.
- All legislative references are to the federal *Income Tax Act* and *Income Tax Regulations*.
- This schedule is a worksheet only. You do not have to file it with your *T2 Corporation Income Tax Return*.

## Part 1 – Calculation of Ontario basic rate of tax for the year

| | | | | | | |
|---|---|---|---|---|---|---|
| Number of days in the tax year before July 1, 2011 / Number of days in the tax year | / 366 | x | 12.00 % | = | % | A1 |
| Number of days in the tax year after June 30, 2011 / Number of days in the tax year | 366 / 366 | x | 11.50 % | = | 11.50000 % | A2 |

**Ontario basic rate of tax for the year** (rate A1 **plus** A2) 11.50000 ► 11.50000 % A3

## Part 2 – Calculation of Ontario basic income tax

Ontario taxable income* . . . . . 26,900,819 B

**Ontario basic income tax**: amount B **multiplied** by Ontario basic rate of tax for the year (rate A3 from Part 1) . . . . . 3,093,594 C

If the corporation has a permanent establishment in more than one jurisdiction, or is claiming an Ontario tax credit in addition to Ontario basic income tax, or has Ontario corporate minimum tax or Ontario special additional tax on life insurance corporations payable, enter amount C on line 270 of Schedule 5, *Tax Calculation Supplementary – Corporations*. Otherwise, enter it on line 760 of the T2 return.

* If the corporation has a permanent establishment only in Ontario, enter the amount from line 360 or line Z, whichever applies, of the T2 return. Otherwise, enter the taxable income allocated to Ontario from column F in Part 1 of Schedule 5.

## Part 3 – Ontario small business deduction (OSBD)

Complete this part if the corporation claimed the federal small business deduction under subsection 125(1) or would have claimed it if subsection 125(5.1) had not been applicable in the tax year.

| | | |
|---|---|---|
| Income from active business carried on in Canada (amount from line 400 of the T2 return) | 27,004,004 | 1 |
| Federal taxable income, less adjustment for foreign tax credit (amount from line 405 of the T2 return) | 26,900,819 | 2 |
| Federal business limit before the application of subsection 125(5.1) (amount from line 410 of the T2 return) | 500,000 | 3 |
| Enter the least of amounts 1, 2, and 3 | 500,000 | D |

Ontario domestic factor: Ontario taxable income * / Taxable income earned in all provinces and territories ** = 26,900,819.00 / 26,900,819 = 1.00000 E

Amount D x factor E 500,000 a

Ontario taxable income (amount B from Part 2) 26,900,819 b

Ontario small business income (lesser of amount a and amount b) 500,000 F

Number of days in the tax year before July 1, 2011 / Number of days in the tax year: ____ / 366 x 7.50 % = % G1

Number of days in the tax year after June 30, 2011 / Number of days in the tax year: 366 / 366 x 7.00 % = 7.00000 % G2

OSBD rate for the year (rate G1 **plus** G2) 7.00000 % G3

**Ontario small business deduction**: amount F **multiplied** by OSBD rate for the year (rate G3) 35,000 H

Enter amount H on line 402 of Schedule 5.

* Enter amount B from Part 2.

** Includes the offshore jurisdictions for Nova Scotia and Newfoundland and Labrador.

## Part 4 – Ontario adjusted small business income

Complete this part if the corporation was a Canadian-controlled private corporation throughout the tax year and is claiming the Ontario tax credit for manufacturing and processing or the Ontario credit union tax reduction.

**Ontario adjusted small business income** (lesser of amount D and amount b from Part 3) 500,000 I

Enter amount I on line K in Part 5 of this schedule or on line B in Part 2 of Schedule 502, *Ontario Tax Credit for Manufacturing and Processing*, whichever applies.

## Part 5 – Calculation of credit union tax reduction

Complete this part and Schedule 17, *Credit Union Deductions*, if the corporation was a credit union throughout the tax year.

| | | | | |
|---|---|---|---|---|
| Amount D from Part 3 of Schedule 17 | | | J | |
| **Deduct:** | | | | |
| Ontario adjusted small business income (amount I from Part 4) | | | K | |
| Subtotal (amount J **minus** amount K) (if negative, enter "0") | | | L | |
| OSBD rate for the year (rate G3 from Part 3) | 7.00000 % | | | |
| Amount L **multiplied** by the OSBD rate for the year | | | | M |
| Ontario domestic factor (factor E from Part 3) | | | 1.00000 | N |
| **Ontario credit union tax reduction** (amount M **multiplied** by factor N) | | | | O |

Enter amount O on line 410 of Schedule 5.

Canada Revenue Agency / Agence du revenu du Canada

**Schedule 510**

# Ontario Corporate Minimum Tax

| Corporation's name | Business number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- File this schedule if the corporation is subject to Ontario corporate minimum tax (CMT). CMT is levied under section 55 of the *Taxation Act, 2007* (Ontario), referred to as the "Ontario Act".
- Complete Part 1 to determine if the corporation is subject to CMT for the tax year.
- A corporation not subject to CMT in the tax year is still required to file this schedule if it is deducting a CMT credit, has a CMT credit carryforward, or has a CMT loss carryforward or a current year CMT loss.
- A corporation that has Ontario special additional tax on life insurance corporations (SAT) payable in the tax year must complete Part 4 of this schedule even if it is not subject to CMT for the tax year.
- A corporation is exempt from CMT if, throughout the tax year, it was one of the following:
  1) a corporation exempt from income tax under section 149 of the federal *Income Tax Act*;
  2) a mortgage investment corporation under subsection 130.1(6) of the federal Act;
  3) a deposit insurance corporation under subsection 137.1(5) of the federal Act;
  4) a congregation or business agency to which section 143 of the federal Act applies;
  5) an investment corporation as referred to in subsection 130(3) of the federal Act; or
  6) a mutual fund corporation under subsection 131(8) of the federal Act.
- File this schedule with the *T2 Corporation Income Tax Return*.

## Part 1 – Determination of CMT applicability

| | | |
|---|---|---|
| Total assets of the corporation at the end of the tax year * | 112 | 825,163,000 |
| Share of total assets from partnership(s) and joint venture(s) * | 114 | |
| Total assets of associated corporations (amount from line 450 on Schedule 511) | 116 | 725,158,771 |
| Total assets (total of lines 112 to 116) | | 1,550,321,771 |
| Total revenue of the corporation for the tax year ** | 142 | 886,094,000 |
| Share of total revenue from partnership(s) and joint venture(s) ** | 144 | |
| Total revenue of associated corporations (amount from line 550 on Schedule 511) | 146 | 62,361,448 |
| Total revenue (total of lines 142 to 146) | | 948,455,448 |

The corporation is subject to CMT if:
– for tax years ending before July 1, 2010, the total assets at the end of the year of the corporation or the associated group of corporations are more than $5,000,000, or the total revenue for the year of the corporation or the associated group of corporations is more than $10,000,000.
– for tax years ending after June 30, 2010, the total assets at the end of the year of the corporation or the associated group of corporations are equal to or more than $50,000,000, and the total revenue for the year of the corporation or the associated group of corporations is equal to or more than $100,000,000.
If the corporation is not subject to CMT, do not complete the remaining parts unless the corporation is deducting a CMT credit, or has a CMT credit carryforward, a CMT loss carryforward, a current year CMT loss, or SAT payable in the year.

* **Rules for total assets**
– Report total assets according to generally accepted accounting principles, adjusted so that consolidation and equity methods are not used.
– Do not include unrealized gains and losses on assets and foreign currency gains and losses on assets that are included in net income for accounting purposes but not in income for corporate income tax purposes.
– The amount on line 114 is determined at the end of the last fiscal period of the partnership or joint venture that ends in the tax year of the corporation. Add the proportionate share of the assets of the partnership(s) and joint venture(s), and deduct the recorded asset(s) for the investment in partnerships and joint ventures.
– A corporation's share in a partnership or joint venture is determined under paragraph 54(5)(b) of the Ontario Act and, if the partnership or joint venture had no income or loss, is calculated as if the partnership's or joint venture's income were $1 million. For a corporation with an indirect interest in a partnership or joint venture, determine the corporation's share according to paragraph 54(5)(c) of the Ontario Act.

** **Rules for total revenue**
– Report total revenue in accordance with generally accepted accounting principles, adjusted so that consolidation and equity methods are not used.
– If the tax year is less than 51 weeks, **multiply** the total revenue of the corporation or the partnership, whichever applies, by 365 and **divide** by the number of days in the tax year.
– The amount on line 144 is determined for the partnership or joint venture fiscal period that ends in the tax year of the corporation. If the partnership or joint venture has 2 or more fiscal periods ending in the filing corporation's tax year, **multiply** the sum of the total revenue for each of the fiscal periods by 365 and **divide** by the total number of days in all the fiscal periods.
– A corporation's share in a partnership or joint venture is determined under paragraph 54(5)(b) of the Ontario Act and, if the partnership or joint venture had no income or loss, is calculated as if the partnership's or joint venture's income were $1 million. For a corporation with an indirect interest in a partnership or joint venture, determine the corporation's share according to paragraph 54(5)(c) of the Ontario Act.

## Part 2 – Adjusted net income/loss for CMT purposes

| | Code | Amount | Code | Amount |
|---|---|---|---|---|
| Net income/loss per financial statements * | | | 210 | 26,413,000 |
| **Add** (to the extent reflected in income/loss): | | | | |
| Provision for current income taxes/cost of current income taxes | 220 | 6,635,000 | | |
| Provision for deferred income taxes (debits)/cost of future income taxes | 222 | | | |
| Equity losses from corporations | 224 | | | |
| Financial statement loss from partnerships and joint ventures | 226 | | | |
| Dividends deducted on financial statements (subsection 57(2) of the Ontario Act), excluding dividends paid by credit unions under subsection 137(4.1) of the federal Act | 230 | | | |
| **Other additions** (see note below): | | | | |
| Share of adjusted net income of partnerships and joint ventures ** | 228 | | | |
| Total patronage dividends received, not already included in net income/loss | 232 | | | |
| 281 | 282 | | | |
| 283 | 284 | | | |
| Subtotal | | 6,635,000 | ▶ | 6,635,000 A |
| **Deduct** (to the extent reflected in income/loss): | | | | |
| Provision for recovery of current income taxes/benefit of current income taxes | 320 | | | |
| Provision for deferred income taxes (credits)/benefit of future income taxes | 322 | | | |
| Equity income from corporations | 324 | | | |
| Financial statement income from partnerships and joint ventures | 326 | | | |
| Dividends deductible under section 112, section 113, or subsection 138(6) of the federal Act | 330 | | | |
| Dividends not taxable under section 83 of the federal Act (from Schedule 3) | 332 | | | |
| Gain on donation of listed security or ecological gift | 340 | | | |
| Accounting gain on transfer of property to a corporation under section 85 or 85.1 of the federal Act *** | 342 | | | |
| Accounting gain on transfer of property to/from a partnership under section 85 or 97 of the federal Act **** | 344 | | | |
| Accounting gain on disposition of property under subsection 13(4), subsection 14(6), or section 44 of the federal Act ***** | 346 | | | |
| Accounting gain on a windup under subsection 88(1) of the federal Act or an amalgamation under section 87 of the federal Act | 348 | | | |
| **Other deductions** (see note below): | | | | |
| Share of adjusted net loss of partnerships and joint ventures ** | 328 | | | |
| Tax payable on dividends under subsection 191.1(1) of the federal Act **multiplied** by 3 | 334 | | | |
| Interest deducted/deductible under paragraph 20(1)(c) or (d) of the federal Act, not already included in net income/loss | 336 | | | |
| Patronage dividends paid (from Schedule 16) not already included in net income/loss | 338 | | | |
| 381 | 382 | | | |
| 383 | 384 | | | |
| 385 | 386 | | | |
| 387 | 388 | | | |
| 389 | 390 | | | |
| Subtotal | | | ▶ | B |
| Adjusted net income/loss for CMT purposes (line 210 **plus** amount A **minus** amount B) | | | 490 | 33,048,000 |

If the amount on line 490 is positive and the corporation is subject to CMT as determined in Part 1, enter the amount on line 515 in Part 3.

If the amount on line 490 is negative, enter the amount on line 760 in Part 7 (enter as a positive amount).

**Note**

In accordance with *Ontario Regulation 37/09*, when calculating net income for CMT purposes, accounting income should be adjusted to:

– exclude unrealized gains and losses due to mark-to-market changes or foreign currency changes on specified mark-to-market property (assets only);
– include realized gains and losses on the disposition of specified mark-to-market property not already included in the accounting income, if the property is not a capital property or is a capital property disposed in the year or in a previous tax year ended after March 22, 2007.

"Specified mark-to-market property" is defined in subsection 54(1) of the Ontario Act.

These rules also apply to partnerships. A corporate partner's share of a partnership's adjusted income flows through on a proportionate basis to the corporate partner.

* **Rules for net income/loss**

– Banks must report net income/loss as per the report accepted by the Superintendent of Financial Institutions under the federal *Bank Act*, adjusted so consolidation and equity methods are not used.

## Part 2 – Adjusted net income/loss for CMT purposes (continued)

– Life insurance corporations must report net income/loss as per the report accepted by the federal Superintendent of Financial Institutions or equivalent provincial insurance regulator, before SAT and adjusted so consolidation and equity methods are not used. If the life insurance corporation is resident in Canada and carries on business in and outside of Canada, **multiply** the net income/loss by the ratio of the Canadian reserve liabilities **divided** by the total reserve liability. The reserve liabilities are calculated in accordance with Regulation 2405(3) of the federal Act.

– Other corporations must report net income/loss in accordance with generally accepted accounting principles, except that consolidation and equity methods must not be used. When the equity method has been used for accounting purposes, equity losses and equity income are removed from book income/loss on lines 224 and 324 respectively.

– Corporations, other than insurance corporations, should report net income from line 9999 of the GIFI (Schedule 125) on line 210.

** The share of the adjusted net income of a partnership or joint venture is calculated as if the partnership or joint venture were a corporation and the tax year of the partnership or joint venture were its fiscal period. For a corporation with an indirect interest in a partnership through one or more partnerships, determine the corporation's share according to clause 54(5)(c) of the Ontario Act.

*** A joint election will be considered made under subsection 60(1) of the Ontario Act if there is an entry on line 342, and an election has been made for transfer of property to a corporation under subsection 85(1) of the federal Act.

**** A joint election will be considered made under subsection 60(2) of the Ontario Act if there is an entry on line 344, and an election has been made under subsection 85(2) or 97(2) of the federal Act.

***** A joint election will be considered made under subsection 61(1) of the Ontario Act if there is an entry on line 346, and an election has been made under subsection 13(4) or 14(6) and/or section 44 of the federal Act.

For more information on how to complete this part, see the *T2 Corporation – Income Tax Guide*.

## Part 3 – CMT payable

| | | | | |
|---|---|---|---|---|
| Adjusted net income for CMT purposes (line 490 in Part 2, if positive) | 515 | | 33,048,000 | |
| **Deduct:** | | | | |
| CMT loss available (amount R from Part 7) | | | | |
| **Minus:** Adjustment for an acquisition of control * | 518 | | | |
| Adjusted CMT loss available | | ▶ | | C |
| Net income subject to CMT calculation (if negative, enter "0") | 520 | | 33,048,000 | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| Amount from line 520 | 33,048,000 | x | Number of days in the tax year before July 1, 2010 / Number of days in the tax year | / 366 | x 4 % = | | 1 |
| Amount from line 520 | 33,048,000 | x | Number of days in the tax year after June 30, 2010 / Number of days in the tax year | 366 / 366 | x 2.7 % = | 892,296 | 2 |
| | | | Subtotal (amount 1 **plus** amount 2) | | | 892,296 | 3 |

| | | | |
|---|---|---|---|
| Gross CMT: amount on line 3 above x OAF ** | 540 | 892,296 | |
| **Deduct:** | | | |
| Foreign tax credit for CMT purposes *** | 550 | | |
| CMT after foreign tax credit deduction (line 540 **minus** line 550) (if negative, enter "0") | | 892,296 | D |
| **Deduct:** | | | |
| Ontario corporate income tax payable before CMT credit (amount F6 from Schedule 5) | | 3,058,594 | |
| Net CMT payable (if negative, enter "0") | | | E |

Enter amount E on line 278 of Schedule 5, *Tax Calculation Supplementary – Corporations*, and complete Part 4.

* Enter the portion of CMT loss available that exceeds the adjusted net income for the tax year from carrying on a business before the acquisition of control. See subsection 58(3) of the Ontario Act.

*** Enter "0" on line 550 for life insurance corporations as they are not eligible for this deduction. For all other corporations, enter the cumulative total of amount J for the province of Ontario from Part 9 of Schedule 21 on line 550.

** **Calculation of the Ontario allocation factor (OAF):**

If the provincial or territorial jurisdiction entered on line 750 of the T2 return is "Ontario," enter "1" on line F.

If the provincial or territorial jurisdiction entered on line 750 of the T2 return is "multiple," complete the following calculation, and enter the result on line F:

$$\frac{\text{Ontario taxable income ****}}{\text{Taxable income *****}} \quad \underline{\qquad\qquad} = \underline{\qquad\qquad}$$

**Ontario allocation factor** . . . . . . . . 1.00000 F

**** Enter the amount allocated to Ontario from column F in Part 1 of Schedule 5. If the taxable income is nil, calculate the amount in column F as if the taxable income were $1,000.

*****Enter the taxable income amount from line 360 or amount Z of the T2 return, whichever applies. If the taxable income is nil, enter "1,000."

## Part 4 – CMT credit carryforward

| | | | | | |
|---|---|---|---|---|---|
| CMT credit carryforward at the end of the previous tax year * | | | G | | |
| **Deduct:** | | | | | |
| CMT credit expired * | 600 | | | | |
| CMT credit carryforward at the beginning of the current tax year * (see note below) | | | ▶ | 620 | |
| **Add:** | | | | | |
| CMT credit carryforward balances transferred on an amalgamation or the windup of a subsidiary (see note below) | | | | 650 | |
| CMT credit available for the tax year (amount on line 620 **plus** amount on line 650) | | | | | H |
| **Deduct:** | | | | | |
| CMT credit deducted in the current tax year (amount P from Part 5) | | | | | I |
| Subtotal (amount H **minus** amount I) | | | | | J |
| **Add:** | | | | | |
| Net CMT payable (amount E from Part 3) | | | | | |
| SAT payable (amount O from Part 6 of Schedule 512) | | | | | |
| Subtotal | | | ▶ | | K |
| CMT credit carryforward at the end of the tax year (amount J **plus** amount K) | | | | 670 | L |

* For the first harmonized T2 return filed with a tax year that includes days in 2009:
- do not enter an amount on line G or line 600;
- for line 620, enter the amount from line 2336 of Ontario CT23 Schedule 101, *Corporate Minimum Tax (CMT)*, for the last tax year that ended in 2008.

For other tax years, enter on line G the amount from line 670 of Schedule 510 from the previous tax year.

**Note:** If you entered an amount on line 620 or line 650, complete Part 6.

## Part 5 – CMT credit deducted from Ontario corporate income tax payable

| | | | | | |
|---|---|---|---|---|---|
| CMT credit available for the tax year (amount H from Part 4) | | | | | M |
| Ontario corporate income tax payable before CMT credit (amount F6 from Schedule 5) | | 3,058,594 | 1 | | |
| For a corporation that is not a life insurance corporation: | | | | | |
| CMT after foreign tax credit deduction (amount D from Part 3) | 892,296 2 | | | | |
| For a life insurance corporation: | | | | | |
| Gross CMT (line 540 from Part 3) | 3 | | | | |
| Gross SAT (line 460 from Part 6 of Schedule 512) | 4 | | | | |
| The **greater** of amounts 3 and 4 | 5 | | | | |
| **Deduct:** line 2 or line 5, whichever applies: | | 892,296 | 6 | | |
| Subtotal (if negative, enter "0") | | 2,166,298 | ▶ | 2,166,298 | N |
| Ontario corporate income tax payable before CMT credit (amount F6 from Schedule 5) | | 3,058,594 | | | |
| **Deduct:** | | | | | |
| Total refundable tax credits excluding Ontario qualifying environmental trust tax credit (amount J6 **minus** line 450 from Schedule 5) | | 222,780 | | | |
| Subtotal (if negative, enter "0") | | 2,835,814 | ▶ | 2,835,814 | O |
| CMT credit deducted in the current tax year (least of amounts M, N, and O) | | | | | P |

Enter amount P on line 418 of Schedule 5 and on line I in Part 4 of this schedule.

Is the corporation claiming a CMT credit earned before an acquisition of control? 675 1 Yes ☐ 2 No ☒

If you answered **yes** to the question at line 675, the CMT credit deducted in the current tax year may be restricted. For information on how the deduction may be restricted, see subsections 53(6) and (7) of the Ontario Act.

## Part 6 – CMT credit available for carryforward by year of origin

Complete this part if:
- the tax year includes January 1, 2009; or
- the previous tax year-end is deemed to be December 31, 2008, under subsection 249(3) of the federal Act.

| Year of origin | CMT credit balance * |
|---|---|
| 10th previous tax year | 680 |
| 9th previous tax year | 681 |
| 8th previous tax year | 682 |
| 7th previous tax year | 683 |
| 6th previous tax year | 684 |
| 5th previous tax year | 685 |
| 4th previous tax year | 686 |
| 3rd previous tax year | 687 |
| 2nd previous tax year | 688 |
| 1st previous tax year | 689 |
| Total ** | |

* CMT credit that was earned (by the corporation, predecessors of the corporation, and subsidiaries wound up into the corporation) in each of the previous 10 tax years and has not been deducted.

** Must equal the total of the amounts entered on lines 620 and 650 in Part 4.

## Part 7 – CMT loss carryforward

CMT loss carryforward at the end of the previous tax year * . . . . . . . . . . . . . . . . . . . . . . . Q

**Deduct:**

CMT loss expired * . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 700

CMT loss carryforward at the beginning of the tax year * (see note below) . . . . . . . . . . . . . . . ▶ 720

**Add:**

CMT loss transferred on an amalgamation under section 87 of the federal Act ** (see note below) . . . . . . . . . . . . . . . . . 750

CMT loss available (line 720 **plus** line 750) . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . R

**Deduct:**

CMT loss deducted against adjusted net income for the tax year (lesser of line 490 (if positive) and line C in Part 3) . . . . . . . . . .

Subtotal (if negative, enter "0") S

**Add:**

Adjusted net loss for CMT purposes (amount from line 490 in Part 2, if **negative**) (enter as a positive amount) . . . . . . . . . . 760

CMT loss carryforward balance at the end of the tax year (amount S **plus** line 760) . . . . . . . . . . . . . . . . . . . . . . . . . 770 T

* For the first harmonized T2 return filed with a tax year that includes days in 2009:
- do not enter an amount on line Q or line 700;
- for line 720, enter the amount from line 2214 of Ontario CT23 Schedule 101, *Corporate Minimum Tax (CMT)*, for the last tax year that ended in 2008.

For other tax years, enter on line Q the amount from line 770 of Schedule 510 from the previous tax year.

** Do not include an amount from a predecessor corporation if it was controlled at any time before the amalgamation by any of the other predecessor corporations.

**Note:** If you entered an amount on line 720 or line 750, complete Part 8.

## Part 8 – CMT loss available for carryforward by year of origin

Complete this part if:

- the tax year includes January 1, 2009; or
- the previous tax year-end is deemed to be December 31, 2008, under subsection 249(3) of the federal Act.

| Year of origin | Balance earned in a tax year ending before March 23, 2007 * | Balance earned in a tax year ending after March 22, 2007 ** |
|---|---|---|
| 10th previous tax year | 810 | 820 |
| 9th previous tax year | 811 | 821 |
| 8th previous tax year | 812 | 822 |
| 7th previous tax year | 813 | 823 |
| 6th previous tax year | 814 | 824 |
| 5th previous tax year | 815 | 825 |
| 4th previous tax year | 816 | 826 |
| 3rd previous tax year | 817 | 827 |
| 2nd previous tax year | 818 | 828 |
| 1st previous tax year | | 829 |
| Total *** | | |

* Adjusted net loss for CMT purposes that was earned (by the corporation, by subsidiaries wound up into or amalgamated with the corporation before March 22, 2007, and by other predecessors of the corporation) in each of the previous 10 tax years that ended before March 23, 2007, and has not been deducted.

** Adjusted net loss for CMT purposes that was earned (by the corporation and its predecessors, but not by a subsidiary predecessor) in each of the previous 20 tax years that ended after March 22, 2007, and has not been deducted.

*** The total of these two columns must equal the total of the amounts entered on lines 720 and 750.

**SCHEDULE 511**

# ONTARIO CORPORATE MINIMUM TAX – TOTAL ASSETS AND REVENUE FOR ASSOCIATED CORPORATIONS

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- For use by corporations to report the total assets and total revenue of all the Canadian or foreign corporations with which the filing corporation was associated at any time during the tax year. These amounts are required to determine if the filing corporation is subject to corporate minimum tax.
- Total assets and total revenue include the associated corporation's share of any partnership(s)/joint venture(s) total assets and total revenue.
- Attach additional schedules if more space is required.
- File this schedule with the *T2 Corporation Income Tax Return.*

| | Names of associated corporations 200 | Business number (Canadian corporation only) (see Note 1) 300 | Total assets* (see Note 2) 400 | Total revenue** (see Note 2) 500 |
|---|---|---|---|---|
| 1 | Hydro Ottawa Holding Inc. | 89411 0816 RC0001 | 596,614,000 | 42,209,000 |
| 2 | Energy Ottawa Inc. | 86338 9961 RC0001 | 90,908,000 | 15,291,000 |
| 3 | Telecom Ottawa Holding Inc. | 86202 9337 RC0001 | 26,200,720 | 271,327 |
| 4 | PowerTrail Inc. | 82829 3944 RC0001 | 10,840,000 | 2,987,000 |
| 5 | Moose Creek Energy Inc. | 82851 1311 RC0001 | 201 | 0 |
| 6 | Chaudiere Hydro Inc. | 81281 3103 RC0001 | 101 | 0 |
| 7 | Chaudiere Water Power Inc. | 10093 1955 RC0001 | 595,749 | 1,603,121 |
| | | **Total** | 450 725,158,771 | 550 62,361,448 |

Enter the total assets from line 450 on line 116 in Part 1 of Schedule 510, *Ontario Corporate Minimum Tax*.
Enter the total revenue from line 550 on line 146 in Part 1 of Schedule 510.

Note 1: Enter ¨NR¨ if a corporation is not registered.

Note 2: If the associated corporation does not have a tax year that ends in the filing corporation's current tax year but was associated with the filing corporation in the previous tax year of the filing corporation, enter the total revenue and total assets from the tax year of the associated corporation that ends in the previous tax year of the filing corporation.

*** Rules for total assets**

– Report total assets in accordance with generally accepted accounting principles, adjusted so that consolidation and equity methods are not used.
– Include the associated corporation's share of the total assets of partnership(s) and joint venture(s) but exclude the recorded asset(s) for the investment in partnerships and joint ventures.
– Exclude unrealized gains and losses on assets that are included in net income for accounting purposes but not in income for corporate income tax purposes.

**** Rules for total revenue**

– Report total revenue in accordance with generally accepted accounting principles, adjusted so that consolidation and equity methods are not used.
– If the associated corporation has 2 or more tax years ending in the filing corporation's tax year, **multiply** the sum of the total revenue for each of those tax years by 365 and **divide** by the total number of days in all of those tax years.
– If the associated corporation's tax year is less than 51 weeks and is the only tax year of the associated corporation that ends in the filing corporation's tax year, **multiply** the associated corporation's total revenue by 365 and **divide** by the number of days in the associated corporation's tax year.
– Include the associated corporation's share of the total revenue of partnerships and joint ventures.
– If the partnership or joint venture has 2 or more fiscal periods ending in the associated corporation's tax year, **multiply** the sum of the total revenue for each of the fiscal periods by 365 and **divide** by the total number of days in all the fiscal periods.

**SCHEDULE 546**

# *CORPORATIONS INFORMATION ACT* ANNUAL RETURN FOR ONTARIO CORPORATIONS

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- This schedule should be completed by a corporation that is incorporated, continued, or amalgamated in Ontario and subject to the Ontario *Business Corporations Act* (BCA) or Ontario *Corporations Act* (CA), except for registered charities under the federal *Income Tax Act*. This completed schedule serves as a *Corporations Information Act* Annual Return under the *Ontario Corporations Information Act*.
- Complete parts 1 to 4. Complete parts 5 to 7 only to report change(s) in the information recorded on the Ontario Ministry of Government Services (MGS) public record.
- This schedule must set out the required information for the corporation as of the date of delivery of this schedule.
- A completed Ontario *Corporations Information Act* Annual Return must be delivered within six months after the end of the corporation's tax year-end. The MGS considers this return to be delivered on the date that it is filed with the Canada Revenue Agency (CRA) together with the corporation's income tax return.
- It is the corporation's responsibility to ensure that the information shown on the MGS public record is accurate and up-to-date. To review the information shown for the corporation on the public record maintained by the MGS, obtain a Corporation Profile Report. Visit **www.ServiceOntario.ca** for more information.
- This schedule contains non-tax information collected under the authority of the Ontario *Corporations Information Act*. This information will be sent to the MGS for the purposes of recording the information on the public record maintained by the MGS.

## Part 1 – Identification

**100** Corporation's name (exactly as shown on the MGS public record)
Hydro Ottawa Limited

| Jurisdiction incorporated, continued, or amalgamated, whichever is the most recent | 110 Date of incorporation or amalgamation, whichever is the most recent (Year Month Day) | 120 Ontario Corporation No. |
|---|---|---|
| Ontario | 2000-10-03 | 1427586 |

## Part 2 – Head or registered office address (P.O. box not acceptable as stand-alone address)

**200** Care of (if applicable)

| 210 Street number | 220 Street name/Rural route/Lot and Concession number | 230 Suite number |
|---|---|---|
| 3025 | Albion Road North | |

**240** Additional address information if applicable (line 220 must be completed first)
PO Box 8700

| 250 Municipality (e.g., city, town) | 260 Province/state | 270 Country | 280 Postal/zip code |
|---|---|---|---|
| Ottawa | ON | CA | K1G 3S4 |

## Part 3 – Change identifier

Have there been any changes in any of the information most recently filed for the public record maintained by the MGS for the corporation with respect to names, addresses for service, and the date elected/appointed and, if applicable, the date the election/appointment ceased of the directors and five most senior officers, or with respect to the corporation's mailing address or language of preference? To review the information shown for the corporation on the public record maintained by the MGS, obtain a Corporation Profile Report. For more information, visit **www.ServiceOntario.ca**.

**300** 1 If there have been no changes, enter **1** in this box and then go to "Part 4 – Certification."
If there are changes, enter **2** in this box and complete the applicable parts on the next page, and then go to "Part 4 – Certification."

## Part 4 – Certification

I certify that all information given in this *Corporations Information Act* Annual Return is true, correct, and complete.

**450** Hoverd (Last name) **451** Alan (First name)

**454** ________________, (Middle name(s))

**460** 2 Please enter one of the following numbers in this box for the above-named person: **1** for director, **2** for officer, or **3** for other individual having knowledge of the affairs of the corporation. If you are a director and officer, enter **1** or **2**.

Note: Sections 13 and 14 of the Ontario *Corporations Information Act* provide penalties for making false or misleading statements or omissions.

**Complete the applicable parts to report changes in the information recorded on the MGS public record.**

## Part 5 – Mailing address

**500** Please enter one of the following numbers in this box:
1 - Show no mailing address on the MGS public record.
2 - The corporation's mailing address is the same as the head or registered office address in Part 2 of this schedule.
3 - The corporation's complete mailing address is as follows:

**510** Care of (if applicable)

| | | |
|---|---|---|
| **520** Street number | **530** Street name/Rural route/Lot and Concession number | **540** Suite number |

**550** Additional address information if applicable (line 530 must be completed first)

| | | | |
|---|---|---|---|
| **560** Municipality (e.g., city, town) | **570** Province/state | **580** Country | **590** Postal/zip code |

## Part 6 – Language of preference

**600** Indicate your language of preference by entering **1** for English or **2** for French. This is the language of preference recorded on the MGS public record for communications with the corporation. It may be different from line 990 on the T2 return.

Canada Revenue Agency / Agence du revenu du Canada

**SCHEDULE 550**

# ONTARIO CO-OPERATIVE EDUCATION TAX CREDIT

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- Use this schedule to claim an Ontario co-operative education tax credit (CETC) under section 88 of the *Taxation Act, 2007* (Ontario).
- The CETC is a refundable tax credit that is equal to an eligible percentage (10% to 30%) of the eligible expenditures incurred by a corporation for a qualifying work placement. The maximum credit amount is $1,000 for each qualifying work placement ending before March 27, 2009, and $3,000 for each qualifying work placement beginning after March 26, 2009. For a qualifying work placement that straddles March 26, 2009, the maximum credit amount is prorated.
- Eligible expenditures are salaries and wages (including taxable benefits) paid or payable to a student in a qualifying work placement, or fees paid or payable to an employment agency for services performed by the student in a qualifying work placement. These expenditures must be paid on account of employment or services, as applicable, at a permanent establishment of the corporation in Ontario. Expenditures for a work placement (WP) are not eligible expenditures if they are greater than the amounts that would be paid to an arm's length employee.
- A WP must meet all of the following conditions to be a qualifying work placement:
  - the student performs employment duties for a corporation under a qualifying co-operative education program (QCEP);
  - the WP has been developed or approved by an eligible educational institution as a suitable learning situation;
  - the terms of the WP require the student to engage in productive work;
  - the WP is for a period of at least 10 consecutive weeks or, in the case of an internship program, not less than 8 consecutive months and not more than 16 consecutive months;
  - the student is paid for the work performed in the WP;
  - the corporation is required to supervise and evaluate the job performance of the student in the WP;
  - the institution monitors the student's performance in the WP; and
  - the institution has certified the WP as a qualifying work placement.
- Make sure you keep a copy of the letter of certification from the Ontario eligible educational institution containing the name of the student, the employer, the institution, the term of the WP, and the name/discipline of the QCEP to support the claim. Do not submit the letter of certification with the *T2 Corporation Income Tax Return*.
- File this schedule with the *T2 Corporation Income Tax Return*.

## Part 1 – Corporate information

| 110 Name of person to contact for more information | 120 Telephone number including area code |
|---|---|
| Mike Grue | (613) 738-5499 |

Is the claim filed for a CETC earned through a partnership?* . . . . . **150** 1 Yes [ ] 2 No [X]

If you answered **yes** to the question at line 150, what is the name of the partnership? . . . . . **160** ______

Enter the percentage of the partnership's CETC allocated to the corporation . . . . . **170** ______ %

* When a corporate member of a partnership is claiming an amount for eligible expenditures incurred by a partnership, complete a Schedule 550 for the partnership as if the partnership were a corporation. Each corporate partner, other than a limited partner, should file a separate Schedule 550 to claim the partner's share of the partnership's CETC. The allocated amounts can not exceed the amount of the partnership's CETC.

## Part 2 – Eligibility

1. Did the corporation have a permanent establishment in Ontario in the tax year? . . . . . **200** 1 Yes [X] 2 No [ ]
2. Was the corporation exempt from tax under Part III of the *Taxation Act*, 2007 (Ontario)? . . . . . **210** 1 Yes [ ] 2 No [X]

If you answered **no** to question 1 or **yes** to question 2, then the corporation is **not eligible** for the CETC.

## Part 3 – Eligible percentage for determining the eligible amount

Corporation's salaries and wages paid in the previous tax year * . . . . . **300** 58,000,000

For eligible expenditures incurred before March 27, 2009:

– If line 300 is $400,000 or less, enter 15% on line 310.
– If line 300 is $600,000 or more, enter 10% on line 310.
– If line 300 is more than $400,000 and less than $600,000, enter the percentage on line 310 using the following formula:

$$\text{Eligible percentage} = 15\% - \left[ 5\% \times \left( \frac{\text{amount on line 300} \ \textbf{minus} \ \$ \ 400{,}000}{\$ \ 200{,}000} \right) \right]$$

**Eligible percentage for determining the eligible amount** . . . . . **310** 10.000 %

For eligible expenditures incurred after March 26, 2009:

– If line 300 is $400,000 or less, enter 30% on line 312.
– If line 300 is $600,000 or more, enter 25% on line 312.
– If line 300 is more than $400,000 and less than $600,000, enter the percentage on line 312 using the following formula:

$$\text{Eligible percentage} = 30\% - \left[ 5\% \times \left( \frac{\text{amount on line 300} \ \textbf{minus} \ \$ \ 400{,}000}{\$ \ 200{,}000} \right) \right]$$

**Eligible percentage for determining the eligible amount** . . . . . **312** 25.000 %

* If this is the first tax year of an amalgamated corporation and subsection 88(9) of the *Taxation Act, 2007* (Ontario) applies, enter the salaries and wages paid in the previous tax year by the predecessor corporations.

## Part 4 – Calculation of the Ontario co-operative education tax credit

Complete a separate entry for each student for each qualifying work placement that ended in the corporation's tax year. If a qualifying work placement would otherwise exceed four consecutive months, divide the WP into periods of four consecutive months and enter each full period of four consecutive months as a separate WP. If the WP does not divide equally into four-month periods and if the period that is less than 4 months is 10 or more consecutive weeks, then enter that period as a separate WP. If that period is less than 10 consecutive weeks, then include it with the WP for the last period of 4 consecutive months. Consecutive WPs with two or more associated corporations are deemed to be with only one corporation, as designated by the corporations.

**Ontario co-operative education tax credit** (total of amounts in column K) 500 48,895 L or, if the corporation answered **yes** at line 150 in Part 1, determine the partner's share of amount L:

Amount L ______ x percentage on line 170 in Part 1 ______ % = . . . . . . . . . . . . . . . . . . . . . . . ______ **M**

Enter amount L or M, whichever applies, on line 452 of Schedule 5, *Tax Calculation Supplementary – Corporations*. If you are filing more than one Schedule 550, add the amounts from line L or M, whichever applies, on all the schedules and enter the total amount on line 452 of Schedule 5.

Note 1: Reduce eligible expenditures by all government assistance, as defined under subsection 88(21) of the *Taxation Act, 2007* (Ontario), that the corporation has received, is entitled to receive, or may reasonably expect to receive, for the eligible expenditures, on or before the filing due date of the *T2 Corporation Income Tax Return* for the tax year.

Note 2: Calculate the eligible amount (Column G) using the following formula:

Column G = (column F1 x percentage on line 310) + (column F2 x percentage on line 312)

Note 3: If the WP ends before March 27, 2009, the maximum credit amount for the WP is $1,000.
If the WP begins after March 26, 2009, the maximum credit amount for the WP is $3,000.
If the WP begins before March 27, 2009, and ends after March 26, 2009, calculate the maximum credit amount using the following formula:

($1,000 x X/Y) + [$3,000 x (Y – X)/Y]

where "X" is the number of consecutive weeks of the WP completed by the student before March 27, 2009,
and "Y" is the total number of consecutive weeks of the student's WP.

Note 4: When claiming a CETC for repayment of government assistance, complete a **separate entry** for each repayment and complete columns A to E and J and K with the details for the previous year WP in which the government assistance was received.
Include the amount of government assistance repaid in the tax year multiplied by the eligible percentage for the tax year in which the government assistance was received, to the extent that the government assistance reduced the CETC in that tax year.

Canada Revenue Agency / Agence du revenu du Canada

**SCHEDULE 552**

# ONTARIO APPRENTICESHIP TRAINING TAX CREDIT

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2012-12-31 |

- Use this schedule to claim an Ontario apprenticeship training tax credit (ATTC) under section 89 of the *Taxation Act, 2007* (Ontario).
- The ATTC is a refundable tax credit that is equal to a specified percentage (25% to 45%) of the eligible expenditures incurred by a corporation for a qualifying apprenticeship. Before March 27, 2009, the maximum credit for each apprentice is $5,000 per year to a maximum credit of $15,000 over the first 36-month period of the qualifying apprenticeship. After March 26, 2009, the maximum credit for each apprentice is $10,000 per year to a maximum credit of $40,000 over the first 48-month period of the qualifying apprenticeship. The maximum credit amount is prorated for an employment period of an apprentice that straddles March 26, 2009.
- Eligible expenditures are salaries and wages (including taxable benefits) paid to an apprentice in a qualifying apprenticeship or fees paid to an employment agency for the provision of services performed by the apprentice in a qualifying apprenticeship. These expenditures must be:
  - paid on account of employment or services, as applicable, at a permanent establishment of the corporation in Ontario;
  - for services provided by the apprentice during the first 36 months of the apprenticeship program, if incurred before March 27, 2009; and
  - for services provided by the apprentice during the first 48 months of the apprenticeship program, if incurred after March 26, 2009.
- An expenditure is not eligible for an ATTC if:
  - the same expenditure was used, or will be used, to claim a co-operative education tax credit; or
  - it is more than an amount that would be paid to an arm's length apprentice.
- An apprenticeship must meet the following conditions to be a qualifying apprenticeship:
  - the apprenticeship is in a qualifying skilled trade approved by the Ministry of Training, Colleges and Universities (Ontario); and
  - the corporation and the apprentice must be participating in an apprenticeship program in which the training agreement has been registered under the *Ontario College of Trades and Apprenticeship Act, 2009 or* the *Apprenticeship and Certification Act, 1998* or in which the contract of apprenticeship has been registered under the *Trades Qualification and Apprenticeship Act*.
- Make sure you keep a copy of the training agreement or contract of apprenticeship to support your claim. Do not submit the training agreement or contract of apprenticeship with your *T2 Corporation Income Tax Return*.
- File this schedule with your *T2 Corporation Income Tax Return*.

## Part 1 – Corporate information (please print)

| 110 Name of person to contact for more information | 120 Telephone number including area code |
|---|---|
| Mike Grue | (613) 738-5499 |

Is the claim filed for an ATTC earned through a partnership? * . . . . . **150** 1 Yes [ ] 2 No [X]

If **yes** to the question at line 150, what is the name of the partnership? . . . . . **160** ____________

Enter the percentage of the partnership's ATTC allocated to the corporation . . . . . **170** ______ %

* When a corporate member of a partnership is claiming an amount for eligible expenditures incurred by a partnership, complete a Schedule 552 for the partnership as if the partnership were a corporation. Each corporate partner, other than a limited partner, should file a separate Schedule 552 to claim the partner's share of the partnership's ATTC. The total of the partners' allocated amounts can never exceed the amount of the partnership's ATTC.

## Part 2 – Eligibility

1. Did the corporation have a permanent establishment in Ontario in the tax year? . . . . . **200** 1 Yes [X] 2 No [ ]
2. Was the corporation exempt from tax under Part III of the *Taxation Act, 2007* (Ontario)? . . . . . **210** 1 Yes [ ] 2 No [X]

If you answered **no** to question 1 or **yes** to question 2, then you are **not eligible** for the ATTC.

## Part 3 – Specified percentage

Corporation's salaries and wages paid in the previous tax year * . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . **300** 50,000,000

For eligible expenditures incurred before March 27, 2009:
- If line 300 is $400,000 or less, enter 30% on line 310.
- If line 300 is $600,000 or more, enter 25% on line 310.
- If line 300 is more than $400,000 and less than $600,000, enter the percentage on line 310 using the following formula:

$$\text{Specified percentage} = 30\,\% - \left[ 5\,\% \times \frac{(\text{amount on line 300} \ \textbf{minus} \ 400{,}000)}{200{,}000} \right]$$

**Specified percentage** . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . **310** 25.000 %

For eligible expenditures incurred after March 26, 2009:
- If line 300 is $400,000 or less, enter 45% on line 312.
- If line 300 is $600,000 or more, enter 35% on line 312.
- If line 300 is more than $400,000 and less than $600,000, enter the percentage on line 312 using the following formula:

$$\text{Specified percentage} = 45\,\% - \left[ 10\,\% \times \frac{(\text{amount on line 300} \ \textbf{minus} \ 400{,}000)}{200{,}000} \right]$$

**Specified percentage** . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . **312** 35.000 %

* If this is the first tax year of an amalgamated corporation and subsection 89(6) of the *Taxation Act, 2007* (Ontario) applies, enter salaries and wages paid in the previous tax year by the predecessor corporations.

## Part 4 – Calculation of the Ontario apprenticeship training tax credit

Complete a **separate entry** for each apprentice that is in a qualifying apprenticeship with the corporation. When claiming an ATTC for repayment of government assistance, complete a **separate entry** for each repayment, and complete columns A to G and M and N with the details for the employment period in the previous tax year in which the government assistance was received.

Note 1: Enter the original registration date of the apprenticeship contract or training agreement in all cases, even when multiple employers employed the apprentice.

Note 2: When there are multiple employment periods as an apprentice in the tax year with the corporation, enter the date that is the first day of employment as an apprentice in the tax year with the corporation. When claiming an ATTC for repayment of government assistance, enter the start date of employment as an apprentice for the tax year in which the government assistance was received.

Note 3: When there are multiple employment periods as an apprentice in the tax year with the corporation, enter the date that is the last day of employment as an apprentice in the tax year with the corporation. When claiming an ATTC for repayment of government assistance, enter the end date of employment as an apprentice for the tax year in which the government assistance was received.

**Ontario apprenticeship training tax credit** (total of amounts in column N) 500 173,885 O

or, if the corporation answered **yes** at line 150 in Part 1, determine the partner's share of amount O:

Amount O ______ x percentage on line 170 in Part 1 ______ % = . . . . . . . . . . . . . . . ______ P

Enter amount O or P, whichever applies, on line 454 of Schedule 5, *Tax Calculation Supplementary – Corporations*. If you are filing more than one Schedule 552, add the amounts from line O or P, whichever applies, on all the schedules, and enter the total amount on line 454 of Schedule 5.

Note 1: When there are multiple employment periods as an apprentice in the tax year with the corporation, do not include days in which the individual was not employed as an apprentice.
For H1: The days employed as an apprentice must be within 36 months of the registration date provided in column E.
For H2: The days employed as an apprentice must be within 48 months of the registration date provided in column E.

Note 2: Maximum credit = ($5,000 x H1/365*) + ($10,000 x H2/365*)
* 366 days, if the tax year includes February 29

Note 3: Reduce eligible expenditures by all government assistance, as defined under subsection 89(19) of the *Taxation Act, 2007* (Ontario), that the corporation has received, is entitled to receive, or may reasonably expect to receive, in respect of the eligible expenditures, on or before the filing due date of the *T2 Corporation Income Tax Return* for the tax year.
For J1: Eligible expenditures before March 27, 2009, must be for services provided by the apprentice during the first 36 months of the apprenticeship program.
For J2: Eligible expenditures after March 26, 2009, must be for services provided by the apprentice during the first 48 months of the apprenticeship program.

Note 4: Calculate the amount in column K as follows:
Column K = (J1 x line 310) + (J2 x line 312)

Note 5: Include the amount of government assistance repaid in the tax year multiplied by the specified percentage for the tax year in which the government assistance was received, to the extent that the government assistance reduced the ATTC in that tax year.
Complete a **separate entry** for each repayment of government assistance.

PIL FILING

# T2 Corporation Income Tax Return

200

055 Do not use this area

This form serves as a federal, provincial, and territorial corporation income tax return, unless the corporation is located in Quebec or Alberta. If the corporation is located in one of these provinces, you have to file a separate provincial corporation return.

All legislative references on this return are to the federal *Income Tax Act*. This return may contain changes that had not yet become law at the time of publication.

Send one completed copy of this return, including schedules and the *General Index of Financial Information* (GIFI), to your tax centre or tax services office. You have to file the return within six months after the end of the corporation's tax year.

For more information see **www.cra.gc.ca** or Guide T4012, *T2 Corporation – Income Tax Guide*.

## Taxable income

| | | | | | |
|---|---|---|---|---|---|
| Net income or (loss) for income tax purposes from Schedule 1, financial statements, or GIFI. | | | 300 | 26,553,071 | A |
| **Deduct:** Charitable donations from Schedule 2 | 311 | 124,771 | | | |
| Gifts to Canada, a province, or a territory from Schedule 2 | 312 | | | | |
| Cultural gifts from Schedule 2 | 313 | | | | |
| Ecological gifts from Schedule 2 | 314 | | | | |
| Gifts of medicine from Schedule 2 | 315 | | | | |
| Taxable dividends deductible under section 112 or 113, or subsection 138(6) from Schedule 3 | 320 | | | | |
| Part VI.1 tax deduction* | 325 | | | | |
| Non-capital losses of previous tax years from Schedule 4 | 331 | | | | |
| Net capital losses of previous tax years from Schedule 4 | 332 | | | | |
| Restricted farm losses of previous tax years from Schedule 4 | 333 | | | | |
| Farm losses of previous tax years from Schedule 4 | 334 | | | | |
| Limited partnership losses of previous tax years from Schedule 4 | 335 | | | | |
| Taxable capital gains or taxable dividends allocated from a central credit union | 340 | | | | |
| Prospector's and grubstaker's shares | 350 | | | | |
| Subtotal | | 124,771 | ► | 124,771 | B |
| Subtotal (amount A **minus** amount B) (if negative, enter "0") | | | | 26,428,300 | C |
| **Add:** Section 110.5 additions or subparagraph 115(1)(a)(vii) additions | | | 355 | | D |
| **Taxable income** (amount C **plus** amount D) | | | 360 | 26,428,300 | |
| Income exempt under paragraph 149(1)(t) | | | 370 | | |
| **Taxable income** for a corporation with exempt income under paragraph 149(1)(t) (line 360 **minus** line 370) | | | | 26,428,300 | Z |

* This amount is equal to 3.5 times the Part VI.1 tax payable at line 724 on page 8. Use 3.2 for tax years ending before 2012.

## Small business deduction

**Canadian-controlled private corporations (CCPCs) throughout the tax year**

| | | | |
|---|---|---|---|
| Income from active business carried on in Canada from Schedule 7 | 400 | 26,553,071 | A |
| Taxable income from line 360 on page 3, **minus** 100/28* 3.57143 of the amount on line 632** on page 7, **minus** 1/(0.38 - X***) 4 times the amount on line 636**** on page 7, and **minus** any amount that, because of federal law, is exempt from Part I tax | 405 | 26,428,300 | B |
| Business limit (see notes 1 and 2 below) | 410 | 500,000 | C |

**Notes:**

1. For CCPCs that are not associated, enter $ 500,000 on line 410. However, if the corporation's tax year is less than 51 weeks, prorate this amount by the number of days in the tax year divided by 365, and enter the result on line 410.
2. For associated CCPCs, use Schedule 23 to calculate the amount to be entered on line 410.

**Business limit reduction:**

Amount C 500,000 x (415 ***** 1,636,031 D / 11,250) = 72,712,489 E

Reduced business limit (amount C **minus** amount E) (if negative, enter "0") 425 ______ F

**Small business deduction**

Amount A, B, C, or F, whichever is the least ______ x 17 % = 430 ______ G

Enter amount G on line 1 on page 7.

* 10/3 for tax years ending before November 1, 2011. The result of the multiplication by line 632 has to be pro-rated based on the number of days in the tax year that are in each period: before November 1, 2011, and after October 31, 2011.

** Calculate the amount of foreign non-business income tax credit deductible on line 632 without reference to the refundable tax on the CCPC's investment income (line 604) and without reference to the corporate tax reductions under section 123.4.

*** General rate reduction percentage for the tax year. It has to be pro-rated based on the number of days in the tax year that are in each calendar year. See page 5.

**** Calculate the amount of foreign business income tax credit deductible on line 636 without reference to the corporation tax reductions under section 123.4.

***** **Large corporations**

- If the corporation is not associated with any corporations in both the current and previous tax years, the amount to be entered on line 415 is: (total taxable capital employed in Canada for the **prior year** minus $10,000,000) x 0.225%.
- If the corporation is not associated with any corporations in the current tax year, but was associated in the previous tax year, the amount to be entered on line 415 is: (total taxable capital employed in Canada for the **current year** minus $10,000,000) x 0.225%.
- For corporations associated in the current tax year, see Schedule 23 for the special rules that apply.

## General tax reduction for Canadian-controlled private corporations

**Canadian-controlled private corporations throughout the tax year**

| | | | | |
|---|---|---|---|---|
| Taxable income from line 360 on page 3* | | | 26,428,300 | A |
| Lesser of amounts V and Y (line Z1) from Part 9 of Schedule 27 | | B | | |

# Notes checklist

| Corporation's name | Business number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- Parts 1, 2, and 3 of this schedule must be completed from the perspective of the person (referred to in these parts as the **accountant**) who prepared or reported on the financial statements. If the person preparing the tax return is not the accountant referred to above, they must still complete Parts 1, 2, 3, and 4, as applicable.
- For more information, see Guide RC4088, *General Index of Financial Information (GIFI)* and Guide T4012, *T2 Corporation – Income Tax Guide*.
- Complete this schedule and include it with your T2 return along with the other GIFI schedules.

## Part 1 – Information on the accountant who prepared or reported on the financial statements

| | | | |
|---|---|---|---|
| Does the accountant have a professional designation? | 095 | 1 Yes X | 2 No |
| Is the accountant connected* with the corporation? | 097 | 1 Yes | 2 No X |

* A person connected with a corporation can be: (i) a shareholder of the corporation who owns more than 10% of the common shares; (ii) a director, an officer, or an employee of the corporation; or (iii) a person not dealing at arm's length with the corporation.

**Note**
If the accountant does not have a professional designation **or** is connected to the corporation, you do not have to complete Parts 2 and 3 of this schedule. However, you **do have** to complete Part 4, as applicable.

## Part 2 – Type of involvement with the financial statements

Choose the option that represents the highest level of involvement of the accountant: 198

| | | |
|---|---|---|
| Completed an auditor's report | 1 | X |
| Completed a review engagement report | 2 | |
| Conducted a compilation engagement | 3 | |

## Part 3 – Reservations

If you selected option **1** or **2** under **Type of involvement with the financial statements** above, answer the following question:

| | | | |
|---|---|---|---|
| Has the accountant expressed a reservation? | 099 | 1 Yes | 2 No X |

## Part 4 – Other information

If you have a professional designation and are not the accountant associated with the financial statements in Part 1 above, choose one of the following options: 110

| | | |
|---|---|---|
| Prepared the tax return (financial statements prepared by client) | 1 | |
| Prepared the tax return and the financial information contained therein (financial statements have not been prepared) | 2 | |

| | | | |
|---|---|---|---|
| Were notes to the financial statements prepared? | 101 | 1 Yes X | 2 No |

If **yes**, complete lines 104 to 107 below:

| | | | |
|---|---|---|---|
| Are subsequent events mentioned in the notes? | 104 | 1 Yes | 2 No X |
| Is re-evaluation of asset information mentioned in the notes? | 105 | 1 Yes | 2 No X |
| Is contingent liability information mentioned in the notes? | 106 | 1 Yes X | 2 No |
| Is information regarding commitments mentioned in the notes? | 107 | 1 Yes X | 2 No |
| Does the corporation have investments in joint venture(s) or partnership(s)? | 108 | 1 Yes | 2 No X |

## Part 4 – Other information (continued)

**Impairment and fair value changes**

In any of the following assets, was an amount recognized in net income or other comprehensive income (OCI) as a result of an impairment loss in the tax year, a reversal of an impairment loss recognized in a previous tax year, or a change in fair value during the tax year? . . . . . 200 1 Yes [ ] 2 No [X]

If **yes**, enter the amount recognized:

| | | In net income<br>Increase (decrease) | | In OCI<br>Increase (decrease) |
|---|---|---|---|---|
| Property, plant, and equipment | 210 | | 211 | |
| Intangible assets | 215 | | 216 | |
| Investment property | 220 | | | |
| Biological assets | 225 | | | |
| Financial instruments | 230 | | 231 | |
| Other | 235 | | 236 | |

**Financial instruments**

Did the corporation derecognize any financial instrument(s) during the tax year (other than trade receivables)? . . . . . 250 1 Yes [ ] 2 No [X]

Did the corporation apply hedge accounting during the tax year? . . . . . 255 1 Yes [ ] 2 No [X]

Did the corporation discontinue hedge accounting during the tax year? . . . . . 260 1 Yes [ ] 2 No [X]

**Adjustments to opening equity**

Was an amount included in the opening balance of retained earnings or equity, in order to correct an error, to recognize a change in accounting policy, or to adopt a new accounting standard in the current tax year? . . . . . 265 1 Yes [ ] 2 No [X]

If **yes**, you have to maintain a separate reconciliation.

# Charitable Donations and Gifts

| Corporation's name | Business number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- For use by corporations to claim any of the following:
  - charitable donations to qualified donees;
  - gifts to Canada, a province, or a territory;
  - gifts of certified cultural property;
  - gifts of certified ecologically sensitive land; or
  - additional deduction for gifts of medicine.
- The donations and gifts are eligible for a five-year carryforward.
- Use this schedule to show a transfer of unused amounts from previous years following an amalgamation or the wind-up of a subsidiary as described under subsections 87(1) and 88(1) of the federal *Income Tax Act*.
- For donations and gifts made after March 22, 2004, subsection 110.1(1.2) of the federal *Income Tax Act* provides as follows:
  - Where a particular corporation has undergone an acquisition of control, for tax years that end on or after the acquisition of control, no corporation can claim a deduction for a gift made by the particular corporation to a qualified donee before the acquisition of control
  - If a particular corporation makes a gift to a qualified donee pursuant to an arrangement under which both the gift and the acquisition of control is expected, no corporation can claim a deduction for the gift unless the person acquiring control of the particular corporation is the qualified donee.
- The eligible amount of a charitable gift is the amount by which the fair market value of the gift exceeds the amount of an advantage, if any, for the gift.
- A gift of medicine made after March 18, 2007, to qualifying organizations for activities outside of Canada, may be eligible for an additional deduction if the gift is an eligible medical gift. This additional deduction is calculated in Part 6.
- File one completed copy of this schedule with your *T2 Corporation Income Tax Return*.
- For more information, see the *T2 Corporation - Income Tax Guide*.

## Part 1 – Charitable donations

| Charity/Recipient | Amount ($100 or more only) |
|---|---|
| United Way | 65,979 |
| United Way | 57,792 |
| Our Youth At Work Assoication | 500 |
| Canada Helps | 100 |
| Heart & Stroke Foundation of Canada | 100 |
| Ottawa Regional Cancer Foundation | 100 |
| Heart & Stroke Foundation of Canada | 100 |
| The Great War Memorial Hospital of Perth Dis | 100 |
| | |
| | |
| | |
| | |
| Subtotal | 124,771 |
| **Add:** Total donations of less than $100 each | |
| Total donations in current tax year | 124,771 |

| | | Federal | | Québec | Alberta |
|---|---|---|---|---|---|
| Charitable donations at the end of the previous tax year | | | A | | |
| **Deduct:** Charitable donations expired after five tax years* | 239 | | | | |
| Charitable donations at the beginning of the tax year | 240 | | B | | |
| **Add:** | | | | | |
| Charitable donations transferred on an amalgamation or the wind-up of a subsidiary | 250 | | | | |
| Total current-year charitable donations made (enter this amount on line 112 of Schedule 1) | 210 | 124,771 | | 124,771 | 124,771 |
| Subtotal (line 250 **plus** line 210) | | 124,771 | C | 124,771 | 124,771 |
| Subtotal (amount B **plus** amount C) | | 124,771 | D | 124,771 | 124,771 |
| **Deduct:** Adjustment for an acquisition of control (for donations made after March 22, 2004) | 255 | | | | |
| Total charitable donations available (amount D **minus** amount on line 255) | | 124,771 | E | 124,771 | 124,771 |
| **Deduct:** Amount applied against taxable income (cannot be more than amount O in Part 2) (enter this amount on line 311 of the T2 return) | 260 | 124,771 | | 124,771 | 124,771 |
| Charitable donations closing balance (amount E **minus** amount on line 260) | 280 | | | | |

* For the federal and Alberta, the gifts expire after five tax years. For Québec, gifts made in a tax year that ended before March 24, 2006, expire after five tax years and gifts made in a tax year that ended after March 23, 2006, expire after twenty tax years.

## Amounts carried forward – Charitable donations

| Year of origin: | | Federal | Québec | Alberta |
|---|---|---|---|---|
| 1st prior year | 2012-12-31 | | | |
| 2nd prior year | 2011-12-31 | | | |
| 3rd prior year | 2010-12-31 | | | |

| **Total** (to line A) | | | | |

***** For the federal and Alberta, the 6th prior year gifts expire in the current year. For Québec, the 6th prior year gifts made in a tax year that ended before March 24, 2006, expire in the current year and the 21st prior year gifts made in a tax year that ended after March 23, 2006, expire in the current year.

## Part 2 – Calculation of the maximum allowable deduction for charitable donations

| | | | | |
|---|---|---|---|---|
| Net income for tax purposes * **multiplied** by 75 % | | | 19,914,803 | F |
| Taxable capital gains arising in respect of gifts of capital property included in Part 1 ** | 225 | | | G |
| Taxable capital gain in respect of deemed gifts of non-qualifying securities per subsection 40(1.01) | 227 | | | H |
| The amount of the recapture of capital cost allowance in respect of charitable gifts | 230 | | | |
| Proceeds of disposition, less outlays and expenses ** | | | | I |
| Capital cost ** | | | | J |
| Amount I or J, whichever is less | 235 | | | |
| Amount on line 230 or 235, whichever is less | | | | K |
| Subtotal (**add** amounts G, H, and K) | | | | L |
| Amount L **multiplied** by 25 % | | | | M |
| Subtotal (amount F **plus** amount M) | | | 19,914,803 | N |
| **Maximum allowable deduction for charitable donations** (enter amount E from Part 1, amount N, or net income for tax purposes, whichever is less) | | | 124,771 | O |

* For credit unions, this amount is before the deduction of payments pursuant to allocations in proportion to borrowing and bonus interest.

** This amount must be prorated by the following calculation: eligible amount of the gift **divided by** the proceeds of disposition of the gift.

## Part 3 – Gifts to Canada, a province, or a territory

| | | | | |
|---|---|---|---|---|
| Gifts to Canada, a province, or a territory at the end of the previous tax year | | | | A |
| **Deduct:** Gifts to Canada, a province, or a territory expired after five tax years | 339 | | | |
| Gifts to Canada, a province, or a territory at the beginning of the tax year | 340 | | | B |
| **Add:** | | | | |
| Gifts to Canada, a province, or a territory transferred on an amalgamation or the windup of a subsidiary | 350 | | | |
| Total current-year gifts made to Canada, a province, or a territory * | 310 | | | |
| Subtotal (line 350 **plus** line 310) | | | ► | C |
| Subtotal (amount B **plus** amount C) | | | | D |
| **Deduct:** | | | | |
| Adjustment for an acquisition of control (for gifts made after March 22, 2004) | 355 | | | |
| Amount applied against taxable income (enter this amount on line 312 of the T2 return) | 360 | | | |
| Subtotal (line 355 **plus** line 360) | | | ► | E |
| Gifts to Canada, a province, or a territory closing balance (amount D **minus** amount E) | 380 | | | |

* Not applicable for gifts made after February 18, 1997, unless a written agreement was made before this date. If no written agreement exists, enter the amount on line 210 and complete Part 2.

## Part 4 – Gifts of certified cultural property

| | | Federal | | Québec | Alberta |
|---|---|---|---|---|---|
| Gifts of certified cultural property at the end of the previous tax year | | | F | | |
| **Deduct:** Gifts of certified cultural property expired after five tax years* | 439 | | | | |
| Gifts of certified cultural property at the beginning of the tax year | 440 | | G | | |
| **Add:** | | | | | |
| Gifts of certified cultural property transferred on an amalgamation or the windup of a subsidiary | 450 | | | | |
| Total current-year gifts of certified cultural property | 410 | | | | |
| Subtotal (line 450 **plus** line 410) | | | H | | |
| Subtotal (amount G **plus** amount H) | | | I | | |
| **Deduct:** | | | | | |
| Adjustment for an acquisition of control (for gifts made after March 22, 2004) | 455 | | | | |
| Amount applied against taxable income (enter this amount on line 313 of the T2 return) | 460 | | | | |
| Subtotal (line 455 **plus** line 460) | | | J | | |
| Gifts of certified cultural property closing balance (amount I **minus** amount J) | 480 | | | | |

* For the federal and Alberta, the gifts expire after five tax years. For Québec, gifts made in a tax year that ended before March 24, 2006, expire after five tax years and gifts made in a tax year that ended after March 23, 2006, expire after twenty tax years.

## Amount carried forward – Gifts of certified cultural property

| Year of origin: | | Federal | Québec | Alberta |
|---|---|---|---|---|
| 1st prior year | 2012-12-31 | | | |

# DIVIDENDS RECEIVED, TAXABLE DIVIDENDS PAID, AND PART IV TAX CALCULATION

**SCHEDULE 3**

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- This schedule is for the use of any corporation to report:
  - non-taxable dividends under section 83;
  - deductible dividends under subsection 138(6);
  - taxable dividends deductible from income under section 112, subsection 113(2) and paragraphs 113(1)(a), (b) or (d); or
  - taxable dividends paid in the tax year that qualify for a dividend refund.
- The calculations in this schedule apply only to private or subject corporations.
- Parts, sections, subsections, and paragraphs referred to on this schedule are from the federal *Income Tax Act.*
- A recipient corporation is connected with a payer corporation at any time in a tax year, if at that time the recipient corporation:
  - controls the payer corporation, other than because of a right referred to in paragraph 251(5)(b); or
  - owns more than 10% of the issued share capital (with full voting rights), and shares that have a fair market value of more than 10% of the fair market value of all shares of the payer corporation.
- File one completed copy of this schedule with your *T2 Corporation Income Tax Return*.
- Column A – Enter "X" if dividends received from a foreign source (connected corporation only).
- Column F1 – Enter the amount of dividends received reported in column 240 that are eligible.
- Column F2 – Enter the code that applies to the deductible taxable dividend.
- Column F3 – Enter if dividends have been received or not after December 20, 2012. This information is required for corporations that must complete Schedules 71 and 72. For more details with regards to this column, consult the Help.

## Part 1 – Dividends received in the tax year

**Do not include dividends received from foreign non-affiliates.**

| Name of payer corporation (from which the corporation received the dividend) | A | B Enter 1 if payer corporation is connected | C Business Number of connected corporation | D Tax year-end of the payer corporation in which the sections 112/113 and subsection 138(6) dividends in column F were paid YYYY/MM/DD (See note) | E Non-taxable dividend under section 83 |
|---|---|---|---|---|---|
| 200 | | 205 | 210 | 220 | 230 |
| | | | | | |

(Columns B, C and D: Complete if payer corporation is connected)

**Total** (enter on line 402 of Schedule 1)

**Note**: If your corporation's tax year-end is different than that of the connected payer corporation, your corporation could have received dividends from more than one tax year of the payer corporation. If so, use a separate line to provide the information for each tax year of the payer corporation.
For more details, consult the Help.

| F Taxable dividends deductible from taxable income under section 112, subsections 113(2) and 138(6), and paragraphs 113(1)(a), (b), or (d)* | F1 Eligible dividends (included in column F) | F2 | F3 | G Total taxable dividends paid by connected payer corporation (for tax year in column D) | H Dividend refund of the connected payer corporation (for tax year in column D)** | I Part IV tax before deductions F x 1 / 3 *** |
|---|---|---|---|---|---|---|
| 240 | | | | 250 | 260 | 270 |
| | | | | | | |
| | | | | | | J |

(Columns G and H: Complete if payer corporation is connected)

**Total** (enter the amount from column F on line 320 of the T2 return and amount J in Part 2)

* If taxable dividends are received, enter the amount in column 240, but if the corporation is not subject to Part IV tax (such as a public corporation other than a subject corporation as defined in subsection 186(3)), enter "0" in column 270. Life insurers are not subject to Part IV tax on subsection 138(6) dividends.

** If the connected payer corporation's tax year ends after the corporation's balance-due day for the tax year (two or three months, as applicable), you have to estimate the payer's dividend refund when you calculate the corporation's Part IV tax payable.

*** For dividends received from connected corporations: Part IV tax = $\frac{\text{Column F x Column H}}{\text{Column G}}$

## Part 2 – Calculation of Part IV tax payable

Part IV tax before deductions (amount J in Part 1) . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .

# TAX CALCULATION SUPPLEMENTARY – CORPORATIONS

| Corporation's name | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- Use this schedule if, during the tax year, the corporation:
  - had a permanent establishment in more than one jurisdiction (corporations that have no taxable income should only complete columns A, B and D in Part 1);
  - is claiming provincial or territorial tax credits or rebates (see Part 2); or
  - has to pay taxes, other than income tax, for Newfoundland and Labrador, or Ontario (see Part 2).
- Regulations mentioned in this schedule are from the *Income Tax Regulations.*
- For more information, see the *T2 Corporation – Income Tax Guide.*
- Enter the regulation number in field 100 of Part 1.

## Part 1 – Allocation of taxable income

100 ______ Enter the Regulation that applies (402 to 413).

| A Jurisdiction Tick yes if the corporation had a permanent establishment in the jurisdiction during the tax year. * | | B Total salaries and wages paid in jurisdiction | C (B x taxable income**) / G | D Gross revenue | E (D x taxable income**) / H | F Allocation of taxable income (C + E) x 1/2*** (where either G or H is nil, do not multiply by 1/2) |
|---|---|---|---|---|---|---|
| Newfoundland and Labrador | 003 1 Yes ☐ | 103 | | 143 | | |

| **Total** | | 129 G | | 169 H | | |

* "Permanent establishment" is defined in Regulation 400(2).

** If the corporation has income or loss from an international banking centre: the taxable income is the amount on line 360 or line Z of the T2 return **plus** the total amount not required to be included, or **minus** the total amount not allowed to be deducted, in calculating the corporation's income under section 33.1 of the federal *Income Tax Act*. This does not apply to tax years starting after March 20, 2013.

*** For corporations other than those described under Regulation 402, use the appropriate calculation described in the Regulations to allocate taxable income.

**Notes:**
1. After determining the allocation of taxable income, you have to calculate the corporation's provincial or territorial tax payable. For more information on how to calculate the tax for each province or territory, see the instructions for Schedule 5 in the *T2 Corporation – Income Tax Guide*.
2. If the corporation has provincial or territorial tax payable, complete Part 2.

## Part 2 – Ontario tax payable, tax credits, and rebates

| Total taxable income | Income eligible for small business deduction | Provincial or territorial allocation of taxable income | Provincial or territorial tax payable before credits |
|---|---|---|---|
| 26,428,300 | | 26,428,300 | 3,004,255 |

| | Line | Amount | | Total | |
|---|---|---|---|---|---|
| **Ontario basic income tax** (from Schedule 500) | 270 | 3,039,255 | | | |
| **Deduct:** Ontario small business deduction (from Schedule 500) | 402 | 35,000 | | | |
| Subtotal | | 3,004,255 | ▶ | 3,004,255 | A6 |
| **Add:** | | | | | |
| Ontario additional tax re Crown royalties (from Schedule 504) | 274 | | | | |
| Ontario transitional tax debits (from Schedule 506) | 276 | | | | |
| Recapture of Ontario research and development tax credit (from Schedule 508) | 277 | | | | |
| Subtotal | | | ▶ | | B6 |
| Subtotal (amount A6 **plus** amount B6) | | | | 3,004,255 | C6 |
| **Deduct:** | | | | | |
| Ontario resource tax credit (from Schedule 504) | 404 | | | | |
| Ontario tax credit for manufacturing and processing (from Schedule 502) | 406 | | | | |
| Ontario foreign tax credit (from Schedule 21) | 408 | | | | |
| Ontario credit union tax reduction (from Schedule 500) | 410 | | | | |
| Ontario transitional tax credits (from Schedule 506) | 414 | | | | |
| Ontario political contributions tax credit (from Schedule 525) | 415 | | | | |
| Ontario tax credit for the purchase of vehicles that use natural gas as a fuel | | | | | |
| Subtotal | | | ▶ | | D6 |
| Subtotal (amount C6 **minus** amount D6) (if negative, enter "0") | | | | 3,004,255 | E6 |
| **Deduct:** Ontario research and development tax credit (from Schedule 508) | 416 | | | | |
| Ontario corporate income tax payable before Ontario corporate minimum tax credit (amount E6 **minus** amount on line 416) (if negative, enter "0") | | | | 3,004,255 | F6 |
| **Deduct:** Ontario corporate minimum tax credit (from Schedule 510) | 418 | | | | |
| Ontario corporate income tax payable (amount F6 **minus** amount on line 418) (if negative, enter "0") | | | | 3,004,255 | G6 |
| **Add:** | | | | | |
| Ontario corporate minimum tax (from Schedule 510) | 278 | | | | |
| Ontario special additional tax on life insurance corporations (from Schedule 512) | 280 | | | | |
| Subtotal | | | ▶ | | H6 |
| Total Ontario tax payable before refundable credits (amount G6 **plus** amount H6) | | | | 3,004,255 | I6 |
| **Deduct:** | | | | | |
| Ontario qualifying environmental trust tax credit | 450 | | | | |
| Ontario co-operative education tax credit (from Schedule 550) | 452 | 44,445 | | | |
| Ontario apprenticeship training tax credit (from Schedule 552) | 454 | 106,354 | | | |
| Ontario computer animation and special effects tax credit (from Schedule 554) | 456 | | | | |
| Ontario film and television tax credit (from Schedule 556) | 458 | | | | |
| Ontario production services tax credit (from Schedule 558) | 460 | | | | |
| Ontario interactive digital media tax credit (from Schedule 560) | 462 | | | | |
| Ontario sound recording tax credit (from Schedule 562) | 464 | | | | |
| Ontario book publishing tax credit (from Schedule 564) | 466 | | | | |
| Ontario innovation tax credit (from Schedule 566) | 468 | | | | |
| Ontario business-research institute tax credit (from Schedule 568) | 470 | | | | |
| Other Ontario tax credits | | | | | |
| Subtotal | | 150,799 | ▶ | 150,799 | J6 |
| **Net Ontario tax payable or refundable credit** (amount I6 **minus** amount J6) (if a credit, enter a negative amount) Include this amount on line 255. | 290 | | | 2,853,456 | K6 |

## Summary

Enter the total net tax payable or refundable credits for all provinces and territories on line 255.

| | | |
|---|---|---|
| **Net provincial and territorial tax payable or refundable credits** | 255 | 2,853,456 |

If the amount on line 255 is positive, enter the net provincial and territorial tax payable on line 760 of the T2 return.
If the amount on line 255 is negative, enter the net provincial and territorial refundable tax credits on line 812 of the T2 return.

| 8. | 42 | | 479,966 | | | 0 | | 479,966 | 12 | 0 | 0 | 57,596 | 422,370 |
| 9. | 45 | | 86,408 | | | 0 | | 86,408 | 45 | 0 | 0 | 38,884 | 47,524 |
| 10. | 50 | | 1,720,471 | 1,686,456 | | 0 | 843,228 | 2,563,699 | 55 | 0 | 0 | 1,410,034 | 1,996,893 |
| 11. | 47 | | 272,823,922 | 70,584,407 | | 219,525 | 35,182,441 | 308,006,363 | 8 | 0 | 0 | 24,640,509 | 318,548,295 |
| | | **Totals** | 599,694,988 | 85,885,171 | | 247,795 | 42,818,689 | 642,513,675 | | | | 46,192,065 | 639,140,299 |

**Note:** Class numbers followed by a letter indicate the basic rate of the class taking into account the additional deduction allowed. Class 1a: 4% + 6% = 10% (class 1 to 10%), class 1b: 4% + 2% = 6% (class 1 to 6%).

* Include any property acquired in previous years that has now become available for use. This property would have been previously excluded from column 3. List separately any acquisitions that are not subject to the 50% rule, see Regulation 1100(2) and (2.2).

** Include amounts transferred under section 85, or on amalgamation and winding-up of a subsidiary. See the *T2 Corporation Income Tax Guide* for other examples of adjustments to include in column 4.

*** The net cost of acquisitions is the cost of acquisitions (column 3) **plus** or **minus** certain adjustments from column 4. For exceptions to the 50% rule, see Interpretation Bulletin IT-285, *Capital Cost Allowance – General Comments*.

**** Enter a rate only, if you are using the declining balance method. For any other method (for example the straignt-line method, where calculations are always based on the cost of acquisitions), enter N/A. Then enter the amount you are claiming in column 11.

***** If the tax year is shorter than 365 days, prorate the CCA claim. Some classes of property do not have to be prorated. See the *T2 Corporation Income Tax Guide* for more information.

# Fixed Assets Reconciliation

Reconciliation of change in fixed assets per financial statements to amounts used per tax return.

# CUMULATIVE ELIGIBLE CAPITAL DEDUCTION

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- For use by a corporation that has eligible capital property. For more information, see the *T2 Corporation Income Tax Guide*.
- A separate cumulative eligible capital account must be kept for each business.

## Part 1 – Calculation of current year deduction and carry-forward

**Cumulative eligible capital - Balance at the end of the preceding taxation year** (if negative, enter "0") . . . 200: 885,650 A

**Add:**

| | Line | Amount | | Result | | | |
|---|---|---|---|---|---|---|---|
| Cost of eligible capital property acquired during the taxation year | 222 | 1,840 | | | | | |
| Other adjustments | 226 | | | | | | |
| Subtotal (line 222 plus line 226) | | 1,840 | x 3 / 4 = | 1,380 | B | | |
| Non-taxable portion of a non-arm's length transferor's gain realized on the transfer of an eligible capital property to the corporation after December 20, 2002 | 228 | | x 1 / 2 = | | C | | |
| amount B minus amount C (if negative, enter "0") | | | | 1,380 | ▶ | 1,380 | D |
| Amount transferred on amalgamation or wind-up of subsidiary | | | | | 224 | | E |
| Subtotal (add amounts A, D, and E) | | | | | 230 | 887,030 | F |

**Deduct:**

| | Line | Amount | | | | | |
|---|---|---|---|---|---|---|---|
| Proceeds of sale (less outlays and expenses not otherwise deductible) from the disposition of all eligible capital property during the taxation year | 242 | | G | | | | |
| The gross amount of a reduction in respect of a forgiven debt obligation as provided for in subsection 80(7) | 244 | | H | | | | |
| Other adjustments | 246 | | I | | | | |
| (add amounts G,H, and I) | | | x 3 / 4 = | | 248 | | J |

**Cumulative eligible capital balance** (amount F minus amount J) . . . 887,030 K

(if amount K is negative, enter "0" at line M and proceed to Part 2)

Cumulative eligible capital for a property no longer owned after ceasing to carry on that business 249

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| amount K | 887,030 | | | | | | |
| **less** amount from line 249 | | | | | | | |
| **Current year deduction** | 887,030 | x | 7.00 % = | 250 | 62,092 * | | |
| (line 249 plus line 250) (enter this amount at line 405 of Schedule 1) | | | | | 62,092 | ▶ | 62,092 L |

**Cumulative eligible capital – Closing balance** (amount K minus amount L) (if negative, enter "0") . . . 300: 824,938 M

* You can claim any amount up to the maximum deduction of 7%. The deduction may not exceed the maximum amount prorated by the number of days in the taxation year divided by 365.

## Part 2 – Amount to be included in income arising from disposition

(complete this part only if the amount at line K is negative)

| | | | | | | |
|---|---|---|---|---|---|---|
| Amount from line K (show as positive amount) | | | | | | N |
| Total of cumulative eligible capital (CEC) deductions from income for taxation years beginning after June 30, 1988 | | | 400 | | 1 | |
| Total of all amounts which reduced CEC in the current or prior years under subsection 80(7) | | | 401 | | 2 | |
| Total of CEC deductions claimed for taxation years beginning before July 1, 1988 | 402 | | 3 | | | |
| Negative balances in the CEC account that were included in income for taxation years beginning before July 1, 1988 | 408 | | 4 | | | |
| Line 3 minus line 4 (if negative, enter "0") | | | ▶ | | 5 | |
| Total of lines 1, 2 and 5 | | | | | 6 | |
| Amounts included in income under paragraph 14(1)(b), as that paragraph applied to taxation years ending after June 30, 1988 and before February 28, 2000, to the extent that it is for an amount described at line 400 | | | 7 | | | |
| Amounts at line T from Schedule 10 of previous taxation years ending after February 27, 2000 | | | 8 | | | |
| Subtotal (line 7 plus line 8) | 409 | | ▶ | | 9 | |
| Line 6 minus line 9 (if negative, enter "0") | | | | | ▶ | O |
| Line N minus line O (if negative, enter "0") | | | | | | P |
| | | | Line 5 | | x 1 / 2 = | Q |
| Line P minus line Q (if negative, enter "0") | | | | | | R |
| | | | Amount R | | x 2 / 3 = | S |
| Amount N or amount O, whichever is less | | | | | | T |
| **Amount to be included in income** (amount S plus amount T) (enter this amount on line 108 of Schedule 1) | | | | | 410 | |

Canada Revenue Agency / Agence du revenu du Canada

**SCHEDULE 13**

# CONTINUITY OF RESERVES

| Name of corporation | Business number | Tax year end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- For use by corporations to provide a continuity of all reserves claimed which are allowed for tax purposes.
- File one completed copy of this schedule with the corporation's *T2 Corporation Income Tax Return*.
- For more information, see the *T2 Corporation Income Tax Guide*.

## Part 1 – Capital gains reserves

| | Description of property 001 | Balance at the beginning of the year $ 002 | Transfer on an amalgamation or the wind-up of a subsidiary $ 003 | Add $ | Deduct $ | Balance at the end of the year $ 004 |
|---|---|---|---|---|---|---|
| 1 | | | | | | |
| | **Totals** | 008 | 009 | | | 010 |

The amount from line 008 **plus** the amount from line 009 should be entered on line 880 of Schedule 6, *Summary of Dispositions of Capital Property*. The amount from line 010 should be entered on line 885 of Schedule 6.

## Part 2 – Other reserves

| Description | | Balance at the beginning of the year $ | Transfer on an amalgamation or the wind-up of a subsidiary $ | Add $ | Deduct $ | Balance at the end of the year $ |
|---|---|---|---|---|---|---|
| Reserve for doubtful debts | ☐ | 110 704,169 | 115 | 406,741 | | 120 1,110,910 |
| Reserve for undelivered goods and services not rendered | ☐ | 130 | 135 | | | 140 |
| Reserve for prepaid rent | ☐ | 150 | 155 | | | 160 |
| Reserve for refundable containers | ☐ | 190 | 195 | | | 200 |
| Reserve for unpaid amounts | ☐ | 210 | 215 | | | 220 |
| Other tax reserves | ☐ | 230 | 235 | | | 240 |
| **Totals** | | 270 704,169 | 275 | 406,741 | | 280 1,110,910 |

Enter "X" in the column above if the tax reserve has also been reported on the corporation's financial statements. This allows offsetting entries on Schedule 1, resulting in a zero effect on net income for tax purposes.

The amount from line 270 **plus** the amount from line 275 should be entered on line 125 of Schedule 1, *Net Income (Loss) for Income Tax Purposes*, as an addition. The amount from line 280 should be entered on line 413 of Schedule 1 as a deduction.

# Continuity of financial statement reserves (not deductible)

## Financial statement reserves (not deductible)

| | Description | Balance at the beginning of the year | Transfer on an amalgamation or the wind-up of a subsidiary | Add | Deduct | Balance at the end of the year |
|---|---|---|---|---|---|---|
| 1 | Allowance for Doubtful Debts | 1,070,899 | | 571,609 | | 1,642,508 |
| 2 | Contingent Liability | 549,242 | | 872,000 | | 1,421,242 |
| 3 | Employee future benefit | | | | | |
| | Reserves from Part 2 of Schedule 13 | | | | | |
| | **Totals** | 1,620,141 | | 1,443,609 | | 3,063,750 |

The total opening balance plus the total transfers should be entered on line 414 of Schedule 1 as a deduction.
The total closing balance should be entered on line 126 of Schedule 1 as an addition.

Canada Revenue Agency / Agence du revenu du Canada

**Schedule 15**

# Deferred Income Plans

| Corporation's name | Business number | Tax year end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- Complete the information below if the corporation deducted payments from its income made to a registered pension plan (RPP), a registered supplementary unemployment benefit plan (RSUBP), a deferred profit sharing plan (DPSP), a pooled registered pension plan (PRPP), or an employee profit sharing plan (EPSP).
- If the trust that governs an employee profit sharing plan is **not resident** in Canada, please indicate if the T4PS, *Statement of Employees Profit Sharing Plan Allocations and Payments*, Supplementary slip(s) were filed for the last calendar year, and whether they were filed by the trustee or the employer.

| | Type of plan (see note 1) 100 | Amount of contribution $ (see note 2) 200 | Registration number (RPP, RSUBP, PRPP, and DPSP only) 300 | Name of EPSP trust 400 | Address of EPSP trust 500 | T4PS slip(s) (see note 3) 600 |
|---|---|---|---|---|---|---|
| 1 | 1 | 5,304,262 | 345983 | | | |

**Note 1**

Enter the applicable code number:

1 – RPP
2 – RSUBP
3 – DPSP

5 – PRPP

**Note 2**

You do not need to add to Schedule 1 any payments you made to deferred income plans.
To reconcile such payments, calculate the following amount:

Total of all amounts indicated in column 200 of this schedule . . . . . . . . . . . . . . . . . . . 5,304,262 A

**Less:**

Total of all amounts for deferred income plans deducted in your financial statements . . . . . 5,304,262 B

**Deductible amount for contributions to deferred income plans**
(amount A **minus** amount B) (if negative, enter "0") . . . . . . . . . . . . . . . . . . . . . . . . C

Enter amount C on line 417 of Schedule 1

**Note 3**

T4PS slip(s) filed by: 1 – Trustee
2 – Employer (EPSP only)

**SCHEDULE 23**

# AGREEMENT AMONG ASSOCIATED CANADIAN-CONTROLLED PRIVATE CORPORATIONS TO ALLOCATE THE BUSINESS LIMIT

- For use by a Canadian-controlled private corporation (CCPC) to identify all associated corporations and to assign a percentage for each associated corporation. This percentage will be used to allocate the business limit for purposes of the small business deduction. Information from this schedule will also be used to determine the date the balance of tax is due and to calculate the reduction to the business limit.
- An associated CCPC that has more than one tax year ending in a calendar year, is required to file an agreement for each tax year ending in that calendar year.

**Column 1:** Enter the legal name of each of the corporations in the associated group. Include non-CCPCs and CCPCs that have filed an election under subsection 256(2) of the *Income Tax Act* (ITA) not to be associated for purposes of the small business deduction.

**Column 2:** Provide the Business Number for each corporation (if a corporation is not registered, enter "NR").

**Column 3:** Enter the association code that applies to each corporation:

1 – Associated for purposes of allocating the business limit (unless code 5 applies)
2 – CCPC that is a "third corporation" that has elected under subsection 256(2) not to be associated for purposes of the small business deduction
3 – Non-CCPC that is a "third corporation" as defined in subsection 256(2)
4 – Associated non-CCPC
5 – Associated CCPC to which code 1 does not apply because of a subsection 256(2) election made by a "third corporation"

**Column 4:** Enter the business limit for the year of each corporation in the associated group. The business limit is computed at line 4 on page 4 of each respective corporation's T2 return.

**Column 5:** Assign a percentage to allocate the business limit to each corporation that has an association code 1 in column 3. The total of all percentages in column 5 cannot exceed 100%.

**Column 6:** Enter the business limit allocated to each corporation by multiplying the amount in column 4 by the percentage in column 5. Add all business limits allocated in column 6 and enter the total at line A. Ensure that the total at line A falls within the range for the calendar year to which the agreement applies:

| Calendar year | Acceptable range |
|---|---|
| 2006 | maximum $300,000 |
| 2007 | $300,001 to $400,000 |

| Calendar year | Acceptable range |
|---|---|
| 2008 | maximum $400,000 |
| 2009 | $400,001 to $500,000 |

If the calendar year to which this agreement applies is after 2009, ensure that the total at line A does not exceed $500,000.

## Allocating the business limit

Date filed (do not use this area) . . . . . **025** Year Month Day

Enter the calendar year to which the agreement applies . . . . . **050** Year 2013

Is this an amended agreement for the above-noted calendar year that is intended to replace an agreement previously filed by any of the associated corporations listed below? . . . . . **075** 1 Yes [ ] 2 No [X]

| | 1 Names of associated corporations **100** | 2 Business Number of associated corporations **200** | 3 Association code **300** | 4 Business limit for the year (before the allocation) $ | 5 Percentage of the business limit % **350** | 6 Business limit allocated* $ **400** |
|---|---|---|---|---|---|---|
| 1 | Hydro Ottawa Limited | 86339 1363 RC0001 | 1 | 500,000 | 100.0000 | 500,000 |
| 2 | Hydro Ottawa Holding Inc. | 89411 0816 RC0001 | 1 | 500,000 | | |
| 3 | Energy Ottawa Inc. | 86338 9961 RC0001 | 1 | 500,000 | | |
| 4 | Telecom Ottawa Holding Inc. / Societe De Port | 86202 9337 RC0001 | 1 | 500,000 | | |
| 5 | PowerTrail Inc. | 82829 3944 RC0001 | 1 | 500,000 | | |
| 6 | Moose Creek Energy Inc. | 82851 1311 RC0001 | 1 | 500,000 | | |
| 7 | Chaudiere Hydro Inc. Hydro Chaudiere Inc. | 81281 3103 RC0001 | 1 | 500,000 | | |
| 8 | Chaudiere Water Power Inc/Energie Hydrauliqu | 10093 1955 RC0001 | 1 | 500,000 | | |
| | | | | **Total** | 100.0000 | 500,000 A |

**Business limit reduction under subsection 125(5.1) of the ITA**

The business limit reduction is calculated in the small business deduction area of the T2 return. One of the factors used in this calculation is the "Large corporation amount" at line 415 of the T2 return. If the corporation is a member of an associated group** of corporations in the current tax year, the amount at line 415 of the T2 return is equal to 0.225% x (A - $10,000,000) where, "A" is the total of taxable capital employed in Canada*** of each corporation in the associated group for its last tax year ending in the preceding calendar year.

* Each corporation will enter on line 410 of the T2 return, the amount allocated to it in column 6. However, if the corporation's tax year is less than 51 weeks, prorate the amount in column 6 by the number of days in the tax year divided by 365, and enter the result on line 410 of the T2 return.

Special rules apply if a CCPC has more than one tax year ending in a calendar year and is associated in more than one of those years with another CCPC that has a tax year ending in the same calendar year. If the tax year straddles January 1, 2009, the business limit for the second (or subsequent) tax year(s) will be equal to the lesser of the business limit that would have been determined for the first tax year ending in the calendar year, if $500,000 was used in allocating the amounts among associated corporations and the business limit determined for the second (or subsequent) tax year(s) ending in the same calendar year. Otherwise, the business limit for the second (or subsequent) tax year(s) will be equal to the lesser of the business limit determined for the first tax year ending in the calendar year and the business limit determined for the second (or subsequent) tax year(s) ending in the same calendar year.

** The associated group includes the corporation filing this schedule and each corporation that has an "association code" of 1 or 4 in column 3.

*** "Taxable capital employed in Canada" has the meaning assigned by subsection 181.2(1) or 181.3(1) or section 181.4 of the ITA.

Canada Revenue Agency / Agence du revenu du Canada

**Schedule 31**

# Investment Tax Credit – Corporations

## General information

- Use this schedule:
  - to calculate an investment tax credit (ITC) earned during the tax year;
  - to claim a deduction against Part I tax payable;
  - to claim a refund of credit earned during the current tax year;
  - to claim a carryforward of credit from previous tax years;
  - to transfer a credit following an amalgamation or wind-up of a subsidiary, as described under subsections 87(1) and 88(1) of the federal *Income Tax Act*;
  - to request a credit carryback to one or more previous years; or
  - if you are subject to a recapture of ITC.
- The ITC is eligible for a three-year carryback (if not deductible in the year earned). It is also eligible for a twenty-year carryforward.
- All legislative references are to the federal *Income Tax Act* and *Income Tax Regulations*.
- Investments or expenditures, described in subsection 127(9) of the Act and Part XLVI of the Regulations, that earn an ITC are:
  - qualified property and qualified resource property (Parts 4 to 7 of this schedule);
  - expenditures that are part of the SR&ED qualified expenditure pool (Parts 8 to 17). File Form T661, *Scientific Research and Experimental Development (SR&ED) Expenditures Claim;*
  - pre-production mining expenditures (Parts 18 to 20);
  - apprenticeship job creation expenditures (Parts 21 to 23); and
  - child care spaces expenditures (Parts 24 to 28).
- Include a completed copy of this schedule with the *T2 Corporation Income Tax Return*. If you need more space, attach additional schedules.
- For more information on ITCs, see "Investment Tax Credit" in Guide T4012, *T2 Corporation – Income Tax Guide*, Information Circular IC 78-4, *Investment Tax Credit Rates*, and its related Special Release*.*
- For more information on SR&ED, see Brochure RC4472, *Overview of the Scientific Research and Experimental Development Program (SR&ED) Tax Incentive Program*; Brochure RC4467, *Support for your R&D in Canada*, and T4088, *Guide to Form T661 – Scientific Research and Experimental Development (SR&ED) Expenditures Claim*. Also see the *Eligibility of Work for SR&ED Investment Tax Credits Policy* at **www.cra.gc.ca/txcrdt/sred-rsde/clmng/lgbltywrkfrsrdnvstmnttxcrdts-eng.html**.

## Detailed information

- For the purpose of this schedule, **investment** means the capital cost of the property (excluding amounts added by an election under section 21 of the Act), determined without reference to subsections 13(7.1) and 13(7.4), minus the amount of any government or non-government assistance that the corporation has received, is entitled to receive, or can reasonably be expected to receive for that property when it files the income tax return for the year in which the property was acquired.
- An ITC deducted or refunded in a tax year for a depreciable property, other than a depreciable property deductible under paragraph 37(1)(b), reduces the capital cost of that property in the next tax year. It also reduces the undepreciated capital cost of that class in the next tax year. An ITC for SR&ED deducted or refunded in a tax year will reduce the balance in the pool of deductible SR&ED expenditures and the adjusted cost base (ACB) of an interest in a partnership in the next tax year. An ITC from pre-production mining expenditures deducted in a tax year reduces the balance in the pool of deductible cumulative Canadian exploration expenses in the next tax year.
- Property acquired has to be **available for use** before a claim for an ITC can be made. See subsections 127(11.2) and 248(19) for more information.
- Expenditures for SR&ED and capital costs for a property qualifying for an ITC must be identified by the claimant on Form T661 and Schedule 31 no later than 12 months after the claimant's income tax return is due for the tax year in which it incurred the expenditures or capital costs.
- Partnership allocations – Subsection 127(8) provides for the allocation of the amount that may reasonably be considered to be a partner's share of the ITCs of the partnership at the end of the fiscal period of the partnership. An allocation of ITCs is generally considered to be the partner's reasonable share of the ITCs if it is made in the same proportion in which the partners have agreed to share any income or loss and if section 103 is not applicable for the agreement to share any income or loss. Special rules apply to specified and limited partners. For more information, see Guide T4068, *Guide for the Partnership Information Return*.
- For SR&ED expenditures, the expression **in Canada** includes the "exclusive economic zone" (as defined in the *Oceans Act* to generally consist of an area that is within 200 nautical miles from the Canadian coastline), including the airspace, seabed and subsoil for that zone.
- For the purpose of this schedule, the expression **Atlantic Canada** includes the Gaspé Peninsula and the provinces of Newfoundland and Labrador, Prince Edward Island, Nova Scotia, and New Brunswick, as well as their respective offshore regions (prescribed in Regulation 4609).
- For the purpose of this schedule, **qualified property** means property in Atlantic Canada that is used primarily for manufacturing and processing, farming or fishing, logging, storing grain, or harvesting peat. Property in Atlantic Canada that is used primarily for oil and gas, and mining activities is considered qualified property only if acquired by the taxpayer **before** March 29, 2012. Qualified property includes new buildings and new machinery and equipment (prescribed in Regulation 4600), and if acquired by the taxpayer **after** March 28, 2012, new energy generation and conservation property (prescribed in Regulation 4600). Qualified property can also be used primarily to produce or process electrical energy or steam in a prescribed area (as described in Regulation 4610). See the definition of **qualified property** in subsection 127(9) of the Act for more information.
- For the purpose of this schedule, **qualified resource property** means property in Atlantic Canada that is used primarily for oil and gas, and mining activities, if acquired by the taxpayer **after** March 28, 2012, and **before** January 1, 2016. Qualified resource property includes new buildings and new machinery and equipment (prescribed in Regulation 4600). See the definition of **qualified resource property** in subsection 127(9) of the Act for more information.

## Detailed information (continued)

- For the purpose of this schedule, **pre-production mining exploration expenditures** are pre-production mining expenditures incurred **after** March 28, 2012, by the taxpayer to determine the existence, location, extent, or quality of certain mineral resources in Canada, excluding expenses incurred in the exploration of an oil or gas well. See subparagraph (a)(i) of the definition of **pre-production mining expenditure** in subsection 127(9) for more information.
- For the purpose of this schedule, **pre-production mining development expenditures** are pre-production mining expenditures incurred **after** March 28, 2012, by the taxpayer to bring a new mineral resource mine in Canada into production, excluding expenses in the development of a bituminous sands deposit or an oil shale deposit. See subparagraph (a)(ii) of the definition of **pre-production mining expenditure** in subsection 127(9) for more information.

## Part 1 – Investments, expenditures, and percentages

| **Investments** | **Specified percentage** |
|---|---|
| Qualified property acquired primarily for use in Atlantic Canada | 10 % |
| Qualified resource property acquired primarily for use in Atlantic Canada and acquired: | |
| – after March 28, 2012, and before 2014 | 10 % |
| – after 2013 and before 2016 | 5 % |
| – after 2015* | 0 % |
| **Expenditures** | |
| If you are a Canadian-controlled private corporation (CCPC), this percentage may apply to the portion that you claim of the SR&ED qualified expenditure pool that does not exceed your expenditure limit (see Part 10) | 35 % |
| **Note:** If your current year's qualified expenditures are more than the corporation's expenditure limit (see Part 10), the excess is eligible for an ITC calculated at the 20 % rate**. | |
| If you are a corporation that is not a CCPC and have incurred qualified expenditures for SR&ED in any area in Canada: | |
| – before 2014** | 20 % |
| – after 2013** | 15 % |
| If you are a taxable Canadian corporation that incurred pre-production mining expenditures before March 29, 2012 | 10 % |
| If you are a taxable Canadian corporation that incurred pre-production mining exploration expenditures***: | |
| – after March 28, 2012, and before 2013 | 10 % |
| – in 2013 | 5 % |
| – after 2013*** | 0 % |
| If you are a taxable Canadian corporation that incurred pre-production mining development expenditures****: | |
| – after March 28, 2012, and before 2014**** | 10 % |
| – in 2014 | 7 % |
| – in 2015 | 4 % |
| – after 2015**** | 0 % |
| If you paid salary and wages to apprentices in the first 24 months of their apprenticeship contract for employment | 10 % |
| If you incurred eligible expenditures after March 18, 2007, for the creation of licensed child care spaces for the children of your employees and, potentially, for other children | 25 % |

* A transitional relief rate of 10% may apply to property acquired after 2013 and before 2017, if the property is acquired under a written agreement entered into before March 29, 2012, or the property is acquired as part of a **phase** of a project where the construction or the engineering and design work for the construction started before March 29, 2012. See paragraph (a.1) of the definition of **specified percentage** in subsection 127(9) for more information.

** The reduction of the rate from 20% to 15% applies to 2014 and later tax years, except that, for 2014 tax years that start before 2014, the reduction is pro-rated based on the number of days in the tax year that are after 2013.

*** Pre-production mining exploration expenditures are described in subparagraph (a)(i) of the definition of **pre-production mining expenditure** in subsection 127(9).

**** A transitional relief rate of 10% may apply to expenditures incurred after 2013 and before 2016, if the expenditure is incurred under a written agreement entered into before March 29, 2012, or the expenditure is incurred as part of the development of a new mine where the construction or the engineering and design work for the construction of the new mine started before March 29, 2012. See subparagraph (k)(ii) of the definition of **specified percentage** in subsection 127(9) for more information. Pre-production mining development expenditures are described in subparagraph (a)(ii) of the definition of **pre-production mining expenditure** in subsection 127(9).

| Corporation's name | Business number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

## Part 2 – Determination of a qualifying corporation

Is the corporation a qualifying corporation? . . . . . 101 1 Yes [ ] 2 No [X]

For the purpose of a refundable ITC, a **qualifying corporation** is defined under subsection 127.1(2). The corporation has to be a CCPC and its taxable income (before any loss carrybacks) for its previous tax year cannot be more than its **qualifying income limit** for the particular tax year. If the corporation is associated with any other corporations during the tax year, the total of the taxable incomes of the corporation and the associated corporations (before any loss carrybacks), for their last tax year ending in the previous calendar year, cannot be more than their qualifying income limit for the particular tax year.

**Note:** A CCPC calculating a refundable ITC is considered to be associated with another corporation if it meets any of the conditions in subsection 256(1), except where:

- one corporation is associated with another corporation solely because one or more persons own shares of the capital stock of both corporations; and
- one of the corporations has at least one shareholder who is not common to both corporations.

If you are a **qualifying** corporation, you will earn a **100%** refund on your share of any ITCs earned at the 35% rate on qualified **current** expenditures for SR&ED, up to the allocated expenditure limit. The 100% refund does not apply to qualified **capital** expenditures eligible for the 35% credit rate. They are only eligible for the **40%** refund*.

Some CCPCs that are **not qualifying** corporations may also earn a **100%** refund on their share of any ITCs earned at the 35% rate on qualified **current** expenditures for SR&ED, up to the allocated expenditure limit. The expenditure limit can be determined in Part 10. The 100% refund does not apply to qualified **capital** expenditures eligible for the 35% credit rate. They are only eligible for the **40%** refund*.

The 100% refund will not be available to a corporation that is an **excluded corporation** as defined under subsection 127.1(2). A corporation is an excluded corporation if, at any time during the year, it is a corporation that is either controlled by (directly or indirectly, in any manner whatever) or is related to:

a) one or more persons exempt from Part I tax under section 149;

b) Her Majesty in right of a province, a Canadian municipality, or any other public authority; or

c) any combination of persons referred to in a) or b) above.

* Capital expenditures incurred after December 31, 2013, including lease payments for property that would have been a capital expenditure if purchased directly, are **not** qualified SR&ED expenditures and are **not** eligible for an ITC on SR&ED expenditures.

## Part 3 – Corporations in the farming industry

Complete this area if the corporation is making SR&ED contributions.

Is the corporation claiming a contribution in the current year to an agricultural organization whose goal is to finance SR&ED work (for example, check-off dues)? . . . . . 102 1 Yes [ ] 2 No [X]

Contributions to agricultural organizations for SR&ED* . . . . . 103 ______

If **yes**, complete Schedule 125, *Income Statement Information*, to identify the type of farming industry the corporation is involved in. For more information on Schedule 125, see Guide RC4088, *General Index of Financial Information (GIFI)*. Enter contributions on line 350 of Part 8.

* Enter only contributions not already included on Form T661. Include all of the contributions made before 2013 and 80% of the contributions made after 2012.

# Qualified Property and Qualified Resource Property

## Part 4 – Eligible investments for qualified property and qualified resource property from the current tax year

| CCA* class number 105 | Description of investment 110 | Date available for use 115 | Location used (province or territory) 120 | Amount of investment 125 |
|---|---|---|---|---|
| | | | | |

**Total of investments for qualified property and qualified resource property** ______ A

* CCA: capital cost allowance

## Part 5 – Current-year credit and account balances – ITC from investments in qualified property and qualified resource property

ITC at the end of the previous tax year . . . . . . . . . . B

**Deduct:**

Credit deemed as a remittance of co-op corporations . . . . . . . . 210

Credit expired . . . . . . . . 215

Subtotal (line 210 **plus** line 215) ▶ C

ITC at the beginning of the tax year (amount B **minus** amount C) . . . . . . . . 220

**Add:**

Credit transferred on amalgamation or wind-up of subsidiary . . . . . . . . 230

ITC from repayment of assistance . . . . . . . . 235

Qualified property; and qualified resource property acquired after March 28, 2012, and before January 1, 2014* (applicable part of amount A from Part 4) . . . . . . . . x 10 % = 240

Qualified resource property acquired after December 31, 2013, and before January 1, 2016 (applicable part of amount A from Part 4) . . . . . . . x 5 % = 242

Credit allocated from a partnership . . . . . . . . 250

Subtotal (total of lines 230 to 250) ▶ D

Total credit available (line 220 **plus** amount D) . . . . . . . . E

**Deduct:**

Credit deducted from Part I tax (enter at amount D in Part 30) . . . . . . . . 260

Credit carried back to the previous year(s) (amount H from Part 6) . . . . . . . . a

Credit transferred to offset Part VII tax liability . . . . . . . . 280

Subtotal (total of line 260, amount a, and line 280) ▶ F

Credit balance before refund (amount E **minus** amount F) . . . . . . . . G

**Deduct:**

Refund of credit claimed on investments from qualified property and qualified resource property (from Part 7) . . . . . . . . . . 310

**ITC closing balance of investments from qualified property and qualified resource property** (amount G **minus** line 310) 320

* Include investments acquired after 2013 and before 2017 that are eligible for transitional relief.

## Part 6 – Request for carryback of credit from investments in qualified property and qualified resource property

| | Year | Month | Day | | | |
|---|---|---|---|---|---|---|
| 1st previous tax year | | | | Credit to be applied | 901 | |
| 2nd previous tax year | | | | Credit to be applied | 902 | |
| 3rd previous tax year | | | | Credit to be applied | 903 | |
| | | | | **Total** (enter at amount a in Part 5) | | H |

## Part 7 – Refund of ITC for qualifying corporations on investments from qualified property and qualified resource property

Current-year ITCs (total of lines 240, 242, and 250 from Part 5) . . . . . . . . I

Credit balance before refund (amount G from Part 5) . . . . . . . . J

**Refund** ( 40 % of amount I or J, whichever is less) . . . . . . . . K

Enter amount K or a lesser amount on line 310 in Part 5 (also enter it on line 780 of the T2 return if the corporation does not claim an SR&ED ITC refund).

## SR&ED

### Part 8 – Qualified SR&ED expenditures

**Current expenditures**

| | | | |
|---|---|---|---|
| Current expenditures (from line 557 on Form T661) | | | |
| **Add:** | | | |
| Contributions to agricultural organizations for SR&ED* | | | |
| Current expenditures (line 557 on Form T661 **plus** line 103 from Part 3)* | ► | 350 | |
| Capital expenditures incurred **before** 2014 (from line 558 on Form T661)** | | 360 | |
| Repayments made in the year (from line 560 on Form T661) | | 370 | |
| **Qualified SR&ED expenditures** (total of lines 350 to 370) | | 380 | |

* If you are claiming only contributions made to agricultural organizations for SR&ED, line 350 should equal line 103 in Part 3. Do not file Form T661.

** Capital expenditures incurred after December 31, 2013, are not qualified SR&ED expenditures.

### Part 9 – Components of the SR&ED expenditure limit calculation

**Part 9 only applies if the corporation is a CCPC.**

**Note:** A CCPC that calculates an SR&ED expenditure limit is considered to be associated with another corporation if it meets any of the conditions in subsection 256(1), except where:

- one corporation is associated with another corporation solely because one or more persons own shares of the capital stock of the corporation; and
- one of the corporations has at least one shareholder who is not common to both corporations.

Is the corporation associated with another CCPC for the purpose of calculating the SR&ED expenditure limit? 385 1 Yes [ ] 2 No [X]

Complete lines 390 and 398 if you answered **no** to the question at line 385 above or if the corporation is not associated with any other corporations (the amounts for associated corporations will be determined on Schedule 49).

| | | |
|---|---|---|
| Enter your taxable income for the previous tax year* (prior to any loss carry-backs applied) | 390 | 26,900,819 |
| Enter your taxable capital employed in Canada for the previous tax year 642,512,864 minus $10 million. If this amount is nil or negative, enter "0". If this amount is over $40 million, enter $40 million | 398 | 40,000,000 |

* If either of the tax years referred to at line 390 is less than 51 weeks, **multiply** the taxable income by the following result: 365 **divided** by the number of days in these tax years.

### Part 10 – SR&ED expenditure limit for a CCPC

| | | | |
|---|---|---|---|
| **For a stand-alone corporation:** | | $ 8,000,000 | |
| **Deduct:** | | | |
| Taxable income for the previous tax year (line 390 from Part 9) or $500,000, whichever is more | 26,900,819 x 10 = | 269,008,190 | A |
| Excess ($8,000,000 **minus** amount A; if negative, enter "0") | | | B |
| $ 40,000,000 **minus** line 398 from Part 9 | a | | |
| Amount a **divided** by $ 40,000,000 | | | C |
| **Expenditure limit for the stand-alone corporation** (amount B **multiplied** by amount C) | | | D* |
| **For an associated corporation:** | | | |
| If associated, the allocation of the SR&ED expenditure limit as provided on Schedule 49 | 400 | | E* |

**Where the tax year of the corporation is less than 51 weeks, calculate the amount of the expenditure limit as follows:**

Amount D or E ______ x Number of days in the tax year 365 / 365 = ______ F

**Your SR&ED expenditure limit for the year** (enter the amount from line D, E, or F, whichever applies) 410 ______

* Amount D or E cannot be more than $3,000,000.

## Part 11 – Investment tax credits on SR&ED expenditures

| | | | | | | |
|---|---|---|---|---|---|---|
| Current expenditures (line 350 from Part 8) or the expenditure limit (line 410 from Part 10), whichever is less* | 420 | | x | 35 % | = | G |
| Line 350 **minus** line 410 (if negative, enter "0")** | 430 | | x | 20 % | = | H |
| Line 410 **minus** line 350 (if negative, enter "0") | | b | | | | |
| Capital expenditures (line 360 from Part 8) or amount b above, whichever is less* | 440 | | x | 35 % | = | I |
| Line 360 **minus** amount b above (if negative, enter "0")** | 450 | | x | 20 % | = | J |

**Repepayments** (amount from line 370 in Part 8)

If a corporation makes a repayment of any government or non-government assistance, or contract payments that reduced the amount of qualified expenditures for ITC purposes, the amount of the repayment is eligible for a credit at the rate that would have applied to the repaid amount. Enter the amount of the repayment on the line that corresponds to the appropriate rate.**

| | | | | | | |
|---|---|---|---|---|---|---|
| 460 | | x | 35 % | = | | c |
| 480 | | x | 20 % | = | | d |
| | | | Subtotal (amount c **plus** amount d) | | ▶ | K |

**Current-year SR&ED ITC** (total of amounts G to K; enter on line 540 in Part 12) L

* For corporations that are not CCPCs, enter "0" for amounts G and I.

** For tax years that end after 2013, the general SR&ED rate is reduced from 20% to 15%, except that, for 2014 tax years that start before 2014, the reduction is pro-rated based on the number of days in the tax year that are after 2013.

## Part 12 – Current-year credit and account balances – ITC from SR&ED expenditures

| | | | |
|---|---|---|---|
| ITC at the end of the previous tax year | | | M |
| **Deduct:** | | | |
| Credit deemed as a remittance of co-op corporations | 510 | | |
| Credit expired | 515 | | |
| Subtotal (line 510 **plus** line 515) | | ▶ | N |
| ITC at the beginning of the tax year (amount M **minus** amount N) | | 520 | |
| **Add:** | | | |
| Credit transferred on amalgamation or wind-up of subsidiary | 530 | | |
| Total current-year credit (from amount L in Part 11) | 540 | | |
| Credit allocated from a partnership | 550 | | |
| Subtotal (total of lines 530 to 550) | | ▶ | O |
| Total credit available (line 520 **plus** amount O) | | | P |
| **Deduct:** | | | |
| Credit deducted from Part I tax (enter at amount E in Part 30) | 560 | | |
| Credit carried back to the previous year(s) (amount S from Part 13) | | e | |
| Credit transferred to offset Part VII tax liability | 580 | | |
| Subtotal (total of line 560, amount e, and line 580) | | ▶ | Q |
| Credit balance before refund (amount P **minus** amount Q) | | | R |
| **Deduct:** | | | |
| Refund of credit claimed on SR&ED expenditures (from Part 14 or 15, whichever applies) | | 610 | |
| **ITC closing balance on SR&ED** (amount R **minus** line 610) | | 620 | |

## Part 13 – Request for carryback of credit from SR&ED expenditures

| | Year | Month | Day | | | | |
|---|---|---|---|---|---|---|---|
| 1st previous tax year | | | | Credit to be applied | 911 | | |
| 2nd previous tax year | | | | Credit to be applied | 912 | | |
| 3rd previous tax year | | | | Credit to be applied | 913 | | |
| | | | | **Total** (enter at amount e in Part 12) | | | S |

## Part 14 – Refund of ITC for qualifying corporations – SR&ED

Complete this part only if you are a qualifying corporation as determined at line 101 in Part 2.

Is the corporation an excluded corporation as defined under subsection 127.1(2)? 650 1 Yes [ ] 2 No [X]

Current-year ITC (lines 540 **plus** 550 from Part 12 **minus** amount K from Part 11) ______ f

Refundable credits (amount f above or amount R from Part 12, whichever is less)* ______ T

**Deduct:**

Amount T or amount G from Part 11, whichever is less ______ U

Net amount (amount T **minus** amount U; if negative, enter "0") ______ V

Amount V **multiplied** by 40 % ______ W

**Add:**

Amount U ______ X

**Refund of ITC** (amount W **plus** amount X – enter this, or a lesser amount, on line 610 in Part 12) ______ Y

Enter the total of lines 310 from Part 5 and 610 from Part 12 on line 780 of the T2 return.

* If you are also an excluded corporation [as defined in subsection 127.1(2)], this amount must be multiplied by 40%. Claim this, or a lesser amount, as your refund of ITC for amount Y.

## Part 15 – Refund of ITC for CCPCs that are not qualifying or excluded corporations – SR&ED

Complete this box only if you are a CCPC that is not a qualifying or excluded corporation as determined at line 101 in Part 2.

Credit balance before refund (amount R from Part 12) ______ Z

**Deduct:**

Amount Z or amount G from Part 11, whichever is less ______ AA

Net amount (amount Z **minus** amount AA; if negative, enter "0") ______ BB

Amount BB or amount I from Part 11, whichever is less ______ CC

Amount CC **multiplied** by 40 % ______ DD

**Add :**

Amount AA ______ EE

**Refund of ITC** (amount DD **plus** amount EE) ______ FF

Enter FF, or a lesser amount, on line 610 in Part 12 and also on line 780 of the T2 return.

# Recapture – SR&ED

## Part 16 – Recapture of ITC for corporations and corporate partnerships – SR&ED

You will have a recapture of ITC in a year when **all** of the following conditions are met:

- you acquired a particular property in the current year or in any of the 20 previous tax years, if the credit was earned in a tax year ending after 1997 and did not expire before 2008;
- you claimed the cost of the property as a qualified expenditure for SR&ED on Form T661;
- the cost of the property was included in calculating your ITC or was the subject of an agreement made under subsection 127(13) to transfer qualified expenditures; and
- you disposed of the property or converted it to commercial use after February 23, 1998. This condition is also met if you disposed of or converted to commercial use a property that incorporates the particular property previously referred to.

**Note:**

The recapture **does not apply** if you disposed of the property to a non-arm's-length purchaser who intended to use it all or substantially all for SR&ED. When the non-arm's-length purchaser later sells or converts the property to commercial use, the recapture rules will apply to the purchaser based on the historical ITC rate of the original user.

You will report a recapture on the T2 return for the year in which you disposed of the property or converted it to commercial use. In the following tax year, add the amount of the ITC recapture to the SR&ED expenditure pool.

If you have more than one disposition for calculations 1 and 2, complete the columns for each disposition for which a recapture applies, using the calculation formats below.

### Calculation 1 – If you meet all of the above conditions

| Amount of ITC you originally calculated for the property you acquired, or the original user's ITC where you acquired the property from a non-arm's length party, as described in the note above **700** | Amount calculated using ITC rate at the date of acquisition (or the original user's date of acquisition) on either the proceeds of disposition (if sold in an arm's length transaction) or the fair market value of the property (in any other case) **710** | Amount from column 700 or 710, whichever is less |
|---|---|---|
| | | |

**Subtotal** (enter this amount at amount C in Part 17) ______ A

### Calculation 2 – Only if you transferred all or a part of the qualified expenditure to another person under an agreement described in subsection 127(13); otherwise, enter nil in amount B in Part 16 on page 9.

| **A** Rate that the transferee used in determining its ITC for qualified expenditures under a subsection 127(13) agreement **720** | **B** Proceeds of disposition of the property if you dispose of it to an arm's length person; or, in any other case, enter the fair market value of the property at conversion or disposition **730** | **C** Amount, if any, already provided for in Calculation 1 (This allows for the situation where only part of the cost of a property is transferred under a subsection 127(13) agreement.) **740** |
|---|---|---|
| | | |

### Calculation 2 (continued) – Only if you transferred all or a part of the qualified expenditure to another person under an agreement described in subsection 127(13); otherwise, enter nil in amount B below.

| **D** Amount determined by the formula (A x B) – C | **E** ITC earned by the transferee for the qualified expenditures that were transferred **750** | **F** Amount from column D or E, whichever is less |
|---|---|---|
| | | |

**Subtotal** (enter this amount at amount D in Part 17) ______ B

**Calculation 3**

As a member of the partnership, you will report your share of the SR&ED ITC of the partnership after the SR&ED ITC has been reduced by the amount of the recapture. If this amount is a positive amount, you will report it on line 550 in Part 12. However, if the partnership does not have enough ITC otherwise available to offset the recapture, then the amount by which reductions to ITC exceed additions (the excess) will be determined and reported on line 760 below.

Corporate partner's share of the excess of SR&ED ITC (amount to be reported at amount E in Part 17) **760** ____________

## Part 17 – Total recapture of SR&ED investment tax credit

| | | |
|---|---|---|
| Recaptured ITC for calculation 1 from amount A in Part 16 | | C |
| Recaptured ITC for calculation 2 from amount B in Part 16 | | D |
| Recaptured ITC for calculation 3 from line 760 in Part 16 | | E |
| **Total recapture of SR&ED investment tax credit** – total of amounts C to E<br>Enter amount F at amount A in Part 29. | | F |

# Pre-Production Mining

## Part 18 – Pre-production mining expenditures

**Exploration information**

A mineral resource that qualifies for the credit means a mineral deposit from which the principal mineral to be extracted is diamond, a base or precious metal deposit, or a mineral deposit from which the principal mineral to be extracted is an industrial mineral that, when refined, results in a base or precious metal.

In column 800, list all minerals for which pre-production mining expenditures have taken place in the tax year.

For each of the minerals reported in column 800, identify each project (in column 805), mineral title (in column 806), and mining division (in column 807) where title is registered. If there is no mineral title, identify only the project and mining division.

| List of minerals 800 | Project name 805 |
|---|---|
| | |

| Mineral title 806 | Mining division 807 |
|---|---|
| | |

**Pre-production mining expenditures***

**Exploration:**

Pre-production mining expenditures that the corporation incurred in the tax year for the purpose of determining the existence, location, extent, or quality of a mineral resource in Canada:

| | | |
|---|---|---|
| Prospecting | 810 | |
| Geological, geophysical, or geochemical surveys | 811 | |
| Drilling by rotary, diamond, percussion, or other methods | 812 | |
| Trenching, digging test pits, and preliminary sampling | 813 | |

**Development:**

Pre-production mining expenditures incurred in the tax year for bringing a new mine in a mineral resource in Canada into production in reasonable commercial quantities and incurred before the new mine comes into production in such quantities:

| | | |
|---|---|---|
| Clearing, removing overburden, and stripping | 820 | |
| Sinking a mine shaft, constructing an adit, or other underground entry | 821 | |

Other pre-production mining expenditures incurred in the tax year:

| Description 825 | Amount 826 |
|---|---|
| | |

Add amounts in column 826 ▶ A

| | | |
|---|---|---|
| Total pre-production mining expenditures (total of lines 810 to 821 and amount A) | 830 | |

**Deduct:**

| | | |
|---|---|---|
| Total of all assistance (grants, subsidies, rebates, and forgivable loans) or reimbursements that the corporation has received or is entitled to receive in respect of the amounts referred to at line 830 above | 832 | |
| Excess (line 830 **minus** line 832) (if negative, enter "0") | | B |

**Add:**

| | | |
|---|---|---|
| Repayments of government and non-government assistance | 835 | |
| **Pre-production mining expenditures** (amount B **plus** line 835) | | C |

* A pre-production mining expenditure is defined under subsection 127(9).

## Part 19 – Current-year credit and account balances – ITC from pre-production mining expenditures

ITC at the end of the previous tax year ........ D

**Deduct:**

Credit deemed as a remittance of co-op corporations ........ 841

Credit expired ........ 845

Subtotal (line 841 **plus** line 845) ▶ E

ITC at the beginning of the tax year (amount D **minus** amount E) ........ 850

**Add:**

Credit transferred on amalgamation or wind-up of subsidiary ........ 860

Pre-production mining expenditures* incurred before January 1, 2013 (applicable part of amount C from Part 18) .. 870 x 10 % = a

Pre-production mining exploration expenditures incurred in 2013 (applicable part of amount C from Part 18) .. 872 x 5 % = b

Pre-production mining development expenditures incurred in 2014 (applicable part of amount C from Part 18) .. 874 x 7 % = c

Pre-production mining development expenditures incurred in 2015 (applicable part of amount C from Part 18) .. 876 x 4 % = d

Current year credit (total of amounts a to d) 880 ▶ F

Total credit available (total of lines 850, 860, and amount F) ........ G

**Deduct:**

Credit deducted from Part I tax (enter at amount F in Part 30) ........ 885

Credit carried back to the previous year(s) (amount I from Part 20) ........ e

Subtotal (line 885 **plus** amount e) ▶ H

**ITC closing balance from pre-production mining expenditures** (amount G **minus** amount H) ........ 890

* Also include pre-production mining development expenditures incurred before 2014 and pre-production mining development expenditures incurred after 2013 and before 2016 that are eligible for transitional relief.

## Part 20 – Request for carryback of credit from pre-production mining expenditures

| | Year | Month | Day | | |
|---|---|---|---|---|---|
| 1st previous tax year | | | | Credit to be applied | 921 |
| 2nd previous tax year | | | | Credit to be applied | 922 |
| 3rd previous tax year | | | | Credit to be applied | 923 |

**Total** (enter at amount e in Part 19) I

### Apprenticeship Job Creation

## Part 21 – Total current-year credit – ITC from apprenticeship job creation expenditures

If you are a related person as defined under subsection 251(2), has it been agreed in writing that you are the only employer who will be claiming the apprenticeship job creation tax credit for this tax year for each apprentice whose contract number (or social insurance number or name) appears below? (If not, you cannot claim the tax credit.) ....... 611 1 Yes ☐ 2 No ☐

For each apprentice in their first 24 months of the apprenticeship, enter the apprenticeship contract number registered with Canada, or a province or territory, under an apprenticeship program designed to certify or license individuals in the trade. For the province, the trade must be a Red Seal trade. If there is no contract number, enter the social insurance number (SIN) or the name of the eligible apprentice.

| | A Contract number (SIN or name of apprentice) 601 | B Name of eligible trade 602 | C Eligible salary and wages* 603 | D Column C x 10 % 604 | E Lesser of column D or $ 2,000 605 |
|---|---|---|---|---|---|
| 1. | [redacted] | [redacted] | 36,805 | 3,681 | 2,000 |
| 2. | [redacted] | [redacted] | 35,752 | 3,575 | 2,000 |

| | A<br>Contract number<br>(SIN or name of apprentice)<br>601 | B<br>Name of eligible trade<br>602 | C<br>Eligible salary and wages*<br>603 | D<br>Column C x 10 %<br>604 | E<br>Lesser of column D or $ 2,000<br>605 |
|---|---|---|---|---|---|
| 3. | [redacted] | [redacted] | 37,103 | 3,710 | 2,000 |
| 4. | [redacted] | [redacted] | 36,428 | 3,643 | 2,000 |

## Part 23 – Request for carryback of credit from apprenticeship job creation expenditures

| | Year | Month | Day | | | |
|---|---|---|---|---|---|---|
| 1st previous tax year | | | | Credit to be applied | 931 | |
| 2nd previous tax year | | | | Credit to be applied | 932 | |
| 3rd previous tax year | | | | Credit to be applied | 933 | |
| | | | | **Total** (enter at amount a in Part 22) | | G |

# Child Care Spaces

## Part 24 – Eligible child care spaces expenditures

Enter the eligible expenditures that the corporation incurred to create licensed child care spaces for the children of the employees and, potentially, for other children. The corporation cannot be carrying on a child care services business. The eligible expenditures include:

- the cost of depreciable property (other than specified property); and
- the specified child care start-up expenditures;

acquired or incurred only to create new child care spaces at a licensed child care facility.

### Cost of depreciable property from the current tax year

| | CCA* class number 665 | Description of investment 675 | Date available for use 685 | Amount of investment 695 |
|---|---|---|---|---|
| 1. | | | | |

Total cost of depreciable property from the current tax year 715

**Add:**

Specified child care start-up expenditures from the current tax year . . . . . 705

Total gross eligible expenditures for child care spaces (line 715 **plus** line 705) . . . . . A

**Deduct:**

Total of all assistance (including grants, subsidies, rebates, and forgivable loans) or reimbursements that the corporation has received or is entitled to receive in respect of the amounts referred to at line A . . . . . 725

Excess (amount A **minus** line 725) (if negative, enter "0") . . . . . B

**Add:**

Repayments by the corporation of government and non-government assistance . . . . . 735

**Total eligible expenditures for child care spaces** (amount B **plus** line 735) . . . . . 745

* CCA: capital cost allowance

## Part 25 – Current-year credit – ITC from child care spaces expenditures

The credit is equal to 25% of eligible child care spaces expenditures incurred to a maximum of $10,000 per child care space created in a licensed child care facility.

Eligible expenditures (from line 745) . . . . . x 25 % = C

Number of child care spaces . . . . . 755 x $ 10,000 = D

**ITC from child care spaces expenditures** (amount C or D, whichever is less) . . . . . E

## Part 26 – Current-year credit and account balances – ITC from child care spaces expenditures

| | | | | |
|---|---|---|---|---|
| ITC at the end of the previous tax year | | | | F |
| **Deduct:** | | | | |
| Credit deemed as a remittance of co-op corporations | 765 | | | |
| Credit expired after 20 tax years | 770 | | | |
| Subtotal (line 765 **plus** line 770) | | | ▶ | G |
| ITC at the beginning of the tax year (amount F **minus** amount G) | | | 775 | |
| **Add:** | | | | |
| Credit transferred on amalgamation or wind-up of subsidiary | 777 | | | |
| Total current-year credit (amount E from Part 25) | 780 | | | |
| Credit allocated from a partnership | 782 | | | |
| Subtotal (total of lines 777 to 782) | | | ▶ | H |
| Total credit available (line 775 **plus** amount H) | | | | I |
| **Deduct:** | | | | |
| Credit deducted from Part I tax (enter at amount H in Part 30) | 785 | | | |
| Credit carried back to the previous year(s) (amount K from Part 27) | | | a | |
| Subtotal (line 785 **plus** amount a) | | | ▶ | J |
| **ITC closing balance from child care spaces expenditures** (amount I **minus** amount J) | | | 790 | |

## Part 27 – Request for carryback of credit from child care space expenditures

| | Year Month Day | | | |
|---|---|---|---|---|
| 1st previous tax year | 2012-12-31 | Credit to be applied | 941 | |
| 2nd previous tax year | 2011-12-31 | Credit to be applied | 942 | |
| 3rd previous tax year | 2010-12-31 | Credit to be applied | 943 | |
| | | **Total** (enter at amount a in Part 26) | | K |

# Recapture – Child Care Spaces

## Part 28 – Recapture of ITC for corporations and corporate partnerships – Child care spaces

The ITC will be recovered against the taxpayer's tax otherwise payable under Part I of the Act if, at any time within 60 months of the day on which the taxpayer acquired the property:

- the new child care space is no longer available; or
- property that was an eligible expenditure for the child care space is:
  - disposed of or leased to a lessee; or
  - converted to another use.

| | | | |
|---|---|---|---|
| If the property disposed of is a child care space, the amount that can reasonably be considered to have been included in the original ITC (paragraph 127(27.12)(a)) | | 792 | |
| In the case of eligible expenditures (paragraph 127(27.12)(b)), the lesser of: | | | |
| The amount that can reasonably be considered to have been included in the original ITC | 795 | | |
| 25% of either the proceeds of disposition (if sold in an arm's length transaction) or the fair market value (in any other case) of the property | 797 | | |
| Amount from line 795 or line 797, whichever is less | | | A |

**Corporate partnerships**

As a member of the partnership, you will report your share of the child care spaces ITC of the partnership after the child care spaces ITC has been reduced by the amount of the recapture. If this amount is a positive amount, you will report it on line 782 in Part 26. However, if the partnership does not have enough ITC otherwise available to offset the recapture, then the amount by which reductions to ITC exceed additions (the excess) will be determined and reported on line 799 below.

| | | | |
|---|---|---|---|
| **Corporate partner's share of the excess of ITC** | 799 | | |
| **Total recapture of child care spaces investment tax credit** (total of line 792, amount A, and line 799) | | | B |

Enter amount B at amount B in Part 29.

# Summary of Investment Tax Credits

## Part 29 – Total recapture of investment tax credit

| | | |
|---|---|---|
| Recaptured SR&ED ITC (from amount F in Part 17) | | A |
| Recaptured child care spaces ITC (from amount B in Part 28) | | B |
| **Total recapture of investment tax credit** (amount A **plus** amount B) | | C |

Enter amount C on line 602 of the T2 return.

## Part 30 – Total ITC deducted from Part I tax

| | | |
|---|---|---|
| ITC from investments in qualified property deducted from Part I tax (from line 260 in Part 5) | | D |
| ITC from SR&ED expenditures deducted from Part I tax (from line 560 in Part 12) | | E |
| ITC from pre-production mining expenditures deducted from Part I tax (from line 885 in Part 19) | | F |
| ITC from apprenticeship job creation expenditures deducted from Part I tax (from line 660 in Part 22) | 11,878 | G |
| ITC from child care space expenditures deducted from Part I tax (from line 785 in Part 26) | | H |
| **Total ITC deducted from Part I tax** (total of amounts D to H) | 11,878 | I |

Enter amount I at line 652 of the T2 return.

**SCHEDULE 50**

# SHAREHOLDER INFORMATION

| Name of corporation | Business Number | Tax year end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

All private corporations must complete this schedule for any shareholder who holds 10% or more of the corporation's common and/or preferred shares.

| | Name of shareholder (after name, indicate in brackets if the shareholder is a corporation, partnership, individual, or trust) | Provide only one number per shareholder: Business Number (If a corporation is not registered, enter "NR") | Social insurance number | Trust number | Percentage common shares | Percentage preferred shares |
|---|---|---|---|---|---|---|
| | 100 | 200 | 300 | 350 | 400 | 500 |
| 1 | Hydro Ottawa Holding Inc. | 89411 0816 RC0001 | | | 100.000 | |
| 2 | | | | | | |
| 3 | | | | | | |
| 4 | | | | | | |
| 5 | | | | | | |
| 6 | | | | | | |
| 7 | | | | | | |
| 8 | | | | | | |
| 9 | | | | | | |

**SCHEDULE 53**

# GENERAL RATE INCOME POOL (GRIP) CALCULATION

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

On: 2013-12-31

- If you are a Canadian-controlled private corporation (CCPC) or a deposit insurance corporation (DIC), use this schedule to determine the general rate income pool (GRIP).
- When an eligible dividend was paid in the tax year, file a completed copy of this schedule with your *T2 Corporation Income Tax Return*. Do not send your worksheets with your return, but keep them in your records in case we ask to see them later.
- Subsections referred to in this schedule are from the I*ncome Tax Act*.
- Subsection 89(1) defines the terms eligible dividend, excessive eligible dividend designation, general rate income pool, and low rate income pool.

## Eligibility for the various additions

Answer the following questions to determine the corporation's eligibility for the various additions:

**2006 addition**

1. Is this the corporation's first taxation year that includes January 1, 2006? ☐ Yes ☒ No
2. If not, what is the date of the taxation year end of the corporation's first year that includes January 1, 2006? Enter the date and go directly to question 4 2006-12-31
3. During that first year, was the corporation a CCPC or would it have been a CCPC if not for the election of subsection 89(11) ITA? ☒ Yes ☐ No
   **If the answer to question 3 is yes, complete Part "GRIP addition for 2006".**

**Change in the type of corporation**

4. Was the corporation a CCPC during its preceding taxation year? ☒ Yes ☐ No
5. Corporations that become a CCPC or a DIC ☐ Yes ☒ No
   **If the answer to question 5 is yes, complete Part 4.**

**Amalgamation (first year of filing after amalgamation)**

6. Corporations that were formed as a result of an amalgamation ☐ Yes ☒ No
   **If the answer to question 6 is yes, answer questions 7 and 8. If the answer is no, go to question 9.**
7. Was one or more of the predecessor corporations neither a CCPC nor a DIC? ☐ Yes ☐ No
   **If the answer to question 7 is yes, complete Part 4.**
8. Was one or more of the predecessor corporation a CCPC or a DIC during the taxation year that ended immediately before amalgamation? ☐ Yes ☐ No
   **If the answer to question 8 is yes, complete Part 3.**

**Winding-up**

9. Has the corporation wound-up a subsidiary in the preceding taxation year? ☐ Yes ☒ No
   **If the answer to question 9 is yes, answer questions 10 and 11. If the answer is no, go to Part 1.**
10. Was the subsidiary neither a CCPC nor a DIC during its last taxation year? ☐ Yes ☐ No
    **If the answer to question 10 is yes, complete Part 4.**
11. Was the subsidiary a CCPC or a DIC during its last taxation year? ☐ Yes ☐ No
    **If the answer to question 11 is yes, complete Part 3.**

## Part 1 – Calculation of general rate income pool (GRIP)

| | | | | |
|---|---|---|---|---|
| GRIP at the end of the previous tax year | | | 100 | 172,381,397 A |
| Taxable income for the year (DICs enter "0") * | 110 | 26,428,300 B | | |
| Income for the credit union deduction * (amount E in Part 3 of Schedule 17) ... 120 | | | | |
| Amount on line 400, 405, 410, or 425 of the T2 return, whichever is less * ... 130 | | | | |
| For a CCPC, the lesser of aggregate investment income (line 440 of the T2 return) and taxable income * ... 140 | | | | |
| Subtotal (**add** lines 120, 130, and 140) ► | | C | | |
| Income taxable at the general corporate rate (line B **minus** line C) (if negative enter "0") | 150 | 26,428,300 | | |
| After-tax income (line 150 x general rate factor for the tax year ** 0.72 ) | | | 190 | 19,028,376 D |
| Eligible dividends received in the tax year | 200 | | | |
| Dividends deductible under section 113 received in the tax year | 210 | | | |
| Subtotal (**add** lines 200 and 210) ► | | | | E |
| GRIP addition: | | | | |
| Becoming a CCPC (line PP from Part 4) | 220 | | | |
| Post-amalgamation (total of lines EE from Part 3 and lines PP from Part 4) | 230 | | | |
| Post-wind-up (total of lines EE from Part 3 and lines PP from Part 4) | 240 | | | |
| Subtotal (**add** lines 220, 230, and 240) ► | | | 290 | F |
| Subtotal (**add** lines A, D, E, and F) | | | | 191,409,773 G |
| Eligible dividends paid in the previous tax year | 300 | | | |
| Excessive eligible dividend designations made in the previous tax year | 310 | | | |
| **Note:** If becoming a CCPC (subsection 89(4) applies), enter "0" on lines 300 and 310. | | | | |
| Subtotal (line 300 **minus** line 310) ► | | | | H |
| GRIP before adjustment for specified future tax consequences (line G **minus** line H) (amount can be negative) | | | 490 | 191,409,773 |
| Total GRIP adjustment for specified future tax consequences to previous tax years (amount W from Part 2) | | | 560 | |
| **GRIP at the end of the tax year** (line 490 **minus** line 560) Enter this amount on line 160 of Schedule 55. | | | 590 | 191,409,773 |

* For lines 110, 120, 130, and 140, the income amount is the amount before considering specified future tax consequences. This phrase is defined in subsection 248(1). It includes the deduction of a loss carryback from subsequent tax years, a reduction of Canadian exploration expenses and Canadian development expenses that were renounced in subsequent tax years (e.g., flow-through share renunciations), reversals of income inclusions where an option is exercised in subsequent tax years, and the effect of certain foreign tax credit adjustments.

** The **general rate factor** for a tax year is 0.68 for any portion of the tax year that falls before 2010, 0.69 for any portion of the tax year that falls in 2010, 0.70 for any portion of the tax year that falls in 2011, and 0.72 for any portion of the tax year that falls after 2011. Calculate the general rate factor in Part 5 for tax years that straddle these dates.

## Part 2 – GRIP adjustment for specified future tax consequences to previous tax years

Complete this part if the corporation's taxable income of any of the previous three tax years took into account the specified future tax consequences defined in subsection 248(1) from the current tax year. Otherwise, enter "0" on line 560.

**First previous tax year** 2012-12-31

| | | | |
|---|---|---|---|
| Taxable income before specified future tax consequences from the current tax year | | 26,900,819 J1 | |
| Enter the following amounts before specified future tax consequences from the current tax year: | | | |
| Income for the credit union deduction (amount E in Part 3 of Schedule 17) | K1 | | |
| Amount on line 400, 405, 410, or 425 of the T2 return, whichever is less | L1 | | |
| Aggregate investment income (line 440 of the T2 return) | M1 | | |
| Subtotal (**add** lines K1, L1, and M1) ► | | N1 | |
| Subtotal (line J1 **minus** line N1) (if negative, enter "0") | | 26,900,819 ► | 26,900,819 O1 |

## Part 2 – GRIP adjustment for specified future tax consequences to previous tax years (continued)

| Future tax consequences that occur for the current year<br>Amount carried back from the current year to a prior year | | | | | |
|---|---|---|---|---|---|
| **Non-capital loss carry-back (paragraph 111 (1)(a) ITA)** | **Capital loss carry-back** | **Restricted farm loss carry-back** | **Farm loss carry-back** | **Other** | **Total carrybacks** |
| | | | | | |

Taxable income after specified future tax consequences . . . . . . . . ______ P1

Enter the following amounts after specified future tax consequences:

Income for the credit union deduction (amount E in Part 3 of Schedule 17) . . . ______ Q1

Amount on line 400, 405, 410, or 425 of the T2 return, whichever is less . . . . ______ R1

Aggregate investment income (line 440 of the T2 return) . . . . . . . . . ______ S1

Subtotal (**add** lines Q1, R1, and S1) ______ ▶ ______ T1

Subtotal (line P1 **minus** line T1) (if negative, enter "0") ______ ▶ ______ U1

Subtotal (line O1 **minus** line U1) (if negative, enter "0") ______ V1

**GRIP adjustment for specified future tax consequences to the first previous tax year**

(line V1 **multiplied by** the general rate factor for the tax year 0.72 ) . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . **500** ______

**Second previous tax year** 2011-12-31

Taxable income before specified future tax consequences from the current tax year . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 32,674,141 J2

Enter the following amounts before specified future tax consequences from the current tax year:

Income for the credit union deduction (amount E in Part 3 of Schedule 17) . . . ______ K2

Amount on line 400, 405, 410, or 425 of the T2 return, whichever is less . . . . ______ L2

Aggregate investment income (line 440 of the T2 return) . . . . . . . . . ______ M2

Subtotal (**add** lines K2, L2, and M2) ______ ▶ ______ N2

Subtotal (line J2 **minus** line N2) (if negative, enter "0") 32,674,141 ▶ 32,674,141 O2

| Future tax consequences that occur for the current year<br>Amount carried back from the current year to a prior year | | | | | |
|---|---|---|---|---|---|
| **Non-capital loss carry-back (paragraph 111 (1)(a) ITA)** | **Capital loss carry-back** | **Restricted farm loss carry-back** | **Farm loss carry-back** | **Other** | **Total carrybacks** |
| | | | | | |

Taxable income after specified future tax consequences . . . . . . . . ______ P2

Enter the following amounts after specified future tax consequences:

Income for the credit union deduction (amount E in Part 3 of Schedule 17) . . . ______ Q2

Amount on line 400, 405, 410, or 425 of the T2 return, whichever is less . . . . ______ R2

Aggregate investment income (line 440 of the T2 return) . . . . . . . . . ______ S2

Subtotal (**add** lines Q2, R2, and S2) ______ ▶ ______ T2

Subtotal (line P2 **minus** line T2) (if negative, enter "0") ______ ▶ ______ U2

Subtotal (line O2 **minus** line U2) (if negative, enter "0") ______ V2

**GRIP adjustment for specified future tax consequences to the second previous tax year**

(line V2 **multiplied by** the general rate factor for the tax year 0.72 ) . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . **520** ______

## Part 2 – GRIP adjustment for specified future tax consequences to previous tax years (continued)

**Third previous tax year** 2010-12-31

Taxable income before specified future tax consequences from the current tax year . . . . . 40,602,698 J3

Enter the following amounts before specified future tax consequences from the current tax year:

Income for the credit union deduction (amount E in Part 3 of Schedule 17) . . . ______ K3

Amount on line 400, 405, 410, or 425 of the T2 return, whichever is less . . . . ______ L3

Aggregate investment income (line 440 of the T2 return) . . . . . 1,259,282 M3

Subtotal (**add** lines K3, L3, and M3) 1,259,282 ► 1,259,282 N3

Subtotal (line J3 **minus** line N3) (if negative, enter "0") 39,343,416 ► 39,343,416 O3

| Future tax consequences that occur for the current year<br>Amount carried back from the current year to a prior year | | | | | |
|---|---|---|---|---|---|
| **Non-capital loss carry-back (paragraph 111 (1)(a) ITA)** | **Capital loss carry-back** | **Restricted farm loss carry-back** | **Farm loss carry-back** | **Other** | **Total carrybacks** |
| | | | | | |

Taxable income after specified future tax consequences . . . . . ______ P3

Enter the following amounts after specified future tax consequences:

Income for the credit union deduction (amount E in Part 3 of Schedule 17) . . . ______ Q3

Amount on line 400, 405, 410, or 425 of the T2 return, whichever is less . . . . ______ R3

Aggregate investment income (line 440 of the T2 return) . . . . . ______ S3

Subtotal (**add** lines Q3, R3, and S3) ______ ► ______ T3

Subtotal (line P3 **minus** line T3) (if negative, enter "0") ______ ► ______ U3

Subtotal (line O3 **minus** line U3) (if negative, enter "0") ______ V3

**GRIP adjustment for specified future tax consequences to the third previous tax year**
(line V3 **multiplied by** the general rate factor for the tax year 0.72 ) . . . . . **540** ______

**Total GRIP adjustment for specified future tax consequences to previous tax years:**
(**add** lines 500, 520, and 540) (if negative, enter "0") . . . . . ______ W

Enter amount W on line 560.

## Part 3 – Worksheet to calculate the GRIP addition post-amalgamation or post-wind-up (predecessor or subsidiary was a CCPC or a DIC in its last tax year)

**nb. 1** Post amalgamation . . . ☐ Post wind-up . . . . . . ☐

Complete this part when there has been an amalgamation (within the meaning assigned by subsection 87(1)) or a wind-up (to which subsection 88(1) applies) and the predecessor or subsidiary corporation was a CCPC or a DIC in its last tax year. In the calculation below, **corporation** means a predecessor or a subsidiary. The last tax year for a predecessor corporation was its tax year that ended immediately before the amalgamation and for a subsidiary corporation was its tax year during which its assets were distributed to the parent on the wind-up.

For a post-wind-up, include the GRIP addition in calculating the parent's GRIP at the end of its tax year that immediately follows the tax year during which it receives the assets of the subsidiary.

Complete a separate worksheet for **each** predecessor and **each** subsidiary that was a CCPC or a DIC in its last tax year. Keep a copy of this calculation for your records, in case we ask to see it later.

Corporation's GRIP at the end of its last tax year . . . . . ______ AA

Eligible dividends paid by the corporation in its last tax year . . . . . ______ BB

Excessive eligible dividend designations made by the corporation in its last tax year . . . . . ______ CC

Subtotal (line BB **minus** line CC) ______ ► ______ DD

**GRIP addition post-amalgamation or post-wind-up (predecessor or subsidiary was a CCPC or a DIC in its last tax year)**
(line AA **minus** line DD) . . . . . ______ EE

After you complete this calculation for each predecessor and each subsidiary, calculate the total of all the EE lines. Enter this total amount on:

- line 230 for post-amalgamation; or
- line 240 for post-wind-up.

## Part 4 – Worksheet to calculate the GRIP addition post-amalgamation, post-wind-up (predecessor or subsidiary was not a CCPC or a DIC in its last tax year), or the corporation is becoming a CCPC

**nb. 1** Corporation becoming a CCPC . . . . . . ☐ Post amalgamation . . . . . . . . . . ☐ Post wind-up . . . . . . . . . . . . . ☐

Complete this part when there has been an amalgamation (within the meaning assigned by subsection 87(1)) or a wind-up (to which subsection 88(1) applies) and the predecessor or subsidiary was not a CCPC or a DIC in its last tax year. Also, use this part for a corporation becoming a CCPC. In the calculation below, **corporation** means a corporation becoming a CCPC, a predecessor, or a subsidiary.

For a post-wind-up, include the GRIP addition in calculating the parent's GRIP at the end of its tax year that immediately follows the tax year during which it receives the assets of the subsidiary.

Complete a separate worksheet for **each** predecessor and **each** subsidiary that was not a CCPC or a DIC in its last tax year. Keep a copy of this calculation for your records, in case we ask to see it later.

| | | | |
|---|---|---|---|
| Cost amount to the corporation of all property immediately before the end of its previous/last tax year | | | FF |
| The corporation's money on hand immediately before the end of its previous/last tax year | | | GG |
| Unused and unexpired losses at the end of the corporation's previous/last tax year: | | | |
| Non-capital losses | | | |
| Net capital losses | | | |
| Farm losses | | | |
| Restricted farm losses | | | |
| Limited partnership losses | | | |
| Subtotal | | ► | HH |
| Subtotal (**add** lines FF, GG, and HH) | | | II |
| All the corporation's debts and other obligations to pay that were outstanding immediately before the end of its previous/last tax year | | JJ | |
| Paid-up capital of all the corporation's issued and outstanding shares of capital stock immediately before the end of its previous/last tax year | | KK | |
| All the corporation's reserves deducted in its previous/last tax year | | LL | |
| The corporation's capital dividend account immediately before the end of its previous/last tax year | | MM | |
| The corporation's low rate income pool immediately before the end of its previous/last tax year | | NN | |
| Subtotal (**add** lines JJ, KK, LL, MM, and NN) | | ► | OO |
| **GRIP addition post-amalgamation or post-wind-up (predecessor or subsidiary was not a CCPC or a DIC in its last tax year), or the corporation is becoming a CCPC** (line II **minus** line OO) (if negative, enter "0") | | | PP |

After you complete this worksheet for each predecessor and each subsidiary, calculate the total of all the PP lines. Enter this total amount on:

- line 220 for a corporation becoming a CCPC;
- line 230 for post-amalgamation; or
- line 240 for post-wind-up.

## Part 5 – General rate factor for the tax year

Complete this part to calculate the general rate factor for the tax year.

| Rate | | Numerator description | Days | | Result | Line |
|---|---|---|---|---|---|---|
| 0.68 | x | number of days in the tax year before January 1, 2010 / number of days in the tax year | / 365 | = | | QQ |
| 0.69 | x | number of days in the tax year in 2010 / number of days in the tax year | / 365 | = | | RR |
| 0.7 | x | number of days in the tax year in 2011 / number of days in the tax year | / 365 | = | | SS |
| 0.72 | x | number of days in the tax year after December 31, 2011 / number of days in the tax year | 365 / 365 | = | 0.720000000 | TT |

**General rate factor for the tax year** (total of lines QQ to TT) . . . . . . . . . . . . . . . . . . . . 0.72000 UU

Canada Revenue Agency / Agence du revenu du Canada

**SCHEDULE 55**

# PART III.1 TAX ON EXCESSIVE ELIGIBLE DIVIDEND DESIGNATIONS

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

**Do not use this area**

- Every corporation resident in Canada that pays a taxable dividend (other than a capital gains dividend within the meaning assigned by subsection 130.1(4) or 131(1)) in the tax year must file this schedule.
- Canadian-controlled private corporations (CCPC) and deposit insurance corporations (DIC) must complete Part 1 of this schedule. All other corporations must complete Part 2.
- Every corporation that has paid an eligible dividend must also file Schedule 53, *General Rate Income Pool (GRIP) Calculation*, or Schedule 54, *Low Rate Income Pool (LRIP) Calculation*, whichever is applicable.
- File the completed schedules with your *T2 Corporation Income Tax Return* no later than six months from the end of the tax year.
- All legislative references on this schedule are to the federal *Income Tax Act*.
- Subsection 89(1) defines the terms eligible dividend, excessive eligible dividend designation, general rate income pool (GRIP), and low rate income pool (LRIP).
- The calculations in Part 1 and Part 2 do not apply if the excessive eligible dividend designation arises from the application of paragraph (c) of the definition of excessive eligible dividend designation in subsection 89(1). This paragraph applies when an eligible dividend is paid to artificially maintain or increase the GRIP or to artificially maintain or decrease the LRIP.

## Part 1 – Canadian-controlled private corporations and deposit insurance corporations

| | Line | Amount | Line | Amount | |
|---|---|---|---|---|---|
| Taxable dividends paid in the tax year **not included** in Schedule 3 | | | | | |
| Taxable dividends paid in the tax year **included** in Schedule 3 | | 15,000,000 | | | |
| Total taxable dividends paid in the tax year | 100 | 15,000,000 | | | |
| Total eligible dividends paid in the tax year | | | 150 | | A |
| GRIP at the end of the tax year (line 590 on Schedule 53) (if negative, enter "0") | | | 160 | 191,409,773 | B |
| Excessive eligible dividend designation (line 150 **minus** line 160) | | | | | C |
| **Deduct**: | | | | | |
| Excessive eligible dividend designations elected under subsection 185.1(2) to be treated as ordinary dividends* | | | 180 | | D |
| Subtotal (amount C **minus** amount D) | | | | | E |
| **Part III.1 tax on excessive eligible dividend designations – CCPC or DIC** (amount E **multiplied** by 20 %) | | | 190 | | F |

Enter the amount from line 190 on line 710 of the T2 return.

## Part 2 – Other corporations

| | Line | Amount | Line | Amount | |
|---|---|---|---|---|---|
| Taxable dividends paid in the tax year **not included** in Schedule 3 | | | | | |
| Taxable dividends paid in the tax year **included** in Schedule 3 | | | | | |
| Total taxable dividends paid in the tax year | 200 | | | | |
| Total excessive eligible dividend designations in the tax year (amount from line A of Schedule 54) | | | | | G |
| **Deduct**: | | | | | |
| Excessive eligible dividend designations elected under subsection 185.1(2) to be treated as ordinary dividends* | | | 280 | | H |
| Subtotal (amount G **minus** amount H) | | | | | I |
| **Part III.1 tax on excessive eligible dividend designations – Other corporations** (amount I **multiplied** by 20 %) | | | 290 | | J |

Enter the amount from line 290 on line 710 of the T2 return.

* You can elect to treat all or part of your excessive eligible dividend designation as a separate taxable dividend in order to eliminate or reduce the Part III.1 tax otherwise payable. You must file the election on or before the day that is 90 days **after** the day the notice of assessment for Part III.1 tax was sent. We will accept an election before the assessment of the tax. For more information on how to make this election, go to **www.cra.gc.ca/eligibledividends**.

Canada

Canada Revenue Agency / Agence du revenu du Canada

**Schedule 500**

# Ontario Corporation Tax Calculation

| Corporation's name | Business number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- Use this schedule if the corporation had a permanent establishment (as defined in section 400 of the federal *Income Tax Regulations*) in Ontario at any time in the tax year and had Ontario taxable income in the year.
- All legislative references are to the federal *Income Tax Act* and *Income Tax Regulations*.
- This schedule is a worksheet only. You do not have to file it with your *T2 Corporation Income Tax Return*.

## Part 1 – Calculation of Ontario basic rate of tax for the year

| | | | | | | |
|---|---|---|---|---|---|---|
| Number of days in the tax year before July 1, 2011 / Number of days in the tax year | / 365 | x | 12.00 % | = | % | A1 |
| Number of days in the tax year after June 30, 2011 / Number of days in the tax year | 365 / 365 | x | 11.50 % | = | 11.50000 % | A2 |

**Ontario basic rate of tax for the year** (rate A1 **plus** A2) 11.50000 ▶ 11.50000 % A3

## Part 2 – Calculation of Ontario basic income tax

| | | |
|---|---|---|
| Ontario taxable income * | 26,428,300 | B |
| **Ontario basic income tax**: amount B **multiplied** by Ontario basic rate of tax for the year (rate A3 from Part 1) | 3,039,255 | C |

If the corporation has a permanent establishment in more than one jurisdiction, or is claiming an Ontario tax credit in addition to Ontario basic income tax, or has Ontario corporate minimum tax or Ontario special additional tax on life insurance corporations payable, enter amount C on line 270 of Schedule 5, *Tax Calculation Supplementary – Corporations*. Otherwise, enter it on line 760 of the T2 return.

* If the corporation has a permanent establishment only in Ontario, enter the amount from line 360 or line Z, whichever applies, of the T2 return. Otherwise, enter the taxable income allocated to Ontario from column F in Part 1 of Schedule 5.

## Part 3 – Ontario small business deduction (OSBD)

Complete this part if the corporation claimed the federal small business deduction under subsection 125(1) or would have claimed it if subsection 125(5.1) had not been applicable in the tax year.

| | | |
|---|---|---|
| Income from active business carried on in Canada (amount from line 400 of the T2 return) | 26,553,071 | 1 |
| Federal taxable income, less adjustment for foreign tax credit (amount from line 405 of the T2 return) | 26,428,300 | 2 |
| Federal business limit before the application of subsection 125(5.1) (amount from line 410 of the T2 return) | 500,000 | 3 |
| Enter the least of amounts 1, 2, and 3 | 500,000 | D |

Ontario domestic factor: Ontario taxable income * / Taxable income earned in all provinces and territories ** = 26,428,300.00 / 26,428,300 = 1.00000 E

| | | |
|---|---|---|
| Amount D x factor E | 500,000 | a |
| Ontario taxable income (amount B from Part 2) | 26,428,300 | b |

Ontario small business income (lesser of amount a and amount b) 500,000 F

| | | | | | | |
|---|---|---|---|---|---|---|
| Number of days in the tax year before July 1, 2011 / Number of days in the tax year | / 365 | x | 7.50 % | = | % | G1 |
| Number of days in the tax year after June 30, 2011 / Number of days in the tax year | 365 / 365 | x | 7.00 % | = | 7.00000 % | G2 |

OSBD rate for the year (rate G1 **plus** G2) 7.00000 % G3

**Ontario small business deduction**: amount F **multiplied** by OSBD rate for the year (rate G3) 35,000 H

Enter amount H on line 402 of Schedule 5.

* Enter amount B from Part 2.

** Includes the offshore jurisdictions for Nova Scotia and Newfoundland and Labrador.

## Part 4 – Ontario adjusted small business income

Complete this part if the corporation was a Canadian-controlled private corporation throughout the tax year and is claiming the Ontario tax credit for manufacturing and processing or the Ontario credit union tax reduction.

**Ontario adjusted small business income** (lesser of amount D and amount b from Part 3) 500,000 I

Enter amount I on line K in Part 5 of this schedule or on line B in Part 2 of Schedule 502, *Ontario Tax Credit for Manufacturing and Processing*, whichever applies.

## Part 5 – Calculation of credit union tax reduction

Complete this part and Schedule 17, *Credit Union Deductions*, if the corporation was a credit union throughout the tax year.

| | | | | |
|---|---|---|---|---|
| Amount D from Part 3 of Schedule 17 | | | J | |
| **Deduct:** | | | | |
| Ontario adjusted small business income (amount I from Part 4) | | | K | |
| Subtotal (amount J **minus** amount K) (if negative, enter "0") | | | L | |
| OSBD rate for the year (rate G3 from Part 3) | 7.00000 % | | | |
| Amount L **multiplied** by the OSBD rate for the year | | | | M |
| Ontario domestic factor (factor E from Part 3) | | | 1.00000 | N |
| **Ontario credit union tax reduction** (amount M **multiplied** by factor N) | | | | O |

Enter amount O on line 410 of Schedule 5.

Canada Revenue Agency / Agence du revenu du Canada

**Schedule 510**

# Ontario Corporate Minimum Tax

| Corporation's name | Business number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- File this schedule if the corporation is subject to Ontario corporate minimum tax (CMT). CMT is levied under section 55 of the *Taxation Act, 2007* (Ontario), referred to as the "Ontario Act".
- Complete Part 1 to determine if the corporation is subject to CMT for the tax year.
- A corporation not subject to CMT in the tax year is still required to file this schedule if it is deducting a CMT credit, has a CMT credit carryforward, or has a CMT loss carryforward or a current year CMT loss.
- A corporation that has Ontario special additional tax on life insurance corporations (SAT) payable in the tax year must complete Part 4 of this schedule even if it is not subject to CMT for the tax year.
- A corporation is exempt from CMT if, throughout the tax year, it was one of the following:
  1) a corporation exempt from income tax under section 149 of the federal *Income Tax Act*;
  2) a mortgage investment corporation under subsection 130.1(6) of the federal Act;
  3) a deposit insurance corporation under subsection 137.1(5) of the federal Act;
  4) a congregation or business agency to which section 143 of the federal Act applies;
  5) an investment corporation as referred to in subsection 130(3) of the federal Act; or
  6) a mutual fund corporation under subsection 131(8) of the federal Act.
- File this schedule with the *T2 Corporation Income Tax Return*.

## Part 1 – Determination of CMT applicability

| | | |
|---|---|---|
| Total assets of the corporation at the end of the tax year * | 112 | 910,312,000 |
| Share of total assets from partnership(s) and joint venture(s) * | 114 | |
| Total assets of associated corporations (amount from line 450 on Schedule 511) | 116 | 796,998,204 |
| Total assets (total of lines 112 to 116) | | 1,707,310,204 |
| Total revenue of the corporation for the tax year ** | 142 | 952,790,000 |
| Share of total revenue from partnership(s) and joint venture(s) ** | 144 | |
| Total revenue of associated corporations (amount from line 550 on Schedule 511) | 146 | 79,526,427 |
| Total revenue (total of lines 142 to 146) | | 1,032,316,427 |

The corporation is subject to CMT if:
- for tax years ending before July 1, 2010, the total assets at the end of the year of the corporation or the associated group of corporations are more than $5,000,000, or the total revenue for the year of the corporation or the associated group of corporations is more than $10,000,000.
- for tax years ending after June 30, 2010, the total assets at the end of the year of the corporation or the associated group of corporations are equal to or more than $50,000,000, and the total revenue for the year of the corporation or the associated group of corporations is equal to or more than $100,000,000.

If the corporation is not subject to CMT, do not complete the remaining parts unless the corporation is deducting a CMT credit, or has a CMT credit carryforward, a CMT loss carryforward, a current year CMT loss, or SAT payable in the year.

* **Rules for total assets**
- Report total assets according to generally accepted accounting principles, adjusted so that consolidation and equity methods are not used.
- Do not include unrealized gains and losses on assets and foreign currency gains and losses on assets that are included in net income for accounting purposes but not in income for corporate income tax purposes.
- The amount on line 114 is determined at the end of the last fiscal period of the partnership or joint venture that ends in the tax year of the corporation. Add the proportionate share of the assets of the partnership(s) and joint venture(s), and deduct the recorded asset(s) for the investment in partnerships and joint ventures.
- A corporation's share in a partnership or joint venture is determined under paragraph 54(5)(b) of the Ontario Act and, if the partnership or joint venture had no income or loss, is calculated as if the partnership's or joint venture's income were $1 million. For a corporation with an indirect interest in a partnership or joint venture, determine the corporation's share according to paragraph 54(5)(c) of the Ontario Act.

** **Rules for total revenue**
- Report total revenue in accordance with generally accepted accounting principles, adjusted so that consolidation and equity methods are not used.
- If the tax year is less than 51 weeks, **multiply** the total revenue of the corporation or the partnership, whichever applies, by 365 and **divide** by the number of days in the tax year.
- The amount on line 144 is determined for the partnership or joint venture fiscal period that ends in the tax year of the corporation. If the partnership or joint venture has 2 or more fiscal periods ending in the filing corporation's tax year, **multiply** the sum of the total revenue for each of the fiscal periods by 365 and **divide** by the total number of days in all the fiscal periods.
- A corporation's share in a partnership or joint venture is determined under paragraph 54(5)(b) of the Ontario Act and, if the partnership or joint venture had no income or loss, is calculated as if the partnership's or joint venture's income were $1 million. For a corporation with an indirect interest in a partnership or joint venture, determine the corporation's share according to paragraph 54(5)(c) of the Ontario Act.

## Part 2 – Adjusted net income/loss for CMT purposes

| | | | | |
|---|---|---|---|---|
| Net income/loss per financial statements * | | | 210 | 25,439,000 |
| **Add** (to the extent reflected in income/loss): | | | | |
| Provision for current income taxes/cost of current income taxes | 220 | 6,750,000 | | |
| Provision for deferred income taxes (debits)/cost of future income taxes | 222 | | | |
| Equity losses from corporations | 224 | | | |
| Financial statement loss from partnerships and joint ventures | 226 | | | |
| Dividends deducted on financial statements (subsection 57(2) of the Ontario Act), excluding dividends paid by credit unions under subsection 137(4.1) of the federal Act | 230 | | | |
| **Other additions** (see note below): | | | | |
| Share of adjusted net income of partnerships and joint ventures ** | 228 | | | |
| Total patronage dividends received, not already included in net income/loss | 232 | | | |
| 281 | 282 | | | |
| 283 | 284 | | | |
| Subtotal | | 6,750,000 ▶ | | 6,750,000 A |
| **Deduct** (to the extent reflected in income/loss): | | | | |
| Provision for recovery of current income taxes/benefit of current income taxes | 320 | | | |
| Provision for deferred income taxes (credits)/benefit of future income taxes | 322 | | | |
| Equity income from corporations | 324 | | | |
| Financial statement income from partnerships and joint ventures | 326 | | | |
| Dividends deductible under section 112, section 113, or subsection 138(6) of the federal Act | 330 | | | |
| Dividends not taxable under section 83 of the federal Act (from Schedule 3) | 332 | | | |
| Gain on donation of listed security or ecological gift | 340 | | | |
| Accounting gain on transfer of property to a corporation under section 85 or 85.1 of the federal Act *** | 342 | | | |
| Accounting gain on transfer of property to/from a partnership under section 85 or 97 of the federal Act **** | 344 | | | |
| Accounting gain on disposition of property under subsection 13(4), subsection 14(6), or section 44 of the federal Act ***** | 346 | | | |
| Accounting gain on a windup under subsection 88(1) of the federal Act or an amalgamation under section 87 of the federal Act | 348 | | | |
| **Other deductions** (see note below): | | | | |
| Share of adjusted net loss of partnerships and joint ventures ** | 328 | | | |
| Tax payable on dividends under subsection 191.1(1) of the federal Act **multiplied** by 3 | 334 | | | |
| Interest deducted/deductible under paragraph 20(1)(c) or (d) of the federal Act, not already included in net income/loss | 336 | | | |
| Patronage dividends paid (from Schedule 16) not already included in net income/loss | 338 | | | |
| 381 | 382 | | | |
| 383 | 384 | | | |
| 385 | 386 | | | |
| 387 | 388 | | | |
| 389 | 390 | | | |
| Subtotal | | ▶ | | B |
| Adjusted net income/loss for CMT purposes (line 210 **plus** amount A **minus** amount B) | | | 490 | 32,189,000 |

If the amount on line 490 is positive and the corporation is subject to CMT as determined in Part 1, enter the amount on line 515 in Part 3.

If the amount on line 490 is negative, enter the amount on line 760 in Part 7 (enter as a positive amount).

**Note**

In accordance with *Ontario Regulation 37/09*, when calculating net income for CMT purposes, accounting income should be adjusted to:

– exclude unrealized gains and losses due to mark-to-market changes or foreign currency changes on specified mark-to-market property (assets only);
– include realized gains and losses on the disposition of specified mark-to-market property not already included in the accounting income, if the property is not a capital property or is a capital property disposed in the year or in a previous tax year ended after March 22, 2007.

"Specified mark-to-market property" is defined in subsection 54(1) of the Ontario Act.

These rules also apply to partnerships. A corporate partner's share of a partnership's adjusted income flows through on a proportionate basis to the corporate partner.

* **Rules for net income/loss**

– Banks must report net income/loss as per the report accepted by the Superintendent of Financial Institutions under the federal *Bank Act*, adjusted so consolidation and equity methods are not used.

## Part 2 – Adjusted net income/loss for CMT purposes (continued)

– Life insurance corporations must report net income/loss as per the report accepted by the federal Superintendent of Financial Institutions or equivalent provincial insurance regulator, before SAT and adjusted so consolidation and equity methods are not used. If the life insurance corporation is resident in Canada and carries on business in and outside of Canada, **multiply** the net income/loss by the ratio of the Canadian reserve liabilities **divided** by the total reserve liability. The reserve liabilities are calculated in accordance with Regulation 2405(3) of the federal Act.

– Other corporations must report net income/loss in accordance with generally accepted accounting principles, except that consolidation and equity methods must not be used. When the equity method has been used for accounting purposes, equity losses and equity income are removed from book income/loss on lines 224 and 324 respectively.

– Corporations, other than insurance corporations, should report net income from line 9999 of the GIFI (Schedule 125) on line 210.

** The share of the adjusted net income of a partnership or joint venture is calculated as if the partnership or joint venture were a corporation and the tax year of the partnership or joint venture were its fiscal period. For a corporation with an indirect interest in a partnership through one or more partnerships, determine the corporation's share according to clause 54(5)(c) of the Ontario Act.

*** A joint election will be considered made under subsection 60(1) of the Ontario Act if there is an entry on line 342, and an election has been made for transfer of property to a corporation under subsection 85(1) of the federal Act.

**** A joint election will be considered made under subsection 60(2) of the Ontario Act if there is an entry on line 344, and an election has been made under subsection 85(2) or 97(2) of the federal Act.

***** A joint election will be considered made under subsection 61(1) of the Ontario Act if there is an entry on line 346, and an election has been made under subsection 13(4) or 14(6) and/or section 44 of the federal Act.

For more information on how to complete this part, see the *T2 Corporation – Income Tax Guide*.

## Part 3 – CMT payable

| | | | |
|---|---|---|---|
| Adjusted net income for CMT purposes (line 490 in Part 2, if positive) | | 515 | 32,189,000 |
| **Deduct:** | | | |
| CMT loss available (amount R from Part 7) | | | |
| **Minus:** Adjustment for an acquisition of control * | 518 | | |
| Adjusted CMT loss available | | ▶ | C |
| Net income subject to CMT calculation (if negative, enter "0") | | 520 | 32,189,000 |

Amount from line 520: 32,189,000 x (Number of days in the tax year before July 1, 2010 / Number of days in the tax year: 365) x 4 % = ________ 1

Amount from line 520: 32,189,000 x (Number of days in the tax year after June 30, 2010: 365 / Number of days in the tax year: 365) x 2.7 % = 869,103 2

Subtotal (amount 1 **plus** amount 2) 869,103 3

| | | | |
|---|---|---|---|
| Gross CMT: amount on line 3 above x OAF ** | 540 | 869,103 | |
| **Deduct:** | | | |
| Foreign tax credit for CMT purposes *** | 550 | | |
| CMT after foreign tax credit deduction (line 540 **minus** line 550) (if negative, enter "0") | | 869,103 | D |
| **Deduct:** | | | |
| Ontario corporate income tax payable before CMT credit (amount F6 from Schedule 5) | | 3,004,255 | |
| Net CMT payable (if negative, enter "0") | | | E |

Enter amount E on line 278 of Schedule 5, *Tax Calculation Supplementary – Corporations*, and complete Part 4.

* Enter the portion of CMT loss available that exceeds the adjusted net income for the tax year from carrying on a business before the acquisition of control. See subsection 58(3) of the Ontario Act.

*** Enter "0" on line 550 for life insurance corporations as they are not eligible for this deduction. For all other corporations, enter the cumulative total of amount J for the province of Ontario from Part 9 of Schedule 21 on line 550.

** **Calculation of the Ontario allocation factor (OAF):**

If the provincial or territorial jurisdiction entered on line 750 of the T2 return is "Ontario," enter "1" on line F.

If the provincial or territorial jurisdiction entered on line 750 of the T2 return is "multiple," complete the following calculation, and enter the result on line F:

Ontario taxable income **** / Taxable income ***** = ________

**Ontario allocation factor** 1.00000 F

**** Enter the amount allocated to Ontario from column F in Part 1 of Schedule 5. If the taxable income is nil, calculate the amount in column F as if the taxable income were $1,000.

*****Enter the taxable income amount from line 360 or amount Z of the T2 return, whichever applies. If the taxable income is nil, enter "1,000."

## Part 4 – CMT credit carryforward

| | | | | | |
|---|---|---|---|---|---|
| CMT credit carryforward at the end of the previous tax year * | | | G | | |
| **Deduct:** | | | | | |
| CMT credit expired * | 600 | | | | |
| CMT credit carryforward at the beginning of the current tax year * (see note below) | | | ▶ | 620 | |
| **Add:** | | | | | |
| CMT credit carryforward balances transferred on an amalgamation or the windup of a subsidiary (see note below) | | | | 650 | |
| CMT credit available for the tax year (amount on line 620 **plus** amount on line 650) | | | | | H |
| **Deduct:** | | | | | |
| CMT credit deducted in the current tax year (amount P from Part 5) | | | | | I |
| Subtotal (amount H **minus** amount I) | | | | | J |
| **Add:** | | | | | |
| Net CMT payable (amount E from Part 3) | | | | | |
| SAT payable (amount O from Part 6 of Schedule 512) | | | | | |
| Subtotal | | | ▶ | | K |
| CMT credit carryforward at the end of the tax year (amount J **plus** amount K) | | | | 670 | L |

* For the first harmonized T2 return filed with a tax year that includes days in 2009:
- do not enter an amount on line G or line 600;
- for line 620, enter the amount from line 2336 of Ontario CT23 Schedule 101, *Corporate Minimum Tax (CMT)*, for the last tax year that ended in 2008.

For other tax years, enter on line G the amount from line 670 of Schedule 510 from the previous tax year.

**Note:** If you entered an amount on line 620 or line 650, complete Part 6.

## Part 5 – CMT credit deducted from Ontario corporate income tax payable

| | | | | | |
|---|---|---|---|---|---|
| CMT credit available for the tax year (amount H from Part 4) | | | | | M |
| Ontario corporate income tax payable before CMT credit (amount F6 from Schedule 5) | | 3,004,255 | 1 | | |
| For a corporation that is not a life insurance corporation: | | | | | |
| CMT after foreign tax credit deduction (amount D from Part 3) | 869,103 | 2 | | | |
| For a life insurance corporation: | | | | | |
| Gross CMT (line 540 from Part 3) | | 3 | | | |
| Gross SAT (line 460 from Part 6 of Schedule 512) | | 4 | | | |
| The **greater** of amounts 3 and 4 | | 5 | | | |
| **Deduct:** line 2 or line 5, whichever applies: | | 869,103 | 6 | | |
| Subtotal (if negative, enter "0") | | 2,135,152 | ▶ | 2,135,152 | N |
| Ontario corporate income tax payable before CMT credit (amount F6 from Schedule 5) | | 3,004,255 | | | |
| **Deduct:** | | | | | |
| Total refundable tax credits excluding Ontario qualifying environmental trust tax credit (amount J6 **minus** line 450 from Schedule 5) | | 150,799 | | | |
| Subtotal (if negative, enter "0") | | 2,853,456 | ▶ | 2,853,456 | O |
| CMT credit deducted in the current tax year (least of amounts M, N, and O) | | | | | P |

Enter amount P on line 418 of Schedule 5 and on line I in Part 4 of this schedule.

Is the corporation claiming a CMT credit earned before an acquisition of control? 675 1 Yes [ ] 2 No [X]

If you answered **yes** to the question at line 675, the CMT credit deducted in the current tax year may be restricted. For information on how the deduction may be restricted, see subsections 53(6) and (7) of the Ontario Act.

## Part 6 – CMT credit available for carryforward by year of origin

Complete this part if:
- the tax year includes January 1, 2009; or
- the previous tax year-end is deemed to be December 31, 2008, under subsection 249(3) of the federal Act.

| Year of origin | CMT credit balance * |
|---|---|
| 10th previous tax year | 680 |
| 9th previous tax year | 681 |
| 8th previous tax year | 682 |
| 7th previous tax year | 683 |
| 6th previous tax year | 684 |
| 5th previous tax year | 685 |
| 4th previous tax year | 686 |
| 3rd previous tax year | 687 |
| 2nd previous tax year | 688 |
| 1st previous tax year | 689 |
| Total ** | |

* CMT credit that was earned (by the corporation, predecessors of the corporation, and subsidiaries wound up into the corporation) in each of the previous 10 tax years and has not been deducted.

** Must equal the total of the amounts entered on lines 620 and 650 in Part 4.

## Part 7 – CMT loss carryforward

CMT loss carryforward at the end of the previous tax year * . . . . . . . . . . . . . . . . . . . . . . . Q

**Deduct:**

CMT loss expired * . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 700

CMT loss carryforward at the beginning of the tax year * (see note below) . . . . . . . . . . . . . . . ► 720

**Add:**

CMT loss transferred on an amalgamation under section 87 of the federal Act ** (see note below) . . . . . . . . . . . . . . . . . . 750

CMT loss available (line 720 **plus** line 750) . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . R

**Deduct:**

CMT loss deducted against adjusted net income for the tax year (lesser of line 490 (if positive) and line C in Part 3) . . . . . . . . . .

Subtotal (if negative, enter "0") S

**Add:**

Adjusted net loss for CMT purposes (amount from line 490 in Part 2, if **negative**) (enter as a positive amount) . . . . . . . . . . 760

CMT loss carryforward balance at the end of the tax year (amount S **plus** line 760) . . . . . . . . . . . . . . . . . . . . . . . . . 770 T

* For the first harmonized T2 return filed with a tax year that includes days in 2009:
- do not enter an amount on line Q or line 700;
- for line 720, enter the amount from line 2214 of Ontario CT23 Schedule 101, *Corporate Minimum Tax (CMT)*, for the last tax year that ended in 2008.

For other tax years, enter on line Q the amount from line 770 of Schedule 510 from the previous tax year.

** Do not include an amount from a predecessor corporation if it was controlled at any time before the amalgamation by any of the other predecessor corporations.

**Note:** If you entered an amount on line 720 or line 750, complete Part 8.

## Part 8 – CMT loss available for carryforward by year of origin

Complete this part if:
- the tax year includes January 1, 2009; or
- the previous tax year-end is deemed to be December 31, 2008, under subsection 249(3) of the federal Act.

| Year of origin | Balance earned in a tax year ending before March 23, 2007 * | Balance earned in a tax year ending after March 22, 2007 ** |
|---|---|---|
| 10th previous tax year | 810 | 820 |
| 9th previous tax year | 811 | 821 |
| 8th previous tax year | 812 | 822 |
| 7th previous tax year | 813 | 823 |
| 6th previous tax year | 814 | 824 |
| 5th previous tax year | 815 | 825 |
| 4th previous tax year | 816 | 826 |
| 3rd previous tax year | 817 | 827 |
| 2nd previous tax year | 818 | 828 |
| 1st previous tax year | | 829 |
| Total *** | | |

* Adjusted net loss for CMT purposes that was earned (by the corporation, by subsidiaries wound up into or amalgamated with the corporation before March 22, 2007, and by other predecessors of the corporation) in each of the previous 10 tax years that ended before March 23, 2007, and has not been deducted.

** Adjusted net loss for CMT purposes that was earned (by the corporation and its predecessors, but not by a subsidiary predecessor) in each of the previous 20 tax years that ended after March 22, 2007, and has not been deducted.

*** The total of these two columns must equal the total of the amounts entered on lines 720 and 750.

Canada Revenue Agency / Agence du revenu du Canada

**SCHEDULE 511**

# ONTARIO CORPORATE MINIMUM TAX – TOTAL ASSETS AND REVENUE FOR ASSOCIATED CORPORATIONS

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- For use by corporations to report the total assets and total revenue of all the Canadian or foreign corporations with which the filing corporation was associated at any time during the tax year. These amounts are required to determine if the filing corporation is subject to corporate minimum tax.
- Total assets and total revenue include the associated corporation's share of any partnership(s)/joint venture(s) total assets and total revenue.
- Attach additional schedules if more space is required.
- File this schedule with the *T2 Corporation Income Tax Return.*

| | Names of associated corporations 200 | Business number (Canadian corporation only) (see Note 1) 300 | Total assets* (see Note 2) 400 | Total revenue** (see Note 2) 500 |
|---|---|---|---|---|
| 1 | Hydro Ottawa Holding Inc. | 89411 0816 RC0001 | 683,552,000 | 57,745,000 |
| 2 | Energy Ottawa Inc. | 86338 9961 RC0001 | 86,832,000 | 15,910,000 |
| 3 | Telecom Ottawa Holding Inc. / Societe De Portefeuill | 86202 9337 RC0001 | 14,873,596 | 253,316 |
| 4 | PowerTrail Inc. | 82829 3944 RC0001 | 10,623,000 | 3,340,000 |
| 5 | Moose Creek Energy Inc. | 82851 1311 RC0001 | 201 | 0 |
| 6 | Chaudiere Hydro Inc. Hydro Chaudiere Inc. | 81281 3103 RC0001 | 100 | 0 |
| 7 | Chaudiere Water Power Inc/Energie Hydraulique De l | 10093 1955 RC0001 | 1,117,307 | 2,278,111 |
| | | **Total** | 450 796,998,204 | 550 79,526,427 |

Enter the total assets from line 450 on line 116 in Part 1 of Schedule 510, *Ontario Corporate Minimum Tax*.
Enter the total revenue from line 550 on line 146 in Part 1 of Schedule 510.

Note 1: Enter ¨NR¨ if a corporation is not registered.

Note 2: If the associated corporation does not have a tax year that ends in the filing corporation's current tax year but was associated with the filing corporation in the previous tax year of the filing corporation, enter the total revenue and total assets from the tax year of the associated corporation that ends in the previous tax year of the filing corporation.

*** Rules for total assets**

– Report total assets in accordance with generally accepted accounting principles, adjusted so that consolidation and equity methods are not used.
– Include the associated corporation's share of the total assets of partnership(s) and joint venture(s) but exclude the recorded asset(s) for the investment in partnerships and joint ventures.
– Exclude unrealized gains and losses on assets that are included in net income for accounting purposes but not in income for corporate income tax purposes.

**** Rules for total revenue**

– Report total revenue in accordance with generally accepted accounting principles, adjusted so that consolidation and equity methods are not used.
– If the associated corporation has 2 or more tax years ending in the filing corporation's tax year, **multiply** the sum of the total revenue for each of those tax years by 365 and **divide** by the total number of days in all of those tax years.
– If the associated corporation's tax year is less than 51 weeks and is the only tax year of the associated corporation that ends in the filing corporation's tax year, **multiply** the associated corporation's total revenue by 365 and **divide** by the number of days in the associated corporation's tax year.
– Include the associated corporation's share of the total revenue of partnerships and joint ventures.
– If the partnership or joint venture has 2 or more fiscal periods ending in the associated corporation's tax year, **multiply** the sum of the total revenue for each of the fiscal periods by 365 and **divide** by the total number of days in all the fiscal periods.

**SCHEDULE 546**

# *CORPORATIONS INFORMATION ACT* ANNUAL RETURN FOR ONTARIO CORPORATIONS

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- This schedule should be completed by a corporation that is incorporated, continued, or amalgamated in Ontario and subject to the Ontario *Business Corporations Act* (BCA) or Ontario *Corporations Act* (CA), except for registered charities under the federal *Income Tax Act*. This completed schedule serves as a *Corporations Information Act* Annual Return under the *Ontario Corporations Information Act*.
- Complete parts 1 to 4. Complete parts 5 to 7 only to report change(s) in the information recorded on the Ontario Ministry of Government Services (MGS) public record.
- This schedule must set out the required information for the corporation as of the date of delivery of this schedule.
- A completed Ontario *Corporations Information Act* Annual Return must be delivered within six months after the end of the corporation's tax year-end. The MGS considers this return to be delivered on the date that it is filed with the Canada Revenue Agency (CRA) together with the corporation's income tax return.
- It is the corporation's responsibility to ensure that the information shown on the MGS public record is accurate and up-to-date. To review the information shown for the corporation on the public record maintained by the MGS, obtain a Corporation Profile Report. Visit **www.ServiceOntario.ca** for more information.
- This schedule contains non-tax information collected under the authority of the Ontario *Corporations Information Act*. This information will be sent to the MGS for the purposes of recording the information on the public record maintained by the MGS.

## Part 1 – Identification

**100** Corporation's name (exactly as shown on the MGS public record)
Hydro Ottawa Limited

| Jurisdiction incorporated, continued, or amalgamated, whichever is the most recent | **110** Date of incorporation or amalgamation, whichever is the most recent (Year Month Day) | **120** Ontario Corporation No. |
|---|---|---|
| Ontario | 2000-10-03 | 1427586 |

## Part 2 – Head or registered office address (P.O. box not acceptable as stand-alone address)

**200** Care of (if applicable)

| **210** Street number | **220** Street name/Rural route/Lot and Concession number | **230** Suite number |
|---|---|---|
| 3025 | Albion Road North | |

**240** Additional address information if applicable (line 220 must be completed first)
PO Box 8700

| **250** Municipality (e.g., city, town) | **260** Province/state | **270** Country | **280** Postal/zip code |
|---|---|---|---|
| Ottawa | ON | CA | K1G 3S4 |

## Part 3 – Change identifier

Have there been any changes in any of the information most recently filed for the public record maintained by the MGS for the corporation with respect to names, addresses for service, and the date elected/appointed and, if applicable, the date the election/appointment ceased of the directors and five most senior officers, or with respect to the corporation's mailing address or language of preference? To review the information shown for the corporation on the public record maintained by the MGS, obtain a Corporation Profile Report. For more information, visit **www.ServiceOntario.ca**.

**300** 2 If there have been no changes, enter **1** in this box and then go to "Part 4 – Certification."
If there are changes, enter **2** in this box and complete the applicable parts on the next page, and then go to "Part 4 – Certification."

## Part 4 – Certification

I certify that all information given in this *Corporations Information Act* Annual Return is true, correct, and complete.

**450** Simpson (Last name) **451** Geoff (First name)

**454** ______________________ , (Middle name(s))

**460** 2 Please enter one of the following numbers in this box for the above-named person: **1** for director, **2** for officer, or **3** for other individual having knowledge of the affairs of the corporation. If you are a director and officer, enter **1** or **2**.

Note: Sections 13 and 14 of the Ontario *Corporations Information Act* provide penalties for making false or misleading statements or omissions.

**Complete the applicable parts to report changes in the information recorded on the MGS public record.**

## Part 5 – Mailing address

**500** Please enter one of the following numbers in this box:
1 - Show no mailing address on the MGS public record.
2 - The corporation's mailing address is the same as the head or registered office address in Part 2 of this schedule.
3 - The corporation's complete mailing address is as follows:

**510** Care of (if applicable)

| | | |
|---|---|---|
| **520** Street number | **530** Street name/Rural route/Lot and Concession number | **540** Suite number |

**550** Additional address information if applicable (line 530 must be completed first)

| | | | |
|---|---|---|---|
| **560** Municipality (e.g., city, town) | **570** Province/state | **580** Country | **590** Postal/zip code |

## Part 6 – Language of preference

**600** Indicate your language of preference by entering **1** for English or **2** for French. This is the language of preference recorded on the MGS public record for communications with the corporation. It may be different from line 990 on the T2 return.

CRA internal form identifier 547

## Part 7 – Director/Officer information

- **Director:** If the individual named in this part is a director (or must be reported ceased as a director), complete lines 700 to 797.
- **Officer:** If the individual named in this part is one of the corporation's five most senior officers (or must be reported ceased in an officer position), complete lines 700 to 790 and the applicable lines from 801 to 912.
- **Director and officer:** If the individual named in this part is a director and one of the corporation's five most senior officers (or must be reported ceased in these position(s)), complete lines 700 to 797 and the applicable lines from 801 to 912.
- The corporation is required to show information on the MGS public record for all its directors and a maximum of five of its most senior officers. If the MGS public record shows more than five officer positions, report cease dates for all except the corporation's five most senior officer positions.
- To report changes to the name of a director/officer, or changes to both the address and the date elected/appointed of a director/officer, enter the director/officer information exactly as shown incorrectly on the public record, with a cease date, and then photocopy and complete only Part 7 with the correct director/officer information.

Please photocopy this page and complete Part 7 only for each additional individual for whom director/officer information changes are being reported.

**Full name and address for service** (P.O. box not acceptable as stand-alone address). The name entered in lines 700 to 710 must be exactly as shown on the MGS public record.

| | | |
|---|---|---|
| 700 Last name: SIMPSON | 705 First name: GEOFF | 710 Middle name(s): |
| 720 Street number: 3025 | 730 Street name/Rural route/Lot and Concession number: ALBION RD NORTH PO BOX 8700 | 740 Suite number: |

750 Additional address information if applicable (line 730 must be completed first):

| | | | |
|---|---|---|---|
| 760 Municipality (e.g., city, town): OTTAWA | 770 Province/state: ON | 780 Country: CA | 790 Postal/zip code: K1G 3S4 |

**Director**

Is this director a resident Canadian? . . . 795 **1** Yes ☐ **2** No ☐

(applies to directors of corporations with share capital only)

796 Date elected/appointed Year Month Day:

797 Date ceased, if applicable Year Month Day:

**Officer information**

| Officer | | Date appointed Year Month Day | | Date ceased, if applicable Year Month Day |
|---|---|---|---|---|
| President | 801 | | 802 | |
| Secretary | 806 | | 807 | |
| Treasurer | 811 | | 812 | |
| General Manager | 816 | | 817 | |
| Chair | 821 | | 822 | |
| Chairperson | 826 | | 827 | |
| Chairman | 831 | | 832 | |
| Chairwoman | 836 | | 837 | |

**SCHEDULE 550**

# ONTARIO CO-OPERATIVE EDUCATION TAX CREDIT

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- Use this schedule to claim an Ontario co-operative education tax credit (CETC) under section 88 of the *Taxation Act, 2007* (Ontario).
- The CETC is a refundable tax credit that is equal to an eligible percentage (10% to 30%) of the eligible expenditures incurred by a corporation for a qualifying work placement. The maximum credit amount is $1,000 for each qualifying work placement ending before March 27, 2009, and $3,000 for each qualifying work placement beginning after March 26, 2009. For a qualifying work placement that straddles March 26, 2009, the maximum credit amount is prorated.
- Eligible expenditures are salaries and wages (including taxable benefits) paid or payable to a student in a qualifying work placement, or fees paid or payable to an employment agency for services performed by the student in a qualifying work placement. These expenditures must be paid on account of employment or services, as applicable, at a permanent establishment of the corporation in Ontario. Expenditures for a work placement (WP) are not eligible expenditures if they are greater than the amounts that would be paid to an arm's length employee.
- A WP must meet all of the following conditions to be a qualifying work placement:
  - the student performs employment duties for a corporation under a qualifying co-operative education program (QCEP);
  - the WP has been developed or approved by an eligible educational institution as a suitable learning situation;
  - the terms of the WP require the student to engage in productive work;
  - the WP is for a period of at least 10 consecutive weeks or, in the case of an internship program, not less than 8 consecutive months and not more than 16 consecutive months;
  - the student is paid for the work performed in the WP;
  - the corporation is required to supervise and evaluate the job performance of the student in the WP;
  - the institution monitors the student's performance in the WP; and
  - the institution has certified the WP as a qualifying work placement.
- Make sure you keep a copy of the letter of certification from the Ontario eligible educational institution containing the name of the student, the employer, the institution, the term of the WP, and the name/discipline of the QCEP to support the claim. Do not submit the letter of certification with the *T2 Corporation Income Tax Return*.
- File this schedule with the *T2 Corporation Income Tax Return*.

## Part 1 – Corporate information

**110** Name of person to contact for more information: Mike Grue

**120** Telephone number including area code: (613) 738-5499

Is the claim filed for a CETC earned through a partnership?* . . . . . **150** 1 Yes [ ] 2 No [X]

If you answered **yes** to the question at line 150, what is the name of the partnership? . . . . . **160** ____________

Enter the percentage of the partnership's CETC allocated to the corporation . . . . . **170** ______ %

* When a corporate member of a partnership is claiming an amount for eligible expenditures incurred by a partnership, complete a Schedule 550 for the partnership as if the partnership were a corporation. Each corporate partner, other than a limited partner, should file a separate Schedule 550 to claim the partner's share of the partnership's CETC. The allocated amounts can not exceed the amount of the partnership's CETC.

## Part 2 – Eligibility

1. Did the corporation have a permanent establishment in Ontario in the tax year? . . . . . **200** 1 Yes [X] 2 No [ ]
2. Was the corporation exempt from tax under Part III of the *Taxation Act*, 2007 (Ontario)? . . . . . **210** 1 Yes [ ] 2 No [X]

If you answered **no** to question 1 or **yes** to question 2, then the corporation is **not eligible** for the CETC.

## Part 3 – Eligible percentage for determining the eligible amount

Corporation's salaries and wages paid in the previous tax year * . . . . . **300** 64,000,000

For eligible expenditures incurred before March 27, 2009:

- If line 300 is $400,000 or less, enter 15% on line 310.
- If line 300 is $600,000 or more, enter 10% on line 310.
- If line 300 is more than $400,000 and less than $600,000, enter the percentage on line 310 using the following formula:

$$\text{Eligible percentage} = 15\,\% - \left[ 5\,\% \times \left( \frac{\text{amount on line 300} \;\; \textbf{minus} \;\; \$ \;\; 400{,}000}{\$ \;\; 200{,}000} \right) \right]$$

**Eligible percentage for determining the eligible amount** . . . . . **310** 10.000 %

For eligible expenditures incurred after March 26, 2009:

- If line 300 is $400,000 or less, enter 30% on line 312.
- If line 300 is $600,000 or more, enter 25% on line 312.
- If line 300 is more than $400,000 and less than $600,000, enter the percentage on line 312 using the following formula:

$$\text{Eligible percentage} = 30\,\% - \left[ 5\,\% \times \left( \frac{\text{amount on line 300} \;\; \textbf{minus} \;\; \$ \;\; 400{,}000}{\$ \;\; 200{,}000} \right) \right]$$

**Eligible percentage for determining the eligible amount** . . . . . **312** 25.000 %

* If this is the first tax year of an amalgamated corporation and subsection 88(9) of the *Taxation Act, 2007* (Ontario) applies, enter the salaries and wages paid in the previous tax year by the predecessor corporations.

## Part 4 – Calculation of the Ontario co-operative education tax credit

Complete a separate entry for each student for each qualifying work placement that ended in the corporation's tax year. If a qualifying work placement would otherwise exceed four consecutive months, divide the WP into periods of four consecutive months and enter each full period of four consecutive months as a separate WP. If the WP does not divide equally into four-month periods and if the period that is less than 4 months is 10 or more consecutive weeks, then enter that period as a separate WP. If that period is less than 10 consecutive weeks, then include it with the WP for the last period of 4 consecutive months. Consecutive WPs with two or more associated corporations are deemed to be with only one corporation, as designated by the corporations.

| 19. | | | | | |

**Ontario co-operative education tax credit** (total of amounts in column K) 500 44,445 L or, if the corporation answered **yes** at line 150 in Part 1, determine the partner's share of amount L:

Amount L ______ x percentage on line 170 in Part 1 ______ % = . . . . . . . . . . . . . . . . . . . . . . . ______ **M**

Enter amount L or M, whichever applies, on line 452 of Schedule 5, *Tax Calculation Supplementary – Corporations*. If you are filing more than one Schedule 550, add the amounts from line L or M, whichever applies, on all the schedules and enter the total amount on line 452 of Schedule 5.

Note 1: Reduce eligible expenditures by all government assistance, as defined under subsection 88(21) of the *Taxation Act, 2007* (Ontario), that the corporation has received, is entitled to receive, or may reasonably expect to receive, for the eligible expenditures, on or before the filing due date of the *T2 Corporation Income Tax Return* for the tax year.

Note 2: Calculate the eligible amount (Column G) using the following formula:

Column G = (column F1 x percentage on line 310) + (column F2 x percentage on line 312)

Note 3: If the WP ends before March 27, 2009, the maximum credit amount for the WP is $1,000.
If the WP begins after March 26, 2009, the maximum credit amount for the WP is $3,000.
If the WP begins before March 27, 2009, and ends after March 26, 2009, calculate the maximum credit amount using the following formula:

($1,000 x X/Y) + [$3,000 x (Y – X)/Y]

where "X" is the number of consecutive weeks of the WP completed by the student before March 27, 2009,
and "Y" is the total number of consecutive weeks of the student's WP.

Note 4: When claiming a CETC for repayment of government assistance, complete a **separate entry** for each repayment and complete columns A to E and J and K with the details for the previous year WP in which the government assistance was received.
Include the amount of government assistance repaid in the tax year multiplied by the eligible percentage for the tax year in which the government assistance was received, to the extent that the government assistance reduced the CETC in that tax year.

Canada Revenue Agency / Agence du revenu du Canada

**SCHEDULE 552**

# ONTARIO APPRENTICESHIP TRAINING TAX CREDIT

| Name of corporation | Business Number | Tax year-end Year Month Day |
|---|---|---|
| Hydro Ottawa Limited | 86339 1363 RC0001 | 2013-12-31 |

- Use this schedule to claim an Ontario apprenticeship training tax credit (ATTC) under section 89 of the *Taxation Act, 2007* (Ontario).
- The ATTC is a refundable tax credit that is equal to a specified percentage (25% to 45%) of the eligible expenditures incurred by a corporation for a qualifying apprenticeship. Before March 27, 2009, the maximum credit for each apprentice is $5,000 per year to a maximum credit of $15,000 over the first 36-month period of the qualifying apprenticeship. After March 26, 2009, the maximum credit for each apprentice is $10,000 per year to a maximum credit of $40,000 over the first 48-month period of the qualifying apprenticeship. The maximum credit amount is prorated for an employment period of an apprentice that straddles March 26, 2009.
- Eligible expenditures are salaries and wages (including taxable benefits) paid to an apprentice in a qualifying apprenticeship or fees paid to an employment agency for the provision of services performed by the apprentice in a qualifying apprenticeship. These expenditures must be:
  - paid on account of employment or services, as applicable, at a permanent establishment of the corporation in Ontario;
  - for services provided by the apprentice during the first 36 months of the apprenticeship program, if incurred before March 27, 2009; and
  - for services provided by the apprentice during the first 48 months of the apprenticeship program, if incurred after March 26, 2009.
- An expenditure is not eligible for an ATTC if:
  - the same expenditure was used, or will be used, to claim a co-operative education tax credit; or
  - it is more than an amount that would be paid to an arm's length apprentice.
- An apprenticeship must meet the following conditions to be a qualifying apprenticeship:
  - the apprenticeship is in a qualifying skilled trade approved by the Ministry of Training, Colleges and Universities (Ontario); and
  - the corporation and the apprentice must be participating in an apprenticeship program in which the training agreement has been registered under the *Ontario College of Trades and Apprenticeship Act, 2009 or* the *Apprenticeship and Certification Act, 1998* or in which the contract of apprenticeship has been registered under the *Trades Qualification and Apprenticeship Act*.
- Make sure you keep a copy of the training agreement or contract of apprenticeship to support your claim. Do not submit the training agreement or contract of apprenticeship with your *T2 Corporation Income Tax Return*.
- File this schedule with your *T2 Corporation Income Tax Return*.

## Part 1 – Corporate information (please print)

| **110** Name of person to contact for more information | **120** Telephone number including area code |
|---|---|
| Mike Grue | (613) 738-5499 |

Is the claim filed for an ATTC earned through a partnership? * . . . . . **150** 1 Yes [ ] 2 No [X]

If **yes** to the question at line 150, what is the name of the partnership? . . . . . **160** ____________

Enter the percentage of the partnership's ATTC allocated to the corporation . . . . . **170** ______ %

* When a corporate member of a partnership is claiming an amount for eligible expenditures incurred by a partnership, complete a Schedule 552 for the partnership as if the partnership were a corporation. Each corporate partner, other than a limited partner, should file a separate Schedule 552 to claim the partner's share of the partnership's ATTC. The total of the partners' allocated amounts can never exceed the amount of the partnership's ATTC.

## Part 2 – Eligibility

1. Did the corporation have a permanent establishment in Ontario in the tax year? . . . . . **200** 1 Yes [X] 2 No [ ]
2. Was the corporation exempt from tax under Part III of the *Taxation Act, 2007* (Ontario)? . . . . . **210** 1 Yes [ ] 2 No [X]

If you answered **no** to question 1 or **yes** to question 2, then you are **not eligible** for the ATTC.

## Part 3 – Specified percentage

Corporation's salaries and wages paid in the previous tax year * . . . . . **300** 25,000,000

For eligible expenditures incurred before March 27, 2009:
- If line 300 is $400,000 or less, enter 30% on line 310.
- If line 300 is $600,000 or more, enter 25% on line 310.
- If line 300 is more than $400,000 and less than $600,000, enter the percentage on line 310 using the following formula:

$$\text{Specified percentage} = 30\,\% - \left[ 5\,\% \times \left( \frac{\text{amount on line 300} \;\textbf{minus}\; 400{,}000}{200{,}000} \right) \right]$$

**Specified percentage** . . . . . **310** 25.000 %

For eligible expenditures incurred after March 26, 2009:
- If line 300 is $400,000 or less, enter 45% on line 312.
- If line 300 is $600,000 or more, enter 35% on line 312.
- If line 300 is more than $400,000 and less than $600,000, enter the percentage on line 312 using the following formula:

$$\text{Specified percentage} = 45\,\% - \left[ 10\,\% \times \left( \frac{\text{amount on line 300} \;\textbf{minus}\; 400{,}000}{200{,}000} \right) \right]$$

**Specified percentage** . . . . . **312** 35.000 %

* If this is the first tax year of an amalgamated corporation and subsection 89(6) of the *Taxation Act, 2007* (Ontario) applies, enter salaries and wages paid in the previous tax year by the predecessor corporations.

## Part 4 – Calculation of the Ontario apprenticeship training tax credit

Complete a **separate entry** for each apprentice that is in a qualifying apprenticeship with the corporation. When claiming an ATTC for repayment of government assistance, complete a **separate entry** for each repayment, and complete columns A to G and M and N with the details for the employment period in the previous tax year in which the government assistance was received.

Note 1: Enter the original registration date of the apprenticeship contract or training agreement in all cases, even when multiple employers employed the apprentice.

Note 2: When there are multiple employment periods as an apprentice in the tax year with the corporation, enter the date that is the first day of employment as an apprentice in the tax year with the corporation. When claiming an ATTC for repayment of government assistance, enter the start date of employment as an apprentice for the tax year in which the government assistance was received.

Note 3: When there are multiple employment periods as an apprentice in the tax year with the corporation, enter the date that is the last day of employment as an apprentice in the tax year with the corporation. When claiming an ATTC for repayment of government assistance, enter the end date of employment as an apprentice for the tax year in which the government assistance was received.

|---|---|---|---|
| 13. | 6,575 | | 6,575 |

**Ontario apprenticeship training tax credit** (total of amounts in column N) 500 ..... 106,354 **O**

or, if the corporation answered **yes** at line 150 in Part 1, determine the partner's share of amount O:

Amount O ________ x percentage on line 170 in Part 1 ________ % = . . . . . . . . . . . . . . . . ________ **P**

Enter amount O or P, whichever applies, on line 454 of Schedule 5, *Tax Calculation Supplementary – Corporations*. If you are filing more than one Schedule 552, add the amounts from line O or P, whichever applies, on all the schedules, and enter the total amount on line 454 of Schedule 5.

Note 1: When there are multiple employment periods as an apprentice in the tax year with the corporation, do not include days in which the individual was not employed as an apprentice.
For H1: The days employed as an apprentice must be within 36 months of the registration date provided in column E.
For H2: The days employed as an apprentice must be within 48 months of the registration date provided in column E.

Note 2: Maximum credit = ($5,000 x H1/365*) + ($10,000 x H2/365*)
* 366 days, if the tax year includes February 29

Note 3: Reduce eligible expenditures by all government assistance, as defined under subsection 89(19) of the *Taxation Act, 2007* (Ontario), that the corporation has received, is entitled to receive, or may reasonably expect to receive, in respect of the eligible expenditures, on or before the filing due date of the *T2 Corporation Income Tax Return* for the tax year.
For J1: Eligible expenditures before March 27, 2009, must be for services provided by the apprentice during the first 36 months of the apprenticeship program.
For J2: Eligible expenditures after March 26, 2009, must be for services provided by the apprentice during the first 48 months of the apprenticeship program.

Note 4: Calculate the amount in column K as follows:
Column K = (J1 x line 310) + (J2 x line 312)

Note 5: Include the amount of government assistance repaid in the tax year multiplied by the specified percentage for the tax year in which the government assistance was received, to the extent that the government assistance reduced the ATTC in that tax year.
Complete a **separate entry** for each repayment of government assistance.

# LOST REVENUE ADJUSTMENT MECHANISM

## 1.0 INTRODUCTION

On March 31, 2010, the Ministry of Energy and Infrastructure issued a directive ("2010 Directive") to the Ontario Energy Board ("the Board") (to take steps in order to establish electricity and Conservation and Demand Management ("CDM") targets to be met by licenced electricity distributors over a four year period beginning January 1, 2011.

In response to the 2010 Directive, the Board issued a new set of Guidelines for Electricity Distributor Conservation and Demand Management (EB-2012-0003) ("2012 CDM Guidelines") which set out the obligations and requirements indicating electricity distributors must comply with the CDM targets as set out in their licences. The 2012 CDM Guidelines also provided updated details for the Lost Revenue Adjustment Mechanism ("LRAM") to compensate distributors for lost revenues resulting from CDM programs for the 2011 to 2014 period. The current CDM Framework results were predominantly delivered by provincially developed programs that were funded by the Ontario Power Authority ("OPA")[1] in cooperation with electricity distributors. It ended on December 31, 2014. The Conservation and Demand Management Code for Electricity Distributors ("CDM Code"), issued September 16, 2010 and 2012 CDM Guidelines are applicable for all activities related to the 2011 to 2014 CDM Framework.

The Government of Ontario released its Long-Term Energy Plan ("LTEP") of which one of the priories is to reinforce the conservation first planning process. The Board received a Directive from the Ministry of Energy on March 31, 2014 altogether the ("Conservation Directive") that required the Board to promote CDM and establish guidelines (the "2015 CDM Guidelines"). The 2015 CDM Guidelines are effective as of the programs beginning January 1, 2015. This new framework is to achieve 7 terawatt-hours of

[1] References to the OPA remain for activities occurring prior to January 1, 2015. As of January 1, 2015, all functions of the OPA will be those of the Independent Electricity System Operator ("IESO")
[2] References made to the IESO in Exhibit D-5-1 are in relation to CDM activities on or after January 1, 2015
[3]Guidelines for Electricity Distributor Conservation and Demand Management, EB-2012-0003, Appendix B
[4]Conservation and Demand Management Requirement Guidelines for Electricity Distributors, EB-2014-0278, Section 7 - LRAM

electricity savings province-wide from 2015 to 2020. These programs will be either Local CDM programs or Province-Wide Distributor initiatives that will be funded by the IESO[2].

## 2.0 Lost Revenue Adjustment Mechanism Variance Account

The Board authorized the establishment of an LRAM variance account ("LRAMVA") Uniform System of Accounts ("USofA") 1568 to capture at the customer rate-class, the difference between:

i. The results of the actual verified impacts of authorized CDM activities undertaken by the electricity distributor for Board-Approved CDM programs and/or OPA-Contracted Province-Wide CDM programs in relation to activities undertaken by the distributor and/or delivered for the distributor by a third party under contract (in the distributor's franchise area)

AND

ii. The level of CDM program activities included in the distributor's load forecast (i.e. the level embedded into rates)[3].

Hydro Ottawa Limited ("Hydro Ottawa") will follow Appendix A of the 2012 CDM Guidelines, which states Local Distribution Companies ("LDCs") in the 2016 Cost of Service ("COS") year can apply for approval of lost revenues for 2014 LRAMVA programs and persistence for LRAMVA 2011 to 2013. According to the 2014 CDM Guidelines, "Distributors should continue to rely on the LRAMVA to track and dispose lost revenues that result from approved CDM programs between 2015 and 2020."[4] At the time of drafting this evidence, Hydro Ottawa can support the 2011, 2012 and 2013 LRAM claims. The 2014 results are expected in the fall of 2015. Hydro Ottawa will file for additional LRAM and persistence claims in the future, and potentially for annual adjustments or other OPA adjustments.

[1] References to the OPA remain for activities occurring prior to January 1, 2015. As of January 1, 2015, all functions of the OPA will be those of the Independent Electricity System Operator ("IESO")
[2] References made to the IESO in Exhibit D-5-1 are in relation to CDM activities on or after January 1, 2015
[3]Guidelines for Electricity Distributor Conservation and Demand Management, EB-2012-0003, Appendix B
[4]Conservation and Demand Management Requirement Guidelines for Electricity Distributors, EB-2014-0278, Section 7 - LRAM

Hydro Ottawa has relied on the most recent final CDM Evaluation Report from the OPA in support of the lost revenue calculation; please refer to Exhibit D-5-2 for further details. Please see Attachment D–5(A) for the OPA report and Attachment D–5(B) for Hydro Ottawa's 2013 Annual Report on Conservation and Demand Management.

**Message from the Vice President:**

The OPA is pleased to provide you with the enclosed Final 2013 Verified Results Report.

2013 Report highlights:

- We have achieved 86% of our cumulative energy savings target and 48% of our annual peak demand savings target to date (Scenario 2).

  By the end of 2013, 42 LDCs have exceeded 80% of their energy target and 19 LDCs have met or exceeded their 2011-14 energy target.
- In 2013, LDCs have achieved over 600 GWh in savings, representing an increase of 20% over the 2012 net incremental energy savings results.
- The BUSINESS PROGRAM continues to generate strong interest and participation amongst business customers with significant savings results. 71% of total energy savings in 2013 came from the BUSINESS PROGRAM and its momentum continues. Also, as the program matures, we are seeing more and more studies in the PROCESS AND SYSTEMS pipeline converting to completed projects.
- Within 4 cents per kWh, Conservation programs continue to be a valuable and cost effective resource for customers across the province.

2013 has been a year of significant operational advancements centered around creating a better customer and LDC experience:

- A number of operational changes were made in 2013 to enhance processes, such as payment of LDC invoices streamlined to an average of 20 days, enhanced reporting and iCon updates to improve users' experience.
- Proactive updates to measures incentivized through saveONenergy have allowed programs to stay ahead of changing market conditions. Specifically in 2013, LEDs became popular measures in both the Consumer and Business programs.
- Technical tools also played a significant role in 2013, which included an updated Measure and Assumptions List as well as new and improved engineering worksheets for RETROFIT which allow customers to more easily access programs by building strong business cases based on latest estimates of savings potential.
- The Conservation Fund introduced the LDC Fast Track stream to support LDCs with innovative program ideas. 2013 LDC pilots included Oshawa PUC Networks Inc.'s retro-commissioning program, Toronto Hydro-Electric System Limited multi-unit demand response, and Niagara-on-the-Lake Hydro Inc.'s electric vehicles load shifting program.
- Key market sectors were also engaged in 2013 through Capability Building programs targeted at Home Builders and HVAC Installers to build conservation knowledge with these partners. Energy Efficiency Services Programs (EESPs) also provided valuable support to a variety of sectors.

The format of this report was developed in collaboration with the Reporting Working Group and is designed to help LDCs populate their 2013 Annual Reports that will be submitted to the OEB by September 30th. Any additional 2013 program activity not captured here will be reported in your Final 2014 Verified Results Report.

Please continue to monitor saveONenergy E-blasts for any further updates and should you have any other questions or comments please contact LDC.Support@powerauthority.on.ca.

We appreciate your ongoing collaboration and cooperation throughout the reporting and evaluation process. We look forward to another successful year in 2014.

Sincerely,

Andrew Pride

| Table 9 | Provincial Net Peak Demand Savings (MW) | Provides a portfolio level view of provincial achievement of net peak demand savings towards the OEB target to date. | 11 |
| Table 10 | Provincial Net Energy Savings (GWh) | Provides a portfolio level view of achievement of provincial net energy savings towards the OEB target to date. | 11 |
| **Appendix** | | | |
| - | Methodology | Detailed descriptions of methods used for results. | 12 to 21 |
| - | Reference Tables | To map C&I and Industrial customer data and Consumer Program allocation methodology. | 22 to 25 |
| - | Glossary | Definitions for terms used throughout the report. | 26 |
| Table 11 | LDC Initiative and Program Level Gross Savings | Provides LDC-specific initiative-level results (gross peak demand and energy savings). | 27 |
| Table 12 | LDC Adjustments to Gross Verified Results | Provides LDC-specific initiative level adjustments from previous years (gross peak demand and energy savings). | 28 |
| Table 13 | Provincial Initiative and Program Level Gross Savings | Provides province-wide initiative-level results (gross peak demand and energy savings). | 29 |
| Table 14 | Provincial Adjustments to Gross Verified Results | Provides province-wide initiative level adjustments from previous years (gross peak demand and energy savings). | 30 |

## OPA-Contracted Province-Wide CDM Programs Final Verified 2013 Results

**LDC:** Hydro Ottawa Limited

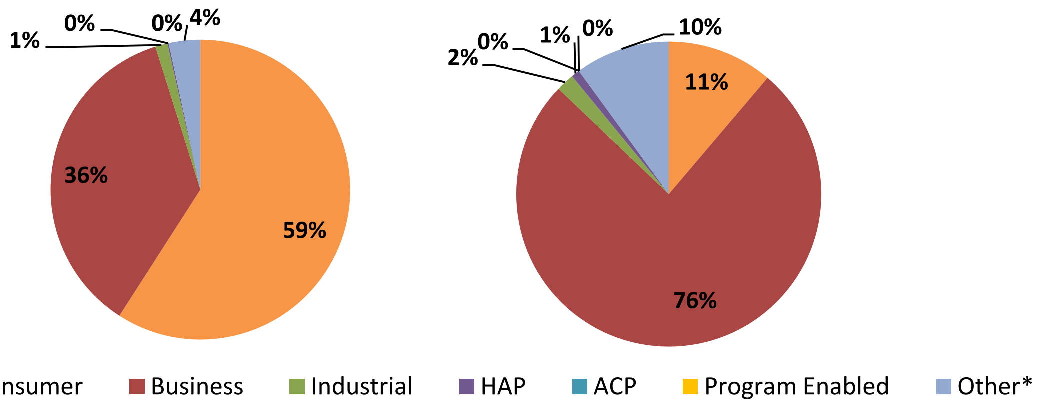
| FINAL 2013 Progress to Targets | 2013 Incremental | Program-to-Date Progress to Target (Scenario 1) | Scenario 1: % of Target Achieved | Scenario 2: % of Target Achieved |
|---|---|---|---|---|
| **Net Annual Peak Demand Savings (MW)** | 22.5 | 25.4 | **29.8%** | **45.6%** |
| **Net Energy Savings (GWh)** | 42.6 | 332.4 | **88.7%** | **88.7%** |

Scenario 1 = Assumes that demand response resources have a persistence of 1 year

Scenario 2 = Assumes that demand response resources remain in the LDC service territory until 2014

## Achievement by Sector

**2013 Incremental Peak Demand Savings (MW)** | **2013 Incremental Energy Savings (GWh)**

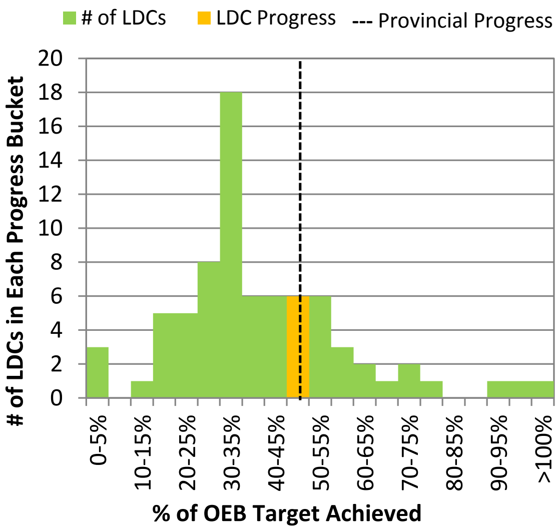


**Other includes adjustments to previous years' results and savings from pre-2011 initiatives*

## Comparison: LDC Achievement vs. LDC Community Achievement (Progress to Target)

The following graphs assume that demand response resources remain in the LDC service territory until 2014 (aligns with Scenario 2)

**% of OEB Peak Demand Savings Target Achieved**



**% of OEB Energy Savings Target Achieved**

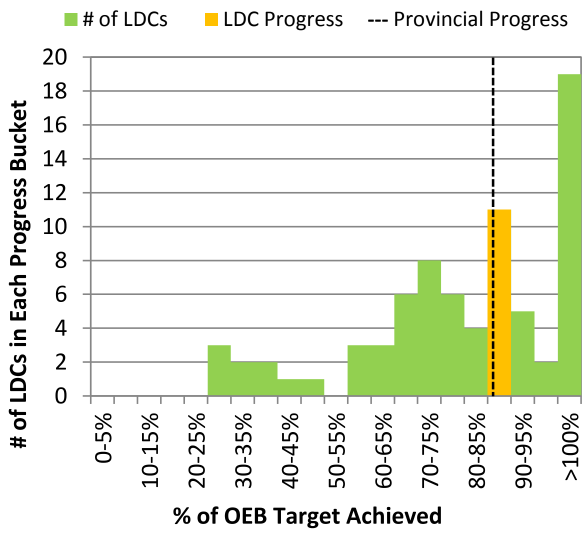


Table 1: Hydro Ottawa Limited Initiative and Program Level Net Savings by Year (Scenario 1)

| Initiative | Unit | Incremental Activity (new program activity occurring within the specified reporting period) | | | | Net Incremental Peak Demand Savings (kW) (new peak demand savings from activity within the specified reporting period) | | | | Net Incremental Energy Savings (kWh) (new energy savings from activity within the specified reporting period) | | | | Program-to-Date Verified Progress to Target (excludes DR): 2014 Net Annual Peak Demand Savings (kW) | Program-to-Date Verified Progress to Target (excludes DR): 2011-2014 Net Cumulative Energy Savings (kWh) |

Activity and savings for Demand Response resources for each year represent the savings from all active facilities or devices contracted since January 1, 2011 (reported cumulatively).

The IHD line item on the 2013 annual report has been left blank pending a results update from evaluations; results will be updated once sufficient information is made available.

*Includes adjustments after Final Reports were issued

Energy Manager, Aboriginal Program and Program Enabled Savings were not independently evaluated

Energy Manager, Aboriginal Program and Program Enabled Savings were not independently evaluated

## Summary Progress Towards CDM Targets

Results are attributed to target using current OPA reporting policies. Energy efficiency resources persist for the duration of the effective useful life. Any upcoming code changes are taken into account. Demand response resources persist for 1 year (Scenario 1). Please see methodology tab for more detailed information.

### Table 4: Net Peak Demand Savings at the End User Level (MW) (Scenario 1)

| Implementation Period | Annual | | | |
|---|---|---|---|---|
| | 2011 | 2012 | 2013 | 2014 |
| **2011 - Verified** | 12.7 | 8.9 | 8.9 | 8.3 |
| **2012 - Verified†** | -0.2 | 16.6 | 8.5 | 8.4 |
| **2013 - Verified†** | 0.0 | 0.5 | 22.5 | 8.8 |
| **2014** | | | | |
| **Verified Net Annual Peak Demand Savings Persisting in 2014:** | | | | **25.4** |
| **Hydro Ottawa Limited 2014 Annual CDM Capacity Target:** | | | | **85.3** |
| **Verified Portion of Peak Demand Savings Target Achieved in 2014 (%):** | | | | **29.8%** |

### Table 5: Net Energy Savings at the End User Level (GWh)

| Implementation Period | Annual | | | | Cumulative |
|---|---|---|---|---|---|
| | 2011 | 2012 | 2013 | 2014 | 2011-2014 |
| **2011 - Verified** | 35.8 | 35.8 | 35.7 | 34.0 | 141.4 |
| **2012 - Verified†** | 0.2 | 35.1 | 34.9 | 34.4 | 104.6 |
| **2013 - Verified†** | 0.0 | 2.4 | 42.6 | 41.4 | 86.4 |
| **2014** | | | | | |
| **Verified Net Cumulative Energy Savings 2011-2014:** | | | | | **332.4** |
| **Hydro Ottawa Limited 2011-2014 Annual CDM Energy Target:** | | | | | **374.7** |
| **Verified Portion of Cumulative Energy Target Achieved in 2014 (%):** | | | | | **88.7%** |

*†Includes adjustments to previous Years' verified results*

Table 6: Province-Wide Initiatives and Program Level Net Savings by Year (Scenario 1)

Activity and savings for Demand Response resources for each year represent the savings from all active facilities or devices contracted since January 1, 2011 (reported cumulatively).

The IHD line item on the 2013 annual report has been left blank pending a results update from evaluations; results will be updated once sufficient information is made available.

*Includes adjustments after Final Reports were issued

Energy Manager, Aboriginal Program and Program Enabled Savings were not independently evaluated

## Summary Provincial Progress Towards CDM Targets

### Table 9: Province-Wide Net Peak Demand Savings at the End User Level (MW)

| Implementation Period | Annual | | | |
|---|---|---|---|---|
| | 2011 | 2012 | 2013 | 2014 |
| **2011** | 216.3 | 136.6 | 135.8 | 129.0 |
| **2012†** | 1.4 | 253.3 | 109.8 | 108.2 |
| **2013†** | 0.6 | 7.0 | 404.5 | 122.0 |
| **2014** | | | | |
| **Verified Net Annual Peak Demand Savings in 2014:** | | | | **359.2** |
| **2014 Annual CDM Capacity Target:** | | | | **1,330** |
| **Verified Portion of Peak Demand Savings Target Achieved in 2014 (%):** | | | | **27.0%** |

### Table 10: Province-Wide Net Energy Savings at the End-User Level (GWh)

| Implementation Period | Annual | | | | Cumulative |
|---|---|---|---|---|---|
| | 2011 | 2012 | 2013 | 2014 | 2011-2014 |
| **2011** | 606.9 | 603.0 | 601.0 | 582.3 | 2,393.1 |
| **2012†** | 18.7 | 503.6 | 498.4 | 492.6 | 1,513.3 |
| **2013†** | 1.7 | 44.4 | 603.3 | 583.4 | 1,232.8 |
| **2014** | | | | | |
| **Verified Net Cumulative Energy Savings 2011-2014:** | | | | | **5,139.1** |
| **2011-2014 Cumulative CDM Energy Target:** | | | | | **6,000** |
| **Verified Portion of Cumulative Energy Target Achieved in 2014 (%):** | | | | | **85.7%** |

*†Includes adjustments to previous Years' verified results*

## METHODOLOGY

All results are at the end-user level (not including transmission and distribution losses)

| EQUATIONS | |
|---|---|
| Prescriptive Measures and Projects | **Gross Savings = Activity * Per Unit Assumption**<br>**Net Savings = Gross Savings * Net-to-Gross Ratio**<br>**All savings are annualized (i.e. the savings are the same regardless of time of year a project was completed or measure installed)** |
| Engineered and Custom Projects | **Gross Savings = Reported Savings * Realization Rate**<br>**Net Savings = Gross Savings * Net-to-Gross Ratio**<br>**All savings are annualized (i.e. the savings are the same regardless of time of year a project was completed or measure installed)** |
| Demand Response | **Peak Demand: Gross Savings = Net Savings = contracted MW at contributor level * Provincial contracted to ex ante ratio**<br>**Energy: Gross Savings = Net Savings = provincial ex post energy savings * LDC proportion of total provincial contracted MW**<br>**All savings are annualized (i.e. the savings are the same regardless of the time of year a participant began offering DR)** |
| Adjustments to Previous Years' Verified Results | All variances from the Final Annual Results Reports from prior years will be adjusted within this report. Any variances with regards to projects counts, data lag, and calculations etc., will be made within this report. Considers the cumulative effect of energy savings. |

| Initiative | Attributing Savings to LDCs | Savings 'start' Date | Calculating Resource Savings |
|---|---|---|---|
| **Consumer Program** | | | |
| Appliance Retirement | Includes both retail and home pickup stream; Retail stream allocated based on average of 2008 & 2009 residential throughput; Home pickup stream directly attributed by postal code or customer selection. | Savings are considered to begin in the year the appliance is picked up. | Peak demand and energy savings are determined using the verified measure level per unit assumption multiplied by the uptake in the market (gross) taking into account net-to-gross factors such as free-ridership and spillover (net) at the measure level. |
| Appliance Exchange | When postal code information is provided by customer, results are directly attributed to the LDC. When postal code is not available, results allocated based on average of 2008 & 2009 residential throughput. | Savings are considered to begin in the year that the exchange event occurred. | |
| HVAC Incentives | Results directly attributed to LDC based on customer postal code. | Savings are considered to begin in the year that the installation occurred. | |

| Initiative | Attributing Savings to LDCs | Savings 'start' Date | Calculating Resource Savings |
|---|---|---|---|
| Conservation Instant Coupon Booklet | LDC-coded coupons directly attributed to LDC; Otherwise results are allocated based on average of 2008 & 2009 residential throughput. | Savings are considered to begin in the year in which the coupon was redeemed. | Peak demand and energy savings are determined using the verified measure level per unit assumption multiplied by the uptake in the market (gross) taking into account net-to-gross factors such as free-ridership and spillover (net) at the measure level. |
| Bi-Annual Retailer Event | Results are allocated based on average of 2008 & 2009 residential throughput. | Savings are considered to begin in the year in which the event occurs. | Peak demand and energy savings are determined using the verified measure level per unit assumption multiplied by the uptake in the market (gross) taking into account net-to-gross factors such as free-ridership and spillover (net) at the measure level. |
| Retailer Co-op | When postal code information is provided by the customer, results are directly attributed. If postal code information is not available, results are allocated based on average of 2008 & 2009 residential throughput. | Savings are considered to begin in the year of the home visit and installation date. | Peak demand and energy savings are determined using the verified measure level per unit assumption multiplied by the uptake in the market (gross) taking into account net-to-gross factors such as free-ridership and spillover (net) at the measure level. |
| Residential Demand Response | Results are directly attributed to LDC based on data provided to OPA through project completion reports and continuing participant lists. | Savings are considered to begin in the year the device was installed and/or when a customer signed a peaksaver PLUS™ participant agreement. | Peak demand savings are based on an ex ante estimate assuming a 1 in 10 weather year and represents the "insurance value" of the initiative. Energy savings are based on an ex post estimate which reflects the savings that occurred as a result of activations in the year and accounts for any “snapback” in energy consumption experienced after the event. Savings are assumed to persist for only 1 year, reflecting that savings will only occur if the resource is activated. |

| Initiative | Attributing Savings to LDCs | Savings 'start' Date | Calculating Resource Savings |
|---|---|---|---|
| Residential New Construction | Results are directly attributed to LDC based on LDC identified in application in the saveONenergy CRM system; Initiative was not evaluated in 2011, reported results are presented with forecast assumptions as per the business case. | Savings are considered to begin in the year of the project completion date. | Peak demand and energy savings are determined using the verified measure level per unit assumption multiplied by the uptake in the market (gross) taking into account net-to-gross factors such as free-ridership and spillover (net) at the measure level. |
| **Business Program** | | | |
| Efficiency: Equipment Replacement | Results are directly attributed to LDC based on LDC identified at the facility level in the saveONenergy CRM; Projects in the Application Status: "Post-Stage Submission" are included (excluding "Payment denied by LDC"); Please see page  for Building type to Sector mapping. | Savings are considered to begin in the year of the actual project completion date on the iCON CRM system. | Peak demand and energy savings are determined by the total savings for a given project as reported in the iCON CRM system (reported). A realization rate is applied to the reported savings  to ensure that these savings align with EM&V protocols and reflect the savings that were actually realized (i.e. how many light bulbs were actually installed vs. what was reported) (gross). Net savings takes into account net-to-gross factors such as free-ridership and spillover (net). Both realization rate and net-to-gross ratios can differ for energy and demand savings and depend on the mix of projects within an LDC territory (i.e. lighting or non-lighting project, engineered/custom/prescriptive track). |
| | Additional Note: project counts were derived by filtering out invalid statuses (e.g. Post-Project Submission - Payment denied by LDC) and only including projects with an "Actual Project Completion Date" in 2013) | | |

| Initiative | Attributing Savings to LDCs | Savings 'start' Date | Calculating Resource Savings |
|---|---|---|---|
| Direct Installed Lighting | Results are directly attributed to LDC based on the LDC specified on the work order. | Savings are considered to begin in the year of the actual project completion date. | Peak demand and energy savings are determined using the verified measure level per unit assumptions multiplied by the uptake of each measure accounting for the realization rate for both peak demand and energy to reflect the savings that were actually realized (i.e. how many light bulbs were actually installed vs. what was reported) (gross). Net savings take into account net-to-gross factors such as free-ridership and spillover for both peak demand and energy savings at the program level (net). |
| Existing Building Commissioning Incentive | Results are directly attributed to LDC based on LDC identified in the application; Initiative was not evaluated, no completed projects in 2011 or 2012. | Savings are considered to begin in the year of the actual project completion date. | Peak demand and energy savings are determined by the total savings for a given project as reported (reported). A realization rate is applied to the reported savings to ensure that these savings align with EM&V protocols and reflect the savings that were actually realized (i.e. how many light bulbs were actually installed vs. what was reported) (gross). Net savings takes into account net-to-gross factors such as free-ridership and spillover (net). |
| New Construction and Major Renovation Incentive | Results are directly attributed to LDC based on LDC identified in the application. | Savings are considered to begin in the year of the actual project completion date. | |
| Energy Audit | Projects are directly attributed to LDC based on LDC identified in the application. | Savings are considered to begin in the year of the audit date. | Peak demand and energy savings are determined by the total savings resulting from an audit as reported (reported). A realization rate is applied to the reported savings to ensure that these savings align with EM&V protocols and reflect the savings that were actually realized (i.e. how many light bulbs were actually installed vs. what was reported) (gross). Net savings takes into account net-to-gross factors such as free-ridership and spillover (net). |

| Initiative | Attributing Savings to LDCs | Savings 'start' Date | Calculating Resource Savings |
|---|---|---|---|
| Commercial Demand Response (part of the Residential program schedule) | Results are directly attributed to LDC based on data provided to OPA through project completion reports and continuing participant lists | Savings are considered to begin in the year the device was installed and/or when a customer signed a peaksaver PLUS™ participant agreement. | Peak demand savings are based on an ex ante estimate assuming a 1 in 10 weather year and represents the "insurance value" of the initiative. Energy savings are based on an ex post estimate which reflects the savings that occurred as a result of activations in the year. Savings are assumed to persist for only 1 year, reflecting that savings will only occur if the resource is activated. |
| Demand Response 3 (part of the Industrial program schedule) | Results are attributed to LDCs based on the total contracted megawatts at the contributor level as of December 31st, applying the provincial ex ante to contracted ratio (ex ante estimate/contracted megawatts); Ex post energy savings are attributed to the LDC based on their proportion of the total contracted megawatts at the contributor level. | Savings are considered to begin in the year in which the contributor signed up to participate in demand response. | Peak demand savings are ex ante estimates based on the load reduction capability that can be expected for the purposes of planning. The ex ante estimates factor in both scheduled non-performances (i.e. maintenance) and historical performance. Energy savings are based on an ex post estimate which reflects the savings that actually occurred as a results of activations in the year. Savings are assumed to persist for 1 year, reflecting that savings will not occur if the resource is not activated and additional costs are incurred to activate the resource. |
| **Industrial Program** | | | |
| Process & System Upgrades | Results are directly attributed to LDC based on LDC identified in application. | Savings are considered to begin in the year in which the incentive project was completed. | Peak demand and energy savings are determined by the total savings from a given project as reported (reported). A realization rate is applied to the reported savings to ensure that these savings align with EM&V protocols and reflect the savings that were actually realized (i.e. how many light bulbs were actually installed vs. what was reported) (gross). Net savings takes into account net-to-gross factors such as free-ridership and spillover (net). |

| Initiative | Attributing Savings to LDCs | Savings 'start' Date | Calculating Resource Savings |
|---|---|---|---|
| Monitoring & Targeting | Results are directly attributed to LDC based on LDC identified in the application; Initiative was not evaluated, no completed projects in 2011, 2012 or 2013. | Savings are considered to begin in the year in which the incentive project was completed. | Peak demand and energy savings are determined by the total savings from a given project as reported (reported). A realization rate is applied to the reported savings to ensure that these savings align with EM&V protocols and reflect the savings that were actually realized (i.e. how many light bulbs were actually installed vs. what was reported) (gross). Net savings takes into account net-to-gross factors such as free-ridership and spillover (net). |
| Energy Manager | Results are directly attributed to LDC based on LDC identified in the application. | Savings are considered to begin in the year in which the project was completed by the energy manager. If no date is specified the savings will begin the year of the Quarterly Report submitted by the energy manager. | Peak demand and energy savings are determined by the total savings from a given project as reported (reported). A realization rate is applied to the reported savings to ensure that these savings align with EM&V protocols and reflect the savings that were actually realized (i.e. how many light bulbs were actually installed vs. what was reported) (gross). Net savings takes into account net-to-gross factors such as free-ridership and spillover (net). |

| Initiative | Attributing Savings to LDCs | Savings 'start' Date | Calculating Resource Savings |
|---|---|---|---|
| Efficiency: Equipment Replacement Incentive (part of the C&I program schedule) | Results are directly attributed to LDC based on LDC identified at the facility level in the saveONenergy CRM; Projects in the Application Status: "Post-Stage Submission" are included (excluding "Payment denied by LDC"); Please see "Reference Tables" tab for Building type to Sector mapping. | Savings are considered to begin in the year of the actual project completion date on the iCON CRM system. | Peak demand and energy savings are determined by the total savings for a given project as reported in the iCON CRM system (reported). A realization rate is applied to the reported savings  to ensure that these savings align with EM&V protocols and reflect the savings that were actually realized (i.e. how many light bulbs were actually installed vs. what was reported) (gross). Net savings takes into account net-to-gross factors such as free-ridership and spillover (net). Both realization rate and net-to-gross ratios can differ for energy and demand savings and depend on the mix of projects within an LDC territory (i.e. lighting or non-lighting project, engineered/custom/prescriptive track). |
| Demand Response 3 | Results are attributed to LDCs based on the total contracted megawatts at the contributor level as of December 31st, applying the provincial ex ante to contracted ratio (ex ante estimate/contracted megawatts); Ex post energy savings are attributed to the LDC based on their proportion of the total contracted megawatts at the contributor level. | Savings are considered to begin in the year in which the contributor signed up to participate in demand response. | Peak demand savings are ex ante estimates based on the load reduction capability that can be expected for the purposes of planning. The ex ante estimates factor in both scheduled non-performances (i.e. maintenance) and historical performance. Energy savings are based on an ex post estimate which reflects the savings that actually occurred as a results of activations in the year.  Savings are assumed to persist for 1 year, reflecting that savings will not occur if the resource is not activated and additional costs are incurred to activate the resource. |

| Initiative | Attributing Savings to LDCs | Savings 'start' Date | Calculating Resource Savings |
|---|---|---|---|
| **Home Assistance Program** | | | |
| Home Assistance Program | Results are directly attributed to LDC based on LDC identified in the application. | Savings are considered to begin in the year in which the measures were installed. | Peak demand and energy savings are determined using the measure level per unit assumption multiplied by the uptake of each measure (gross), taking into account net-to-gross factors such as free-ridership and spillover (net) at the measure level. |
| **Aboriginal Program** | | | |
| Aboriginal Program | Results are directly attributed to LDC based on LDC identified in the application. | Savings are considered to begin in the year in which the measures were installed. | Peak demand and energy savings are determined using the measure level per unit assumption multiplied by the uptake of each measure (gross), taking into account net-to-gross factors such as free-ridership and spillover (net) at the measure level. |

| Initiative | Attributing Savings to LDCs | Savings 'start' Date | Calculating Resource Savings |
|---|---|---|---|
| **Pre-2011 Programs completed in 2011** | | | |
| Electricity Retrofit Incentive Program | Results are directly attributed to LDC based on LDC identified in the application; Initiative was not evaluated in 2011, 2012 or 2013 assumptions as per 2010 evaluation. | Savings are considered to begin in the year in which a project was completed. | Peak demand and energy savings are determined by the total savings from a given project as reported. A realization rate is applied to the reported savings to ensure that these savings align with EM&V protocols and reflect the savings that were actually realized (i.e. how many light bulbs were actually installed vs. what was reported) (gross). Net savings takes into account net-to-gross factors such as free-ridership and spillover (net). If energy savings are not available, an estimate is made based on the kWh to kW ratio in the provincial results from the 2010 evaluated results (http://www.powerauthority.on.ca/evaluation-measurement-and-verification/evaluation-reports). |
| High Performance New Construction | Results are directly attributed to LDC based on customer data provided to the OPA from Enbridge; Initiative was not evaluated in 2011, 2012 or 2013, assumptions as per 2010 evaluation. | Savings are considered to begin in the year in which a project was completed. | |
| Toronto Comprehensive | Program run exclusively in Toronto Hydro-Electric System Limited service territory; Initiative was not evaluated in 2011, 2012 or 2013, assumptions as per 2010 evaluation. | | |

## Reporting Glossary

**Annual: the peak demand or energy savings that occur in a given year (includes resource savings from new program activity in a given year and resource savings persisting from previous years).**

**Cumulative Energy Savings: represents the sum of the annual energy savings that accrue over a defined period (in the context of this report the defined period is 2011 - 2014). This concept does not apply to peak demand savings.**

**End-User Level: resource savings in this report are measured at the customer level as opposed to the generator level (the difference being line losses).**

Free-ridership: the percentage of participants who would have implemented the program measure or practice in the absence of the program.

**Incremental: the new resource savings attributable to activity procured in a particular reporting period based on when the savings are considered to 'start'.**

Initiative: a Conservation & Demand Management offering focusing on a particular opportunity or customer end-use (i.e. Retrofit, Fridge & Freezer Pickup).

**Net-to-Gross Ratio: The ratio of net savings to gross savings, which takes into account factors such as free-ridership and spillover**

**Net Energy Savings (MWh): energy savings attributable to conservation and demand management activities net of free-riders, etc.**

**Net Peak Demand Savings (MW): peak demand savings attributable to conservation and demand management activities net of free-riders, etc.**

**Program: a group of initiatives that target a particular market sector (e.g. Consumer, Industrial).**

Realization Rate: A comparison of observed or measured (evaluated) information to original reported savings which is used to adjust the gross savings estimates.

Settlement Account: the grouping of demand response facilities (contributors) into one contractual agreement

Spillover: Reductions in energy consumption and/or demand caused by the presence of the energy efficiency program, beyond the program-related gross savings of the participants. There can be participant and/or non-participant spillover.

**Unit: for a specific initiative the relevant type of activity acquired in the market place (i.e. appliances picked up, projects completed, coupons redeemed).**

Table 11: Hydro Ottawa Limited Initiative and Program Level Gross Savings by Year

| Initiative | Unit | Gross Incremental Peak Demand Savings (kW) (new peak demand savings from activity within the specified reporting period) | | | | Gross Incremental Energy Savings (kWh) (new energy savings from activity within the specified reporting period) | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | 2011 | 2012 | 2013 | 2014 | 2011 | 2012 | 2013 | 2014 |

Activity and savings for Demand Response resources for each year represent the savings from all active facilities or devices contracted since January 1, 2011 (reported cumulatively).

The IHD line item on the 2013 annual report has been left blank pending a results update from evaluations; results will be updated once sufficient information is made available.

Adjustments to previous years' results shown in this table will not align to adjustments shown in Table 1 as the information presented above does not consider persistence of savings

Gross results are presented for informational purposes only and are not considered official 2013 Final Verified Results

**Net results substituted for gross results due to unavailability of data

| **Other Total** | | **624** | **824** | | | **1,673,712** | **9,927,473** | | |
| **Adjustments to 2011 Verified Results** | | **13,911** | | | | **50,449,939** | | | |
| **Adjustments to 2012 Verified Results** | | | **8,707** | | | | **55,101,043** | | |
| **Adjustments to Previous Years' Verified Results Total** | | **13,911** | **8,707** | | | **50,449,939** | **55,101,043** | | |

Activity and savings for Demand Response resources for each year represent the savings from all active facilities or devices contracted since January 1, 2011 (reported cumulatively).

The IHD line item on the 2013 annual report has been left blank pending a results update from evaluations; results will be updated once sufficient information is made available.

*Gross results are presented for informational purposes only and are not considered official 2013 Final Verified Results*

# Hydro Ottawa

## Conservation and Demand Management

# 2013 Annual Report

**Submitted to:**

## Ontario Energy Board

**Submitted on September 30, 2014**

*TABLE OF CONTENTS*

# Executive Summary

This annual report is submitted by Hydro Ottawa in accordance with the filing requirements set out in the CDM Code (Board File No. EB-2010-0215), specifically Appendix C Annual Report Template, as a progress report and modification to Hydro Ottawa Strategy. Accordingly, this report outlines Hydro Ottawa CDM activities for the period of January 1, 2013 to December 31, 2013. It includes net peak demand and net energy savings achieved from 2011, 2012 and 2013, with discussion of the current/future CDM framework, CDM program activities, successes and challenges, as well as forecasted savings to the end of 2014.

Hydro Ottawa did not apply for any Board-Approved CDM Programs during 2013; however, as noted in the CDM guidelines, released April 26, 2012, the Ontario Energy Board (OEB) has deemed Time-of-Use (TOU) pricing a Province-wide Board-Approved CDM Program. The Ontario Power Authority (OPA) is to provide measurement and verification on TOU. At the time of this report the OPA has not released any verified results of TOU savings to Hydro Ottawa.

In 2011, Hydro Ottawa contracted with the Ontario Power Authority (OPA) to deliver a portfolio of OPA-Contracted Province-Wide CDM Programs to all customer segments including residential, commercial, institutional, industrial and low income. These programs were rolled-out by the OPA in June 2011. In 2011 Program activities were centered on building a foundation for full program execution over the next three years of the program term, including staffing, procurement, and program delivery.

In 2012, Hydro Ottawa focused efforts on lead generation and program execution. In the Commercial and Industrial segments the focus was on leveraging marketplace delivery channels such as heating, cooling and lighting manufacturers, suppliers and distributors for maximum program uptake. Hydro Ottawa achieved excellent program results by working with and through these delivery channels and with major property managers, high volume customers and the municipal, university, school and hospital (MUSH) segment. The efforts of Hydro Ottawa were augmented through the strategic deployment of Energy Managers embedded in a number of large customers including a national retailer, local Colleges and Universities, Federal and Municipal Governments and Property Management organizations with broad scale.

In the Residential segment, Hydro Ottawa focused on mass marketing, direct mail and on-line promotion to attract and enlist greater participation in this segment.

In 2013, Hydro Ottawa continued to focus on lead generation, expanded channel management and program execution as efforts are delivering good results. Three additional Embedded Energy Managers were added. A street team was deployed to deliver and install Energy Displays to eligible customers. This had a very positive impact on the profile of the *peaksaver* PLUS program.

Hydro Ottawa achieved 22.5 MW of net incremental peak demand savings and 42.6 GWh of net incremental energy savings in 2013. A summary of the achievements towards the CDM targets is shown below:

## OPA-Contracted Province-Wide CDM Programs Final Verified 2013 Results

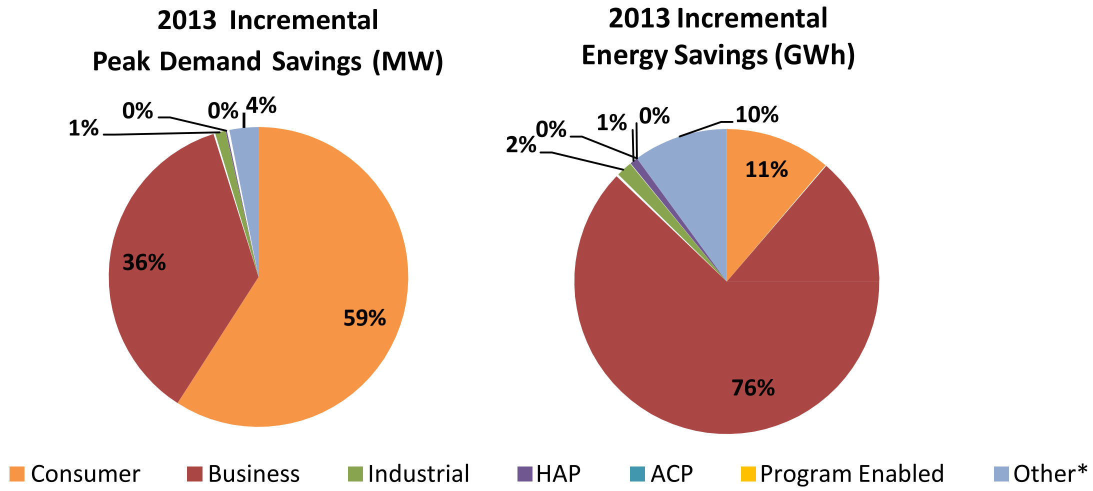
**LDC:** Hydro Ottawa Limited

| FINAL 2013 Progress to Targets | 2013 Incremental | Program-to-Date Progress to Target (Scenario 1) | Scenario 1: % of Target Achieved | Scenario 2: % of Target Achieved |
|---|---|---|---|---|
| **Net Annual Peak Demand Savings (MW)** | 22.5 | 25.4 | **29.8%** | **45.6%** |
| **Net Energy Savings (GWh)** | 42.6 | 332.4 | **88.7%** | **88.7%** |

Scenario 1 = Assumes that demand response resources have a persistence of 1 year

Scenario 2 = Assumes that demand response resources remain in the LDC service territory until 2014

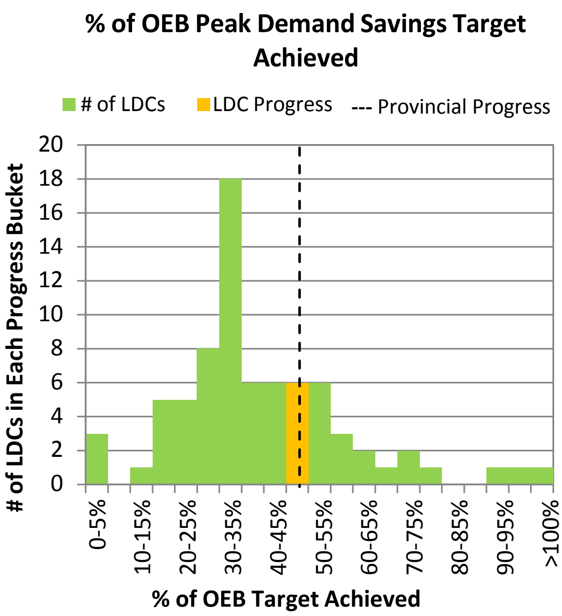
## Achievement by Sector

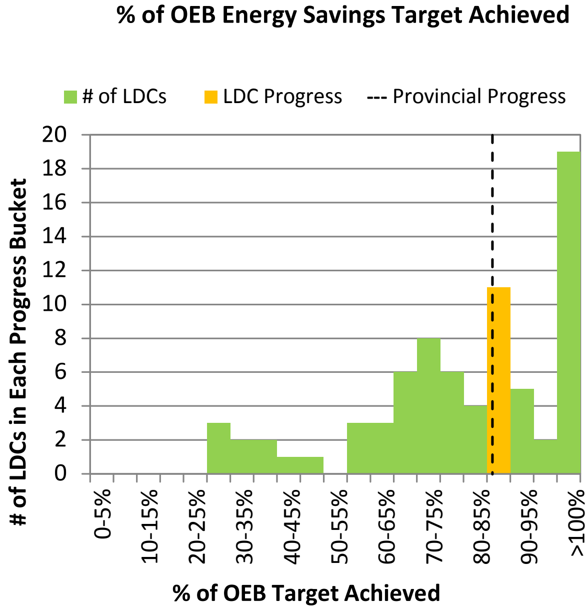


**Other includes adjustments to previous years' results and savings from pre-2011 initiatives*

## Comparison: LDC Achievement vs. LDC Community Achievement (Progress to Target)

The following graphs assume that demand response resources remain in the LDC service territory until 2014 (aligns with Scenario 2)





Hydro Ottawa expects to achieve the 2014 electricity energy savings target and 90% of the peak demand target. Hydro Ottawa continues to work actively on participant engagement. In addition Hydro Ottawa has partnered with other LDCs, and has been working with the Ontario Power Authority ("OPA") and the Electrical Distribution Association ("EDA") to improve program effectiveness, however it is Hydro Ottawa's position that these actions will not fully overcome the forecasted peak demand savings shortfall.

# Background

On March 31, 2010, the Minister of Energy and Infrastructure of Ontario, under the guidance of sections 27.1 and 27.2 of the *Ontario Energy Board Act, 1998*, directed the Ontario Energy Board (OEB) to establish Conservation and Demand Management (CDM) targets to be met by electricity distributors. Accordingly, on November 12, 2010, the OEB amended the distribution license of Hydro Ottawa to require Hydro Ottawa, as a condition of its license, to achieve 374.73 GWh of energy savings and 85.26 MW of summer peak demand savings, over the period beginning January 1, 2011 through December 31, 2014.

In accordance with the same Minister's directive, the OEB issued the Conservation and Demand Management Code for Electricity Distributors (the Code) on September 16, 2010. The code sets out the obligations and requirements with which electricity distributors must comply in relation to the CDM targets set out in their licenses. To comply with the Code requirements, Hydro Ottawa submitted its CDM Strategy on June 13, 2011 which provided a high level of description of how Hydro Ottawa intended to achieve its CDM targets.

The Code also requires a distributor to file annual reports with the Board. This is the third Annual Report by Hydro Ottawa and has been prepared in accordance with the Code requirement and covers the period from January 1, 2013 to December 31, 2013.

Hydro Ottawa submitted its 2011 Annual Report on September 30, 2012 which summarized the CDM activities, successes and challenges experienced by Hydro Ottawa for the January 1, 2011 to December 31, 2011 period. The OEB's 2011 CDM Results report identified that the delay in the full suite of CDM Programs being made available by the OPA, and the absence of some programs negatively impacted the final 2011 results for the LDCs. This issue was also highlighted in Volumes I & II of the Environmental Commissioner's Report on Ontario's Annual Energy Conservation Progress.

On December 21, 2012, the Minister of Energy directed the Ontario Power Authority (OPA) to fund CDM programs which meet the definition and criteria for OPA-Contracted Province-Wide CDM Programs for an additional one-year period from January 1, 2015 to December 31, 2015.

The Ministerial Directive did not amend the timelines for LDCs to achieve their energy savings and demand savings targets. Therefore, the main focus of the LDCs remains the achievement of CDM targets by December 31, 2014.

Hydro Ottawa submitted its 2012 Annual Report on September 30, 2013 which summarized the CDM activities undertaken by Hydro Ottawa for the January 1, 2012 to December 31, 2012 period. The OEB's 2012 CDM Results report identified that the majority of LDCs achieved close to 20% of their net peak demand (MW) target from their 2012 results. However, LDCs generally advised the Board that meeting their peak demand (MW) target is not likely and that a shortfall is expected.

LDCs collectively achieved approximately 8% of the energy savings (GWh) target, which is slightly below the 10% incremental annual savings needed each year to achieve the energy savings target. Overall the cumulative results represent approximately 65% of the net energy target of 6,000 GWh.

The report identified that although there have been improvements to programs there still remains some shortcoming to the design and delivery of certain initiatives that have resulted in a negative impact to some programs. In particular, the change management process still requires improvements to expedite enhancements to initiatives. The report also noted that certain initiatives may be reaching the point of market saturation and that new initiatives may need to be developed in order to take the place of the existing initiatives.

# 1 Board-Approved CDM Program

## 1.1 Introduction

In its Decision and Order dated November 12 2010 (**EB-2010-0215 & EB-2010-0216**), the OEB ordered that, (to meet its mandatory CDM targets), "Each licensed electricity distributor must, as a condition of its license, deliver Board-Approved CDM Programs, OPA-Contracted Province-Wide CDM Programs, or a combination of the two".

At this time, the implementation of Time-of-Use ("TOU") Pricing has been deemed as a Board-Approved Conservation and Demand Management ("CDM") program that is being offered in Hydro Ottawa's service area.

## 1.2 TOU Pricing

### 1.2.1 Background

In its April 26, 2012 CDM Guidelines, the OEB recognizes that a portion of the aggregate electricity demand target was intended to be attributable to savings achieved through the implementation of TOU Pricing. The OEB establishes TOU prices and has made the implementation of this pricing mechanism mandatory for distributors. On this basis, the OEB has determined that distributors will not have to file a Board-Approved CDM program application regarding TOU pricing. The OEB has deemed the implementation of TOU pricing to be a Board-Approved CDM program for the purposes of achieving the CDM targets. The costs associated with the implementation of TOU pricing are recoverable through distribution rates, and not through the Global Adjustment Mechanism ("GAM").

In accordance with a Directive dated March 31, 2010 by the Minister of Energy and Infrastructure, the OEB is of the view that any evaluations of savings from TOU pricing should be conducted by the OPA for the province, and then allocated to distributors. Hydro Ottawa will report these results upon receipt from the OPA.

The OPA had retained The Brattle Group as the evaluation contractor and has been working with an expert panel convened to provide ongoing advice on methodology, data collection, models, savings allocation, etc. The initial evaluations were conducted in 2013 with five LDCs – Hydro One, THESL, Ottawa Hydro, Thunder Bay and Newmarket. Preliminary results from these five LDCs were issued to the five LDCs involved in the study in August 2013 and are now publically available on the OPA website. Preliminary results demonstrated load shifting behaviors from the residential customer class.

Three additional LDCs were added to the study in 2014 – Cambridge-North Dumphries, Powerstream and Sudbury. Preliminary results from this study are planned to be issued to the eight LDCs in September 2014. The OPA advised that the TOU study will be complete in the summer of 2015 and final verified savings will be available for LDCs to include in the 2014 Annual Report.

As of September 30, 2014, the OPA has not released any verified results of TOU savings to Hydro Ottawa. Therefore Hydro Ottawa is not able to provide any verified savings related to LDC's TOU program at this time. In the original business case, Hydro Ottawa was expecting approximately 17MW of savings from TOU based on the 2010 provincial business case estimate of 308 MW.) Without clear knowledge of the TOU impact, we are not able to provide accurate forecasts for TOU.

### 1.2.2 TOU PROGRAM DESCRIPTION

**Target Customer Type(s):** Residential and small business customers (up to 250,000 kWh per year)

**Initiative Frequency:** Year-Round

**Objectives:** TOU pricing is designed to incent the shifting of energy usage. Therefore peak demand reductions are expected, and energy conservation benefits may also be realized.

**Description**: In August of 2010, the OEB issued a final determination to mandate TOU pricing for Regulated Price Plan ("RPP") customers by June 2011, in order to support the Government's expectation for 3.6 million RPP consumers to be on TOU pricing by June 2011, and to ensure that smart meters funded at ratepayer expense are being used for their intended purpose.

The RPP TOU price is adjusted twice annually by the OEB. A summary of the RPP TOU pricing is provided below:

| RPP TOU | | Rates (cents/kWh) | |
|---|---|---|---|
| Effective Date | On Peak | Mid Peak | Off Peak |
| November 1, 2010 | 9.9 | 8.1 | 5.1 |
| May 1, 2011 | 10.7 | 8.9 | 5.9 |
| November 1, 2011 | 10.8 | 9.2 | 6.2 |
| May 1, 2012 | 11.7 | 10.0 | 6.5 |
| November 1, 2012 | 11.8 | 9.9 | 6.3 |
| May 1, 2013 | 12.4 | 10.4 | 6.7 |
| November 1, 2013 | 12.9 | 10.9 | 7.2 |

**Delivery:** The OEB set the rates; LDCs install and maintain the smart meters and convert customers to TOU billing.

**Initiative Activities/Progress:**

Hydro Ottawa began transitioning its RPP customers to TOU billing on May 1, 2010. At December 31st, 2013, 304,210 RPP customers were on TOU billing.

## 1.3 Hydro Ottawa's Application with the OEB

Hydro Ottawa did not submit a CDM program application to the OEB in 2013.

## 1.4 Hydro Ottawa's Application with the OPA's Conservation Fund

Hydro Ottawa did not submit a CDM program application to the OPA's Conservation Fund in 2013.

# 2 OPA-Contracted Province-Wide CDM Programs

## 2.1 Introduction

Effective February 10, 2011, Hydro Ottawa entered into an agreement with the OPA to deliver CDM programs extending from January 1, 2011 to December 31, 2014, which are listed below. Program details are included in Appendix A. In addition, results include projects started pre 2011 which were completed in 2011:

| Initiative | Schedule | Date schedule posted | Hydro Ottawa in Market Date |
|---|---|---|---|
| **Residential Programs** | | | |
| Appliance Retirement | Schedule B-1, Exhibit D | *Jan 26,2011* | *February 2011* |
| Appliance Exchange | Schedule B-1, Exhibit E | *Jan 26, 2011* | *May 2011* |
| HVAC Incentives | Schedule B-1, Exhibit B | *Jan 26, 2011* | *February 2011* |
| Conservation Instant Coupon Booklet | Schedule B-1, Exhibit A | *Jan 26, 2011* | *March 2011* |
| Bi-Annual Retailer Event | Schedule B-1, Exhibit C | *Jan 26, 2011* | *April 2011* |
| ~~Retailer Co-op~~ | n/a | *n/a* | *n/a* |
| Residential Demand Response | Schedule B-3 | *Aug 22, 2011* | *May 2012* |
| New Construction Program | Schedule B-2 | *Jan 26, 2011* | *Fall 2011* |
| Home Assistance Program | Schedule E-1 | *May 9, 2011* | *January 2012* |
| **Commercial & Institutional Programs** | | | |
| Efficiency: Equipment Replacement | Schedule C-2 | *Jan 26, 2011* | *February 2011* |
| Direct Install Lighting<br>• *General Service <50 kW* | Schedule C-3 | *Jan 26, 2011* | *March 2011* |
| Existing Building Commissioning Incentive | Schedule C-6 | *Feb 2011* | *March 2011* |
| New Construction and Major Renovation Initiative | Schedule C-4 | *Feb 2011* | *July 2011* |
| Energy Audit | Schedule C-1 | *Jan 26, 2011* | *March 2011* |
| Commercial Demand Response<br>• *General Service <50 kW* | Schedule B-3 | *Jan 26, 2011* | *May 2013* |
| **Industrial Programs -** General Service 50 kW & above | | | |
| Process & System Upgrades | Schedule D-1 | *May 31, 2011* | *February 2011* |
| Monitoring & Targeting | Schedule D-2 | *May 31, 2011* | *February 2011* |
| Energy Manager | Schedule D-3 | *May 31, 2011* | *August 2012* |
| Key Account Manager ("KAM") | Schedule D-4 | *May 31,2011* | *August 2012* |
| Efficiency Equipment Replacement Incentive<br>• (part of the C&I program schedule) | Schedule C-2 | *May 31, 2011* | *February 2011* |
| Demand Response 3 | Schedule D-6 | *May 31, 2011* | *October 2011* |

In addition, results were realized towards LDC's 2011-2014 target through the following pre-2011 programs:

- Electricity Retrofit Incentive Program
- High Performance New Construction
- Toronto Comprehensive

- Multifamily Energy Efficiency Rebates
- Data Centre Incentive Program
- EnWin Green Suites

As per the table below, several program initiatives are no longer available to customer or have not been launched in 2013.

| Not in Market | Objective | Status |
|---|---|---|
| **Residential Program** | | |
| Midstream Electronics | Encourages retailers to promote and sell high efficency televisions, and for distributors to distribute high efficiency set top boxes. | Did not launch and removed from Schedule in Q2, 2013. |
| Midstream Pool Equipment | Encourage pool installers to sell and install efficient pool pump equipment in residential in-ground pools. | Did not launch and removed from Schedule in Q2, 2013. |
| Home Energy Audit Tool | This is a provincial online audit tool to engage customers in conservation and help drive customer participation to CDM programs. | Did not launch and removed from Schedule in Q2, 2013. |
| **Commercial & Institutional Program** | | |
| Direct Service Space Cooling | Offers free servicing of air conditioning systems and refrigeration units for the purpose of achieving energy savings and demand reduction. | Did not launch in 2011/2012. As per the OPA there no plans to launch this Initiative in 2013. |
| Demand Response 1 ("DR1") | This initiative allows distribution customers to voluntarily reduce electricity demand during certain periods of the year pursuant to the DR 1 contract. The initiative provides DR payment for service for the actual electricity reduction provided during a demand response event. | No customer uptake for this initiative. As a result this Initiative was removed from the Schedule in Q4, 2012. |
| **Industrial Program** | | |
| DR1 | As above | No customer uptake for this initiative. Removed in Q4, 2012. |

The Master CDM Program Agreement includes program change management provision in Article 3. Collaboration between the OPA and the Local Distribution Companies (LDCs) commenced in 2011, and continued in 2012, as the change management process was implemented to enhance the saveONenergy program suite. The change management process allows for modifications to the Master Service Agreement and initiative Schedules. The program enhancements give LDCs additional tools and greater flexibility to deliver programs in a way that meets the needs of customers and further drives participation in the Initiatives.

## 2.2 Program Descriptions

Full OPA-Contracted Province-Wide CDM Program descriptions are available on the OPA's website at http://www.powerauthority.on.ca/ldc-province-wide-program-documents and additional initiative information can be found on the saveONenergy website at [https://saveONenergy.ca](https://saveONenergy.ca). The targeted customer types, objectives, and individual descriptions for each Program Initiative are detailed in Appendix A.

### 2.2.1 RESIDENTIAL PROGRAM

**Description:** Provides residential customers with programs and tools to help them understand and manage the amount of energy they use throughout their entire home and help the environment.

**Objective:** To provide incentives to both existing homeowners and developers/builders to motivate the installation of energy efficiency measures in both existing and new home construction.

**Discussion:**

The addition of LED measures to the Bi-Annual Retailer Event and to the Annual Coupon initiative in July 2013 has had a positive impact on customer participation. There were three LDC custom coded coupon options for LDCs to utilize in 2013. The Residential Demand Response program continues to be the largest contributor to demand savings in the Residential Program and has been generally well received by consumers. There were no savings associated with the Energy Display attributed to LDCs in the OPA's 2012 or 2013 verified results.

The Residential Program Portfolio is predominately a carryover of Initiatives from previous programs. It is mostly driven by retailers and contractors who many not have fully delivered what was anticipated. Three new initiatives (Midstream Electronics, Midstream Pool Equipment and Home Energy Audit Tool) were not launched and subsequently removed from the schedule in 2013 with no new additions.

Province-wide advertising was re-introduced in Q3 2013. This provided limited value due to the late market entry, especially for *peaksaver*PLUS.

Work to revitalize and increase the effectiveness and breadth of the Initiatives through the Residential Program continue to be a high priority. Opportunities within the Residential marketplace need to be identified, developed and offered to customers.

#### *2.2.1.1 Appliance Retirement Initiative (Exhibit D)*

**Initiative Activities/Progress:**

| | | | |
|---|---|---|---|
| Bill insert | Feb – Mar | multi program focus | all residential customers |
| Insert | Apr | multi program focus | daily newspaper |
| Event Team | promoted at over 100 community events | | |

| | |
|---|---|
| Print collateral | inclusion in the omnibus FOR HOME brochure |

**Additional Comments:**

- Due to the duration of the program, and the revised eligibility requirements to a minimum of 20 years old, this Initiative appears to have reached market saturation and has been under consideration for removal from the Portfolio.
- As participation is very responsive to province wide advertising, OPA province-wide advertising should continue to play a key role if the initiative continues.

#### *2.2.1.2 Appliance Exchange Initiative (Exhibit E)*

**Initiative Activities/Progress:**

**Additional Comments:**

- The design of the Initiatives, including eligible measures and incentives amounts are developed through the Residential Working Group. Retail Partner(s) are contracted by the OPA to deliver the initiatives province-wide. Individual LDCs have the opportunity to stage in-store events to drive the distribution of LDC coded Coupons and promotion of other programs in the portfolio
- The restrictive, limited and sometimes non-participation of local stores can diminish the savings potential for this Initiative.
- To date there has only been one retailer participant in the Appliance Exchange Initiative.
- Notification to LDCs regarding retailer participation and eligible measures continues to be delayed. Improved communications will aid in appropriate resource allocation and marketing of the Initiative.
- This Initiative may benefit from the disengagement of the retailer and allowing LDCs to conduct these events, possibly as part of a larger community engagement effort, with the backing of ARCA for appliance removal.
- The initiative appears to require more promotion from retailers.

#### *2.2.1.3 HVAC Incentives Initiative (Exhibit B)*

**Initiative Activities/Progress:**

| | | | |
|---|---|---|---|
| Bill insert | Feb – Mar | multi program focus | all residential customers |
| Insert | Apr | multi program focus | daily newspaper |
| Bill insert | Oct – Nov | all residential customers | |

| | | | |
|---|---|---|---|
| Radio | Spring / Fall | 10' tags on traffic and weather | |
| Print ads | Oct | community newspapers | |
| Event Team | promoted at over 100 community events | | |
| Print collateral | inclusion in the omnibus FOR HOME brochure | | |

**Additional Comments:**

- Incentive levels may not be sufficient to prompt customers to upgrade HVAC equipment prior to end of useful life. An Air Miles incentive was introduced in 2013 to try and encourage early replacement.
- This Initiative is contractor driven with LDCs responsible for marketing efforts to customers. More engagement with the HVAC contractor channel should be undertaken to drive a higher proportion of furnace and CAC sales to eligible units.
- In an effort to build capability, mandatory training has been instituted for all participating HVAC contractors. This could present a barrier for participation for some contractors as the application process already presents a restriction to contractor sales. It has been noted that there are approximately 4500-5000 HVAC contractors in the Province, however in 2013, only a total of 1,587 contractors completed the mandatory HVAC training and can participate in the program.
- There are cases where non-participating contractors are offering their own incentives (by discounting their installations to match value of the OPA incentive). As this occurs outside of the Initiative, savings are not credited to LDCs.
- Planned changes to the Schedule in 2014 will allow incentives for new installations, in addition to replacement units, may provide greater Initiative results.

#### *2.2.1.4 Conservation Instant Coupon Initiative (Exhibit A)*

**Initiative Activities/Progress:**

| | | | |
|---|---|---|---|
| Bill insert | Feb – Mar | multi program focus | all residential customers |
| Insert | Apr | multi program focus | daily newspaper |
| Bill insert | Mar – Apr | all residential customers | |
| Event Team | promoted at over 100 community events | | |
| Print collateral | inclusion in the omnibus FOR HOME brochure | | |
| Print collateral | individual coupons for distribution at events | | |

**Additional Comments:**

- The timeframe for retailer submission of redeemed coupons varies depending on the retailer and in some cases has been lengthy. The delays and incomplete results reporting limits the ability to react and respond to Initiative performance or changes in consumer behavior.
- Coupon booklets were not printed and mailed out in 2013 so coupons were not widely available to consumers without the ability to download and print online coupons. Consumers may not have been aware of the online coupons. The Initiative may benefit from province-wide marketing as a substitute to a mail out campaign.
- Program evolution, including new products and review of incentive pricing for the coupon Initiatives, should be a regular activity to ensure continued consumer interest.
- In 2013, LDCs were provided with 3 custom coded coupons. All coupons will be available with LDC custom coding in 2014 which allows LDCs to promote coupons based on local preferences.
- Consumer experience is not always consistent between and among participating retailers and this can impact coupon redemption rates. The challenges vary from not accepting coupons, to having a specific procedure to static lists of eligible products.

#### *2.2.1.5 Bi-Annual Retailer Event Initiative (Exhibit C)*

**Initiative Activities/Progress:**

| | | |
|---|---|---|
| Print ad | Apr + Oct | community newspapers |
| Print collateral | individual coupons for distribution at events | |

**Additional Comments:**

- This Initiative is strongly influenced by the retail participants and has no direct involvement from the LDCs.
- LDCs have the opportunity to stage in-store events to drive the distribution of LDC coded Coupons and promotion of other programs in the portfolio however this requires cooperation from the local retailer and LDC staff bandwidth.
- The Product list has changed very little over the past five years.
- Program evolution, including new products and review of incentive pricing for the coupon Initiatives, must be a regular activity to ensure continued consumer interest.
- The Product list could be distinctive from the Conservation Instant Coupon Initiative in order to gain more consumer interest and uptake.
- A review conducted by the Residential Working Group identified three areas of need for Initiative evolution: 1) introduction of product focused marketing; 2) enhanced product selection and 3) improved training for retailers as retail staff tend not to be knowledgeable regarding the products or promotion.

- This Initiative may benefit from a more exclusive relationship with a retailer appropriate to the program. There should be a value proposition for both the retailer and LDC.

#### ~~2.2.1.6 Retailer Co-op~~

**Initiative Activities/Progress:**

**Additional Comments:**

- This is a retailer Initiative with no direct benefit to the LDCs
- Limited engagement of local retailers can restrict the savings potential for this Initiative.
- The availability of retailer and/or LDC staff with product knowledge and the ability to conduct demonstration in store during the events would be an asset. This could be a valuable role for LDCs, however many LDCs are limited by available resources and unable to participate.

#### 2.2.1.7 New Construction Program (Schedule B-2)

**Initiative Activities/Progress:**

Print ad Greater Ottawa Home Builders Association annual directory and magazine

One-on-one outreach to local builders

**Additional Comments:**

- This Initiative provides incentives to home builders for incorporating energy efficiency into their buildings. To support this, LDCs need to provide education to the consumers regarding the importance of choosing the energy efficient builder upgrade options without an immediate benefit to the consumer.

- In 2012 the application process was streamlined, however continues to be too cumbersome for most builders. This combined with low incentives has resulted in this Initiative continuing to under-achieve.

- Administrative requirements, in particular individual home modeling, must align with perceived stakeholder payback.

- Applications are expected to increase in 2014 primarily because Hydro Ottawa has agreed to manage the application process for some of the larger builders. This is a temporary work-around to overcome the weak program design.

- This Initiative may benefit from collaboration with the Natural Gas utilities.

#### *2.2.1.8 Residential Demand Response Program (Schedule B-3)*

**Initiative Activities/Progress:**

| | | | |
|---|---|---|---|
| Direct mail | new participants, continuing participants | | |
| Television | specialty channel, local CTV | | |
| Video | target placement and You Tube | | |
| Bill insert | Feb – Mar | multi program focus | all residential customers |
| Insert | Apr | multi program focus | daily newspaper |
| Online | Apr – Dec | geo targeted local - TWN, Senators, CTV | |
| Print ad | June | daily newspaper gatefold | |
| Transit ads | Apr | bus exterior | |
| Print ads | Feb + Jul/Aug | community newspapers | |
| Print ads | Summer | specialty magazines | |
| Bill insert | Aug-Sep | all residential customers | |
| Street Team | May – Aug | deliver Energy Display to existing participants | |
| Event Team | promoted at over 100 community events | | |
| Print collateral | inclusion in the omnibus FOR HOME brochure | | |

**Additional Comments:**

- This is the main Initiative within the Residential portfolio that was to drive savings for LDCs, however the 2012 evaluation indicated savings realized from the In Home Display (IHD) were not statistically significant. LDCs were advised that the evaluation of the IHDs would continue with 2013 data. Data for the program EM&V was only reviewed in on geographic area within the province. Hydro Ottawa believes that because the Ottawa delivery model was strongly focused on the customer education, it will lead to significantly different results.

- Verified demand savings in 2012 from the load control devices were less than originally anticipated. This prompted an increase to the load cycling strategy in 2013 in order to increase savings closer to the original business case.

### 2.2.2 COMMERCIAL AND INSTITUTIONAL PROGRAM

**Description:** Provides commercial, institutional, agricultural and industrial organizations with energy-efficiency programs to help reduce their electrical costs while helping Ontario defer the need to build new generation and reduce its environmental footprint. This Initiative included programs to help fund energy audits, to replace energy-wasting equipment or to pursue new construction projects that exceed our existing codes and standards. Businesses can also pursue incentives for controlling and reducing their electricity demand at specific times.

**Targeted Customer Type(s):** Commercial, Institutional, Agricultural, Multi-family buildings, Industrial

**Objective:** Designed to assist building owners and operators as well as tenants and occupants in achieving demand and energy savings, and to facilitate a culture of conservation among these communities as well as the supply chains which serve them.

**Discussion:**

Throughout 2011 to 2013 the Commercial and Institutional (C&I) Working Group has strived to enhance the existing C&I programs and rectify identified program and system deficiencies. This has proven to be a challenging undertaking. Overbuilt governance, numerous initiative requirements, complex program structure and lengthy change management have restricted growth without providing the anticipated improved Measurement and Verification results. In addition, Evaluation, Measurement and Verification (EM&V) has not yet achieved transparency. LDCs are held accountable for these results but are not included in the EM&V process.

LDC program management has been hampered by varying rule interpretation, limited marketing ability, a somewhat inflexible online system of checks and balances and revolving OPA support personnel.

The C&I Working Group, working in cooperation with the OPA, continued to improve many of the issues which could be rectified. In particular, an accomplishment of 2012 was the advent of the expedited change management as means to accelerate certain program changes. 2013 saw the benefits of expedited change management process.

Looking ahead there is minimal opportunity to make valuable changes to the current program suite and have these changes reflected in LDC 2014 results. LDCs and the OPA should look beyond the current Initiatives and work to launch new programs, built on the strengths of the 2011-2014 programs, which will meet the needs of the industry and consumers.

#### *2.2.2.1 Efficiency: Equipment Replacement Incentive (ERII) (Schedule C-2)*

**Initiative Activities/Progress:**

| Collateral | omnibus FOR BUSINESS brochure |

Channel Sales Strategy

**Additional Comments:**

- A large proportion of LDC savings are attributed to ERII.
- Capability building programs from Industrial programs have had very positive contributions to ERII program.
- This Initiative is limited by the state of the economy and the ability of commercial/institutional facility to complete capital upgrades.
- Applicants and Applicant Representatives continue to express dissatisfaction and difficulty with the online application system. This issue has been addressed by LDCs through application training workshops, Key Account Managers, channel partner/contractor training and LDC staff acting as customer Application Representatives. Although this has been an effective method of overcoming these issues and encouraging submissions, it also reveals the complexity and time consuming nature of the application process. As such, Applicant Representatives continue to influence the majority of applications submitted. Continued development of Channel Partners is essential to program success.
- Prescriptive and Engineered worksheets provide a much needed simplified application process for customers. However, the eligible measures need to be updated and expanded in both technology and incentive amounts to address changing product costs and evolution of the marketplace.
- A focus on demand incentives has limited some kWh project opportunities. In particular, night lighting projects have significant savings potential for customers but tend to have incentives of 10% of project cost or less.
- The requirement to have a customer invoice the LDC for their incentive is very burdensome for the customer and results in a negative customer experience and another barrier to participation.
- There is redundancy in the application process as customers may need to complete a worksheet and then enter most of that information over to the online application form. This can be cumbersome.
- Processing Head Office applications became much easier for the Lead LDC after Schedule changes came into effect in August 2013. The largest beneficiary was the customer who could now deal with one LDC for all of their provincial locations.
- The application process for Head Office projects requires improvement. Applicants still need to manually enter one application per facility associated with the project can be extremely onerous, often requiring a dedicated resource.
- Streamlining of the settlements systems resulted in significant improvement in the payment process in 2013.

#### *2.2.2.2 Direct Install Initiative (DIL) (Schedule C-3)*

**Initiative Activities/Progress:**

Video target placement and You Tube

Collateral customized sell sheets for contractors

Collateral omnibus FOR BUSINESS brochure

**Additional Comments:**

- LED lighting was introduced in 2013 as a new measure and has been well received by customers who may not have previously qualified for DIL eligible upgrades. This is an efficient product with a long estimated useful life.
- Cold start high output lighting was removed from the program. This particularly affected the farming customers who now have limited options within the program.
- The inclusion of a standard incentive for additional measures increased project size and drove higher energy and demand savings results in some situations. However, LDCs are unable to offer these standard incentives to prior participants. The ability to return to prior participants and offer a standard incentive on the remaining upgrades has potential to provide additional energy and demand savings
- Electrical contractor's margins have been reduced due to no labor rate increase, increase cost of materials, greater distances between retrofit and more door knocking required before a successful sale. This has led to a reduction in vendor channel participation in some regions.
- Measure incentives and additional funding for forklifts were introduced in September 2013 and were well received by installers.

#### *2.2.2.3 Existing Building Commissioning Incentive Initiative (Schedule C-6)*

**Initiative Activities/Progress:**

Collateral omnibus FOR BUSINESS brochure

Channel Sales Strategy

**Additional Comments:**

- Initiative name does not properly describe the Initiative.
- There was minimal participation for this Initiative. It is suspected that the lack of participation in the program is a result of the Initiative being limited to space cooling and a limited window of opportunity (cooling season) for participation.

- Participation is mainly channel partner driven.
- Customers would like to see the program expanded to include a broader range of measures for a more holistic approach to building re-commissioning. Chilled water systems used for other purposes should also be made an eligible measure.
- This initiative should be reviewed for incentive alignment with ERII. Currently a participant will not receive an incentive if the overall payback is less than 2 years.

#### *2.2.2.4 New Construction and Major Renovation Initiative (HPNC) (Schedule C-4)*

**Initiative Activities/Progress:**

Hydro Ottawa has Enbridge under contract as delivery agent for this program. Enbridge works in conjunction with the Hydro Ottawa sales team and engineering staff to deliver the program.

Collateral omnibus FOR BUSINESS brochure

Channel Sales Strategy

**Additional Comments**

- With the Ministerial Directive issued December 21, 2012, facilities with a completion date near the end of 2015 have some security that they will be compensated for choosing efficient measures. However, buildings that are in the planning phase with completion dates post-2015 may not participate due to funding and program uncertainty.
- Participants estimated completion dates tend to be inaccurate and are usually six months longer. This could result in diminished savings towards target when facilities are not substantially completed by December 31, 2014.
- The custom application process requires considerable customer support and skilled LDC staff. The effort required to participate through the custom stream exceeds the value of the incentive for many customers.
- There are no custom measure options for items that do not qualify under the prescriptive or engineered track as the custom path does not allow for individual measures, only whole building modeling.
- This Initiative has a very low net-to-gross ratio, which results in more than 50% of the proposed target savings being 'lost'. This factor may force LDCs to remove the program from portfolios in the future as the program delivers strong savings for the customer but minimal verified results from the OPA.
- The requirement to have a customer invoice the LDC for their incentive is very burdensome for the customer and results in a negative customer experience and a potential barrier to participation.

#### 2.2.2.5 *Energy Audit Initiative*

**Initiative Activities/Progress:**

Collateral omnibus FOR BUSINESS brochure

Channel Sales Strategy

**Additional Comments**

- The introduction of the new audit component for one system (i.e. compressed air), has increased customer participation.
- The energy audit Initiative is considered an 'enabling' Initiative and 'feeds into' other saveONenergy Initiatives.
- Evaluators in 2012 and 2013 recognized savings towards LDCs targets as a result of customers implementing low/no cost recommendations from their energy audits.
- Audit reports from consultants vary considerably and in some cases, while they adhere to the Initiative requirements, do not provide value for the Participant. A standard template with specific energy saving calculation requirements should be considered.
- Customers look to the LDCs to recommend audit companies. A centralized prequalified list provided by the OPA may be beneficial.
- Participation has been limited to one energy audit per customer which only allowed the customer to review and audit one area of their business. This has been revised in 2014 and LDCs are now able to consider additional customer participation when presented with a new scope of work.

### 2.2.3 INDUSTRIAL PROGRAM

**Description:** Large facilities are discovering the benefits of energy efficiency through the Industrial Programs which are designed to help identify and promote energy saving opportunities. It includes financial incentives and technical expertise to help organizations modernize systems for enhanced productivity and product quality, as wells as provide a substantial boost to energy productivity. This allows facilities to take control of their energy so they can create long-term competitive energy advantages which reach across the organization.

**Targeted Customer Type(s):** Industrial, Commercial, Institutional, Agricultural

**Objective:** To provide incentives to both existing and new industrial customers to motivate the installation of energy efficient measures and to promote participation in demand management.

**Discussion:**

The Industrial Program Portfolio has been able to provide significant incentives and valuable resources to large facilities to help them with energy efficiency upgrades and process system improvements. The Engineering Studies in particular as well as the Monitoring and Targeting initiative provide a unique opportunity for a customer to complete a comprehensive analysis of an energy intensive process that they otherwise may not undertake. The Energy Manager Initiative provides customers with a skilled individual whose only role is to assist them with conservation initiatives. To date these Energy Managers have played a key role in customer participation.

Due to the size, scope and long lead time of these Initiatives and associated projects, the Ministerial Directive provides some security for the continuation of the conservation programs and associated compensation for the participant; however the subsequent savings would not be attributed to an LDC's current target for projects that go into service after 2014.

Extensive legal documents, complex program structure and lengthy change management have restricted the change and growth of this Portfolio. While the expedited change management has benefited the Commercial Portfolio, the Industrial Portfolio has not seen the same results due to the narrow scope of the process. For 2013 the change to the threshold for small capital projects and the new small capital project agreement are expected to improve the number of projects and savings achieved within PSUI. Likewise, a decision to proceed with 2012 natural gas load displacement generation projects applications will also increase uptake although the limited time to bring new projects into service is a barrier.

#### *2.2.3.1 Process & Systems Upgrades Initiative (PSUI) (Schedule D-1)*

**Initiative Activities/Progress:**

Collateral omnibus FOR BUSINESS brochure

Channel Sales Strategy

**Additional Comments:**

- Numerous energy studies have been submitted and completed. This is a strong indication that there is the potential for large projects with corresponding energy savings. Many of these studies have been initiated through the Energy Manager and KAM resources.
- This Initiative is limited by the state of the economy and the ability of a facility to complete large capital upgrades.
- There is typically a long sales cycle for these projects, and then a long project development cycle. As such, limited results were generated in 2013. The majority of the results are expected in 2014 with a much reduced benefit to cumulative energy savings targets.
- Delays with processing funding payments have caused delayed payments to Participants beyond contract requirements. In some cases, LDCs have developed a separate side agreement between the LDC and Participant acknowledging that the Participant cannot be paid until the funds are received.
- The contract required for PSUI is a lengthy and complicated document. A key to making PSUI successful is a new agreement which is a simplified with less onerous conditions for the customer.

- To partially address this, changes were made to the ERII Initiative which allowed smaller projects to be directed to the Commercial stream. Most industrial projects to-date have been submitted as ERII projects due to less onerous contract and M&V requirements.

- A business case was submitted by the Industrial Working Group in July 2012 which would change the upper limit for a small project from 700 MWh to 1 million dollars in incentives. This would allow more projects to be eligible for the new small capital project agreement and increase participant uptake, while still protecting the ratepayer. This small capital project agreement was finalized in August 2013.

- While there is considerable customer interest in on-site Load Displacement (Co-Generation) projects, in 2012 the OPA was accepting waste heat/waste fuel projects only. Natural gas generation projects were on hold awaiting a decision on whether PSUI will fund these types of projects. In June 2013, a decision was made to allow natural gas load displacement generation projects to proceed under PSUI. It is expected that a number of projects will proceed although results may not be counted towards LDC targets due to in-service dates beyond 2014.

- The requirement to have a customer invoice the LDC for their incentive is very burdensome for the customer and results in a negative customer experience and another barrier to participation.

#### *2.2.3.2 Monitoring & Targeting Initiative (Schedule D-2)*

**Initiative Activities/Progress:**

Collateral omnibus FOR BUSINESS brochure

Channel Sales Strategy

**Additional Comments:**

- The M&T initiative is targeted at larger customers with the capacity to review the M&T data. This review requires the customer facility to employ an Energy Manager, or a person with equivalent qualifications, which has been a barrier for some customers. As such, a limited number of applications have been received to date.

- The savings target required for this Initiative can present a significant challenge for smaller customers.

- Changes were made to ERII in 2013 to allow smaller facilities to employ M&T systems.

#### *2.2.3.3 Energy Manager Initiative (Schedule D-3)*

**Initiative Activities/Progress:**

Hydro Ottawa added 3 new Embedded Energy Managers in 2013 and saw one EEM discontinued bringing the total number of Embedded Energy Managers to four. The Hydro Ottawa Roving Energy Manager continued in 2013.

**Additional Comments:**

- The Energy Managers have proven to be a popular and useful resource for larger customers.
- LDCs that are too small to qualify for their own REM are teaming up with other utilities to hire an REM to be shared by the group of utilities.
- Some LDCs and Customers are reporting difficulties in hiring capable Roving and Embedded Energy Managers (REM/EEM), in some instances taking up to 7 months to have a resource in place.
- New energy managers require training, time to familiarize with facilities and staff and require time to establish “credibility”. Energy Managers started filling their pipeline with projects in 2012 but few projects were implemented until 2013.

#### *2.2.3.4 Key Account Manager (Schedule D-4)*

**Initiative Activities/Progress:**

Hydro Ottawa had 1 Key Account Manager is 2013.

**Additional Comments**

- Customers appreciate dealing with a single contact to interface with an LDC, a resource that has both the technical and business background who can communicate easily with the customer and the LDC.
- Finding this type of skill set has been difficult. In addition, the short-term contract discourages some skilled applicants resulting in longer lead times to acquire the right resource.

#### *2.2.3.5 Demand Response 3 (D-6)*

**Initiative Activities/Progress:**

Collateral omnibus FOR BUSINESS brochure

Channel Sales Strategy

**Additional Comments:**

- Until early 2013 customer data was not provided on an individual customer basis due to contractual requirements with the aggregators. This limited LDCs' ability to effectively market to prospective participants and verify savings.
- No program improvements were made in 2013 however, it was accepted that prior participants who renew their DR3 contract within the 2011-2014 term will contribute to LDC targets.
- As of 2013, Aggregators were able to enter into contracts beyond 2014 which has allowed them to offer a more competitive contract price (5 year) than if limited to 1 or 2 year contracts.
- Metering and settlement requirements are expensive and complicated and can reduce customer compensation amounts, and present a barrier to smaller customers.
- Compensation amounts for new contracts and renewals have been reduced from the initial launch of this program (premium zones and 200 hour option have been discontinued) and subsequently there has been a corresponding decrease in renewal revenue.

### 2.2.4 LOW INCOME INITIATIVE (HOME ASSISTANCE PROGRAM) (Schedule E-1)

**Initiative Activities/Progress:**

A third party is contracted to deliver this program on behalf of Hydro Ottawa. Outreach to the three largest social housing providers has been the most effective to date. Over 1000 families benefited from this program in 2013.

**Additional Comments:**

- The process for enrolling in social housing was complicated and time consuming. This was addressed in late 2012 and showed some benefits in 2013 through changes to the participant agreements.
- The financial scope, complexity, and customer privacy requirements of this Initiative are challenging for LDCs and most have contracted this program out. Program design changes are expected to address these challenges.

### 2.2.5 PRE-2011 PROGRAMS

Savings were realized towards LDC's 2011-2014 target through pre-2011 programs. The targeted customer types, objectives, descriptions, and activities of these programs are detailed in Appendix B

# 3 2013 LDC CDM Results

## 3.1 Participation and Savings

Table 1: Hydro Hawkesbury Inc. Initiative and Program Level Net Savings by Year (Scenario 1)

| Initiative | Unit | Incremental Activity (new program activity occurring within the specified reporting period) | | | | Net Incremental Peak Demand Savings (kW) (new peak demand savings from activity within the specified reporting period) | | | | Net Incremental Energy Savings (kWh) (new energy savings from activity within the specified reporting period) | | | | Program-to-Date Verified Progress to Target (excludes DR) 2014 Net Annual Peak Demand Savings (kW) | 2011-2014 Net Cumulative Energy Savings (kWh) |
